Distinguished Federal Judge Holds Naturalization Court Sermon in Hollywood Bowl Armistice Day

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. DOYLE. Mr. Speaker, thanking you and all of my distinguished colleagues in this great legislative body for heretofore granting me unanimous consent so to do, I am pleased and honored to herewith place in the daily CONGRESIONAL RECORD the text of the remarks made by Hon. Peirson M. Hall, United States district court judge for the southern district of California, at Los Angeles, Calif., on November 11, 1954, at the famous Hollywood Bowl in Los Angeles, Calif.

The honorable judge on that historic date, November 11, held an outdoor special session of the naturalization court. Needless to say, the hundreds of new American citizens who were there in attendance and took the oath of American citizenship, together with the thousands of visitors to this unique court session, will not forget either the occasion or the few words by the distinguished Federal Judge Hall.

I have the special pleasure in presenting the news of this unique special session of the naturalization court with the judge's remarks, because Hon. Peirson M. Hall and I were classmates in Los Angeles law study class, and we took the California State examination before the Supreme Court of the State of California together to enter into the practice of the profession of law.

SPECIAL SESSION OF NATURALIZATION COURT, HOLLYWOOD BOWL, NOVEMBER 11, 1954

The court is meeting today as a naturalization court in special session.

Before administering the oath, I would like to say a few words which the occasion requires. Each of you, by seeking to become citizens of the United States, has made a free choice.

A free choice is of special significance in the world today because there are two basic conflicting ideologies at large in the world today engaged in a contest for men's minds and lives. One is godless and material, and uses all of the arts of deception and force to impose itself upon all the peoples of the world. The other is that which has found its highest expression in the Americas, and especially in this great land of ours.

All of you have been to school and have learned sufficiently of the Constitution, the laws, and the system and method of our government to pass the required examination. There are, however, some fundamental concepts which underlie our way of life and our system of government to which I would like to advert for a moment before administering the oath.

We, of course, look to our Constitution as the basic law; we look to the acts of Congress as providing the means for carrying that Constitution into effect. We look to the judicial department to interpret the Constitution and laws, and to the executive department to enforce them. However, if you look for the concepts which underlie our system and method of government and the freedom which is ours, you must look beyond the mere words of documents, and search for the spiritual quality which makes men free. So, may I suggest, that if you take the Ten Commandments, the Sermon on the Mount, the Declaration of Independence, and the Constitution of the United States with its amendments, I believe that in them you will find the written words for the concepts upon which this country was founded, and under which people, millions of them, just like you, who over the last 150 years have come from every land, have turned what theretofore in the entire history of time had been a desert into this productive and prolific country. To all of them it was, and today it still is, what Daniel Webster described as "The last best hope of mankind," for a system of government to secure the dignity and liberty of individuals under the rule of law.

The first and the one great concept which pervades our way of life is that there is a power which is greater than man, either individually or collectively, whether expressed in the form of government, or otherwise. That power some people call God; some people call it nature; some people call it the power of the universe; or whatever they wish. It may be beyond the reach of human reason, But the first concept is that that power does exist. And those of you who have been in travail, who have been in deep and heavy trouble, know that if you exercise some communion with that power—which some people call prayer—that you will receive a source of strength from it which tides you over whatever grief or care or burden or obstacle may confront you, or gives you the courage to face your troubles and to take the consequences, whatever they may

Another is, that individual man, the individual human being, is the most perfect creature which God created of all the creatures of the earth and the sky and the seas; and that all things created by man must be made to serve the needs of man, That is to say, if man creates a machine, that machine must be used and made to serve the needs of mankind, not to control him. Far more so, if man creates a government, that government must be created and used to serve the needs of mankind and not destroy him or enslave him, either to the state, the government, or to other human beings. States and governments, being the creatures of man, are lesser, ultimately, in the long run and in the whole pattern than the dignity of the individual person.

Another is that man can attain the natural dignity which he was intended to possess by his creator as an individual, by the preservation of individual liberty under law; and, that to love liberty, one must first love order; to want order is to desire the rule of law; to desire the rule of willing to yield to the dominance of law.

And when I say yield to the dominance of law, I do not mean to yield to the wishes or desires of any individual or group who proclaims that his or their wishes is the law, or,

the state or government, but the rules of law itself. And furthermore, that to yield to the dominance of law one must be willing to give up some individual liberty for the sake of liberty itself and for the sake of liberty of other people. Indeed, many thousands of people have given up their lives for the preservation of our concepts of liberty.

Law is not just a rule of action prescribed by a superior which an inferior is bound to obey, but law is the application of reason to the conduct of mankind based upon the experience of mankind in his search for

Another concept is that the end and aim of government must ever be to preserve liberty for human beings; not just the name of liberty but the fact of individual liberty.

And next, that howsoever the settings or circumstances of civilization, whether by gadgets or otherwise, which may change from generation to generation, or from day to day for that matter, these principles for the preservation of human liberty ever remain the same.

Another concept is that peace alone, without the fact of liberty, can be slavery, as indeed it was, and is in the whole vast area of the world's surface today where liberty and democracy and freedom are mere words that are used to conceal and further the purpose of the most brutal and barbaric absolutism and philosophy in its most highly developed form that has been known in modern times, if not in all history.

Another is that the touch of the Infinite within each individual, which some people call conscience, or spirit, is the greatest force for justice and right among men that has ever been discovered by human beings.

Another is that no official—I or any other—has, or can have any personal power. I, and every official, must be limited to official power; that is to say, the power which has been granted to the office by the law, as no power can be granted to the man.

Another is that three equal departments of the Government are necessary to maintain checks against the seizure and abuse of power by any branch of the Government; whether the legislative over the executive and judicial; whether the executive over the judicial and legislative; or whether the judicial, by expansion of power and self-declarations, attempt to seize the power of the legislative and executive. Thus, we can legislative and executive. Thus, we can prevent the occurrence of that pattern so familiar to the founders of America, and which is being followed today in too many places in the world where, under false pretenses and delusions offered to the people in one form or another, the people are first deceived, then they are vilified, and then they are enslaved.

Another concept is that the rights guaranteed to the individual shall not be distorted, by their abuse, into weapons to destroy those very rights; that human hunger and disease and despair and confusion shall not be created, and if existing, shall not be used as weapons for the destruction of liberty or the creation of absolutism, but that the elimination of these apocalyptic horsemen is the concern constantly of the whole people and of all mankind.

Finally, if I could sum it up in a few words, I should say that the philosophy of our Government is founded on four principles: The principle of love—I mean brotherly love—faith, reason, and truth. And as against that philosophy, there is the cruel

and monstrous attempt to force on all the peoples of the world today, a philosophy where hate is substituted for love, fear sub stituted for faith, force substituted for reason, and ignorance substituted for truth.

Someone once said that liberty was an eternal compact between the living with those who are dead and with those who

are yet unborn.

So to all of you who are about to take the oath and to all of those who are present. let us join in keeping the faith of that com-pact made by that little band of men in 1776, who struck off the immortal words of our Declaration of Independence, and concluded with the majestic phrase: "And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

I shall now administer the oath.

General Agreement on Tariffs and Trade

EXTENSION OF REMARKS

HON. FRANK A. BARRETT

OF WYOMING

IN THE SENATE OF THE UNITED STATES Thursday, January 6, 1955

Mr. BARRETT. Mr. President, I had the privilege of attending the annual convention of the National Wool Growers' Association at Salt Lake City early in December. Longtime members told me that it was one of the best conventions ever held by the association.

Mr. O. R. Strackbein, chairman of the Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy, delivered an outstanding address before the convention. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

ADDRESS BY O. R. STRACKBEIN, CHAIRMAN, THE NATIONWIDE COMMITTEE OF INDUSTRY, AG-RICULTURE, AND LABOR, ON IMPORT-EXPORT POLICY BEFORE THE NATIONAL WOOL GROW-ERS ASSOCIATION, SALT LAKE CITY, DE-**CEMBER 8, 1954**

LOOK OUT FOR THE GATT-IT IS LOADED

When I was asked to provide a title for the present address I was at something of a loss, because I felt that I should talk to you about GATT, because of its great importance at this time. GATT is the short name of the General Agreement on Tariffs and Trade. struck me, however, that not many people knew about the general agreement. people had perhaps read about GATT with-out knowing what it is. Considering the character of GATT and what it has been up to, it seemed to me that a pun on the name itself would help to alert you to the dangers that lurk in that international organiza-That explains the title: "Look Out tion. for the GATT—It Is Loaded."
Somebody will be sure to ask, what's

wrong with GATT? And that is the question that I hope will be asked. We hope that it will be asked all over the United States. The conclusion will then be reached that GATT is loaded, indeed.

What is GATT? Where did it come from?

Where is it headed?

GATT did not just happen. It is the brainchild of people whose names are quite surely not known to you. Definitely it is not the product of Congress. It was conceived 7 or 8 years ago in the Department of State and other executive departments who had one thing in common, namely, the planning of world trade and its regulation by an international organization dedicated to the principles of free trade. Seven or eight years ago, it will be recalled, the idea of world economic planning was in full bloom.

To keep the record straight we will have to provide you with a little background.

GATT, I. e., the General Agreement on Tariffs and Trade, a tariff-cutting conference, was negotiated in 1947 and signed on October 30 of that year in Geneva, Switzerland. Some 21 or 22 countries adhered to the agreement. Today the number is 34.

However, sometime before GATT came along the planners in the State Department and other departments drew up what was called a "Proposal for the Expansion of World Trade and Employment." This was an ambitious proposal to take on and make over the economy of the world. That was in 1945. Ideas of world planning and world government were in the ascendancy at that time. want to emphasize that.

This proposal was revised and emerged as a proposed charter for an International Trade Organization. After 3 more revisions over a period of nearly 3 years the ITO Charter, as it became known, was signed in Habana, Cuba, in March 1948 by more than 50 countries, including the United States.

It would have set up a governing or executive board on which the United States would have had 1 vote out of 50 plus. The objective was free trade through progressive re-ductions of the tariff and other trade barriers, and guiding the world's industrial, agricultural and mineral resources into the most productive channels.

The provisions of the charter went so far beyond the powers delegated to the President in the Trade Agreements Act of 1934, which empowered him to enter into trade agreements, that it was regarded necessary to submit the document to Congress for ratification.

Now let us go back to GATT and trace the relationship between GATT and the ITO

While the ITO Charter was still being revised and negotiated, it was decided to enter into a general trade agreement with a large group of countries. This was done in 1947, as already said, i. e., about 6 months before the ITO Charter was signed in March in

The plan was to turn administration of the General Agreement (GATT) over to the ITO or International Trade Organization when the charter was ratified by a sufficient number of countries. GATT was then to dissolve and pass out of the picture. one bothered to present GATT for legislative ratification even though it was also given powers that went far beyond those delegated under the Trade Agreements Act to the President. After all, once the ITO came into being it would replace GATT.
Obviously GATT should also have been

sent to Congress for ratification, but this was never done.

Then the unexpected happened. The ITO Charter was sent to Congress for ratification but never came out of committee. It was submitted to both the Foreign Relations Committee of the Senate and the House Committee on Foreign Affairs. The Committee on Foreign Affairs of the House held hearings on the charter in 1950 but never issued a report to the House. The Senate Foreign Relations Committee, on its part, failed to hold any hearings at all.

This was the legislative as distinguished from the executive reception given to the ITO. It was a revealing demonstration of how much Congress liked the ITO Charter. Disowned and spurned so unceremoniously by the legislative branch, the charter died quickly and has not been resurrected. No other country felt inclined to push the organization.

But while Congress was so emphatic in rejecting the charter the State Department went on with GATT as if nothing had happened; in fact, acted much as it might have done had Congress ratified the ITO.

Obviously GATT, not having been submitted for ratification at any time, had no legal standing with the possible exception of the schedule of tariff concessions which it contained. Nevertheless, it went right on with additional conferences and held periodic meetings at which disputed tariff and trade actions of the different members were reviewed.

Without bothering you with further details let me tell you that GATT has in the meantime come to act as the supreme arbiter over our tariff and similar matters. It has reviewed several sovereign acts of the Congress and the President and continues to do so. Also it bound member countries against unilateral withdrawal of concessions granted in the agreement. It bound them further against using import quotas except as a defense in balance of payment difficulties or to avoid breaking down government sponsored agricultural programs.

This is rather high-handed action to be

exercised by an illegitimate organization; but

GATT is not easily abashed.

I will give you 1 or 2 examples.

In 1951 Congress by law directed the President to withdraw all trade agreement concessions from the Communist-controlled countries. The State Department complied expeditiously by notifying Russia, Poland, expeditiously by notifying Russia, Poland, Rumania, Bulgaria, etc., but held off with respect to Czechoslovakia. Something stood in the way. Why could the State Department not notify Czechoslovakia as in the other cases of our withdrawal of trade agreement concessions? It was because Czechoslovakia, although Communist-controlled, was (and still is) a member of GATT.

Although Congress had passed a law and although the President had signed it, the United States had lost its freedom of action so far as Czechoslovakia was concerned. had signed away our freedom of action-i. e., the State Department had signed it away in the General Agreement on Tariffs and Trade (GATT). Did you know this? Did any of you know it? No. It could be said that the American people did not know it. The State Department did not want anyone to know it.

Yet the fact is that the United States had to wait until the next meeting of GATT in the fall of 1951 before proceeding with the congressional mandate. We had to lay the question of cancellation of our trade agreement with Czechoslovakia before GATT so that GATT might decide the question for us. Fortunately, after hearing the arguments for and against, GATT said that we were free to do what Congress had directed the President In a very short time we withdrew from our trade agreement with Ozechoslovakia-but not before getting GATT's O. K.

In other words, Congress is no longer the supreme legislative body for this country. Did you know that? Were you aware that we had clothed an international body with a veto over our tariff and trade questions?

This was not the only case that demonstrated this fact. In another case we raised the duty on women's fur felt hats after a hearing by the Tariff Commission under the escape clause. That time, as it happened, Czechoslovakia was also the protestant and contested our action. GATT appointed a working party to make a study of all the circumstances and to make a report. The working party made a detailed study and submitted an elaborate report. We were found by GATT to be justified in our action once more and we accepted the GATT decision.

Now, the Department of State denies that we are bound by GATT, and denies that

GATT has the power of review over acts of the United States that fall within the purview of the General Agreement on Tariffs and Trade.

riow good is this denial?

It is obviously worthless as a practical matter. In the first place, the State Department wants GATT to have these powers otherwise it would never have entered into the agreement in the first place.

Secondly, it would otherwise have sub-mitted GATT to Congress for ratification, Evidently the Department, for good reason, feared the same result for GATT as was

accorded the ITO Charter.

Thirdly, the denial is without effect because we have as a member of GATT ac-cepted its jurisdiction in tariff and trade disputes. Moreover, we helped write the agreement in the first place and took part in and agreed to the procedures set forth. We are therefore in a poor position to repudiate its actions.

Fourthly, we accepted the two important decisions cited above. They were both in our favor. How could we then in good conscience or in good honor refuse to abide by GATT decisions if they went against us? The State Department knows that we are bound to accept such decisions and intends that we should.

Where does that leave Congress?

Out in the cold, so far as the tariff is concerned-or at least on the outer edges.

But the Constitution placed the regulation of our foreign commerce and the laying of taxes and duties squarely on the shoulders of Congress. The purpose was to keep control of these matters closely in the hands of the people. The effects of the acts since 1947 have been in the opposite direction. Congress is being elbowed out of the way to make room for the State Department.

What is happening and what has been

going on is this:

The State Department has sought to cut Congress out of control of the tariff because that Department wants to use the tariff as a pawn of diplomacy. If Congress controls the tariff, even if only indirectly, as through the Tariff Commission, the State Department is handicapped in its moves. Congress might assert its authority and embarrass

the Department.

The State Department is concerned with foreign relations and is properly interested in the economic factors that bring about good relations. On the other hand, the Department is entirely too prone to lose sight of the interests of the people back home in the factories and on the farms and ranches. That is why the system of executive domination of the tariff leads to a sacrifice of domestic producers in favor of considerations of diplomacy and in fayor of foreign producers.

That is not as it should be for several reasons. One is that the pawns of diplomacy are rather shifty and transient. looks good today may go sour tomorrow. Another is that when we seek to woo friends through economic concessions, these friends a habit of becoming insatiable. Instead of appreciating what we have already done they resent it when we try to call a halt. Economic concessions too easily deterior teriorate into economic appeasement—unless they are carefully watched.

In its designs to wrest tariff control from Congress, the State Department has given assurances abroad that were not in its place to give; or made agreements that lay beyond its powers. Then the Department has
expected Congress to make good on the
promises and agreements. Congress was to
consent to its own handcuming and like it.

This represents a form of coercion that is properly resented by Congress; because the State Department cannot bind the Congress in any field of its constitutional powers against legislating as it sees fit. Each new

bounds when it seeks to bind Congress as it has done in GATT.

The machinations of the Department in the field of tariffs and trade have been highhanded to say the least and devious to boot.

We have seen how GATT sits in judgment on tariff cases and similar disputes brought before it. We have seen how the State Department has worked hand in glove with this procedure by submitting cases to GATT and participating in the procedures. Also, we have witnessed State Department acceptance of the results.

And now, as if to prove what they have previously denied, that Department is seeking the strengthening of GATT by taking part in a revision of the general agreement designed to give it more teeth. Right today a conference is going on in Geneva, attended by some 50 countries. GATT is being revised and the new version will probably be ready in January or February. This time a lefthanded move will be made to bring the revised GATT before Congress for ratification. This looks like something new-like a change of heart.

But look out. The scheme is loaded.

The announced intention is to submit only the organizational features of the new GATT to Congress-not the part that counts, that is, the contents, such as the ban on import quotas, the provisions on valuation, the binding of rates against unilateral change, and so forth.

Should the organizational features, innocent as they are, be ratified, GATT would have the semblance of legality and would no doubt grow in its arrogation of powers with the full blessings of the State Department. Congress would find it ever more difficult to reassert and recapture its constitutional power; and the Department of State would describe congressional rebelliousness as evidence of irresponsible tendencies and instability. It would say that if Congress did not go along with the State Department design we would lose our friends abroad and be left high and dry and alone in the world. We would have to face Russia alone.

That is the gamut and that is the trap. So, I say, look out for the GATT-it's loaded. What do we propose as a substitute?

Some bills were introduced in the past session of Congress that embodied our objec-A few simple changes would be made.

Tariff changes would only be made if given individual rates could be shown to the satisfaction of the Tariff Commission to be too low and causing or threatening serious injury to domestic producers; or if export or import interests could demonstrate that individual rates are higher than necessary.

The Tariff Commission would hold hearings and make investigations as now, but its recommendations would go to Congress rather than to the President. The Department of State would have the right to send a report to Congress for its consideration along with other factors.

In this way the control over the tariff that has been usurped so deviously by the State Department would be broken and Congress would recapture its constitutional authority. Unless this is done all tariff legislation will be futile because it will be nullified by international procedures. You as wool growers might then just as well forget about electing men to the House and Senate, so far as the tariff is concerned, because they would be helpless. There would be no point in talking to them, sending them your complaints or asking their help. And, of course, as for going to Geneva itself—that is, to the new source of power-you would be voiceless for sure and completely ignored.

That is not the way the Constitutionmakers wanted things to be. So let's take the cartridge out of GATT and unload it.

Congress is free to repeal, amend, or leave alone any previous act of that body and the State Department is completely out of and Arthur Garfield Hays

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Thursday, January 6, 1955

Mr. MARTIN of Pennsylvania. Mr. President, with a profound sense of personal loss and with deep regret I announce to the Senate the death of Lt. Gen. Raymond S. McLain, who passed away at Walter Reed Hospital on December 14, 1954. General McLain was a distinguished

American who attained outstanding success in business and as a military man.

He began his brilliant military career as a National Guardsman, serving as a private, corporal, and sergeant in the Oklahoma National Guard from 1912 until he was commissioned as a second lieutenant in 1914.

He was the first National Guard officer ever appointed brigadier general with permanent rank in the Regular Army, and the first civilian soldier in either World War I or II to command an Army corps.

He started at the bottom and his outstanding record should be an inspiration to all young Americans to strive to sustain our American ideals.

I ask unanimous consent to have printed in the Appendix of the RECORD an obituary from the Army and Navy Journal of December 18, 1954, which gives General McLain's record as a soldier and civilian, and also an editorial from the Pittsburgh Press of December 17 which combines tributes to General McLain and to Arthur Garfield Hays.

There being no objection, the obituary and the editorial were ordered to be printed in the RECORD, as follows:

[From the Army and Navy Journal of December 18, 1954]

LT. GEN. RAYMOND S. MCLAIN, UNITED STATES ARMY, RETIRED

Military services at the Fort Myer, Va., Chapel were held, on December 17, for Lt. Gen. Raymond Stallings McLain, United States Army, retired, distinguished citizensoldier, who died at Walter Reed Army Hospital, on December 14, of acute leukemia, after an illness of only 2 weeks. Burial was at Oklahoma City, Okla.

Born in Washington County, Ky., in 1890, General McLain served as a private, corporal and sergeant in the Oklahoma National Guard, from 1912, until he was commissioned as a second lieutenant 2 years later. In 1916 he served on the Mexican border, and in World War I, he went overseas with the AEF, participating in the Champagne and Meuse-Argonne campaigns. When the 45th Division of the Oklahoma National Guard was formed in 1924, General McLain became its first operations officer, later serving in turn as chief of staff; commanding general 70th field artillery brigade; and artillery commander.

General McLain's World War II service included a spectacular succession of com-He led the attack on Vittoria in the 45th's amphibious operations in Sicily; saw renewed action at Salerno; personally led a breakthrough of German lines, when the 179th Infantry was cut off and isolated near

Persano, and, with another officer and two enlisted men, made his way to the sur-rounded regiment, reorganized its defense and reestablished its communications. He continued with the 45th in the Italian campaign, in its drive to the Cassino district, when the division was diverted for the landing at Anzio in January 1944, where, despite severe losses, it succeeded in turning back prolonged German tank attacks.

In April 1944, General McLain assumed command of the 30th Infantry Division Artillery, landing in France on June 10, and participated in heavy fighting north of St. Lo. The following July, he was placed in command of the 90th Division, which formed part of the spearhead of General Patton's Third Army's smash across France and ultimately helped close the Falalse pocket. In October 1944, General McLain was named commander of the XIX Corps, then in the final stages of reducing the Aachen pocket, under whose command, during the Bastogne breakthrough, the corps took over the Hurtgen Forest sector. He led the XIXth in the crossing of the Roer, the fall of the Julich Fortress, in its drive to the Rhine, its capture of the Muchen-Gladback industrial area and the Ruhr, when the corps was relieved in order to drive on Berlin. The first to reach the Elbe, the corps, under General McLain's command, was all set for the Berlin drive, when it was halted and ordered to hold its position.

In June 1945, General McLain was promoted to the rank of lieutenant general, and 1 year later was commissioned a brigadier general in the Regular Army, the first National Guard officer to be so distinguished by Presidential appointment. In the period since World War II, he served as Chief of Information of the Army, Comptroller of the Army, on duty with the Defense Department's special staff as liaison officer between the Department and the President's Advisory Commission on UMT, and as a member of the National Security Training Commission. He was retired for statutory age in April 1952, when he returned to his former position as president of the American First

Trust Co. of Oklahoma City.

He is survived by his widow, Mrs. Bertha McLain, of 1709 Pennington Way, Oklahoma City: 2 sons, Mr. Raymond S. McLain, Jr., and Robert Duncan McLain; and 4 daugh-ters, Miss JenAnne McLain, Mrs. Betty Beloin, Mrs. Norman Guazzo, and Mrs. Dorothy Rogers.

A joint statement issued in the name of the National Security Training Commission, by Mr. Julius Ochs Adler, Mr. Warren Atherton, Mr. Alfred L. Hays, and Adm. Thomas C. Kinkaid, United States Navy, retired, said in

"General McLain's contributions to the Nation as one of our greatest civilian soldiers, as a distinguished and devoted public servant, as a successful businessman, and as a warmhearted individual have been great and can never be lost to us. Perhaps more than any other individual since the end of World War II, he has devoted himself to the cause of the training of civilian soldiersto the cause of national security through trained manpower. Sacrificing time which he could have given to his private business in Oklahoma City, he remained in Wash-ington after World War II to work on the problem of building a better trained Reserve. His work in this field was so active that he was one of the original five Commissioners appointed to the National Security Training Commission in 1951 when this Commission was established to study the problems of military training. He has de-voted himself selflessly to the task ever since.

"The Commission proudly salutes General McLain's devotion to duty, his vision, his humanity. His life and his works will be an inspiration to all who follow him." [From the Pittsburgh Press of December 17, 1954]

GENERAL AND LAWYER

On the same day this week, two distinguished men died.

One, and probably the better known, was Arthur Garfield Hays, the New York lawyer. The other was Lt. Gen. Raymond S. McLain, an Oklahoma banker.

For more than 30 years, Mr. Hays had been general counsel for the Civil Libertics Union. In this capacity, he had represented, for free, hundreds of persons in cases involving constitutional liberties.

Mr. Hays led a double life in the law. made (from fees) and spent several fortunes as attorney for Wall Street corporations and wealthy clients. But he devoted most of his efforts to the feeless cases of those whose rights he thought were being infringed upon.

He was, as he said, a nut on the Bill of Rights. The politics, backgrounds, opinions, or alleged offenses of these nonpaying clients were not so important as the question of whether they were getting a fair shake. Mr. Hays' career was born of a detest for intolerance and censorship and faith in the right of dissent.

General McLain was the first National Guard officer ever appointed brigadier general of permanent rank in the Regular Army, the first civilian soldier to be given battle-field command of a corps. He is the general who might have captured Berlin, except for orders from the top to stop.

But he also was an effective advocate of a system of universal military training, and had been since 1912, in his belief that service and sacrifice were the responsibility of all,

not just some.

The thing about these men is that, despite bountiful success in their personal vocations, they had the mettle and the devotion to give their time and talents to the causes which were at the heart of their convictions. Of such does our country grow strong and

Participation of United States Marine Band in Commemoration of the Victory at Yorktown

> EXTENSION OF REMARKS OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES Thursday, January 6, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Newport News-Hampton-Warwick Daily Press, in regard to the commemoration, on October 19 last, of the American victory at the battle of Yorktown. The headline of the article is "Marine Corps Band Steals Show in 3-Hour Ceremony."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARINE CORPS BAND STEALS SHOW IN 3-HOUR CEREMONY

Yorktown, October 19.—With a flare of drumsticks and blare of bugies the trim, blue-uniformed Marine Corps musicians be-came the "show stealers" during a 3-hour tribute commemorating American victory in

the Revolution here today.

The 35-man corps, led by M. Sgt. W. O. Nickell, had a well-rehearsed selection of

French martial airs including the French national Fe-File and French Foreign Legion airs. Another tune, oddly enough, had a title, "Downfall of Paris."

They waited patiently for their Com-mandant, Gen. Lemuel Shepherd, to arrive by police escort at the French grave site, 3

miles below Yorktown.

Asked if he was used to playing for the Marine chief, one youthful bugler replied: "Sure, this is old stuff for us."

Later, when the same Marine snapped to rigid attention as the famed general passed, the mouthpiece dropped from his bugle.

This was, without a doubt, the most widely

covered Yorktown Day in history.
On hand, not to mention a battery of Tidewater news and cameramen from both the civilian and military, was Robert Franc-special events officer for the French division Voice of America.

Franc captured most of the speaking and musical program on wire records. It will be played, via short wave, and picked up by the French National Network Saturday. wearing Washington correspondents for the Paris "Figaro" and the French News Agency were Nicolas Chatelain and George Wolff, respectively.

SPECIAL DINNER

The midday program included the long-awaited cornbread and bean dinner on the site where Rochambeau's 4,000-man army dined Surrender Day on the same date 173 years ago.

The food was prepared and a mobile kitchen supplied and manned by members of the 32d Truck Company of Fort Eustis under Lt. Col. Robert Smoak and Capt. Richard

Bergstrom.

Bonnet had expected difficulty managing his American field mess gear, but seemed to enjoy the novelty of it.

General Shepherd, next in the line of honor guests at this unique luncheon, grumbled good-naturedly for "some of that cornbread." bread.

Behind Shepherd was Rear Adm. B. Austin, commander of Cruiser Division Two from the USS Roanoke. It was an unusual array of service brass to be seen in a mess

The advance notices said the menu would consist of bread, beans, and coffee. Fort Eustis cooks, however, sent along a tray of cheese and a tub of lettuce to round out the meal.

In the line of parade were the Marine musicians, playing Semper Fidelis and the Marine Hymn as they approached the re-viewing stand on Main Street; two companies of naval and Marine personnel from the Naval Mine Depot here, and two units of soldiers from the 744th Transportation Com-

pany, Port Eustis.

The entire parade was marshalled by Lieutenant Colonel Lipot, commanding officer of the Marine Detachment at the Naval Mine Depot-followed by an eight-man color guard of depot marines in modern and both French and Colonial period uniforms.

NAVY BAND

After assembly call by a Marine bugler at the monument, the colors were brought forward. At this point the Navy's Cruiser Division Two band from the Roanoke struck up the national anthem and Marseillaise.

A trumpeter played church call before the Reverend Arbrose Brown, retired Episcopal Bishop of Southern Virginia, pronounced invocation.

Charles Parmer, Rochambeau Commission chairman, introduced State Senator John A. K. Donavan, of Falls Church-chief proponent of Rochambeau legislation in the Virginia General Assembly.

Colors were retired and the benediction

given by the Reverend Chester P. Michael,

of Williamsburg.

The Navy had a "walkle-talkle" system in use to coordinate developments at the mon-

5-7-

ument with crews at a 3-inch salute gun on CBS Makes Education Grants in Name of the Roanoke.

As the band sounded the last note of Marseillaise a Roanoke crewman, with a radio strapped to his back, barked the order to commence fire into his phone set. seconds later the first puff of smoke belched from the cruiser lying below the cliff.

His code signal for communication with his ship was "George"—as in Washington.

PERENNIAL VISITOR

A perennial Yorktown visitor who returned today was Mrs. John Hubbard, of New York-the lone American woman to wear the French Commander ribbon-a Legion of Merit degree awarded for outstanding service to France. She was given the decoration during 17 years in various activi-

Members of the Rochambeau group attending were Glen Mower, of Pennsylvania; Mrs. Granville Gray Valentine, president of the Colonial Dames of Virginia; Major General Charles Landon, of Alexandria, and Mrs. R. M. Reese, commission historian of Alexandria.

Other guests: Mrs. John P. Harrison, chairman of the Sarah Constant Chapter of Colonial Dames on the Peninsula; Mrs. Logan Billingsley from Connecticut; Mr. and Mrs. Stuart Jackson, of the Friends of Lafayette; Col. Catesby A. Jones; George Waller Blow, 3 Society of the Cincinnati; Col. S. S. Ballentine, commanding officer of Marine Barracks, Portsmouth Navy Yard; Capt. A. T. Walker, commanding officer of the Naval Mine Depot; Col. T. B. Tufte, chief of staff to Maj. Gen. Frank S. Besson at Fort Eustis; Mr. and Mrs. Henry Harrison De Frise; Jean Baube, aide to Bonnett and members of the Yorktown Day Association.

Establishment by Columbia Broadcasting System, Inc., of a Foundation To Make Grants to Educational Institutions

EXTENSION OF REMARKS OF

HON, J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES Thursday, January 6, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an announcement by the Columbia Broadcasting System, Inc., of the establishment of a foundation which will make grants to the educational institutions from which the executive personnel have graduated.

I have long felt that the business institutions in this country should recognize the responsibility to their colleges, and I am pleased to note that CBS has originated a practical way to put the idea into effect. I sincerely hope that other business leaders in this country will follow this example.

In this connection, I should like to request also that following the announcement there be printed in the RECORD an editorial appearing in the New York Herald Tribune for December 28, 1954, commenting favorably on the establishment of the CBS Foundation.

There being no objection, the announcement and editorial were ordered to be printed in the RECORD, as follows: KEY PERSONNEL—CBS FOUNDATION GIFTS RECOGNIZE JOB PERFORMANCE OF EXECU-TIVE STAFF

A plan of making financial contributions to privately supported colleges and universities from which key CBS executive personnel have been graduated was announced today by CBS Foundation, Inc., the agency for making charitable and educational grants on behalf of Columbia Broadcasting System, Inc., and its divisions.

A total of 14 colleges and universities are included in the first-year grants, which are being made on behalf of 16 CBS executives. The group was selected solely on objective standards which do not involve any appraisal or evaluation. The formula used foundation is not to be made public includes minimum service of 30 months on a continuous basis and promotion to or beyond a specified level of responsibility. Graduation from an accredited privately endowed educational institution is also required.

The 16 executives in the first group under the CBS plan are drawn from two classifications, those who met the standards in 1953 and those who had met the same standards prior to 1953. Not all of the CBS executives who had qualified prior to 1953 could be included in the first-year group, and their individual names and their colleges and universities will be announced in succeeding years on a seniority schedule.

Consultants in the foundation and educational field said they believed this type of plan on a general basis is unique in the history of financial aid to higher education by

business and industry in this country.
CBS Foundation will not confine itself to this one approach to giving to educational institutions, though it intends to follow its formula as its primary method of general aid to education.

The foundation's decision to limit its performance grants to privately endowed institutions was based in part on the support CBS already gives to publicly supported colleges and universities through taxes at its various locations throughout the country, and in part because of the special problem and privately endowed universities are recognized to have as a result of their almost complete dependence on private funds. If this plan were applicable to State, municipal or public institutions, three such institutions would also have been included in the first-year grants.

"In adopting this plan the CBS Foundation is attempting to do more than express CBS's appreciation to the institutions from which key executive personnel have been graduated," Dr. Frank Stanton, president of CBS, Inc., and a member of the board of CBS Foundation, said. "We believe it is a way of demonstrating our belief in, and support of, the American system of privately endowed higher education. These colleges and universities all across the land need support from private sources, from individuals, and companies and foundations, if they are to continue to produce the informed and trained citizens on which our political and industrial democracy depends.

"These institutions have a special financial problem which separates them from the taxsupported State and other public institutions, which likewise play a most significant and vital role in our educational system. But because of the different basis of support on which our privately endowed institutions depend, we are concentrating our contributions in this area to help assure the continued service of these institutions to our national life as well as to our business and professional needs."

Members of the board of CBS Foundation, Inc., are all directors of Columbia Broad-casting System, Inc. Besides Dr. Stanton, they are: J. A. W. Iglehart, a partner in W. E. Hutton & Co., and president of CBS Foundation, Inc.; Ralph F. Colin, member Rosenman, Goldmark, Colin & Kaye; Dr. Leon Levy, of Philadelphia; and Robert A. Lovett, general partner in Brown Bros., Harriman & Co., and former Secretary of Defense.

The 1954 contributions under the new plan go to five colleges and universities on behalf of executive employees who met the requirements during 1953. In addition, nine other institutions were included because of executive employees who met the standards in earlier years. The recipient colleges and universities and the CBS employees on whose behalf contributions are being made (with the year in which each joined the company)

Brown University: Hubbell Robinson, Jr., vice president in change of network pro-

grams, CBS Television (1947).

Columbia College: Louis Hausman, vice

Columbia College. 10413 president, CBS-Columbia (1940).

WCBS sales manager (1937).

Dartmouth College: Harry S. Ackerman, vice president in charge of network pro-grams—Hollywood, CBS Television 1948; and James B. Conkling, president, Columbia Records (1951).

Denison University: John Hundley, manager of CBS Television Program Service, (1938).

Duke University: George Klayer, Chicago sales manager, CBS Television (1946). College of the Holy Cross: Daniel T.

O'Shea, vice president, CBS, Inc. (1950).

University of Kansas City: Edward P. Shurick, director of station relations, CBS

Television (1950).

Knox College: J. Kelly Smith, administrative vice president, CBS Radio (1931).

New York University: Norman A. Adler, general attorney Columbia Records (1951). Ohio Wesleyan University: Dr. Frank Stanton, president, CBS, Inc. (1935).

University of Pennsylvania: William S. Paley, chairman of the board, CBS, Inc. (1928); and James M. Seward, administrative vice president, CBS Radio (1933).

Princeton University: Adrian Murphy, president, CBS Radio (1936).

Wesleyan University: Harry Ommerle, director of programs, CBS Television (1950).

The grants are unrestricted as to use that the recipient institutions can if they wish apply them to general fund operating needs they consider most important.

Dr. Stanton said the experimental plan could be modified or expanded in future years, on the basis of experience with its actual operation. A sum of \$32,000 is provided in the first-year grants representing a contribution of \$2,000 on behalf of each of the 16 individuals. The sum, Dr. Stanton pointed out, approximates the extra "cost of education" which the college or university bore from endowment or other funds and which was "over and above the tuition and other fixed charges the individual was asked to pay at the time he was a student." the amount of each contribution under the foundation's pilot-plant plan is not large, Dr. Stanton said it was hoped the pattern of widespread support on the principle adopted would assist the fund-raising efforts of accredited privately endowed institutions in all parts of the country.

[From the New York Herald Tribune of December 28, 1954]

REPAYING THE COLLEGES

Industry has found many ways to help the country's privately supported colleges and universities; but none could seem hap-pler than that which has been put into effect by the CBS Foundation, Inc. As a kind of repayment to the colleges from which CBS executives are drawn, the foundation is offering to the alma maters of 14 of its officers a sum roughly equal to the difference between the tuition fees and the actual costs of the education which these men received. This sum is figured at \$2,000 per man. Originally the difference was made up out of endowments and scholarships.

One can imagine the satisfaction of the individual colleges on receiving such grants; and the gift is made the more delightful in that the graduates who have come to be CBS executives can rightly feel a share of pride. It would perhaps be too much to suggest that industry is only paying a due debt when it returns to the colleges these sums which have made their top men what they Yet there is a symbolic fitness in the deed: industry does owe much to the liberal arts colleges of the land. Without them, the sources of their growth, their inspiration, and their progress would run dry.

The plan is to be continued in other years. Perhaps it will also be taken up by other companies. Here is an occasion where imitation would not only be flattery but a real boon.

Woodrow Wilson's Legacy

EXTENSION OF REMARKS OF

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, January 6, 1955

Mr. CLEMENTS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Woodrow Wilson's Legacy, which was published in the St. Louis Post-Dispatch on December 29, 1954, as a reprint from the Manchester Guardian. together with an article by Bernard M. Baruch, which appeared in the January 2, 1955, edition of the New York Times.

There being no objection, the articles were ordered to be printed in the REC-ORD, as follows:

[From the St. Louis Post-Dispatch of December 29, 1954]

WOODROW WILSON'S LEGACY

World War I President was isolationist turned internationalist by history, Britton writes; not the best politican, he succeeded as prophet when Nation neglected him and League of Nations; it took America 20 years to catch up with Wilson's ideals.

MAX FREEDMAN IN THE MANCHESTER GUARDIAN, REPRINTED FROM THE BEDSIDE GUARDIAN, ANTHOLOGY OF WRITINGS AND CARTOONS PUB-LISHED IN LONDON AND EDITED BY IVOR BROWN

Today is the 98th anniversary of the birth of Woodrow Wilson, December 28, 1856. The following article was first printed in the Manchester Guardian on February 3, 1954:

"Thirty years ago today Woodrow Wilson died in Washington, It seemed as if his career had ended in tragedy.

"The country had turned against him in 1918 and chosen a Republican Congress; the Senate had refused to ratify the peace treaty; America had slumped into isolation, ignoble and indolent, symbolized by Warren Harding's election with a record majority. President Coolidge, in his first message to Congress, said that "The League of Nations is a closed incident."

"Yet the last word did not belong to the cynics and the scoffers. The second war came, as Wilson had foretold with tragio accuracy, and even before peace returned

the United States had taken the lead in trying to establish a new system of collective security, as he also had predicted with brave faith.

"From the grave his ideals ruled the future. Balfour, thinking of the mistakes of Versailles, said the League was born in sin and dedicated to sainthood. Perhaps so; but if Wilson failed as a politician he succeeded as a prophet.

There is one episode of his last phase on which Franklin Roosevelt liked to dwell. In 1920 Roosevelt was the Vice Presidential candidate on the Democratic ticket, with Governor Cox, of Ohio, as Presidential nominee.

"The party strategists warned them with cruel iteration they would be crushed if they continued to outrage the temper of the country by their vain defense of the [League] Covenant. Finally the two candidates went to the White House to consult with the President.

"Wilson, crippled by the stroke from which he never recovered, was wheeled in, and with unforgettable grace thanked his two friends for risking their careers by refusing to quit the standard of honor even under the pressure of vindictive prejudice. * * * So, with honor, they met inevitable defeat at the hands of Harding.

"Years passed, and Roosevelt, now President, took up Wilson's interrupted tasks. Both parties, amid public acclaim, supported the United Nations. Isolationism was dead

"When Mr. Truman in 1950 pondered the aggression in Korea his chief adviser was Mr. Acheson. Now Mr. Acheson had once been secretary to Mr. Justice Brandels, appointed to the Supreme Court by Wilson over unprecedented protests from the leaders of the American bar, who hated Brandeis' radical opinions. Mr. Acheson derived his faith in collective security not only from his knowledge of America's need but from his admiration for Wilson.

The members of the free world, amid the harsh quarrels of the Korean war, had reason to be thankful for his unshaken faith in

collective action.

"Mr. Stevenson proudly walks today in Wilson's tradition, and President Eisenhower is at his best in defending America's partnership in the great enterprise to save the peace of the world by united strength and wisdom. Was not Wilson correct in what he told a friend just before his death?

"'I am not sorry,' he said, 'that I broke down. As it is coming now, the American people are thinking their way through, and reaching their own decision, and that is the better way for it to come.'

"Could a more adroit politician have reduced the period of waiting? The short answer is that Wilson was not Roosevelt, and Lodge was not Vandenberg.

"A deeper answer-and the one which explains the true significance of Wilson's career-is that Wilson was a supreme isolationist with a genius for repentance. he resented the war as a savage interruption to his social reforms. He knew little, and cared less, about Europe's quarrels.

"Only slowly did he come to see the moral Issues at the heart of the struggle. Then he led America into battle and tried in vain to lead her into a partnership for peace.

"The lonely man in the White House forgot how much he had learned in those tragic and tremendous years of the war. He thought the same lessons were stamped with equal clarity on the American mind. Years later he complained that America had betrayed the League because of 'a slump in idealism."

"That was only a fragment of the truth. American thinking had to catch up with his convictions. It took something like 20

[From the New York Times Magazine of January 2, 1955]

WILSON'S WORDS-WORDS FOR TODAY (By Bernard M. Baruch)

Like a mighty mountain, the figure of Woodrow Wilson, seen from the distance of a generation, is more impressive, more impos ing than ever, towering over his time and casting his shadow down through the years.

Almost a century has passed since he was born-three decades since he was laid to rest. The world has changed greatly since his day and, in many ways, regrettably, not at all. Perhaps in the thought and spirit of that singular man we can find the key to the problems, old and new, which confront us-and at the same time replenish our minds and hearts.

Woodrow Wilson offers us the rare example of the practical dreamer. He as much as any man in our history, epitomized the idealism upon which, for all our pragmatism and materialism, the American heritage rests. At the same time, he was endowed with a stern sense of realism.

Although more than half of Wilson's life was spent in the realm of scholarship, it was not confined to an ivory tower. As a student of government and politics, he was concerned not with the "abstract and occult," as he wrote, but with the "practical and suggesnot alone with the theory of government but with its actual operation, too. 1 was interested in affairs, not doctrines.

Thus he was equipped, when he assumed public office, with a knowledge and an understanding of government which few Chief Executives have possessed. He knew the real workings, potentialities, limitations of government-and of men. He knew that human affairs do not lend themselves to theories.

anairs do not tend themselves to make an animal momentum of the momentum of the library.

"Life is a very complex thing," he said.
"No theory I have ever heard will match its varied pattern, and the men who are dangerous are the men who are not content with understanding, but go on to propound theories * * * which will make a new pattern for society and a new model for the universe. Those are the men not to be trusted. cause although you steer by the North Star, when you have lost the bearings on your compass, you must nevertheless steer a pathway on the sea—you are not bound for the North Star."

Wilson indeed steered by the North Star, but his goal was not so distant. It lay always within the grasp of men if they would but extend themselves. Of a well-known theorizer who sought to remake the world, Wilson once wrote, "I know of no man who has more perverted the thinking of the world than Karl Marx."

Wilson's goal was a better America, a better world, not a perfect one. He knew that men might achieve much, but not perfection. And he knew that progress comes by slow stages, that you cannot throw off the habits of society immediately any more than you can throw off the habits of an individual immediately, "You cannot in human experience rush into the light," he wrote. "You have to go through the twilight into the broadening light of day before the noon comes up and the full sun is upon the landscape."

He sought ever after the warm sun of peace, freedom, and justice, and sought a place be-neath its rays for all men.

As Governor of New Jersey and as President, Wilson helped to clear away the rank growth of political inequality and economic and social injustice which was stifling American life, at the same time he prepared the ground for a new growth of opportunity and freedom, whose fruits we enjoy today. The freedom, whose fruits we enjoy today. best of contemporary American liberalism derives from him.

Despite the clamor raised against Wilson's program of tax, tariff, and electoral reforms, of restraints against monopoly and irresponsible business practice, of concessions to labor and aid to agriculture, there was nothing radical in it. Wilson did not seek change for the sake of change or ride "booted and spurred * * * the wild horses of reto win the applause of the multitude.

Indeed, as with every true liberal, there was a deep conservative instinct in him. His reforms were not intended to remake the American political and economic system but to conserve its essence. They were designed to strengthen it, to preserve it, to protect it (from itself, in many respects) by correcting and eliminating abuses which had grown up about it. He sought new means to pre-serve old ends. "The new freedom," as he serve old ends. "The new freedom," as he said, "was only the old revived and clothed in the unconquerable strength of America."

Wilson devoted his life to preserving, strengthening, and extending democracy. Democracy, he said, was the most difficult form of government, yet he knew that it was the best ever devised by the minds of men. He knew that to survive, it must constantly adapt itself to changing circumstances. If it remained static it must wither and decay, and die under the impact of forces, destructive and disorganized, which would spring "Liberty is not something that can be laid away in a document, a completed work," he wrote. "Democratic institutions are never done—they are like the living tissue, always a-making." always a-making.

The torch of liberty that burned so bright in Wilson made him a beason to which men and nations turned their eyes. Passionately as he was devoted to it, he knew that liberty was not an end in itself. Rather it was the catalyst which released human energies, the key which unlocked the door of opportunity and thus permitted men to achieve their potentialities. He knew, too, that liberty, unrestrained by disciple and responsibility, is anarchy. "Liberty," he said, "is not itself government. In the wrong hands—in hands unpracticed, undisciplined—it is incompatible with government."

The First World War transformed Wilson from an American leader into a world leader and he responded nobly to the challenge and the opportunity. Under his direction America mobilized all her resources of men, material, and spirit and threw them into the conflict. He was an inspiring war leader, but fought for peace, not military victory. And it is as a champion of international peace and order that his reputation is most luminous.

The concept of an international organization to enforce peace was not original with Wilson. For centuries men had proposed it. He was the first to translate the idea into a "What we seek," he said, "is the reign of law based on the consent of the governed and sustained by the organized opinion of mankind."

He knew that without such a reign of law civilization itself might crash in ruins in another outburst of lawlessness. In the debate in the United States over the League of Nations, he said: "I can predict with absolute certainty that, within another generation, there will be another world war if the nations of the world do not concert the method by which to prevent it." How true that Drophe that prophecy was we well know.

Wilson's quest for a reign of law among nations failed. But the failure was not his.
As the late Jan Christiaan Smuts said, the failure was humanity's. In the United States, partisanship, seifishness, and blindness prevented our joining the League and doomed it to failure. Without the force of American example and leadership other nations gave only lip service to the principles American example and leadership other na-tions gave only lip service to the principles of the League and pursued their separate ways which met finally in catastrophe. As Ray Stannard Baker said, in the League Wilson gave the nations of the world an instrument for expressing good will, but he could not give them good will.

Critics of Wilson have charged him with responsibility for America's failure to join the League of Nations. They argue that had he been less stubborn he would have compromised with his opponents and accepted half a loaf.

This characterization of Wilson as dogmatic and uncompromising is wholly inac-curate. He compromised often and without embarrassment. Compromise is the essence of democracy. No man can lead a nation who cannot reconcile divergent views. list of compromises he accepted in the Treaty of Versailles is long. But while he would compromise readily on detail, on method, on pace, he would not compromise on principle. And he was right.

The controversy over the treaty, in the last analysis, centered around article X which contained the pledge to preserve the terri-torial and political independence of all members of the League. This was the heart of the question. To abandon this article, as his opponents demanded, would have been to create a cardboard structure that would topple at the first thrust of an aggressor. The League, said Wilson, was the "indispensable instrumentality of peace." It was necessary to guarantee that peace. Article

X was the guaranty.

The very same issue confronts us today in the question of the control of atomic energy, disarmament, and peace. There must be a guaranty. Declarations of intent and good will are not enough. Agreements which fail to provide for direct and effective control of the atom and close supervision of disarmament are meaningless and worse,

incalculably dangerous.

To enter such agreements while abandoning the principle of international inspection and control would mean the dismemberment of our strength, while other nations, without our moral compunction, could maintain, behind the cloak of duplicity, the strength to destroy us. We cannot gamble with our survival. As Wilson refused to compromise on the essence of the League, we must stand fast on the principle of effective atomic control. In that case and this, half a loaf is not better than none. Wilson left the White House broken in

body, but not in spirit, his faith in men and in his own ideals untarnished. He did not live to see his somber prophecy fulfilled. But his principles were at last adopted. It is his spirit which animates the United Nations, and if we can recapture his spirit we can make that as yet imperfect instru-

ment succeed.

Woodrow Wilson will be an example and an inspiration to men as long as we admire greatness. Greatness, he once observed, is a word which we Americans use loosely. who deserves that accolade more than he? Gifted as few men are, the true source of his greatness lay not so much in his intellect, his eloquence, his courage, or in all the other qualities with which he was endowed. It lay in the fact that he devoted these qualities not to his own interest but to the interests of humanity.

We need men such as he; men devoted to democracy, who seek the sure road of progress while avoiding extremes; men who are ambitious to serve in government without serving themselves. We need men of courage and integrity, men who love hu-manity but understand it. We need men with vision enough to see the mountaintop and ability enough to lead us there.

For that is our goal—the mountaintop where men may breathe the clear, pure air of freedom and peace and justice. We will not reach it unless we link our arms together and pull together up the long, hard slope. Even if we ourselves do not reach that summit, we will, at least, have marked the way for others.

"All through the centuries," wrote Wilson, "there has been this slow, painful struggle forward, forward, up, up, a little at a time, along the entire incline, the interminable way. What difference does it make if we do not reach the uplands? We have given our lives to the enterprise, and that is richer and the moral is greater."

The Dixon-Yates Contract Hearings

EXTENSION OF REMARKS

HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Thursday, January 6, 1955

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Dixon-Yates Hearings End; Court Fight Likely," written by the brilliant young reporter, Charles Bartlett, and published in a recent issue of the Chattanooga times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DIXON-YATES HEARINGS END; COURT FIGHT LIKELY

(By Charles Bartlett)

Washington, December 25 .- The five members of the Securities and Exchange Commission closed their hearings on the Dixon-Yates contract this week without providing any concrete clue to their reaction to this political hot potato.

The 3 Republicans and 2 Democrats who sit on this quasi-judicial body made it clear only in the 13 days of hearings that they recognize their decision in this matter as a very important test of their abilities that cannot be handled lightly. Each of the five was in constant attendance through every minute of the long sessions and a staff of at least 8 other commission lawyers was maintained in the room for every word of the testimony.

Private lawyers in Washington who are accustomed to obtaining easy access and fast action from the SEC for their clients have been disturbed to find that very little is being done there these days that is not connected with Dixon-Yates. Companies anxious to make stock issues before the end of the year have been crying aloud with little prospect of relief.

SENSITIVE TO INTEREST

The Commission is clearly sensitive to the newspaper interest in their deliberations on these matters and to its own evolution from the financial to the front pages. A pressroom was created for the hearings and the 8 or 10 reporters who covered the sessions were accorded conveniences normally restricted to sportswriters.

A quasi-judicial commission is a curious arm of the Federal Government in that it cannot deal in the give-and-take area of politics and yet does not enjoy the lofty sanctity of the judiciary. The Commission is responsible to its own integrity and to possible review by the courts and members must face the necessity of reappointment by the politicians at 5-year inter-vals. Membership is not for most Commissioners and staff members an end in itself but in most cases a stepping stone either to higher political office or business preferment.

In the earlier chapters of the contract controversy, some of the less sophisticated of the public power group were shocked by evidences that the utility lawyers deal on a highly informal basis in all but the most formal aspects of the Commission's normal activities and there was much dark muttering that this was no body to make an honest decision on this matter. Some of these people would probably have been shocked if they had heard Edgar Dixon, president of Middle South Utilities, Inc., turn to SEC Chairman Ralph Demmier as they both walked out of the final session on Tuesday and say, "I've been very pleased, Ralph, by the way these hearings have been handled."

However this familiarity between the

However this familiarity between the judge and the judged is a natural outgrowth of the Commission system with its specialization and tremendous amount of detail that required long and informal deliberations between the Government and the applicant. Every specialist lawyer in Washington of any stature is familiar with the top individuals in the commissions with which he deals and these relationships are not only natural but generally beneficial if the men involved are decent. The fact that the SEC Commissioners are friendly with the utility people, with whom, after all, they have constant dealings, should not, in itself, prejudice their ability to make an impartial determination.

It is true, however, that three of the Commissioners, Chairman Demmler, J. S. Armstrong, and A. J. Goodwin, were selected by the Eisenhower administration from strong business backgrounds. Demmler and Armstrong were corporation lawyers in Pittsburgh and Chicago and Goodwin was a banker from Anniston, Ala. The two Truman appointees who remain on the Board, Paul Rowen and Clarence Adams, were in contrast appointed from the field of government.

It is further true that all three of the Eisenhower appointments were made on the initial recommendation of George Humphrey, the Secretary of the Treasury. This fact would seem to provide any assurance that might be needed that none of the three are blind to the interest of the business world.

There has been some talk of the fact that Goodwin's appointment had to be cleared through the Alabama Republican chairman, Claude Vardaman, who works for the Alabama Power Co. Research has disclosed, however, that Vardaman had no voice in the selection and that the two met only briefly just before the President sent the nomination up to the Senate. Goodwin is an Eisenhower Democrat.

Demmler spoke for the Commission in every instance during the hearings and while the body has not yet ruled on a number of the efforts by the contract's opponents to extend the consideration of the case, Demmler's motions showed a definite inclination to restrict that consideration to exclude some of the aspects of public interest that have been included in the political debate on the contract. While the Holding Company Act forbids utility acquisitions that may be detrimental to the interest of consumers, the hearings closed with no indication whether the interest of the TVA consumers is to be considered pertinent to the decision.

The SEC decision in the valley's interest in the contract will be an important one because the act specifically provides that the Commission must find that a utility acquisition serves the public by tending toward the economical and efficient development of an ingrated public-utility system. If the TVA system is not to be considered, the only hope for the contract's opponents will lie in the remote chance that the SEC may decide that the contract will tend toward interlocking relations or a concentration of control of private utility companies.

The circumstances of the Commission and of the hearings suggest strongly that the real hope for the opponents of the Dixon-Yates contract will lie in an ultimate court review of the matter rather than in the pending decision of the SEC.

The Farm Cooperative Movement

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Thursday, January 6, 1955

Mr. WILEY. Mr. President, in the current issue of Cooperative Digest, the national magazine of farm business, there appeared a splendid article portraying the tremendous extent to which the fine farm cooperative movement has taken hold in our country.

The co-ops have become an indispensable part of the American scene, particularly in serving the needs of United States agriculture. My own State, I am glad to say, is one of the strongest co-op States in the Union, particularly with respect to its great dairy industry.

Co-op organizations at Federal, State, and local level have become invaluable aids to farmer and consumer alike. I refer in particular at the national level to the National Council of Farmer Co-operatives, to the Cooperative League of the U. S. A., the American Institute of Cooperation, the National Milk Producers Federation, the National Rural Electric Cooperative Association, the National Livestock Producers Association, and other important groups.

I send to the desk the text of the article in the Cooperative Digest, preceded by a series of inspiring quotations from comments by the President of the United States in praise of the co-op movements. I ask unanimous consent that this material be printed in the Appendix of the Record.

There being no objection, the comments and article were ordered to be printed in the RECORD, as follows:

EISENHOWER SPEAKS—PRESIDENT'S POSITION ON FARM COOPERATIVES

In statement and action, President Dwight D. Elsenhower has given his approval of farm cooperatives. He has indicated his support of the principle of bona fide farmerowned, farmer-operated cooperatives. The following statements indicate the President's and the administration's position on farm cooperatives.

"We must always be concerned with strengthening farmer cooperatives, which have done so much to build progressive farming areas, up-to-date farm-to-market roads, rural electrification, and phone service." (Kasson, Minn.)

"Cooperation is the means by which freemen solve problems or tackle jobs too big for the individual. Farmer cooperatives are an essential device for maintaining the independent family farm. We will not let them be endangered. We shall aid farmers to strengthen their own institutions.

"Another farm program in which we must increase farmer participation and control is that of the Farm Credit Administration.

* * * A Federal Farm Credit Board, elected by farmer-members, should be established to form credit policies, select executive officers, and to see that sound credit operations will not be endangered by partisan political influences.

"For the record I should like to emphasize certain facts. During the past year, the progress of the Rural Electric Administration has been exceptional. The administration considers these REA programs great advances for rural America; they have made our farms more productive; they have greatly enriched the lives of our country's economy."

Since the above statements have been made, the 83d Congress authorized the establishment of the Farm Cooperative Service as a separate and vital agency in the Department of Agriculture. And at the same time, this Congress gave independence to the Farm Credit Administration and provided for eventual control by the farmers themselves.

WHAT ARE TRUE FARM COOPERATIVES?

Since the establishment of man's society—community life—the need for and essence of cooperation has been readily understood. As man has progressed along the path of civilization his society living has become more complex and the subsequent need for coperation has increased proportionately to his progress. Consequently, today, there is no phase of modern living regardless of how simple or how complex that is not dependent on cooperation.

Thus it appears only natural and quite logical to refer to that organizing of the farmer society within a civilization for the purpose of doing together what cannot be done as individuals as the cooperative movement. And the divisions within the movement, which are determined by the various types of farming and farmers' needs as cooperatives.

FIRST CO-OP MET IN 1811

In the community—using the term loosely—referred to by foreigners and by one-hundred-and-sixty-million-odd natives as the United States of America, the cooperative movement got its earliest recorded start among America's farmers when a cooperative, generally referred to as co-op, was organized in Missouri in 1811.

Thus created on the heels of a revolution, which was fought to answer needs of a society in general, the first American farmers' cooperative was organized to meet the needs of a specific group within the general framework of American civilization.

More co-ops were formed as the need arose with the expanding new country and its ever-complicating society. In 1913 the United States Department of Agriculture estimated there were a little more than 3,000 farmer cooperatives with about 650,000 farm members.

Post-World War I era co-op boom

Despite their rapid growth in numbers, farm cooperatives did not begin to affect the Nation's farm economy to any appreciable degree until after World War I. Only after the cessation of hostilities did the agricultural cooperatives gain strength as one unit which could and did influence the agricultural economy specifically and the national economy generally.

The "why" of this sudden growth influencewise may be seen in the fact that following the war the Nation's farmers were suddenly faced with a drastically reduced market. They had produced to "the sky's the limit" during the war years, but now were confronted with surpluses, no markets and an ever-increasing cost of production. Thus they turned as individuals to each other and as groups developed cooperatively.

1922 hails co-op magna carta

Legislatively they, farm cooperatives, made their greatest gain in 1922 when the late Senator Arthur Capper guided the magnet carta of farmer cooperatives—the Capper Volstead Act—through Congress. This less islation gave the Nation's farmers the goahead to increase the scope and operation of their cooperatives—their off-the-farm tool—

for it meant co-ops were no longer subject to the antitrust laws.

However, the vertical growth-in numbers-of co-ops reached its peak in 1925-26 when 10,800 cooperatives were recorded. This peak era marked the close of a 50-year period which represented the greatest growth curve in co-op history.

More members than farmers

Although vertical growth was deterred, cooperative horizontal growth has continued with a little more than 10,000 farmer co-ops today boasting a membership of more members-some 7.4 million-than there are farmers in America.1 This statistical contradiction is explained by duplication of membership.

Horizontal growth of the farmer cooperatives is also seen in a comparison of business done on a dollar-volume basis. In 1913 this amounted to about \$310 million, whereas today's farmer cooperative business totals some \$12 billion annually.

Co-ops go specialized

As the role and influence of the Nation's agricultural economy has changed drastically since the 1920's, so have the farmer-financed cooperative associations changed in their scope of activities. These changes have re-sulted in agriculture and cooperatives becoming specialized businesses respectively.

Specialization within the co-op field has resulted in three distinct types of cooperatives with which farmers are associated. First there are the marketing co-ops which market the commodities produced by their farmer-members. Purchasing or farm supply cooperatives are the second type of associa-tion and they handle the supplies needed for members' farm production.

Thirdly, there are the service cooperatives such as the artificial cattle breeding associations, rural electrification, and telephone co-ops and insurance mutuals.

Work outside specialty

The following statistics will give a general breakdown of the number of cooperatives, membership, and approximate annual dollar volume business within each of the three categories in which cooperatives operate. However, it should be understood that some marketing cooperatives are also engaged in purchasing and the converse may be true of the purchasing and service associations. In other words a cooperative may be classified as one type but do business in more than one category.

Consequently total figures will not necessarily reflect exact amounts or numbers in some cases because of the duplication of operation factor. An example of this type of differentiation is found in the fact that there are some 3,300 purchasing cooperatives listed as such, but almost 7,500 associations are carrying on purchasing operations at the present time.

MARKETING COOPERATIVES

Today, there are more than 7,000 cooperatives engaged in marketing which do a volume business of \$9.25 billion annually. However, the readjustment figure, necessary because of duplication, indicates that some 6.500 specifically designated marketing cooperatives do a gross business volume of almost \$7.5 billion annually for more than a multiple \$7.5 billion annually for more than million farmer-members.

Some of the principal categories in which marketing cooperatives function are as

Cotton and cotton products co-ops

Approximately 550 cotton cooperatives, with a membership of some 380,000 members do an annual more than do an annual business volume of more than \$375 million. However, total cotton and cotton products operations carried on by nearly 570 cooperations. 570 cooperatives amount to more than \$435 Although their principal function is handling loan cotton, these associations have broadened their service to farmers by handling farm supplies, warehousing, compressing cotton, and processing cottonseed.

Dairy products cooperatives

Dairy marketing carried on by all cooperatives grossed nearly \$2.6 billion annually with 90 percent of this sum being netted by bona fide dairy associations-nearly 2,000for more than 825,000 members.

Dairy co-op functions are divided into three phases. Some handle fluid milk, some engage in manufacturing dairy products, and a third group merchandises the finished product.

Three-fourths of all the milk sold under Federal marketing orders-which is about one-fourth of United States market milkis handled by fluid milk cooperatives. Dairy associations handle about two-fifths of the butter, one-sixth of the cheese, more than one-half of the nonfat dry-milk solids and about one-tenth of the evaporated milk produced in this country.

Next to the grain co-ops, dairy cooperatives do the largest volume of marketing business for farmers.

Grain cooperatives

The largest single type cooperative is represented by the grain co-ops. Currently they number about 2,200 representing 900,000 members. Their total annual business volume grosses around \$2.3 billion with a \$2.5 billion volume being done by all cooperatives handling grain.

The dominant grain associations handle not only grain, but dry beans—including soybeans and soybean products—and rice. Their principal functions are to handle, merchandise, and provide storage space for all The latter function explains types of grains. the increase in the number of country elevators, new grain terminals and addition of more storage facilities at most grain handling points.

Livestock cooperatives

Today, nearly 550 cooperatives devoted basically to livestock and livestock marketing functions do an annual business of approximately \$1.75 billion for some 900,000 members which represents about 98 percent of the total livestock marketing done by all cooperatives.

The principal functions of these cooperatives are shipping, auctions, sales, meat packing, locker plants with slaughtering and processing facilities and research. primary objective is to provide producers with more satisfactory markets for their livestock and to carry such products closer to the customer.

Nut cooperatives

There are approximately 40 nut cooperatives serving a membership of more than 43,000 farmers which market gross \$126 million in nuts-including tree and peanutsyearly. This dollar volume figure represents about 98 percent of the total nut market transacted by about 75 associations.

Principal nuts handled are walnuts, almonds, pecans, and peanuts. Nut associa-tions are located in the South and on the west coast. Today's nut marketing finds the nut cooperative utilizing the latest merchandising techniques in carrying their members' product all the way to the consumer. A few are engaged in processing peanut butter and peanut oil.

Poultry and poultry-products co-ops

Only about 18 percent of the cooperatives marketing poultry products, according to latest tabulations, are classified poultryproducts marketing associations. A total gross sales of more than \$350 million is indicated annually for this market with the recognized associations—about 140—doing more than \$225 million worth of this volume.

Poultry cooperatives first specialized in eggs, which still make up the bulk of the business volume in this field, but they are now building volume in handling large quantities of chickens, turkeys, ducks, and other fowls, as well as providing chick-handling services.

Poultry co-ops are strongest in the West. but the broiler business has seen the advent of thriving cooperatives in the East.

Fruit and vegetable cooperatives

Slightly more than 800 fruit and vegetable cooperatives do a yearly gross business vol-ume of approximately \$900 million for some 138,000 members. This dollar figure represents better than 99 percent of the total fruit and vegetable business carried on by all cooperatives.

Fruit and vegetable associations are credited as being pioneers in their respective industries-in nationwide sales service, trade names, grading, processing, and merchandising.

They are continuing to pioneer in developing new food products, particularly in the juice-concentrate fields and in prepackaging.

Tobacco cooperatives

Twenty-nine tobacco cooperatives, handling the product of more than 700,000 members, do an annual gross business volume of approximately \$173 million. The business of these associations is reported as predominantly tobacco with no interassociation business-other co-ops in tobacco as a sidelinecontracted.

Tobacco cooperatives engage in sales-promotion programs, facility expansion, and in the development of new uses of tobacco.

Wool and mohair cooperatives

Latest reports indicate that there are more than 100 wool and mohair cooperatives in the Nation doing about \$40 million worth of business annually for almost 100,000

They have provided woolgrowers with substantial benefits from freight-rate reductions, expansion of existing storage-intransit privileges, changes in trap-car services, and absorption of switching charges.

Two hundred other marketing cooperatives

Marketing cooperatives falling into other categories which have not been discussed number about 200 and do an annual business of approximately \$340 million gross for some 77,000 members.

These categories include beans and peas co-ops, rice, sugar products (including sugar beets), forest products, and other miscellaneous associations.

Also included are those handling several types of commodities or furnishing special marketing or related services.

PURCHASING COOPERATIVES

Almost 7,500 cooperatives purchase supplies annually which gross some \$2.8 billion in sales. However, "legitimate" purchasing co-ops, of which there are about 3,300, gross \$2.2 billion of this amount in carrying out. their primary function for over 3 million farmer-members.

The \$2 billion plus gross sales is transacted by three types of purchasing cooperatives. They are the large regional associations or federated type, the local associations, and those which are called purchasing and marketing.

Feed \$1 billion item

These cooperatives supply their farmerpatrons with more than 5,000 different commodities. The largest single item is feed. of which a gross volume of over \$1 billion is realized yearly. This volume-in tons, 7 million-is attributed to some 4,000 co-ops which handle feed. However, over \$800 million is grossed on feed by approximately 1,800

purchasing co-ops alone.

Petroleum products, which have of late taken precedence over fertilizer, rank as second largest volume item handled by pur-

¹ The 1950 Census lists some 5.3 million farmers in the United States.

chasing co-ops-or some 20 percent of all the petroleum products used on American farms. Pertilizer annual gross volume sales now run close to \$300 million.

Other volume products

Other large volume items are seed, insecticides, dusts and spray materials, bags, machinery, automotive supplies, tools, electrical equipment, household appliances, livestock remedies, foodstuffs, coal, paints, roofing, barn equipment, farm implements, and machinery and building materials.

SERVICE COOPERATIVES

Although there are only a few more than 250 service cooperatives listed as such, latest tabulations indicate that over 4,000 associations are performing functions which may be classified in the services category.

Total receipts for all cooperatives perform ing service functions total more than \$114 million annually on the gross side of the Contributing the largest rate to this volume figure is ginning services performed by slightly more than 500 co-ops at a gross annual volume of about \$21 million. packing and picking, rice and rice drying, and livestock trucking services contributed substantially in the order listed to the total service gross volume figure.

Operations numerous

Other services performed by service co-ops and other associations performing operations in this category include drying grain, fruits, eggs, and milk; handling loan papers; repairmachinery; and other miscellaneous services.

The McCarran-Walter Immigration and Naturalization Act

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, January 6, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine column on the McCarran-Walter Act and our immigration and naturalization policies, which was published in the Post-Star of Glens Falls, N. Y. The column was written by the Honorable Nathaniel P. Davis, who had a brilliant career as a Foreign Service officer and American diplomat, and who is now making his mark in upstate New York as a civic leader and as a commentator on affairs local, State, and national.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEN SKETCHES

(By Nathaniel P. Davis)

One of the most important, most intricate, and at the same time most controversial acts of the 82d Congress was the McCarran-Walter immigration and naturalization law. ceived as a modernization and streamlining of a hodgepodge of laws dealing piecemeal with various aspects of immigration, it finally emerged from long and bitter debate, and surmounted a veto by President Truman, just about the time the 1952 campaign was getting under way. Both Mr. Eisenhower and Mr. Stevenson criticized some features of the act and promised remedial action if elected; and in at least one message President Eisenhower has recommended amendments, but so far nothing has been done.

Criticism of the law falls into two main categories: The first is that it continues the system of restricting immigration on the basis of national origins. That is a matter of policy and can be argued for or against with good conscience. The second is that it denies to foreigners, immigrants and temporary visitors alike, the equal protection of the laws and treats them as "some kind of second-class human beings not entitled to the normal amenities of a civilized social (The quotation is from a recently published statement by our own attorney general-elect, Mr. Javits.) That is a matter of morality and in my opinion is indefensible.

Section 242, for example, authorizes the Attorney General of the United States to arrange for appropriate places of detention" for aliens who for one reason or another have not been cleared for admission by the time their vessel docks. With the decrease in immigration to this country and the extension of pre-examination procedures by immigration inspectors stationed abroad and on board the larger liners, Ellis Island has been little used of late and recently it was

closed as an immigration station.

In carrying out his obligation to provide an appropriate place to house immigrants and visitors awaiting final clearance the best thing Mr. Brownell could think up was to lodge them in the Westchester County fail. What a greeting for foreign visitors to the land of the free and the home of the brave. It is one thing to jail a man who has been ordered deported upon conviction of some violation of the immigration laws, or who is being held for trial on legally filed charges of violation or attempted violation. It is quite another thing to imprison him while the complicated and sometimes time-consuming administrative procedures under our immigration laws pursue their normal course; and it is a matter of record that most of the immigrants and temporary visitors denied admission in recent years have been held up for technical and administrative reasons and that few of them have been excluded on final review of their cases. To lock such persons in jail on the mere say-so of an immigration inspector without the filing of criminal charges and without recourse to bail is scarcely in accord with our traditions.

This action by the Attorney General, which the McCarran-Walter Act authorizes, raised a storm of protest in letters to the New York Times, and in two editorials in that news-Whether or not in deference to those protests, the Department of Justice announced a few days ago that it had rescinded the order to hold detained aliens in jail, and that they will henceforth be housed in a hotel. That is all to the good, but it should not be forgotten that in issuing the order as well as in rescinding it the Attorney General was acting within the absolute discretion conferred on him by law. The incident is a heartening demonstration of the power of public opinion; but it also demonstrates the un-American quality of a law which permits human beings—any human beings—to be thrown into jail at the discretion of an administrative officer.

American Jews are now celebrating the 300th anniversary of the founding of the first Jewish community in this country. a short time in the long history of Jewry, but it goes back to the days before the United States was born. I am not aware that the arrival of those immigrants attracted any particular attention at the time or that there were any Dutch immigrration officials in New Amsterdam to go over their papers and with authority to put them in Jali while they did But the English colony of Massachusetts had a restrictive immigration law, forbidding the entry of Quakers on pain of death. Just about the time the first Jews were entering New York a group of Quakers entered Boston. They were imprisoned and four of them were hanged. It may be argued that they got no more than they asked for since they knowingly entered the colony in violation of law.

Be that as it may, the treatment accorded them was harsh, to say the least, by any modern standard of decency. We have progressed a little bit since then. We no longer hang illegal immigrants; we imprison and then deport them after conviction by due process of law. But in this supposedly enlightened day we are closer to our Massa-chusetts forebears than to the New Amsterdam Dutch when we pass laws empowering officials of the executive branch to imprison those who are applying for admission, who are not charged with any crime, with no right to ball and no recourse to habeas

Many people, even among those who favor the tightest kind of restriction on immigration, feel that there are other provisions of the McCarran-Walter Act which are widely at variance with American concepts of fairness and standards of decency. Since the President has already urged amendments to remove what he has called discriminations and injustices it is to be hoped that he will again bring the matter up in his state of the Union message next month. And the Congress could do a lot worse than demonstrate its bipartisan approach to questions of national importance by doing something about it.

Right To Work Laws

EXTENSION OF REMARKS OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Right to Work Laws," written by Arthur J. Goldberg, general counsel, Congress of Industrial Organizations, and published in the Washington Post and Times Herald of Tuesday, January 4, 1955.

The article is as follows:

RIGHT TO WORK LAWS

In a letter published on December 28, 1954. former Congressman Fred A. Hartley attacked the Washington Post and Times Herald for supporting Secretary of Labor Mitchell's views on the so-called State right to work He accuses you of either calculated cynicism or a failure to understand the issue. The accusation is more properly made with respect to Mr. Hartley's letter, although failure of understanding may seem unlikely in the titular coauthor of the Taft-Hartley

The fact is that under the Taft-Hartley Act a union which is freely selected by secret ballot by a majority of employees in any unit is obliged by law to bargain for all of the employees, whether or not they are members. The benefits secured by the union must, under the law, be given to all of the employees. When a union asks an employernot the Government—to agree voluntarily to a union shop it asks only that all of those who are legally entitled to the benefits secured by the union pay their share of the cost of securing those benefits.

This does not mean union monopoly. Only a union which has been selected by a majority of the employees is permitted by law to negotiate for a union shop provision. And the majority of the employees have the right, under the law, to select another union or no union by secret ballot at appropriate times, and, indeed, to revoke at any time the union's authority to negotiate for a union

showing equal lack of understanding is Mr. Hartley's comment that members can be expelled from unions "at the whim of union officials" and that, therefore, their livelihood is endangered if a union-shop agreement is in effect. Members cannot be so expelled, but, even if they could be, their livelihood would not be endangered because the law provides that under a union-shop agreement only failure to pay dues can be a ground for discharge or other discipline.

Mr. Hartley says that the repeal or nullification of the State laws would throw the weight of the Federal Government on the side of union compulsion. To the contrary, the present Taft-Hartley Act throws the weight of the Federal Government against unions. It permits the 17 or so States which forbid the union shop to enforce their laws but it prevents unions from negotiating for a closed or preferential stop in the 30 States which approve of such agreements. The present Federal law thus permits States to enforce laws which restrict union security more than the Federal law but prevents them from enforcing laws which are more liberal than the Federal law.

Finally, Mr. Hartley commends to the Post and Times Herald the comments of Mr. Justice Brandels against the closed shop. It is unfortunate that he did not quote all of what the late Justice said on the subject. Justice Brandels opposed the closed shop be-cause he favored the preferential shop, an arrangement much more advantageous unions than the union shop. In Brandeis' own words:

"The preferential shop is this: It is a shop in which union standards and conditions prevail, and in which the employer agrees, other things being equal, that he will employ union men-that he will give the union man a preference over a nonunion man.

"I should say to those employers who stand for the open shop that they ought to recognize that it is for their interest as well as that of the community that unions should be powerful and responsible; that it is to their interest to build up the unions, to aid as far as they can in making them stronger, and to create conditions under which the unions shall be led by the ablest and most experienced men. * * As nearly and most experienced men. . . as possible union existence should be assured so that the efforts of the leaders might be devoted to solving the fundamental and difficult problems of discipline and organization, and the working out of other problems of the trades."

It is unfortunate that the law which Mr. Hartley helped write forbids unions, irrespective of State laws, to negotiate for the preferential shop which Brandeis so strongly favored. But, at the very least, the words of the late Justice should not be quoted out of context to make it appear that he favored the open shop.

ARTHUR J. GOLDBERG, General Counsel, Congress of Industrial Organizations. WASHINGTON.

Christmas, 1954

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include

the following radio address I delivered over WMEX, Boston, Mass., on Saturday, December 18, 1954:

It may seem a long way from the manger Bethlehem to a New York penthouse high in the sky.

From a camel to a jet plane. Across the distance of 1,954 years.

And yet the stars above seem the same. While the life of a person who lives to be

80 is only a brief moment of awareness. The world today is in fearful worship of atomic energy, the primitive pagan deference to a terrifying force that we have not learned to control, just as our so-called uncivilized ancestors made sacrifices to the powerful but vengeful gods of the sun and the sea.

Man, with all his proud, material accomplishments, faces the future with greater uncertainty than ever before.

For now his finger rests lightly but nervously on the trigger of a mechanism, the two-edged weapon that could sear his whole world with fire and leave the few survivors in prehistoric darkness.

Ignoring at this Christmas of 1954 the miracle that took place at Bethlehem over 19 centuries ago, the miracle of love that is always available to save him from his weakness and his cruelty, if he will only try to live his life as God intended that he should.

Christmas, 1954, with its message of peace on earth to men of good will is an inspiring religious festival.

That brings faith and hope and purification to hundreds of millions of people.

To others it is but the commercial climax

of the year.
While heads of government search for answers to the unknown in the danger and the darkness beyond the neon-lighted streets, far off in the secret recesses of the brains that rule Moscow and Peiping, and plot to master the world by force and fraud and terror in place of God's redeeming love, we in the United States can be thankful for many blessings on this Christmas of 1954.

That we live in freedom under governments responsible to us, the sovereign peo-Without masters, or slaves.

With signs of progress all around us as America builds upward and outward. only servants are machines, tens of millions of them, that we control most of the time. Motor cars and planes, a loved one speaking to us across a continent, and pictures coming to us through the air as science gives us the magic eye and ear to be present at great events, no matter where they happen.

In laboratories, hospitals, and universities new miracles are unfolding to bring us health and happiness and greater understanding.

Everything quickens with life as express highways arch over our cities to expedite trade and travel, and people find the elbowroom for sunlit homes instead of dark tenements, in the countryside that is growing more ranch houses than crops.

And you think how wonderful it is to be 20 years of age and standing on the threshold of man's greatest progress.

Here in America, where all the machines and tools and techniques are banishing the poverty and the back-breaking toil, and the worry, that have stunted the growth of many.

are thankful for the schools and We churches of our land. For the good that people do, because they are free to develop the best within them without fear of Government reprisals. Freedom to think, and speak, and do, and pray.

With these liberating powers, we can eventually solve any problem-if we have enough time.

We Americans have weathered many storms—for independence, for unity, for progress, and survival.

We suffered hardship and despair, but our faith in what is right gave us the strength to surmount all difficulties.

Sometimes our leaders made tragic blunders. Sometimes we were late in waking up to the betrayers; to those who put money, power, and pride above all else; to the fanatics of the right and of the left.

In spite of these dangers, the good commonsense of the average American, his decency, and his regard for other people, managed to keep us on a steady course.

These are the gifts we have received from freedom under God, for which we are grateful at this Christmastide, as we commemorate the Birthday of our Saviour whose life on earth pointed the way to brotherhood and peace to men of good will.

Most of the world longs for peace and equality of opportunity, but a few evil men are not satisfied with this. In the name of the false god of communism, they would enslave mankind, stripping their fellow humans of mind and soul and dignity-to satisfy their consuming lust for power and to heal the sickness of their own insecurity.

We could be sorry for these tyrants because their desperate cruelty is a confession that they are lost and are trying to cut through the jungle of their own hates and

We could be forgiving but for their present brutality and their continuing aggres-

On December 10 Molotov declared before a rally of would-be conquerors-and I quote: "There is no force in the world strong enough to stop the march of communism.

Mr. Molotov is in error.

There are forces to crush the Communist assault upon humanity, if we had the determination to employ them effectively.

One is military: The use of our presently superior weapons to win a quick and decisive preventive war.

Another is economic: Aid to free nations that will enable them to develop a higher standard of living-and, by contrast, expose the failures of communism-similar to the progress of West Berlin as compared with the rundown condition of East Berlin, which is under Soviet control.

A third is moral: Reaching through to the captive peoples under the hammer and sickle, with the beliefs and the aspirations that we share in common, encouraging them to prepare for the day of their own libera-

As to military means, time is the diminishing factor.

The United States, which has a clear superiority in nuclear weapons and the means of bringing them on target, did not unleash this overwhelming power against communism. Instead, it asked Russia and other nations to join in a workable plan, guaranteed by inspection and supervision, to outlaw nuclear weapons as a step toward disarmament and genuine world peace.

The Communists rejected this generous

There can be only one answer.

Communist Russia is playing for time to assemble a sufficient supply of A-bombs and H-bombs, and long-range aircraft and guided missiles, that will force Europe and Asia to capitulate to its demands, thereby isolating the United States.

Our positions would be reversed.

The Nation would be at the mercy of the Communists, and no clear-thinking person could expect them to exercise the charity and forbearance that is guiding our foreign policy today as time, that is now on our side, is running out.

What should we do before it is too late? The power advantage may be ours for 2 or 3 or possibly a few more years.

How are we going to use it in order to establish a foolproof peace?

By helping other nations to become materially strong and confident as a bulwark against communism.

By carrying psychological warfare to the Russian people, so that they will rise up to overthrow their despotic rulers?

By preventive war now to destroy the Communist regimes in Russia and China and replace them with governments representative of the Russian and Chinese peoples, who will cooperate with the United Nations to outlaw aggression forever?

This last is a hard alternative.

It may be the only one if the other alternatives do not show results, and soon.

Even preventive war is a choice that is limited by time.

Once Communist Russia catches up with

us that chance is gone.

If anyone thinks that the Communists will change their design for world conquest if we will only be nice to them, or believes that we should just wait for a revolution by the oppressed peoples of Russia and China, then that person should consult a psychiatrist.

We will not survive without leadership and without a positive program to defeat communism.

Perhaps, as some suggest, we should serve an ultimatum upon the Communist tyrants through the United Nations while we still have the upper hand, establishing a deadline before which they must agree to a universal program of disarmament, made effective by U. N. inspection and control, or suffer atomic annihilation of their military and industrial centers.

Drastic? Yes.

But the need to establish and enforce an international system of law and order is imperative if the world is to escape enslavement or utter destruction, as time is running out for this as well as other alternatives.

How can we reach through to our fellow human beings behind the Iron Curtain now to build a common cause that will forever

outlaw aggression?

So many of these captive peoples treasure the meaning of Christmas, hoping for freedom as they pray before home altars, safe for the moment from the secret police.

Christmas, 1954, is but I week away.

When freedom and slaves ask for the greatest gift of all—the way to find peace with honor for all men of good will.

Research in Blinding Eye Diseases

EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1955

Mr. TEAGUE of Texas. Mr. Speaker, because those disease of the eyes which result in blindness have been brought close to home to me, my interest in the research programs being carried on has certainly increased.

Recently a group of doctors conducting research in retrolental fibroplasia, an eye disease which has affected 50 percent of those premature infants weighing 31/2 pounds or less at birth, discovered a practical prevention of almost all of this disease. There is no doubt that this discovery is far more important to the people of our country than any other medical discovery; as this might well pave the way for the eventual cure of the majority of our eye diseases.

Under leave to extend my remarks in the RECORD, I wish to include a short statement with reference to this discovery.

Today, we are spending less than \$2 million for medical research in the blinding eye diseases—a group of conditions which more than any other group stakes a claim on the American taxpayer-for the education, training, and support of the blind. What we are spending for research today is just a little more than we have been spending for the past decadein spite of the overwhelming evidence that such research can either prevent or cure disorders of the eye.

Last year and, indeed, the year before, I asked that the appropriations of the National Institute of Neurological Diseases and Blindness be increased with a view toward strengthening the weak national research programs in both the neurological and sensory disorders. As you know, those increases were given, so that now the budget of the National Institute of Neurological Diseases and Blindness stands at \$7,600,000 and the number of investigations on blinding eye disorders conducted throughout the United States has burgeoned by 25 to 30 percent.

This research attack is still pitifully small, but to the citizens of this country, Congress' action on the Institute's appropriations may well be a source of deep gratitude. In the short span of 2 years, rapid progress has been made against eye disease; modes of prevention and treatment have been developed with the results that thousands now are escaping the helpless fate of darkened vision and the economic burden of their care, which is the country's responsibility, has been lightened.

Let me illustrate just one of the many achievements made under the eye research programs of the National Institute of Neurological Diseases and Blindness. This achievement represents the virtual conquest of retrolental fibroplasia, a blinding eye disease which affected 50 percent of those premature infants weighing 3½ pounds or less at birth. Retrolental fibroplasia may be an unfamiliar disease to you, but for 5.000 mothers in this country whose children have completely lost their sight because of this condition its name spells constant despair. It is the leading cause of blindness in children; and each of the 5,000 children individually costs the community, State, and Federal governments more than does a single victim of any other disease-\$100,000 for education, training, and support from birth to death, or for all, a grand total of \$500

This past month, however, the practical prevention of almost all retrolental fibroplasia became a dramatic reality. On September 14, Dr. V. Everett Kinsey of the Kresge Eye Institute in Detroit, summed up the results of a 1-year study of retrolental fibroplasia before a large gathering of eye specialists from all over the United States and from all over the continent as well. What he had to say was simple—the major contributing cause of the disease was oxygen, the oxygen which was routinely adminis-

tered to premature children in hospital incubators. The way to stop retrolental fibroplasia was to stop using oxygen, except where urgently needed in crisis.

Dr. Kinsey, I should point out, was speaking on behalf of more than 75 pediatricians and ophthalmologists who during the past year have worked in close coordination in 18 hospitals throughout the United States to come up with the answer. The answer was made possible by the Government through support of the study by the National Institute of Neurological Diseases and Blindness. The answer-oxygen-perhaps sounds simple to you, yet it represented the end of what had been a long, hard 12-year hunt for the cause of the disease on the part of hundreds of scientists.

Their quest may prove as interesting to you as it is for me. Retrolental fibroplasia, I should tell you, was first de-scribed in the United States in 1942 by a Dr. T. L. Terry. Dr. Terry, himself, tried to explain why the blood-carrying tissues of the eyes were affected in retrolental fibroplasia. He thought the condition was due to factors affecting the mother during pregnancy-possibly toxemia or hemorrhage. Many others believed as Terry did, though they could not find sufficient evidence to support their beliefs.

Retrolental fibroplasia mysteriously continued to grow in incidence from 1942 on, and it began to appear as well in England, on the Continent and elsewhere. More and more it became evident that the disease was probably not related to the condition of the mother during pregnancy but to the changing care of infants in hospitals. Many causes for the disorder were suggestednutritional deficiencies in the infant or. again, nutritional excesses; irritation of light on the infants' eyes or possibly not sufficient light; mother's milk was first implicated, then cow's milk. As one set of facts were established to support a given theory, another set arose to contradict them. None of them were statistically sound.

By 1951, oxygen had also been suggested as the cause of retrolental fibroplasia-too little oxygen, however, not too much. At the same time, one hospital had noted that the incidence of retrolental fibroplasia seemed to parallel the increasing introduction and use of oxygen-bearing incubators in their maternity wards. But the real possibility that oxygen was the contributing cause could not be substantiated else-

In 1953 the first real breakthrough came. Dr. Arnall Patz, of Georgetown University, working with newborn rats, proved that constant oxygen administration, such as was routinely given to premature infants in our hospitals, could cause retrolental fibroplasia. Dr. Patz' work was supported by the National Institute of Neurological Diseases and Blindness.

Whether what was true for animals would prove true for humans remained to be proved. A clinical study of premature infants weighing 31/2 pounds or less at birth posed a major problem. Such a study, if conducted at a single hospital, might take 3, 4, or even 5 years

before enough premature infants were born so that results of the study would be statistically valid. If the vital answer were to be obtained as rapidly as possible-and with children blinded each day by retrolental fibroplasia, speed was essential—then a number of hospitals working on the same problem at the same time under the same strict scientific rules of evidence would be needed.

Such a study as this would require considerable funds. The National Institute of Neurological Diseases and Blindness with its increased appropriations could now make most of the funds avail-Just as important, to muster the combined research strength of a large number of distinguished investigators would require organizational capacity of a high order. Through its grantees, however, the Institute had access to some of the leading scientists in the country who might participate in the investigation. With the creation of a subcommittee composed of some of those scientists who worked closely with the Institute, so was born one of the broadest research studies on a single medical problem ever conceived.

The results of this study you now know. That study, you should know, cost the Government just \$40,000. To this sum was added another \$11,000 by the National Foundation for Eye Research and the National Society for the Prevention of Blindness. It appears that the cause of blindness for 5,000 babies has been prevented at a cost of \$51,000—\$10.50 per baby blinded from this cause in this country. The cost of care for 5,000 blind babies will be, for our generation, 100,000 times the cost of the prevention for the future. It appears that we have also removed one more source of pain and misery from the world.

The scientific attack on disease is not always so productive so rapidly. Yet there can be no question that the more effort science can devote to medical problems, the more successful science can be. Let science, through us, in short, attack the dreadful problems of glaucoma, cataract, and diabetic retinopathy on the scale these problems deserve and we count on their answers too—sooner rather than later.

Higher Pay Scale Could Improve Congress Caliber

EXTENSION OF REMARKS OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, I am happy to note a substantial amount of recent discussion of the oftmentioned but oft-postponed salary increases for Members of Congress. Every responsible group which has recently studied this question has recommended substantial pay increases. It is my personal feeling that Members of Congress should receive the same pay as Members of the President's Cabinet.

Because it demonstrates an intelligent understanding of this problem, I am inserting herewith an editorial written by Gib Koenig, which appeared in the Waukesha (Wis.) Freeman, my hometown newspaper:

HIGHER PAY SCALE COULD IMPROVE CONGRESS CALIBER

A much needed and long overdue pay increase for Congressmen and Federal judges may meet with favor in the new Congress. Representative Francis E. Walter, of Pennsylvania, announces he will introduce a bill raising congressional pay from \$15,000 to \$27,500 with larger expense allowances. The judges will profit by increases of \$12,500 to \$14,500. This would give some judges salaries as high as \$40,000; others would be close to \$30,000. These sums will raise an outcry from the unthinking who themselves have never been paid \$25,000 a year, and see no reason why anyone else should. They would be willing to serve in Congress for \$15,000. and think the present Representatives should not mind doing so. They overlook the fact that men of real competence could earn more than that in private practice of their businesses or professions. While public spirit causes many to hold office at a secrifice, public spirit does not move many to stay in politics when it means hardships for their families.

All congressional pay is not pure velvet. Many expenses go with the position; \$15,000 is not nearly so large a sum for Congressmen

Is Our Defense Policy Based on the Nation's Needs or on Questionable Campaign Promises?

> EXTENSION OF REMARKS OF

HON, OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. TEAGUE of Texas. Mr. Speaker, I wish to call attention to a column by Mr. Roscoe Drummond which appeared in the Washington Post and Times Herald on January 5, 1955. Mr. Drummond predicts that the administration's cut in military manpower will not go unchallenged and states that he has information that the proposed cut in military manpower was not approved by the Joint Chiefs of Staff, the Secretary of the Army, or the Secretary of the Navy, and that these cuts were originally opposed by the Secretary of Defense until he was ordered to approve them. Mr. Drummond states that the only reason given for making the cuts was the desire of the administration to bring the budget more nearly into balance.

The defense of our country must not be jeopardized for the purpose of attempting to place certain campaign promises of the administration in a more favorable light. The article to which I refer appears below:

WHY THE DEFENSE CUT?—REAL REASONS HELD NOT GIVEN

(By Roscoe Drummond)

The Eisenhower administration is not yet giving the American people either a candid

or a full explanation of why it is reducing by 400,000 the manpower strength of the Armed Forces by June 1956.

It will have to be franker and more persuasive than it has thus far if it is to convince the country and the Congress that its drastic reduction is wise at this time.

The administration will have to lay out its real reasons at its own initiative-or Congress will extract those reasons, painfully and piecemeal, from uncomfortable witnesses when the military committee goes to committee.

Senator RICHARD B. RUSSELL (Democrat. Georgia), who, with the convening of the new Congress, resumes his post this week as chairman of the Senate Armed Services Committee, is quite properly calling for an inquiry into why we are making such a large cut in the Army at a time of atomic stale-

"We are certainly going into this very thoroughly," says Senator Russell, himself one of the most responsible men in the Senate, "and get the views and the reasoning of those who are proposing the reduction.'

Senator Russell does not say he cannot be persuaded that this manpower reduction is sound, but it is plain that he is not satisfied with the reasons so far advanced.

And what are those reasons?

Secretary of Defense Charles E. Wilson cited as reason for the proposed cuts the assumption that the danger of war in the visible future has lessened.

Secretary of State John Foster Dulles cited reason for the reductions the view that the technological improvements in weapons makes it possible to achieve equal defense with fewer men.

It does seem odd that the two leading spokesmen of the administration should give such divergent reasons for cutting the Army, Navy, and Marines. Are they offering halftruths, which means that they are half untrue? Or are they incidental truths but not the controlling reasons? Why do the official explainers diverge so in their explanations?

The explanations are not, I believe, halftruths, but even when added together are more than two-tenths of the whole

The argument can be made that there is less danger of war than there was a year ago, but this is a very speculative judgment which could not possibly be a controlling basis for national policy.

There are technological improvements in

weapons, but at a time when we may not always find it in our national interest to atomic weapons to defend against possible aggressions; it is doubtful that these improvements constitute a controlling reason for sharply reducing the size of the Army.

If these reasons are not controlling, what then? Why does the administration propose to drop 400,000 men out of the Armed Forces during the next 18 months?

My information is:

That the proposed manpower reduction does not have the support of the Joint Chiefs of Staff.

That it is opposed by the civilian Secretary of the Army, Robert T. Stevens, and the civilian Secretary of the Navy, Charles S. Thomas.

That the Pentagon decision against such cuts was originally indorsed by Secretary of Defense Charles E. Wilson, who held to it until ordered otherwise.

That the only reason given to the Pentagon for making the cuts was the desire of the administration to bring the budget more nearly into balance.

Perhaps a case can be made to hold up that it is more important to our economy to trim the size of the Army than it is to our security to maintain the size of the Army, but this case has certainly not been made. Perhaps President Eisenhower, viewing our defensive capacities from his long career as a military commander, can certify to the Nation that the manpower cuts are prudent. But there can be no doubt that Mr. Elsenhower as President and as Commander in Chief must soon begin to expound his decision frankly and explicitly.

Moro Province Bill

EXTENSION OF REMARKS

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. MACK of Washington. Mr. Speaker, I reintroduced in the House today the bill which is commonly known as the Moro Province bill.

This bill is designed to provide longdelayed justice to a small group of less than 500 war veterans and to less than 300 of their dependent widows and children.

The 500 veterans who will benefit from this legislation fought valiantly and nobly 50 years ago in the Moro Provinces and in the islands of Samar and Leyte in the Philippines. They have been deprived of pensions all of these years due to a minor technicality. The injustice done them can be corrected only by an act of Congress. To correct that injustice is the purpose of my Moro Province bill.

That the members of the Veterans' Committee, who have studied this bill closest and know most about the case, believe an injustice has been done and should be corrected is indicated by the fact that the House Veterans' Affairs Committee four times has approved unanimously bills to provide pensions to the Moro Province veterans.

In the 78th and 79th Democratic Congresses, the Veterans' Committee unanimously reported a Moro Province bill similar to the one which I introduced today.

In the 80th and 83d Republican Congresses, the Veterans' Committee, like the ones in previous democratically controlled Congresses, unanimously reported favorably bills similar to the Moro Province bill I have introduced.

In the 78th Congress, the Moro Province bill was passed by both Houses of Congress, but was vetoed by President Roosevelt. In the 79th Congress, the House again passed this bill, but it died for lack of action in the Senate.

In the 80th and 83d Congresses, the Veterans' Committee again unanimously approved a Moro Province bill. The Rules Committee, however, held up these bills, and they never were reported for House action.

The cost of the Moro Province bill for its first year was estimated at about \$700,000. This figure will decrease rapidly after the first year since the Moro veterans are of an average age of 78 years.

The case for the Moro Province bill is this:

Technically and legally, the war with Spain and the Philippine Insurrection ended on July 4, 1902, when the President issued a proclamation of peace. Actually, however, the fighting did not stop. It continued for several years in the Moro Provinces and on Leyte and Samar. American soldiers fought there. A total of 1,548 casualties and deaths from disease occurred. Soldiers engaged in this fighting received 13 Congressional Medals of Honor.

Despite the severity of the fighting and the many casualties these veterans never have been recognized as wartime fighters and have been denied veteran pension rights. Half a century has elapsed since the hostilities. The Moro Province bill which I introduced today would merely provide delayed justice to the handful of Moro veterans who are still alive. The cost is very small.

These veterans have been denied war status and pensions because officially the war had, by proclamation, been terminated. Recently, soldiers in Korea have been granted war and pension rights even for services rendered after the fighting had stopped. Here in the Moro Province and on Samar and Leyte, where the fighting continued after the proclamation of peace, veterans are denied pensions.

Obviously, justice to these Moro Province war veterans has been overlooked. This injustice should be corrected even if Congress is 50 years late in doing so.

I hope that the House Veterans' Committee will report my Moro Province bill favorably and that the Rules Committee will permit it to come to a vote. I am sure that if it is permitted to come to a vote the Moro Province bill will, as it did in two previous sessions, be approved unanimously or almost unanimously.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

HON. JERE COOPER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. COOPER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

CHAIRMAN JERE COOPER OF THE COMMITTEE ON WAYS AND MEANS INTRODUCES H. R. 1, PROVIDING FOR A 3-YEAR EXTENSION OF THE PRESIDENT'S AUTHORITY TO ENTER RECIPRO-CAL TRADE AGREEMENTS

Chairman Jere Cooper, Committee on Ways and Means, today introduced H. R. 1, which would extend for 3 years the President's authority to enter trade agreements. The bill is patterned along the lines of the President's recommendations to the last Congress on foreign economic policy of the United States, which were based on the findings and recommendations of the Randall Commission.

In addition to the 3-year extension, H. R. 1 would authorize the President to reduce duties in three alternative ways: (1) 15 percent below the July 1, 1955, rates by reductions of not more than 5 percent in each of the 3 years under the extension; or (2) to 50 percent of the rate existing on January 1, 1945, in the cases of items which are not

being imported or which are being imported only in negligible quantities; or (3) to 50 percent ad valorem, in the case of any rates now in excess of 50 percent ad valorem.

As under the first alternative, the reductions under the other alternatives would be gradual with no reduction becoming effective until the previous one had been in effect for a year. In the case of the first alternative authority, no decrease could be made effective after June 30, 1958.

The bill would also require the President to report annually on the trade-agreements program, and would authorize the President to reduce duties by 50 percent below the January 1, 1945, rate unilaterally in the case of products which are not being imported or which are being imported only in negligible quantities.

Mr. Cooper stated:

"Our trade-agreements program is now at the crossroads. Through such programs as economic aid, technical assistance, and our efforts to bolster production in the free nations of the world, we have helped reestablish their war-torn economies. These nations are now in a position where they can and are willing to stand on their own feet. We must try to, on our part, help lay the foundations on which a stable foreign trade can be built. If we do not permit the free nations to trade with us, they will be forced to trade elsewhere, and in many cases this can only mean Russia and her satellites.

Our reciprocal trade agreements program occupies a prominent place in our overall foreign policy, and it is essential that we reaffirm at this time our determination to continue and to liberalize this program in the interest of constructive and cooperative international effort and relations. The for-eign policy of the United States depends to a great extent upon the cooperation of strong and healthy free nations. Our tariff and trade policies are especially significant because of our outstanding position of leadership and economic importance. We must help the free nations in every way possible to find the means with which to earn dollars which to buy our exports. Otherwise their shortages of dollars will force them to restrict imports from us, and this will result in a further loss of our export markets which will mean less wages to labor, profits to businesses and farmers, and taxes to our Govern-

"The main way in which we can help provide dollars to the free nations with which to buy our goods is to buy imports from them. With world conditions being what they are today, none of the free nations can afford to become either economically, politically, or militarily isolated from the others. One of the best known tenets of communism is that the way to divide and conquer the free nations of the world is through trade wars. Russia and the countries which she dominates are making an all-out effort to encourage the free nations to trade with them.

"A realistic foreign trade policy on our part will contribute to an expanding world economy, establish and maintain in all the free countries rising levels of employment and real income and create economic conditions which are conducive to world peace. We must strive, in making our decisions on foreign-trade policy, to base them to the maximum extent possible on our national interests. Such a policy will benefit all segments of our economy—agricultural, labor, and industrial alike.

"In my opinion, H. R. 1 is a modest though realistic step in the direction of an expanded market for our exports, while at the same time permitting free nations to earn their own way by increasing their exports to us. I do not now, nor have I ever, advocated the surrendering of our markets to foreign goods; however, I do feel that we can—through enactment of H. R. 1—greatly strengthen the economies of the free world as well as our

own, while at the same time still providing realistic protection for our own industries

and agriculture.

'A realistic and constructive foreign-trade policy on the part of all the free nations of the world is more important today than it has ever been in the past. If we fail on our part to do our share to bring about such a foreign-trade policy, the other free nations of the world of the world will despair in their cooperative efforts with us to fight communistic aggression and subversion. Our position of lead-ership in the world today demands that we be a moving factor in expanding world trade."

Keep Your Guard Up

EXTENSION OF REMARKS

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. SCRIVNER. Mr. Speaker, on December 18, 1954, I had the pleasure and privilege of making the dedicatory address at the ceremony dedicating the Kansas National Guard Armory, at Ottawa, Kans., the future home of Headquarters Battery, 127th Field Artillery Battalion, Capt. Thomas E. Gleason, commanding.

As I began my remarks, which follow. jet planes, flown by Air National Guard men, roared over in salute:

If I were to give my remarks any titlewould call it "Keep Your Guard Up," for in this world of international conflict, just as in the fight ring, any relaxation in our defense might very well give any determined enemy the opening he has looked and waited for. Those jets which have just roared over-head are proof of the modernization of the National Guard.

To many, a small local unit of the National Guard may seem unimportant. If it were the only such unit it might be-but this battery is but one of thousands throughout the country—all of which put together makes up 27 divisions of ground troops, to which we can add 27 Air National Guard wings—a very vital and important part of our entire

national defense.

The National Guard is not new-it is the successor to the old militia—the Minute Men of the Revolutionary War—and the advance made in those long historic years is made evident in this very unit.

Once we heard the phrase that we can call a million men to arms overnight." If that ever was true, even in the day and age of the soldier armed with a musket, it certainly is far from true today.

For today, the National Guard man, as you have seen in the parade, is equipped with modern complex weapons, which require skill operate—and skill to maintain; motor vehicles by the thousands, instead of foot travel or animal traction; radio and other complex communications equipment, instead of the simple semaphore flags; complex electronic computers, instead of pencil and pad or paper; radar detection, instead of far-flung outposts, or clumsy observation ballons.

All of these new weapons, not to mention automatic hand weapons, not to many and so many other items including the Honest John Tooks and automatic Honest John rocket and NIKE antiaircraft installations require time to master their effective operation; they require adequate efficient classrooms, such as you'll find here.

Too much credit cannot be given these citizen soldiers of the National Guard, who give up their time from pleasures and families during the week, and their vacations in summer-all that this Nation may be secure. No one knows when again our Guard units will be called into Federal Service. Maybe tomorrow—maybe not till next year, 10 years from now; perhaps never. But whenever it is they will again perform their services as they have in the past.
In World War I, over one-quarter of the

troops in combat in Europe were National Guard troops—including the 35th Division from Kansas and Missouri, in which I served

as a private first class.

World War II saw 9 National Guard units in Europe, again the 35th was there, and 9 units in the Pacific. All of these turned in magnificent records of combat.

From the ranks of the National Guard

came officers and noncommissioned officers to

train new troops.

In fact, the contribution of the National Guard in both those wars was so great that one shudders to think what might have happened to our country without them ready to answer the call of their country. Again, Korea made the need of National

Guard units quite apparent.

With all of our Regular troops withdrawn from this country-National Guard troops were ready to defend the continental United States, if needed, just as they have always been, and now are ready to do.

Citizens of Ottawa can well be proud of their national guardsmen—and proud of themselves for the part they have played in making the new fine armory available-not only for training of this local unit, but available for community affairs of many kinds.

Looking at it from a selfish angle, you have made a good investment, not only in having well-trained military men in your but from a financial angle as Every 3 months new money in the form of pay comes into town-and it turns drill over 7 times, which here in Ottawa means new business. It means greater national security, upon which the security of each individual depends.

So, I join with you in the joy you have in dedicating this building to the services of our State and Nation, to be used for the training of the youth of your community for service in time of peace—or war. Young men, who I am sure, will—in the future, as their fathers in the past-serve with loyalty, courage, and skill—serving in such a fine manner that they, and you, will have great pride in them and their exploits.

Though they will be prepared, and better prepared, with these facilities, than they would have been otherwise, let us hope— yes—let us fervently pray—that they need never be called upon to serve in time of war.

In conclusion, as a part of this dedication ceremony, I wish to present to Captain Gleason, battery commander, a United States flag, which, at my request, was recently flown over the United States Capitol.

This flag, no different from any other, is more than mere threads of red, white, and blue. In its folds are contained all of the past and future of this great Nation.

And, as Francis Scott Key said, in those closing words of our national anthem-

"Long may it wave o'er the land of the free and the home of the brave."

And it will wave long, because this is the land of the free and the home of the brave. Free because our men are brave.

Brave because they have faith.

Faith in themselves.

Faith in their country. Faith in its future.

And above all because they have an abiding faith in God-the divine providence that has guided and guarded our beloved Republic.

Soil Conservation Service Should Not Be Crippled

EXTENSION OF REMARKS OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES Thursday, January 6, 1955

Mr. SYMINGTON. Mr. President, for myself and on behalf of my colleague. the distinguished senior Senator from Missouri [Mr. Hennings], I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "If Soil Conservation Service Is Crippled, Conservation Will Be Set Back by 20 Years," relating to the Soil Conservation Service. The article was written by one of the great farm leaders of Missouri and of the entire country, Mr. Fred V. Heinkel, president of the Missouri Farmers Association, and was published in the Missouri Farmer for January 1955.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

IF SOIL CONSERVATION SERVICE IS CRIPPLED, CONSERVATION WILL BE SET BACK BY 20

(By Fred V. Heinkel, president, Missouri Farmers Association)

Unless Congress intervenes, it looks as though the Soil Conservation Service may soon be broken up into 48 pieces, and its constructive program of conserving and rebuilding our valuable land resources wrecked.

The wrecking of Soil Conservation Service has been recommended by a subcommittee of President Eisenhower's Commission on Intergovernmental Relations. The recommendations of this subcommittee, which will be studied by the big committee, would discontinue Soil Conservation Service as a Federal program and pass it on to the 48 States, with funds to be on a matching basis. transition period of 5 years is recommended

for making the changes.

The subcommittee recommends that the transition to a grant-in-aid basis be effected along the following lines: (a) The transition period to be spread over a 5-year period; (b) during the first year Soil Conservation Service technicians to be transferred from Federal to State rolls, with the States receiving 100 percent Federal grants during this period; (c) the second year, an adjusted matching arrangement is to be provided for between the Federal Government and the States; (d) the third and fourth years, provision to be made for shifting over to an equalizing grant basis with Federal funds allocated on a formula giving weight to such factors as area and type of farmland, farm population, per capita income, etc., with a sliding scale for matching to run from onethird to two-thirds, depending upon State fiscal capacity as measured by State per capita income.

Membership of the subcommittee which made the recommendations includes R. L. Nowell, vice president of Equitable Life Associations Society; Edward J. Condon, vice president of Sears, Roebuck & Co.; Dr. Frederick Lawson Hovde, president of the Association of Land Grant Colleges; Phillip Aylesworth, USDA; Fred B. Glass, National Association of County Officials; W. C. Jacobsen, director of agriculture, State of Callfornia; John A. Logan, president of National Association of Food Chains; Herschel D. Newsom, master of the National Grange; Robert A. Rowan, chairman, R. A. Rowan & Co., Los Angeles; and Senator Andrew Schoeppel, of Kansas. Mr. Newsom was the only farmer on the committee, and he was the only member who voted against the recommendations.

The big committee, to whom the recommendations were made and which will in turn report to President Eisenhower, is chairmanned by Meyer Kestnbaum, president of Hart, Schaffner & Marx (clothiers). Nearly all the other 25 members are far removed from agriculture.

Briefly, the Soil Conservation Service, a branch of USDA, furnishes technical and other services in soll and water conservation to soil-conservation districts and individual farmers who are cooperators in such districts. Local soil-conservation districts are established as local units of government, and conduct their operations in accordance with State enabling legislation.

Soil-conservation practices which are undertaken by the farm operator are paid for by the operator. The Federal Government furnishes technical advice and assistance, such as laying out terraces, farm ponds, and making farm plans.

Approximately 2,500 of the Nation's 3,000 counties had soil-conservation districts at the end of 1953. Missouri has only 32 districts. As a result of our State not having districts in all its 114 counties, Missouri has been passing up approximately \$1 million each year in Federal funds that have been available to us. Soil Conservation Service funds do not require matching by States, counties, or individuals.

It will be a colossal mistake for Congress to allow Soil Conservation Service to be divided into 48 pieces, as now recommended by the subcommittee of the President's Commission on Intergovernmental Relations. Before Soil Conservation Service was established by the Federal Government the 48 States were doing very little about soil conservation; and I predict that if this recommendation is carried out, very little money for continuing the work will ever be appropriated by the States, including Missouri.

The initial responsibility for conserving the soil rests with the individual farmers; and they are doing their best to save their soil. But there are serious limitations to what individual farmers can do in soil-conservation operations. Because of limited financial means, equipment, and technical knowledge, they must have help from Government. The responsibility for that help does not belong on the States; it belongs squarely on the Federal Government.

The need for food is universal. Everybody has a stake in soil conservation, because everybody is interested in products of the soil. The areas of concentrated population and the areas where food products are raised very seldom lie within the same State. It is the responsibility of the Nation to see that the soil in the growing districts is saved from erosion and loss of fertility if the people in the thickly populated districts are not to go hungry.

This proposal to shunt soil-conservation responsibilities to the individual States is a typical example of the general trend among Federal Government officials these days. They are constantly advocating shifting burdens and responsibilities to the States, but never do you hear one of them recommend lowering the Federal taxes in order to give the States a chance to increase their revenue.

For instance, our State income tax here is relatively low. However, we canont increase it because the citizens of our State are paying such high income taxes to the Federal Government. The same is true of tobacco, liquor, and many other taxes. I am not advocating it, but I contend that if the State of Missouri were permitted to keep the income taxes that now go to the Federal Government, we in Missouri could get along fairly well on our own.

We have made a lot of progress with soil-conservation work since Soil Conservation Service was established by the Federal Government in 1935. But the point has not yet been reached where we have arrested the decline in soil fertility. In spite of the miles of terraces we have built, the ever increasing number of tons of plant foods we have used, and all the other good soil conserving practices we have employed, the loss in fertility still has not been overcome. We should now be accelerating our pace instead of taking a step backward, as proposed.

If Soil Conservation Service is crippled, as

If Soil Conservation Service is crippled, as recommended, it is my firm belief that soil conservation will be set back by 20 years. The Missouri Farmers Association will urge Missouri's delegation in Congress to resist any such reorganization of the Service.

Moreover, we shall support the soil districts association in Missouri in its efforts to amend our own State soil districts law so as to make it easier for farmers to establish soil districts in Missouri.

Farmers living in counties where soil districts exist report to us that they use, apprecite, and are highly pleased with the services they have been receiving from soil district technicians. It is unfortunate that farmers in other counties of our State have been unable to enjoy such services.

It is also most unfortunate for Missouri farmers that our State has been passing up \$1 million in Federal funds that would be available if every county had a soil district. These funds which we have not been using have been going to other States. If Missouri farmers had received the money, it would have made no difference in our tax bills. As of now we are simply paying taxes to help farmers in other States.

Our population is growing at the rate of 2 million per year. If these on-coming generations are to be well fed, the general public had better join forces with us farmers to do everything possible to conserve our soft and build up its fertility.

Wanted: A 49th State

EXTENSION OF REMARKS

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. MACK of Washington. Mr. Speaker, our forefathers who founded this Republic fought a costly and bloody war to free themselves from the tyranny of taxation without representation. Yet we, their descendants, today, impose taxation without representation upon the 523,000 inhabitants of Hawaii.

Hawaiian youths are drafted to serve in the Armed Forces of our country. The Hawaiian people must pay the same tax rates as those levied upon the citizens of our 48 States. The Hawaiians must abide by our laws. But Hawaiians have no vote in the making of draft laws, in the fixing of tax schedules or in enacting any law.

This obviously is unfair and not in keeping with America's historic traditions. The situation should be speedily remedied by the enactment early in this new session of Congress of a law that will make Hawaii the 49th State.

The people of Hawaii, during the past year, paid a greater amount of taxes into the Federal Treasury than did the citizens of 11 of our present States; these being Arizona, Idaho, Nevada, New Hampshire, Montana, New Mexico, North Dakota, Utah, Vermont, and Wyoming.

Hawaii, today, has a greater population than four of our States; these being Delaware, Nevada, Vermont, and Wyoming.

Some say Hawaii is too remote from the Capitol in Washington, but she is closer to it, in travel time, than was Nebraska or Kansas at the time of their admission to the Union.

Congress should act quickly to right an old injustice by voting statehood to Hawaii soon so that her people may exercise the American right of voting for citizens to represent them in the Congress and for others to be President and Vice President of the Republic.

His Holiness Pope Pius XII

EXTENSION OF REMARKS

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission to extend my remarks in the Record, I wish to include an address by His Holiness, Pope Pius XII, to the members of the governing body of the International Labor Organization.

I am particularly pleased because the ILO has been under attack at various times in this country, and in this Congress, on what was termed favoritism to communism. Having been a member on four different occasions as a delegate to the International Labor Organization, I am familiar with its activities and acquainted with its top personnel; and I can personally vouch, therefore, for their thorough patriotism and their intense dislike for communism, and I have expressly said so many times.

Pope Pius Tells Labor To Aim Higher (Address by His Holiness Pope Pius XII on the occasion of the audience granted to the

members of the governing body of ILO)
Although we have frequently had the opportunity in the course of this year to meet representatives of widely different occupational associations and to inform each of them of our interest and solicitude, it is particularly agreeable to us, gentlemen, to receive the delegates of the International Labor Organization, which truly represents the great masses of workers with their cares, their difficulties, and, above all, their desire

for a better and juster world.

For more than 30 years you have patiently, untiringly, built up a structure of which you may be justly proud, not only because you have contributed to the progress of social legislation in the various countries, but above all because you have united governments, employers, and workers in brave and fruitful cooperation.

You have brought them to master every passion, every feeling of bitter resentment, every obstinate refusal to face an inevitable development, and to listen to one another calmly to weigh the facts of an extremely complex problem and jointly to propose the necessary improvements. You have thus cre-

ated a kind of international forum, a place of exchange where all necessary information and useful suggestions are assembled, tested,

and published.

It is enough to compare the present state of labor legislation with what it was at the time of the First World War in order to appreciate the magnitude of the work accomplished. In the last century there was already a feeling that a coordinating body was needed to unify the efforts of the workers in their fight against the inhuman conditions in which they were struggling. There was indeed awareness that measures of social defense and protection would impose economic burdens and would thus place countries which decided to apply them in an inferior position.

Our predecessor, Leo XIII, had a clear perception of the great importance of international collaboration in labor questions. As early as 1890, I year before the publication of the encyclical rerum novarum, he wrote, in connection with the international conference about to meet in Berlin, to seek means of improving the conditions of the working classes, that it responded to "one of his dearest wishes," and he added: "Conformity of views and legislation, at least to the extent permitted by differing conditions in places and countries, will contribute greatly to the advance toward a just solution of the question."

In 1900 the International Association for the Legal Protection of Workers was created, but the war soon came to interrupt its work. However, this was only a private venture. More serious hopes could be based on an institution officially recognized by the various states. This unanimous wish was finally realized in 1919, and the International Labor Organization has since that time continued to respond ever more adequately to the expectations of workers and of all men sincerely devoted to justice.

While the International Labor charter aimed above all at the suppression of abuses and laid down your main objectives at the time of the feundation of the organization, the Declaration of Philadelphia of 1944 was designed to adapt these objectives to new

circumstances.

Among all the fields in which your efforts are deployed today, particular attention must be drawn to the relations between employers and workers, which is one of the most delicate points in the evolution of modern society. The International Labor Organization has already concerned itself with collective bargaining, conciliation and arbitration, and collaboration between employers and workers at the level of the lindertaking.

The efficiency of your institution and its authority result mainly from its respect for the profound ideal which moves the promoters of a civilization which is fully the lust aspiration of the workers. The International Labor Organization has not wished to represent only one social class nor to become the means of expression of one tendency exclusively. It welcomes everything that is constructive, everything that meets the real needs of a harmoniously constructed society, and that is why our predecessor, Piux XI, did not hesitate to draw attention to the remarkable resemblance between the Principles set forth in the labor code and those

and those of the encyclical rerum novarum. The Christian trade-union movements on their side have given their full support to the International Labor Organization and consider it an honor to take part in its work.

What is at stake is not only the interests of the working class and its accession to the full exercise of its responsibilities, but the future of human society as a whole. The labor movement cannot rest satisfied with material success, with a more perfect scheme

of guarantees and security, and with a greater measure of influence on the economic system.

It cannot visualize its future merely in terms of opposition to other social classes or to the excessive ascendancy of the state over the individual. The end it pursues must be sought on the very plane on which the organization has placed it, that is to say, on the plane of universality—as the Encyclical Quadragesimo Anno proposed—in a social order where material prosperity results from the sincere collaboration of all for the welfare of all and serves as a support for the higher values of culture, and, above all, serves the indissoluble union of minds and hearts.

We wish you all success in your work at the 127th session of your governing body. Continue tirelessly to consider the problems which face the world of labor so that you may add to the material aiready existing some additional parts which will complete and consolidate the whole structure. the Master of all things, who became a divine workman in order to bring to each His message of peace and brotherhood, continue to watch over your activities and to grant you the courageous perseverance which overcomes all obstacles. As a pledge of His good will and as a proof of our high consideration, we grant to you and to all the collaborators of the International Labor Organization our apostolic blessing.

Pray for Christians in Captivity

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1955

Mr. LANE. Mr. Speaker, may I bring to the attention of the Congress and the American public an editorial prayer by Irving E. Rogers, president of the Eagle-Tribune Publishing Co., of Lawrence, Mass., appearing in the Evening Tribune, Lawrence, Mass., Friday, December 24, 1954.

Publisher Rogers takes for his theme, the moving Christmas message of Richard J. Cushing, Catholic archbishop of the Boston diocese, whose tireless spirit and abundant good works have won the esteem and cooperation of all men of good will, irrespective of race or creed.

With the great charity of which he is the living symbol, the archbishop asks us to think of the unforunate in other lands, so that the bond of faith between us may overcome the tyranny of communism, and lead the world to peace, freedom, and happiness.

Publisher Rogers merits our thanks and appreciation for bringing our hearts and minds to dwell on the spirit of Christ as the essence of Christmas.

Under unanimous consent, I include his editorial in the Congressional Record.

The editorial follows:

URGES PRAYERFUL SYMPATHY AND CHRISTIAN LOVE

Peace be on earth to men of good will. Christmas Day, the anniversary of the birth of the Christ child in Bethlehem, will, on the morrow, be celebrated by millions of Christians the world over. It was 1954 years ago that Mary became mother of Jesus in a little manger in a stable adjoining an inn at Bethlehem. Increasing millions continue to celebrate the anniversary of the occasion that brought the shepherds, the Wise Men, and the faithful from near and far into the little town of Bethlehem.

Christ proclaimed that there would be peace on earth to men of good will. That peace was never more threatened than it is at the present time. There are too many men who are not of good will who are striving to destroy the peace of the world, godless men who would destroy the love of God and the decency of God's way of life.

Richard J. Cushing, Catholic archbishop of the Boston diocese, has issued his annual Christmas message. It is most timely and appeals to us all to "remember with prayerful sympathy and Christian love" persecuted families in other lands who are living under programs of hatred, persecution, and tyranny.

I recommend for brief Christmas Eve reading the Christmas message of the beloved

prelate. It follows:

"I pray that our families will remember with prayerful sympathy and Christian love those other families for whom persecution is a special title of kinship with the Holy Family of Bethlehem.

"Driven underground by the hatred of God that links them closely to Christ's own lot, they bear a special resemblance to the Holy Three who were no sooner united at the nativity than they were driven into flight and exile by Herod's persecution.

"On this Christmas Day, when our families here at home are free to commemorate Christ's birth and to surround with beauty their adoration of Him, we must be no less mindful of our Christian brethren in other parts of the world who suffer a new tyranny."

IRVING E. ROGERS, Publisher.

Four-Year Tenure for Members of the House of Representatives

EXTENSION OF REMARKS

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. VURSELL. Mr. Speaker, today I am introducing a joint resolution to amend the Constitution to provide for the election of Members of the House of Representatives for a 4-year tenure.

The 2-year term provided for Members of the House of Representatives written into the Constitution in 1787, in the days of limited communication, was designed to keep the Members in close touch with their constituents. The authors of the Constitution, who wanted the Government to be controlled by the people, also felt that such control would be more effective if all Members of the House of Representatives were compelled to stand for reelection every 2 years.

They feared that a long term in this important body of the Congress might cause the Members to disregard the will of the people to a greater degree, and become more dictatorial as a legislative body.

With the rapid development of travel by train, on paved highways, and by air, and with the rapid development of communications through the press, the mails, and the radio, the people are so well advised on legislative matters as to make biannual elections of the Members of the House of Representatives unnecessary in the future.

In fact, the authors of the Constitution when this subject was under discussion said that the frequency of elections of the Members of the House of Representatives must depend upon a variety of circumstances, and that experience should be the guide to follow.

Through experience we now know that the Senate with 6-year terms has worked well; that the Senators, due to rapid communications, are in close touch with their constituents, as are Members of the House. Modern communications now enable the Members of the House and Senate to preserve the close tie between legislator and constituents that the framers of our Constitution thought was necessary.

The 2-year term for Members of the House has become antiquated. Too frequent elections of Members of the House of Representatives with our increased population, business growth, and the complexity of problems coming to the Congress for solution has reached the point where the biannual election of Members of the House places an unnecessary burden upon such Members, and is a deterrent to better and more efficient governmental service in such capacity.

Mr. Speaker, if the Members of the House are given a 4-year tenure, a much greater amount of their time can be employed in the study of legislation and the investigation of governmental problems. If a 4-year term of office is provided, a Member of the House, when elected, will have at least 3 years in which he can give all of his attention to the problems of government before he has to give a part of his time to the consideration of his reelection.

If the Members of the House are provided a 4-year tenure, it will give them greater resistance against the powerful pressure groups that have developed in our politics, which seek to influence the voting of the Members of the House by their power of numbers rather than by the merit of the proposed legislation they are supporting. It will place the Members of the House in a position where they can courageously support and pass legislation which they know to be in the interest of the Nation, and in which they know such legislation will have time to demonstrate its value in the public interest, and become acceptable to the majority of the people before they have to stand for reelection again.

For instance, Members of the House who voted for the Taft-Hartley law were marked for defeat by the big labor leaders who falsely branded the legislation as a "slave-labor law," and many Members had great difficulty and some failed at election because the law had not had time to become sufficiently understood by the rank and file of labor. This is only one instance in many which points out the necessity of giving the Members of the House a 4-year tenure, and the benefits it will bring to the people in better government.

Mr. Speaker, this resolution provides that the 4-year tenure will become effective on the year we elect a President. The people elect a President for a 4-year term. If this resolution becomes law, they will elect all of the Members of the House at the time they elect the President. Generally, under our two-party system of government, if the people lose faith in an administration, they put the other party in power, seeking to hold it responsible for the ensuing 4 years.

If a Republican President is elected, he has a right, and the people generally want him, to have a majority of his own party, so that they may hold that party responsible. If a Democrat President is elected, they want him to have a majority so that they can hold that party responsible. This is one of the great advantages of the two-party system, and if this resolution is adopted, it will strengthen the two-party system for the future, which will be of untold benefit in the future to our processes of government, as it has been in the past.

We cannot hold a party responsible, we cannot achieve the best in government for the people with the President of one party, and the legislative branch controlled by the opposite party.

In closing, may I say that there is utterly no sense, rhyme or reason for the continuance of the election of the Members of the House for a 2-year term. The time and expense of election is a burden that prevents more able men from being willing to enter public service. It is a deterrent to good progressive government, is antiquated, and I sincerely hope that this Congress will take the great and progressive step toward better government that a 4-year tenure for Members of the House of Representatives would assure.

The Hatch Act

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution furnished me my Mr. Anthony J. Novicki, secretarytreasurer, New England Conference, International Association of Machinists:

HATCH ACT

Whereas the right to fully participate in the election of representatives at Federal, State, and community levels is the inherent right of every American citizen; and

Whereas this basic right is denied to the Government employees under the provisions of the Hatch Act: Therefore, be it

Resolved. That the International Association of Machinists support or cause to be introduced legislation to modify the Hatch Act in order that Government, State, and municipal employees may enjoy the same rights and privileges of other citizens of this country to fully participate in the election of representatives at Federal, State, and community levels; and be it further

Resolved, That the New England Conference of Machinists, assembled in Boston, October 16 and 17, 1954, adopt this resolution and the secretary-treasurer send copies to the grand lodge, district 44. Government lodges in the New England area, and to the New England congressional delegation.

Submitted by:

ARSENAL LODGE No. 150, IAM.

A Lady Named Lieu Beats Miss Taxes

EXTENSION OF REMARKS

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include an editorial which appeared in the Tupelo (Miss.) Journal on December 7, 1954. The editorial follows:

A LADY NAMED LIEU BEATS MISS TAXES

One of the loudest—and most successful cries of the private utilities in their campaign against TVA and other public-power projects is that public power pays no taxes.

"Low cost electricity sounds all rights," the critics of TVA tell citizens of towns interested in rate cuts, "but think what your town would lose in taxes if you were served by public power."

Well, the Journal got to wondering just what was being saved in these towns which keep getting this kind of propaganda in the battle against TVA.

And so the city tax collector at McComb, which is nearer to Tupelo's size than any other town in the State, was contacted.

McComb in the last census showed a population of 10,400 compared with 11,527 in Tupelo. The potential market for electricity, therefore, is practically the same in both cities.

In the matter of tax payments, received from their power distributors, however, they are so far apart that one would never realize they were anywhere near the same population bracket.

The Tupelo electric department, being municipally owned, pays no actual taxes, but each year it makes a payment to the city treasury in lieu of taxes.

And during the past year that payment was \$41,181.

The Mississippi Power & Light Co., which serves McComb, paid that city, however, a total of only \$10,884 in taxes.

This difference in city income from taxes paid by power distributors is one reason McComb has a higher tax rate on property than Tupelo does. For if Tupelo's electric department paid no more taxes than the Mississppi Power Co. pays McComb, our tax rate in Tupelo would have to be almost 2 mills higher than it is.

When a difference of \$30,000 for the municipal treasury is involved, we might ask the people of McComb or other cities swallowing the usual power-company propaganda about lack of taxation in the TVA area, "Do you prefer Miss Taxes or a lady named Lieu?"

The truth about Tupelo's electric department is that it pays almost twice as much in taxes as all the public utilities serving the city.

In 1952, the telephone company, gas company, Frisco Railroad, and G., M. & O. Railroad combined paid the city of Tupelo \$20,273.

In the same year the city's electric department paid into the municipal treasury \$35,513 in tax-equivalent payments.

Not only does our local electric department pay approximately 10 cents out of every dollar it receives in tax payments to the city, but it performs various services to the city that would cost thousands of dollars a year if the city had to pay to get the work done.

The electric department has just completed putting up the most beautiful set of Christmas decorations Tupelo has ever had. And its cooperation with the merchants' committee of the Community Foundation in this work saved local businessmen a large sum of money.

In spite of its high tax payments and its beyond-the-call-of-duty services performed for the city and civic groups, Tupelo's effi-ciently operated city light department showed a net profit during the past year of \$82,000 after allowing for depreciation, tax

payments, and all operating expenses.

People fortunate enough to live in a city which has such a good electrical program just don't pay much attention to the private utilities' propaganda about no taxes. And others would be less critical of our TVA area if they knew the full story of the benefits provided by our system.

Liberation of European Countries Under Communist Dominance

EXTENSION OF REMARKS

OF_

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following constructive editorial from the Boston Sunday Herald, January 2, 1955:

NEM MEANS NO

The Iron Curtain is rusty. There is dissatisfaction among subjected peoples. There is opposition to the Soviet-backed regimes. That opposition is aided and abetted by the free world.

Radio Free Europe and the Free Europe Press, both American sponsored, have joined ranks with Hungarian patriots to oppose the Red regime in Hungary. The patriots call their organization the National Opposition Movement. In Hungarian the initials come out NEM which, appropriately enough, spells "no" in that language.

The movement is not an open one in Hungary, of course. But, according to NEM's manifesto, it is not a conspiracy or an underground organization either. NEM believes that liberty can be won and the Communist darkness dispelled by legal means.

At first this sounds compromising or naive. How can you play fair with a bunch of Communists and be sincere, or, if sincere, get anywhere? But NEM's goals are unmistakably democratic—they demand the things which are guaranteed in our Bill of Rights.

And they have drawn blood.

Operation Focus, as the NEM campaign is called, began October 1. By November, according to news from behind the Iron Curtain, it had been denounced by the Hungarian Foreign Ministry; by the Soviet Union; by every other satellite country, and by almost every Communist radio, newspaper and important public official. Teachers were ordered to instruct their pupils not to touch the leaflets which were wafted into the country by balloon (they were "germladen"). Soviet military planes were reportedly engaged in destroying the leaflet balloons in the air. And the leaflets were being bought and sold for high prices in regions where the balloons had not landed.

The really significant part about the NEM technique is that it has had little of the cloak and dagger about it—it is all quite aboveboard. No kidnapings. No little guns with poison bullets. No violence at NEM's line is truth and passive resistance, the weapons which Gandhi and his followers used so successfully in India.

Perhaps this is the means to bring about the liberation of European countries under Communist dominance. We have neither the weapons nor the will to embark upon a war to accomplish this objective. The Communists are as well-schooled in military techniques as we are. Passive resistance, however, is a difficult thing to put your finger on. And communism has no defenses against truth.

Havm Salomon Day

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. MULTER. Mr. Speaker, I have today introduced a resolution which would authorize and direct the President to proclaim January 6 of each year as Haym Salomon Day.

Haym Salomon is possibly the least known patriot of the American Revolution. Today is the anniversary of the death of this great Jewish-American who helped to bring this country into being.

He came to this country from Poland, settled in New York, and there engaged in business. He became active in the Sons of Liberty which was organized in the colonies for the purpose of breaking away from Britain and setting up an independent country, which subsequently was set up as the United States of America. In 1776 he was arrested by the British and confined to jail. He was released a year later and immediately reengaged actively in the effort to set up this country as a free and independent nation.

He was arrested again in 1778, courtmartialed for spying and sentenced to be hanged. With the aid of his fellow patriots, he escaped to Philadelphia, where he continued his activities on behalf of the cause of liberty and freedom.

When the efforts of the Founding Fathers were at their lowest ebb, when their leaders did not know where to turn, Haym Salomon came to the front and contributed his entire fortune to finance the continuance of the Revolutionary War

He gave to the cause \$640,000, his entire wealth. While it is a small sum, as we look at money today, it was a tremendous sum in those days. In addition to that, he went out and pledged his personal credit and borrowed additional sums.

General Washington and others of that day have given him credit for having financed the successful continuation of that war, as a result of which our fine Nation came into being and has since grown into a great and prosperous country. Neither his estate nor his descendants were repaid the loans he made to our Government nor those guaranteed by him. Haym Salomon died penniless.

I think that we could do little less than honor his memory by asking or authorizing the President of the United States to proclaim each year January 6 as Haym Salomon Day in commemoration of that great American patriot, not by making it a national holiday but by proclaiming it as a day of commemoration and directing that the United States flag be flown on all Government buildings on that day.

The Program of the United States Information Service in Italy, Spain, Algeria, Morocco, and Tunisia, With Specific Information Concerning Rome, Naples, Palermo, Madrid, Barcelona, Algiers, Casablanca, and Tunis

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. CELLER. Mr. Speaker, the following is an outline of the program of the United States Information Service in Italy, Spain, Algeria, Morocco, and Tunisia, with specific information concerning Rome, Naples, Palermo, Madrid, Barcelona, Algiers, Casablanca, and Tunis:

TTALY.

In Italy the job of the United States Information Service-USIS-is to win Italian support for the development of free world strength and to help expose and defeat the Communist conspiracy. We are trying to show the Italian people that the policies of the United States are based on interests compatible with Italy's own legitimate aspirations, and wherever possible we are trying to stimulate the Italians to a more vigorous defense of their own democracy. In Italy all the media of the agency are employed in accomplishing our objectives, namely, radio, press, motion pictures, libraries, and exhibits.

USIS Rome, where Ned Nordness is public affairs officer and John Mac-Knight his deputy, has, with the Italy branch offices, been concentrating in recent months on a special cultural program to counter the still widely held concept among Italians of United States immaturity and cultural barrenness, USIS officers, through cultivation of key personalities in Italian education, have been instrumental in the establishment of, or in initiating procedures for establishing, chairs in American studies at 4 major Italian universities-1 in Venice, 2 in Florence, 1 in Rome—thus placing American studies for the first time on an equal footing with other academic subjects in the Italian university curriculum. The Atoms for Peace Exhibit, which opened in Rome last June and by now has toured some 20 other Italian cities, has been a tremendous success in stimulating Italian awareness of the President's atoms for peace program and of the United States commitment to the development of atomic energy for peaceful purposes.

Walter Wien is public affairs officer in Naples, a post that is especially important not only as the center of NATO naval effort but as one of the principal cities, along with Palermo, of a vast economically backward and previously isolated area which offers the greatest danger today for Communist growth. Here an economic development and reform program, set in motion by democratic Italian governments since the war, is producing a slow awakening which the Communist Party is attempting to exploit to its own advantage.

Paul Wheeler is acting public affairs officer in Palermo, a post that is faced with special problems in serving an isolated, in many ways still backward, island community.

SPAIN

In Spain, Morrill Cody is public affairs officer in Madrid, and William Hart is public affairs officer in Barcelona. Our USIS program there has made increasingly active and effective use of all media-radio, press, films, exhibits, and our library centers. We are concentrating in Spain on helping to insure the success of the United States aid agreements with that country by bringing about a clear understanding of their purposes. We are trying also to convince the Spaniards of the importance of the Western European Community and the value of international cooperation and collective military strength. The Madrid office is increasing its efforts in areas of defense activity and is giving special support to the United States military program for establishing good troop-community relations.

In Barcelona, which is the center of the rapidly developing industrial area of Catalonia, a special effort is being made, under the educational exchange program, to increase the number of leader and specialist grants to Catalonian industrialists in order to give those who will have a hand in developing the area a broader point of view.

ALGERIA

The strategic importance of Algeria, together with Tunisia and Morocco, in western defense and its vital contribution to the economic health of France are among the reasons for a USIS program in this country. Communist propaganda strives constantly to deepen the differences between the French and the Arab population on the "colonial issue" and to create suspicion and hatred of the United States.

Mr. John Rhodes is public affairs officer in Algiers. The United States Information Service works through an information center, press and publications, and radio to expose Communist motives and strengthen confidence in the United States. The past year has featured a successful effort to extend the influence of the program into a growing number

of population centers throughout Algeria.

TUNIS

Although the political situation in Tunisia is restrictive, as in Morocco, the atmosphere of conciliation permits association with many Arab groups. The fact that the public affairs officer is fluent in Arabic, and well as French, and had established association with the Arab population prior to the period of violence, further increases the program opportunities.

Mr. Leslie Lewis is public affairs officer at Tunis. Through the use of the four media—press, radio, films, and the library—the USIS operation in Tunis explains and exploits American foreign policy with regard to Tunisia in particular, founded on the Byroade statement regarding American foreign policy in colonial areas. This is directed at the mixed middle-group audience of politically conscious French-Tunisians, Arab-Tunisians, and minority groups-Italians, Jews, Corsicans, Maltese, and so forth. The program is not directed to the political extremists, which are an unlikely audience because of the exclusiveness of their interests.

MOROCCO

The USIS American staff in Morocco consists of a country public affairs officer, Mr. James Carter, and two subordinate public affairs officers, Mr. Donald R. Norland, at Rabat, and Miss Annadele Riley, stationed at Casablanca. The activities at Casablanca are conducted by Miss Riley, under the supervision of Mr. Carter, who visits Casablanca frequently.

In addition to this American complement, which is assigned to carry forward the aims of the United States Information Agency among the Moroccan population, the International Broadcasting Service—IBS—of the Agency, known as the Voice of America, maintains a relay station at Tangier which transmits short-wave programs to Europe and Iron Curtain countries. No programs are broadcast to Morocco, this being technically impossible because the short-wave radio beam rides over the area adjacent to the transmitters.

The present political situation in Morocco, and resulting restrictions imposed on the Information Service by the local French administration, severely limits the scope of the USIS activities There is virtually no possibility of personal association with the Moroccan population. The realities of the local situation permit factual news reporting by press, radio, and films and the publicizing of American cultural activities through the Information Center. These programs contribute to United States objectives by displaying the United States in a favorable light, and through its subject matter tends to enlist the cooperation of the French and Moroccans.

My experience with the United States Information Agency is that insufficient appropriations have been allotted to this Agency. This is an agency which is involved in the battle of men's minds, and ideas are more important than bullets. We appropriated \$77,114,000 for propaganda purposes, which included funds

for the Voice of America and the United States Information Agency. Against this figure, it is interesting to note that the Soviet Union spends about one and one-third billion dollars on propaganda. In comparison, our expenditure is minuscular.

In my contact with the United States Information Service, I wish to state that I have found the staff both here and abroad to be made up of hardworking, painstaking, and patriotic public servants.

The President, significantly, in today's state of the Union message urged enhancement of our USIA information facilities.

The Fight Against Illegal Narcotics

EXTENSION OF REMARKS

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. EDMONDSON. Mr. Speaker, there is one battle in the cold war of today which is in critical need of attention by this House. I am speaking of our country's continuing fight against the vicious and deadly traffic in illegal narcotics, a traffic which has apparently become one of the major weapons of the international Communist conspiracy throughout the world.

Although our small Government forces in this specialized field are fighting valiantly and tirelessly, the battle is not being won. On the contrary, as recently as June 1 of 1954, the United Nations Bulletin reported:

The Commission on Narcotic Drugs noted that there was a high level of illicit traffic in narcotic drugs which seemed to be increasing.

The Honorable Harry J. Anslinger, United States representative on this Commission, has issued several reports in recent months which paint an alarming picture of the extent and danger of this illicit traffic, which is worldwide in its scope and devastating in its effects upon the health and morale of its victims.

Yet, in the face of abundant evidence that the danger is mounting throughout the world, the 83d Congress was responsible for further cuts in the already slender manpower of the United States customs inspection force, the Border Patrol, and other agencies having some responsibility in this vital field of law enforcement and protection of our Nation.

The same Congress, I regret to say, failed to take any action on the numerous bills before it which called for a strengthening of existing penalties for narcotics violations, especially in the field of second and third offenses.

If this new Congress does nothing else in the field of law enforcement, we owe it to our children to restore at the earliest possible date a fully effective customs inspection and border patrol force, as our coastal line of defense against illegal importation of nar-

cotics. We should also act immediately to strengthen the penal provisions of our narcotics laws, particularly for criminal repeaters who destroy the very souls of American manhood and womanhood through their evil traffic.

I believe we also have an obligation to our Armed Forces and civil servants in occupied areas, as well as to humanity in general, to investigate to the fullest extent the organized and depraved conspiracy of international communism in its effort to subvert free people through promotion of narcotics addiction.

Continuing and complete exposure of this evil practice, with the documentation and human evidence available to us, will not only serve as a true and effective answer to the false propaganda of germ warfare still being circulated by Moscow and Peiping, but will also point the way to more efficient countermeasures by the free world.

To these ends, I have offered a House resolution authorizing a full and complete investigation of illegal narcotic traffic as an instrument and weapon of the international Communist conspiracy, and have also reintroduced the bill which I sponsored as H. R. 4453 in the 83d Congress, which would increase the penalty provisions of certain acts dealing with narcotics.

At the proper time, I trust that many Members will join with me in sponsorship of whatever amendments are necessary to restore our first-line fighting strength in the battle to stop illegal narcotic traffic in our ports and along our borders.

The cost of these measures will be small. The cost of our failure to take them-in terms of increased crime and broken lives-could be too great to reckon.

Dolph Camp, Educator

EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. TEAGUE of Texas. Mr. Speaker. under leave to extend my remarks in the RECORD, I wish to include the following article which has reference to a close personal friend of mine, the Honorable Dolph Camp, president of Southern State College, Magnolia, Ark. I commend it to the Members of this body with particular reference to Mr. Camp's use of funds appropriated by the Congress under the George-Barden Act:

DOLPH CAMP IS A FIGHTER IN BEHALF OF GOOD EDUCATION FOR STATE

(By Dick Ratliff)

Dolph Camp bears scant resemblance to a gladiator, but he's been fighting a battle for the people of Arkansas all his adult life. He has won more campaigns than he has lost, but the crucial battlefield has always been the same-in the field of education, where he thinks Arkansans deserve more than they're getting.

A native of Columbia County, Dr. Camp's first battle for education was a very personal

one—to get a high school education. He got it on the campus of what is now South-He ern State College at Magnolia, the institution where he now works as president.

Dolph Camp was 22 years old when he finished high school. He worked his way through in the college farm at the wage of

10 cents an hour.

Since that time, he has climbed to a position of national and international prominence as a leader in the field of school guidance and counseling. As Arkansas State di-rector of guidance services, he established what has come to be recognized as the Nation's model program of school guidance.

After he received his high school diploma on the Magnolia campus in 1920, Dolph Camp took his bachelor's degree at Hendrix College, his master's degree at Peabody Teachers College, Nashville, Tenn., and his doctorate at Syracuse University. With all these alma maters, Southern State continued as his first love. When he had time to get away from his work at Little Rock for a football game, it was the Southern State Muleriders he preferred to see in action. He had played center for the Muleriders back in the days when the college was a high school. So he remained an enthusiastic visitor to the campus.

In 1950, when Southern State was preparing to launch its senior college program and Dr. Charlie S. Wilkins, then president, decided to take over the vice presidency of an oil company, Dolph Camp was the natural choice to become third president of South-ern State College. He liked the idea, be-cause it would give him a chance to fight against what he considered the shame of Arkansas-a poorly supported system of higher education.

"Many Arkansas didn't know then and still don't know how inadequate has been the State's contribution toward supporting the colleges," he declares. "With a little in cooperation with other presitime and dents of State colleges, I hope I may them learn how a dollar invested in higher education is returned manyfold to the taxpayer. If this should be my only achievement in this world, I think my time will have been well spent."

This is spoken with the enthusiasm of a man who has fought the cause of better schools even in the National Capital. When schools even in the National Capital. Camp was struggling against fiscal obstacles in setting up Arkansas' school guidance program, and serving as president of the National Association of Guidance Supervisors, he outlined a plan of action which took him to the Halls of Congress.

He was one of a small group of educators who sat in a continuous lobby pushing for equal benefits for educational guidance programs. Congress was balky but if Dolph Camp and his friends hadn't won that fight, Arkansas youngsters today wouldn't reaping the benefits of the State's excellent program for school guidance.

Camp had taken with him to Washington a clear idea of what all the school children in the United States needed at the high school level-trained counselors, to help them achieve peace of mind concerning postschool plans. He and his group of schoolmen busied themselves with throwing key blocks before bluff legislation sponsored by opponents of the George-Barden Act.

The George-Barden Act was passed. The law provided for an increase in Federal funds for vocational education and made it possible for those funds to be used to pay part of the salaries of high-school counselors. Incidentally, the 83d Congress has increased appropriations under this act approximately \$5 million. Arkansas youngsters will benefit from this increase.

After he had established the Arkansas program of public-school guidance, Dr. Camp was summoned to England to interpret American practices, including tools and techniques, to British educators. That was

about the time, he was called to Magnolia to take over as head of Southern State Col-"It didn't take me long to make a decision to stay home, since I feel the job I have taken at home and Magnolia will be all I can handle for a time," he said.

At Southern State, he busied himself among other things, with a goal to establish an outstanding college-guidance program. That program is well underway but

still incomplete, he admits.

Dolph Camp this year got a second chance to work with the educators of the British With all expenses paid for him and his wife and a modest stipend to boot, he spent 8 weeks this past summer lecturing school people at Reading University. He also visited the schools and worked with the teachers and headmasters, leaving with them the best American guidance practices and bringing home with him the best ideas he found in practice there.

C. H. Dobinson, dean of the College of Education at Reading University, followed up Dr. Camp's work there with a letter

using these words:

"The task I had in mind for you was one requiring infinite tact, patience, and good will, and in all these respects you achieved more than I could have expected. You have left behind you, wherever you were, good friends, and appreciative listeners. You have also left behind you stimulating thoughts which will go on growing in the minds of the people who heard you for years and which finally, I am sure, will bring forth good fruit.

Your own great modesty and wide understanding of human beings has been one of the principal factors in the success of your work for us, for without these the knowledge at your disposal could not have been made available acceptably to the audiences you

have had."

As one of the Nation's leading authorities in his field, Dr. Camp is in great demand as a teacher at leading universities. In recent years, he has taught at the University of Arkansas, Bradley University, and Peabody Teachers College, University of Illinois, and the University of Syracuse.

As a student at Southern State, Dolph Camp met and later married Florence Crain. They have 2 children, and 1 granddaughter. Their blond daughter, Mrs. Pamela Warren, was named "Miss Arkansas of 1947."

If, over the long haul, Dolph Camp should be remembered at Southern State for a single trait, that trait will be sincerity. No gladhander, he might be mistaken in a crowd for a Methodist preacher. His sincerity is based on a burning desire to do the right thing for the youth of Arkansas, tempered by a shadow of concern over the realization that he, too, makes mistakes in day-to-day deci-

But he has a zealous respect for the value But he has a Zealous respect for the value of education, and a smoldering contempt for those who pay it only lipservice, or exploit it selfishly, and pay it nothing in re-turn. "It is they who are killing the goods," he pleads.

The Late Dwight L. Rogers

SPEECH OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 5, 1955

Mr. AUCHINCLOSS. Mr. Speaker, the Congress of the United States can ill afford to lose men like DWIGHT ROGERS. There was little difference in our ages and he started his service in the Congress only a short time after I did. From the beginning it was abundantly evident that he was a fine American and a worthy Member of the House of Representatives.

His was a gentle character, with a keen sense of humor, a devotion to duty which was outstanding, and a facility for making friends which won many to him. His love for his country and his abiding faith were equaled by few men, and his was a distinct contribution to the preservation of good government and the American principles of liberty and freedom. A large part of his life was devoted to public service, and being recognized as a leader among men, he held many positions of trust. He performed his duties with zeal and fidelity and would not compromise with evil. I glory in the fact that we were friends, and it is nothing less than the truth to say that the world is richer for his life.

My warm sympathy goes out to his family at this time, and I trust that the tender mercies of Almighty God may assuage their grief.

Milk Pricing—Housewives Pay for Outmoded Controls

EXTENSION OF REMARKS

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. DAVIS of Wisconsin. Mr. Speaker, one of the things that has deeply concerned those of us who are keenly interested in the dairy industry—and surely all of us from Wisconsin are in that category—is the increase in the spread between the return to the milk producer and the price to the consumer.

It is true that while prices paid to farmers for producing milk steadily declined during the 2-year period preceding this autumn, the price per quart to the housewife declined little if at all. There can be little doubt that a major cause has been the existence of monopolistic and discriminatory practices, regulations, and laws.

It is my hope that the 84th Congress will continue the work which the Senate Agriculture Committee, under the distinguished Senator from Vermont [Mr. AIKEN], has begun. That committee has made preliminary findings relating to the margin between prices paid to farmers and retail prices of milk. The problem merits further inquiry. Only through the removal of artificial restrictions to permit maximum consumption of milk at reasonable prices will the problem of surplus dairy products be solved.

So long as the desirable use of dairy products is hampered, there will be a serious problem of low prices for milk at the farm level—a problem that cannot be solved permanently by the equally artificial measure of high price supports.

Mr. Speaker, I insert a thought-provoking article on this subject which appeared in a recent issue of Time magazine:

MILK PRICING—HOUSEWIVES PAY FOR OUTMODED CONTROLS

At the White House last week, President Eisenhower held a special luncheon for dairymen and heads of civic organizations. purpose of the luncheon, featuring dishes prepared with milk, was to help the crusade of Agriculture Secretary Benson to increase milk consumption. Even though the United States expects a 5.5 billion pound milk surplus this year, Americans, by and large, do not drink all the milk they need. But the Eisenhower-Benson campaign alone is not enough to increase milk-drinking. The big reason United States milk consumpno higher is that milk markets all over the Nation have been saddled with monopolistic controls that create artificially high prices, thus cut consumption.

As milk prices keep going up, United States housewives are beginning to rebel against these restrictive State controls. In-Oregon, voters repealed the State law setting arbitrary prices at the doorstep and grocery counter, thereby sent prices down 2 cents a quart. Yet farmers are still collecting as much, or almost as much (10.9 to 10.2 cents a quart) as before, and consumption is headed up. In Florida, after voters failed to abolish their milk-control board, they brought pressure on the legislature for more consumer representatives on the board. In California, Safeway Stores, which preach firm prices for farmers and farmers and free competition among bottlers, are leading a campaign to throw out a State law that sets retail prices, thereby guarantee a profit to all bottlers, efficient or Even in dairy-rich Pennsylvania, bigcity legislators have set out to abolish the State's milk-control commission.

Last week the Senate Agriculture Committee took out after the processors. It found in a study of 10 representative processing plants around the United States, that the margin between prices paid the farmer and retail prices had increased as much as 27.9 percent in 3½ years, and a "very substantial portion of the increased spread went into greater profit taking."

Milk controls were born during the depression, when farmers were forced to sell milk for as little as 1 cent a quart. In all, 26 States passed laws to protect farmers and bottlers. Some later junked the laws, but 16 States still maintain strict controls. In addition, Federal controls can be applied if

addition, Federal controls can be applied if a majority of the milk producers in an area petition for them. As a result, 3 of every 4 United States citizens drink price-controlled

The State controls, which are far more restrictive than the Federal system, are a patchwork of politics and protection for local milk producers. Alabama, for example, prohibits distributors from increasing outof-State milk purchases except during a severe shortage, fixes the grocery milk 1 cent higher than the home delivered price, even though it usually costs nearly 3 cents a quart less to sell through a grocery. Thus milk is 26 cents a quart in Birmingham, but in Chattanooga, a freely competitive market about 4 hours away by truck, milk is only 16 cents a quart. Wisconsin, because of highly efficient mass production and distribution methods, claims it could deliver fresh milk in Manhattan for 11.2 cents a quart wholesale (almost 1 cent less than the New York price). But a New York State control law keeps all Wisconsin milk out.

University of Illinois Agricultural Economist R. W. Bartlett surveyed milk pricing in 50 United States cities last year found that prices were invariably higher where State controls existed. In 17 cities with free milk markets, grocery stores charged an average of 20.1 cents a quart, 3.1 cents less

than the average home delivered price. In 18 State-controlled markets, the grocery price averaged 23.6 cents a quart, only 2 cents less than the home delivered price. Says Economist Bartlett: "Modified Pederal regulation is absolutely essential to prevent chaos in milk markets. But State control of consumer prices constitutes a legalized monopoly which is definitely against the public interest."

For health's sake, United States families are forced to buy milk, whatever the price. But consumers have demonstrated that they buy more milk when the price goes down. For example, when the price dropped as much as 3 cents a quart in Kansas City, Mo., last year, sales of milk promptly rose 7.4 percent.

Washington State's Agriculture Director Sverre Omdahl has successfully fought off all attempts for a State-control law because he believes "fixing farm and retail prices favors the inefficient producer and makes for a basically false and unhealthy milk market." What Agriculturist Omdahl advocates, along with other milk experts, is more use of the Federal Marketing law which protects the dairy farmer, but allows the efficient distributors to pass their savings on to housewives. There is little doubt that freer, more flexible milk markets would bring lower prices and increase milk drinking. This would not only help dairy farmers, but it would also do much to improve the health of the entire Nation.

Impact on Veterans' Benefits of Presidential Proclamation

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. TEAGUE of Texas. Mr. Speaker, the proclamation of the President terminating certain benefits now available to veterans of the Korean conflict was issued last Saturday-January 1, 1955. Its effective date is January 31. One of the results of this proclamation is to bar accumulation of eligibility for education or training under Public Law 550, after this cutoff date. I have introduced legislation which will permit all those members of the armed services on January 31, 1955, to gain the full education benefits if they serve for as much as 2 years after that date. Many recruiting offices have promised the full benefits of the GI bill of rights to those men now serving and unless legislation such as my bill is enacted, the Government will not make good on its promises. I am sure that the Committee on Veterans' Affairs will give this subject early action.

I am indicating below some of the results flowing from the proclamation:

Basic service period: Korean service, by the terms of the proclamation, has been officially set as on or after June 27, 1950, and through January 31, 1955.

Education and training: Public Law 550 of the 82d Congress authorizes 1½ days of education or training for each day of service performed during this basic service period with a maximum of 36 calendar months of entitlement. The proclamation means that no additional

eligibility may be accumulated under this law after January 31, 1955, and persons first entering service after such date acquire no eligibility for the benefits. The proclamation also ends eligibility for training under the vocational

rehabilitation laws.

Compensation: Today disabled veterans of the Korean conflict are entitled to service-connected disability compensation ranging from \$17 per month for a 10-percent disability to \$181 per month for total disability. In certain severely disabled cases special rates may go as high as \$420 per month. Any veteran who has a service-connected disability as a result of service after January 31, 1955, will be entitled, as a peacetime veteran, to 80 percent of the rates mentioned previously. Certain presumptions of service connection in chronic disease cases will not be available to veterans separated from servilce after January 31, 1955. After that date eligibility for service-connected death compensation will also be on a peacetime basis, with rates based on 80 percent of the wartime rate.

Pensions: Veterans of World War I, II, and Korea today are entitled under certain conditions to non-service-connected disability pension at rates of \$66.16, \$78.75, or \$135.45, depending upon age, condition, and other factors. Service after the date of January 31. 1955, will be considered peacetime, but any veterans serving, for example, as little as 1 day prior to the delimiting date and 89 additional days continuously thereafter will be eligible for nonservice-connected disability pension un-

der the existing laws. Widows and children of veterans of the Korean conflict period—June 27, 1950, through January 31, 1955—are eligible for pension based upon the nonservice-connected death of such veterans. The basic rate for a widow is \$50.40 per month. This program will not be available to dependents of persons first entering the service on or after

February 1, 1955.

Automobiles: Veterans of exclusive service after January 31, 1955, will not be eligible for the benefits of Public Law 187, 82d Congress, which provides \$1,600 toward the purchase of a specially equipped automobile for service-connected veterans who have suffered the loss or loss of the use of one or both hands, or feet, or who are blind as defined.

Hospitalization: No entitlement to VA hospitalization for non-service-connected disabilities where the service of the veteran is solely after January 31, 1955.

Insurance: The proclamation does not affect in any way provisions of Public Law 23 which automatically insures any serviceman in the amount of \$10,000 while in active service. It is payable over a 10-year period to beneficiaries defined in the law.

Housing: The issuance of the proclamation means that in order for a veteran to obtain a loan guaranty-maximum \$7,500—the loan must be made prior to February 1, 1965. So long as there is service prior to January 31, 1955, additional service to complete the required 90 days may be had after that date, if continuous.

Mustering-out payments: Musteringout payments in the amount of \$100, \$200, or \$300, depending upon the length and place of service will no longer be available to veterans who serve exclusively after January 31, 1955.

Public housing preference: Those serving exclusively after January 31, 1955, will no longer enjoy preference in the occupancy of low-rent public housing. They also will not have the benefits of certain provisions of the National Housing Act and certain assistance in the acquisition of family-size farm under the Bankhead-Jones Farm Tenant Act.

Unemployment compensation: Public Law 550, 82d Congress, makes veterans serving on or after June 27, 1950, eligible for unemployment compensation of \$26 per week not to exceed 26 weeks. This program is administered by the States. The proclamation ends this right as of January 31, 1955, for those serving exclusively after that date.

Income tax: Enlisted men serving in combat zone defined in Executive Order 10195, December 20, 1950, did not have to pay taxes on their pay. Executive order issued in conjunction with proclamation terminates this tax exemption.

Legislation To Make Tax Free the Gain on the Sale of a Home

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. RABAUT. Mr. Speaker, yesterday I dropped a bill in the hopper to amend section 112 (n) of the Internal Revenue Code to provide that gain from the sale or exchange of the taxpaver's home will not be taxed whether or not he replaces it with another residence.

The purpose of this bill is to rectify a longstanding situation which now places an unfair financial burden on the parents of our Nation, when they find it necessary to dispose of a large home after the children have grown and married and have families of their own.

Most young married couples rent an apartment at first. Then, when they have children, they buy a modest home. As more children come along and grow up, it is necessary to purchase a larger home which becomes the scene of many happy hours which include birthday parties and holiday festivities as well as courtships and weddings. When the father and mother have completed the lifelong task of rearing their children and the days of the past are fond memories, they desire to move to a smaller home or an apartment to enjoy the peace and rest that is due them.

This is when the Government steps in to levy a huge tax bill on the total profit realized by the sale of the former homes, This is penalizing the parents who brought into this world our future citizens who will play an important part in the progress and growth of our Nation.

This situation should be changed and it is my hope that the Congress will enact proper legislation to alleviate the hardship resulting from the present law.

Peaceful Coexistence

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1955

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me at the banquet of the New England Regional Tax Conference of Public Accountants, December 10, 1954, Hotel Bradford, Boston, Mass.:

PEACEFUL COEXISTENCE

Uppermost in the minds of our people, and of countless millions of others throughout the world, is the desire for permanent peacefor a world of peace. It is only a small group of evil-minded men, through their domination of countries and of peoples, who prevent world peace of a lasting nature being established.

The world of today is confronted with a condition and not a theory.

You and I know that the evil forces of

atheistic communism are bent on conquering the world and subjecting all peoples to communistic enslavement, persecution, and even. death.

We must face the fact that we are dealing with a cold, ruthless, destructive force, the leaders of which are possessed of the minds of what might well be termed "world killers."

If we permit ourselves to be deceived, or to become complacent, or disunited, or frustrated, it might prove dangerous to us. It is therefore imperative that we think calmly. rationally, and soundly, and in order to do so, the American people should be given all information possible.

The American people, when told the facts, are willing to make any sacrifice necessary for the best interests of our country. And our people should be given as much information as possible so that they may understand. and may be able to evaluate the situation, and form a sound, healthy, public opinion. For in a democracy, public opinion is the most necessary, pertinent, and powerful factor.

Under dictatorships, public opinion is suppressed and unable to assert itself because of fear.

And our people should be informed so that a sound, rational public opinion might be developed.

The withholding from our people of information that could and should be released tends to create uncertainty, confusion, frustration, fear, and disunity—and that is an unhealthy condition to have existing, and should be avoided.

For example, we read a great deal about peaceful coexistence. We all subscribe to that in principle. We would like to see it accomplished in fact—not only peaceful co-existence but peace of a lasting nature.

But what do you and I know, even to the slightest extent, about this new policy which could easily lead to appeasement, and how it can be brought about?

What does peaceful coexistence mean to the Kremlin?

Can peaceful coexistence, whatever it means in fact and in results, be accomplished unless the Communist leaders change their minds and their intent to ultimately conquer the world? Does peaceful coexistence to the Kremlin mean submission to them and their ideology, which would result in slavery, persecution, and death? Does peaceful coexistence mean that the hopes of the people of Poland, of Lithuania, and other Communist-dominated countries to regain their independence and liberty are to be destroyed and these countries permanently frozen into the Soviet Union?

These, and many other questions, are involved and should be discussed publicly, and should be considered seriously by the Congress of the United States in order that the facts and the truth can be ascertained so that a sound public opinion can be developed in favor or against this policy before our country becomes committed to it.

I am talking about facts and information that can and should be made known to our

For unnecessary secrecy could be a dangerous road for a country like ours to travel.

And let me ask you what I consider to be a pertinent and proper question. Can peaceful coexistence be accomplished if the Communist leaders are still bent on world aggression? The answer to that question seems to me to be emphatically "No."

The evidence clearly shows that aggression is still the Communist policy; that while their strategy might temporarily change, their intent of world domination has not that the Communists are using the slogan of peaceful coexistence as another deceptive move in their efforts to divide and conquer.

It was only a few days ago on November 23, that the President in a press conference said that while "The Russians have lately been talking a different tone than they had for sometime past" and that "there was one underlying, unchanging motive, world revolution and the dominance of a Communist centrally controlled world state."

And on November 11, while appearing before the Senate Committee on Foreign Affairs, Secretary Dulles said, in relation to the aggressive intent of Red China, and I quote, "That Communist China is showing aggressive intent in Asia which belies its protestations of peace."

On the same day that the President, talking in Boston, said in substance that "Peace was nearer now than it has been for many years." And at the same gathering, Ambassador Lodge said that the "U. N. is succeeding despite unending Soviet attempts to sabotage it."

It is difficult for me to reconcile these statements. It is difficult for me to believe that peaceful coexistence can be brought about with the Kremlin still determined to conquer the world; with its ally and present junior partner, Red China, persecuting and imprisoning American airmen; shouting defiance to the dignity and honor of our country and making preparations for another shooting conflict.

For once committed to a policy, we must follow it through.

It therefore seems to me that before our country is committed to this policy, we should view it and all of its implications with extreme caution having in mind always the national interests of the United States of America.

One of the main purposes of diplomacy, where differences exist between countries, is to try and reduce as much as possible the area of differences. That is a wise policy for diplomats to follow.

However, this involves good faith on the part of both sides to try to solve or reduce the area of differences.

It is most difficult for me to believe that any real progress can be made where bad faith exists on the part of one of the negotiating countries.

And mark you, I am discussing a major matter—not a minor one—of concern to our people.

We have traveled from the policy of liberation and of massive and instant retaliation to that of impending peaceful coexistence.

We had better stop, look, and listen and thoroughly inquire and deliberate before we become committed to this policy, where the results of a mistake or a wrong guess is a picture that I would not want to paint.

I think that the old saying, "eternal vigilance is the price of liberty" would be a better one for us to follow. Whether we like it or not, whether we want to or not, we must face the fact that the only thing the Communists respect is what they fear, and that is military force and power greater than they possess.

The Communists do not fear God, because they do not love Him. In fact, they hate Him and are fighting God and His natural law on earth. Their god is materialism and power, carrying with it the imposition of their victous ideology, and in its wake, imperialism,

slavery, persecution, and death.

But even Communists, despite the fact that they attempt to deny it, are subject to the law of self-preservation, just the same as is any other person. And in the hidden resources of their minds, the Communist leaders know that the law of self-preservation applies to a nation just as well as it does to an individual.

And the one thing that they will respect, because of fear—fear of defeat and destruction—is military power and strength greater than they possess.

And in relation to our diplomats dealing with the diplomats of such a force and movement, the Soviet Union, the weapon that will enable us to carry out our national objectives in the field of foreign affairs is the strength and power of our military force. And the strength and power of our military force must be in relation to the strength and power of the Soviet Union and its satellites and dominated nations.

For if we are stronger, respect through fear will exist, with favorable results.

If we are weaker, arrogance and contempt will exist with other results.

There is no question but that we possess strong military strength and power—in our Army, our Navy, and our Air Force. There is no question of the genius of our scientists, our engineers, our businessmen, our workers, our members of our Armed Forces, particularly in their specialized training, of our people as a whole, and of our will and determination to remain a free people.

But the principal question is not whether we are militarily strong—but is our overall military strength and power greater than that of the potential enemy? Is it such as to command respect through fear so as to deter attack and prevent another general conflict and to make a contribution toward ultimate world peace?

There are many among us, military men, Members of Congress, and among our people who feel that we should be stronger, having in mind the military strength possessed by the forces of world revolution and aggression.

In order to determine if our military strength and power in relation to that possessed by the Soviet Union is powerful enough to instill respect through fear, there must be not only an understanding of our own strength but of the strength of the Soviet bloc.

While it is difficult to obtain definite information, there is enough reliable information available to give us a current appraisal of the Soviet strength. It is known that from 1947 to the present time the numerical strength of the Soviet ground forces of 175 divisions has remained fairly constant. Nevertheless, significant changes have been made in favor of increased mechanization with sturdy and efficient modern equipment. It is reliably understood that 65 divisions of their present establishment are tank and

mechanized divisions, that rifle divisions have been provided motorized equipment, and that they also have organic tanks and additional artillery. This means that the mobile and fire power have been increased through the introduction of improved weapons and equipment.

The Soviet Union, Eastern Germany, and

The Soviet Union, Eastern Germany, and Eastern European satellites today have over 6 million men under arms. Approximately 4,500,000 of these are in ground forces, with a high state of preparedness maintained as a result of a rigorous training program. It is known that the number of satellite divisions have almost doubled since 1947, bringing their total to at least 80 divisions.

The Soviet Union has a readymade spearhead for a rapid advance into Western Europe, if that decision is ever made. This spearhead is composed of at least 22 Soviet divisions in Eastern Germany. The bulk of these are armored divisions with nearly a complete complement of tanks and self-propelled guns—and behind this spearhead, there are additional 60 Soviet divisions located in the Eastern European satellite countries and in western Russia. This does not take into account satellite country divisions.

It is also known that their mobilization system is exercised periodically to insure its effectiveness by the ability of the Soviet and satellite ground forces to quickly increase to 400 divisions.

The numerical strength of the Soviet air force in recent years has been constant, having been stabilized at about 20,000 aircraft, but the rapid increase in Soviet air potential is shown by the rate of changeover to jet aircraft. For example, in 1951, about 20 percent of their fighters were jet types. By the year 1954, almost all of their fighters were jet types.

In connection with the light bombers, a similar development has occurred.

For example, in early 1951, jet bombers had not been introduced by the Soviet into operational units. By 1954, well over two-thirds of their light bomber force were jets.

In the medium bomber category, the TU-4's, which are similar to the United States B-20, the Soviets have doubled the number of this type in operational units since 1951, and still newer types of medium bombers, including jet models also have been observed.

The development of a comprehensive aviation training program, according to information received, has been one of the most significant contributions in Soviet postwar program to improve the capability of its air power.

The program for airfield construction has been and still is in progress with attention in recent years being directed to the construction of fields with very long runways. In the past 4 years, the Soviets have almost tripled the number of major airfields in eastern Europe that will accommodate jet fighters.

It is known that the combat value of the satellite air forces has increased significantly since 1951. In 1951, their aircraft was obsolete. By 1954, the numerical strength of satellite air forces had been doubled with one-half by jet fighters, with their facilities improved and the training, from a military angle, having reached a farly satisfactory standard.

The Soviets have attached great importance to providing an effective air defense belt along the western perimeter of Russia through the construction of airfields throughout eastern Europe, and of aircraft control, warning systems, and antiaircraft artillery.

They have also since the end of World War II, improved their potential for the use of airborne troops and weapons.

From a naval angle, the information available is most striking. Their principal naval threat is the submarine capability. They

are building other types of naval vessels at the same time. It is known that the Soviet Navy has over 300 submarines in service, and that about one-half of them are large or medium oceangoing types, and that the current large-scale naval construction program lays emphasis on the continued production of large oceangoing submarines

of large oceangoing submarines.

It is known that the Soviet bloc has developed a strong capability in the special fields of atomic, chemical, and biological warfare, as well as in the field of guided missiles. The stockpile of the Soviets is of such a tremendous size, that they have more than enough tanks, mortars, and antitank guns for some three-hundred-odd Soviet divisions, with a stockpile of sea mines, field artillery, and antiaircraft artillery that is amazingly large, with the annual production of these items continuing at a sizable rate.

These facts have been made public at one time or another, but I am giving them to you in collected form because I feel that it is information that should be given to our people. It is information clearly showing the military strength and power of the Soviet and its satellites. And I might add that this does not include Red China.

If our people are made aware and awakened, I know that a sound public opinion will be developed as a result of which steps in connection with the increasing of our military strength and power will be taken.

You will remember, that our policy of a few years ago was the building of an Air Force to 143 air-wing groups by latter 1955. That policy was scrapped in 1953 by reducing our objective to 120 air wing groups. This reduction was fought in Congress, and I was one of the Members who opposed it. But the reduction took place. Many outstanding military leaders opposed it as unwise, as a sign of weakness, and as too great a calculated risk to take for budgetary reasons.

Fortunately, a year later, the present administration changed its policy in this respect, and recommended appropriations to increase our Air Force to 137 air-wing groups by the middle of 1957. In doing this, however, for budgetary reasons, our Army has taken a sharp reduction during this fiscal year from 20 divisions to 17 divisions. A second year reduction had been ordered, but has, fortunately, been canceled.

There were a number of Members of Congress who expressed deep concern in this reduction, having in mind the known military strength and power of the Soviet bloc and their sinister purposes. We felt it was too great a calculated risk to take. Able military leaders also expressed their concern.

There was also a reduction in our Navy during this fiscal year. That is now taking place.

There is no question but that we have the advantage today in the possession of destructive bombs and other weapons of destruction-and in our ability to produce them, as well as an advantage in the means of delivering them, if necessary, to determined targets. But the information available shows that the Soviet Union is narrowing down the advantage we possess in this field of offensive military action.

I am sure that you were amazed not so long ago to read in the newspapers that 90 to 95 percent of attacking planes from abroad could get through to their targets in the United States. In other words, the defense of our cities and our people from air attack was so weak that only from 5 to 10 percent of attacking planes, carrying their terrible instruments of destruction, would probably be intercepted and shot down.

This was information that not only amazed me but stunned me.

I am glad to advise you that as a result of speeches made in Congress, and I have made several of them, appropriations have been made to improve this situation. But we have a long way yet to go, and we should move faster.

While it is known that no defense can be built that will prevent any plane from getting to a target, it is known too that we can build defenses against air attack that would be reasonably certain of destroying anywhere from 40 to 50 percent of attacking planes. If such defenses were built, it is felt by competent authority that the "kill" to attacking forces would be so great that they would think and hesitate long before attacking.

think and hesitate long before attacking. It would seem to me to be of imperative importance that the most effective continental defense should be constructed as rapidly as possible. However, I repeat, that decided improvements have been made in this respect during the past year.

If we err, it is better that we err on the side of strength than on the side of weak-ness.

It is better for us to have too much military strength and power and not need it than to have too little and need it.

As long as the Kremlin adheres to its policy of world revolution and enslavement, the most effective way, as I see it, to stop Communist aggresison, to deter war, and to ultimately bring about peace is through strength.

And I close my remarks with the statement that I have already made, and which I have made in and out of the Congress on a number of occasions, and which, as an American, I shall continue to make because I consider it my duty to do so, that the only thing the Communists respect is what they fear, and that is military power and strength greater than they possess.

And with such a force, with the spiritual values of America, with public opinion when aroused, and a united America, we can approach the trying days that lie ahead with confidence and success.

The Late Dwight L. Rogers

SPEECH

HON. BENJAMIN F. JAMES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1955

Mr. JAMES. Mr. Speaker, notice of the untimely passing of our late colleague, the Honorable Dwight L. Rocers, came to us, I know, and to all of his many friends, with grievous and stunning impact.

I join with all those whose lives have been brightened by his friendship and whose days have been saddened by his death, in sorrow.

It has been my great privilege to be DWIGHT ROGERS' closest neighbor in the House Office Building since the day I came into this body 6 years ago, and the memory of his helpful attentions and courtesies to me as a freshman will stay with me forever.

A friendly man by nature and a kindly man, he made friends easily and held friendships securely. Pleasant memories of Mr. Rogers, we may be sure, will long remain in the minds and in the hearts of all those whose great privilege it has been to know him.

I extend to his devoted wife and his splendid sons my most profound sympathy in this time of their bereavement. The Late Dwight L. Rogers

SPEECH

HON. PRINCE H. PRESTON, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1955

Mr. PRESTON. Mr. Speaker, I was in Montevideo, Uruguay, when our colleague, the gentleman from Pennsylvania, [Mr. Scott] informed me of the passing of my beloved friend, Dwight Rogers. Being 6,000 miles away, unable to reach his family, unable to attend the funeral, I somehow felt the shock to a greater degree than I would have had I been able to go to the family and present my feelings to them.

Mr. Speaker, I did feel a keen shock in the passing of DWIGHT ROCERS. I had a reason to. Dwight was born in my district. The majority of his family live there yet. He came from good stock; honest, God-fearing people. When I came to Washington, Dwight took on interest in me because, representing his old home county, we became very fast friends. I think Dwight's greatest attribute was his capacity to love people. One cannot be loved unless he has himself the capacity to love others. DWIGHT had a heart big enough to permit him to love many people, and he did not fail to let people know that he loved them. I suppose he was about as popular an individual as we had in the House of Representatives. He perhaps had more warm friends than anybody in the House. had many friends on the Republican side. He associated just as much with the Republicans as he did with the people in his own party. So, he was loved by many people.

Mr. Speaker, little can be said to add anything to what has already been said about him. I think this eulogy here today has perhaps been as warm as any I have ever heard since I came to Congress 9 years ago. But he deserves everything that has been said. I know that the House will be glad to know that his son, Paul, who is very much like his father, is likely to succeed him. That district historically has been a Democratic distract. He has no opposition from the Democratic Party, and on next Tuesday it is most likely that he will be elected to succeed his father, and we will come to love him, I am sure, as we all did Dwight ROGERS. We hope he will be up here by next Wednesday to assume his office.

I certainly want to express my deepest sympathy to all of Dwight's family and those in my district as well as his immediate family in Florida. I talked to his son, Paul, when I came through returning from Montevideo. He is a resident of the city of West Palm Beach and is one of the outstanding young men in that community.

So, in conclusion I would like to express the hope that the House can be blessed with more men like Dwight Rogers, because he shed a lot of sunshine among his colleagues here in this body. He converted some dark hours into happiness for us by his good humor and his wit.

Free World Neglects Fight Against Communism

EXTENSION OF REMARKS

HON, RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. MADDEN. Mr. Speaker, the following editorial by Editor H. B. Snyder, of Gary (Ind.) Post Tribune, reveals that we overlook one of our greatest weapons in winning the minds of millions against Communist tyranny:

MAKE HOPE A REALITY FOR REFUGEE

One of the Western World's greatest weapons in its contest with communism is the hope we can offer to the peoples behind the Iron Curtain, or the Bamboo Curtain of the East—hope of freedom, of independence in thought, freedom to work, and to worship.

But in many ways we are failing to make the most effective use of this weapon. We have not carried through on our promises to many of those who have escaped from the totalitarian world. They have risked life, they have sacrificed their possessions. They have not found hope a reality in the free world.

Every day the press of te world—and the Communist radio, too—carries reports of disillusioned and discouraged refugees whose freedom turned out to be the freedom to rot in refugee camps surrounded by barbed wire, to go without work, to be treated with hostility or indifference. In desperation, many have gone back behind the Iron Curtain.

West Germany has virtually closed the door to refugees from Soviet control. The average refugees now are destined for a German concentration camp, with little hope of release. There is no place for them in the Bonn Republic; there is all mopportunity for them to go on to new homes in the Western World.

A serious problem is present on the other side of the globe. A haif million Vietnamese have fled south of the 17th parallel into free Vietnam. Their exodus was encouraged by the United States. Our warships were converted into transports to carry them from the area the Reds were occupying. They represented a major psychological victory for the western nations in Asia.

There are thousands of potential leaders among this throng of Vietnamese refugees—3,000 university and high-school students, 200 university professors, hundreds of secondary-school teachers, former civil servants, small-business men. They can be of great value in rebuilding community life, strengthening the Government.

They need housing, furnishings, clothing; they need medicines, classroom and technical supplies. They are short of food. For them, the needs are great. For us, pitifully small amounts of money and supplies will make them independent and self-supporting once more. We have the obligation to do something, and quickly.

One organization that is doing something about it, that is equipped to do something because of 21 years in the field—activity dating back to the early years of the Nazis in Germany—is the International Rescue Committee, of 62 West 45th Street, New York 36.

Its freedom fund has been established to help anti-Communist refugees throughout the world. The IRC is competing with communism. When it has enough resources, it is winning. Support of its freedom fund is an effective way of strengthening the free world.

Canton Student Strolls in Red Berlin

EXTENSION OF REMARKS

HON, FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1955

Mr. BOW. Mr. Speaker, there is a constituent of mine from the 16th District of Ohio, who is making a fine record as a Fulbright scholar studying at the Free University in Berlin, Germany. She is Miss Sue R. Barthelmeh, of Canton, Ohio, the daughter of Mrs. Wilda Barthelmeh and the late Common Pleas Court Judge A. C. L. Barthelmeh. I am quite proud of this young lady. She is a Phi Beta Kappa graduate of DePauw University and is preparing for a career in Government service.

She has written an excellent article for the Canton Repository, one of the newspapers in my district, about a trip into the Soviet sector of Berlin. It is well written and shows some of the wonderful opportunities given to Fulbright students to study and learn at first hand of the ways others in this world must live without the magnificent freedoms we enjoy in this Nation.

It is pleasing to see that American students can objectively view these other ways of life for only through understand-

ing can we break down the barriers to world peace.

I should like to call this fine article to the attention of my colleagues in the House of Representatives. Under unanimous consent, I ask that it be printed in the Appendix of the Record.

The article follows:

CANTON STUDENT STROLLS IN RED BERLIN (By Sue Barthelmeh)

BERLIN.—Several weeks ago, Gretchen Putnam of the Repository staff described her trip by bus into the Soviet sector of Berlin.

I can add to her descriptions from a student's point of view because I have made several trips into the Red sector since my arrival here in October as a Fulbright student.

If my fellow Cantonians came to visit me here, I would be glad to take them on a typical student excursion to the East. Our program for the day would be similar to this:

We would make a quick stop at a money exchange house in the West sector to buy some eastmarks. For 4.40 westmarks you can obtain 20 eastmarks, even though the Communists claim the official rate is two east to one west.

We would wear drab clothes and take the subway to the stop before the border. From the Kockstrasse subway station, we would walk the short block to the border and then casually walk across as if we did it every day. Guided tours are fine, but you are spotted as a foreigner immediately.

East Berlin is the biggest hole in the Russian Iron Curtain. Our American passports are our entry cards and 9 times out of 10, you will not be stopped at the control points.

If you are, it is never by the Russian soldiers, but by the hated People's Police, or Volpos, as the Berliners call them. As soon as you pass the sign welcoming you into the "People's Republic" you enter an entirely different world.

On the eastern side of the street are the gray bombed-out hulks, splattered with bright red propaganda signs, and Berlin's former railroad center, now a graveyard of

rusting, unused equipment. Behind you, not 500 yards away, stand the new modern apartment houses of West Berlin.

Except for Saturday afternoons or at the end of the working day, we would not meet many people on the street. We could spend our time strolling and reading the posters claiming what a wonderful place it is and what warmongering capitalists the Americans are.

We could even walk in the streets if we wanted to because there is no traffic to dodge. There just aren't that many automobiles on the streets.

We would probably go into some of the stores although without a special passport from the Red authorities we are not supposed to purchase anything other than food that can be consumed on the premises, or cultural materials.

Some of my American student friends have purchased gifts and clothing simply by showing the Russian translation of their travel orders through the Soviet Zone. It is amazing what the sight of any document with Russian printing upon it will do for you in the East sector.

At the newsstands, we would be sure to purchase the magazine "U. S. in Words and Pictures." From this we could read the latest "authentic" reports of how the United States is abusing its pepole, with doctored photographs to substantiate the twisted

words.

After a while the drab streets would lose their appeal so we would journey to Alexanderplatz and the Red's showplace, Stalin Allee.

Stalin Allee is the only section the Communists have rebuilt and here you find Moscow architecture, along green boulevard and many people and cars.

On one of the corners stands a strange plece of machinery. It is billed as the latest thing for harvesting grain, a present from the Soviets to the DR to celebrate Russian-German friendship. It looks like some of the pictures I have seen of McCormick's original reaper.

When it was time for dinner, we would dine at the Warsaw or the Budapest—Government-owned restaurants that only East Berlin's 400 could afford. The high prices wouldn't bother us, however, because of the favorable rate of exchange for our West money.

Both restaurants are nicely furnished and the food is fair. But you have to remember there are few East Berliners who can afford to eat in them. After dinner, we would still have some time before the opera began.

We could buy some books or records of that popular song Ami Go Home, or wander past the grocery stores where the people are lined up to buy baked goods, butter, or sugar on sale that day for a high price and no precious ration stamps.

Going to the opera is an experience. East Berlin becomes a true ghost town at night. A scattered light here and there dimly outline the wide, deserted streets. I could not guarantee that the production I would take you to would be just as the author wrote it although La Boheme, which I saw recently, was in its original form.

You can be sure the artists will be exceptionally good. They are lured over to the East by very high salaries.

But you won't escape the propaganda signs even inside the opera house. The audience would seem less gay and relaxed than in the West, yet receptive. If we had a car, there would be plenty of space in the parking place.

The last stop of the evening would probably be the Hotel Adlon, formerly Berlin's most prominent hotel used by all visiting dignitaries. Today it's third rate. We would have to climb stairs to get to the restaurant.

Inside, a radio plays quietly, waiters in tails and dress shirts scurry around, a few potted palms vainly try to add color, and most of the tables are occupied by men in dark uniforms that can mean anything from people's police to streetcar conductor.

This feeble attempt to appear as an exclusive night club is sad and ridiculous at the same time. I once ordered an omelet. After much bowing and scraping, the waiter began a long apology that he had no fresh eggs, only powdered ones. No fresh eggs in the Hotel Adion of all places when East newspapers were proclaiming abundance in the worker's paradise was a calamity difficult to explain.

My natural student curiosity sends me to Berlin every 2 weeks or so to see if anything new has developed and better to understand the problems of the East Germans. I find life much more free and pleasant on the western side.

Many of my German friends cannot accompany me to the East in fear that their names may be included in the black ledgers

of the Communists as politically dangerous.

Yet, the risks that many of them have taken to help relatives in the sector and zone and to continue the fight for freedom deserve credit and all the praise that has been given to West Berlin, the isle of freedom in the Red sea.

Fireman of the Year

EXTENSION OF REMARKS OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. AUCHINCLOSS. Mr. Speaker, it is always a privilege to do honor to those who devote their lives to the service of others. Men and women who find happiness in doing what they can to make life a bit easier for others and to bring encouragement and faith to the stricken are great people, the kind of people who make our country great. Such spirit of service is common among the members of our police and fire departments which are made up of brave men, always prepared to risk their lives in the protection of ours. These thoughts are prompted by a member of the District of Columbia Fire Department who has recently been selected as Fireman of the Year, and I consider it a privilege to do honor to this man.

Charles M. Chamberlin, Jr., assigned to No. 1 platoon of engine company 16, and presently detailed to the deputy fire chief, has received this honor and he richly deserves it. Mr. Chamberlin has been a member of the District Fire Department for more than 17 years, during which he served in different engine and truck companies, and 5 years with rescue squad No. 1. He also acted as aide to various battalion fire chiefs, and for the past 3 years he has been aide to Deputy Fire Chief Handback. Let me quote from a statement made about him by one of his superior officers:

Private Chamberlin has always demonstrated a keen interest in the Fire Department and is always ready to give his time to help others, from the lowest private to the highest ranking officer. When any member is sick or wounded he can always count on a visit from Charlie or "Doc" as he is called by all members who know him. this respect he is largely responsible for the starting and smooth operating of the firemen's blood bank. His interest in this respect is not confined to the Fire Department alone since his record shows he has donated 52 pints of blood through the American Red Cross for the use of the Armed Forces or for other purposes for which they need it.

Private Chamberlin is a family man with a wife and one son. He is an active member of his church, a Mason, and has served as den father to a Cub Scout pack and on the executive committee of the Boy Scouts of America. He is popular with his comrades and is recognized as one who is always ready to help in a good cause.

I am proud to be able to speak of Charlie Chamberlin as my friend, and it is indeed a privilege to know him. The inspiration received from a character with such high and unselfish standards makes us very proud and eager to do our own tasks better and in a more cheerful

Persons Serving in the Armed Forces on January 31, 1955, Should Be Entitled To Continue To Accrue Educational Benefits

> EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. TEAGUE of Texas. Mr. Speaker. the President of the United States has acted under the provisions of the Veterans' Readjustment Assistance Act of 1952 and issued a proclamation declaring the emergency period at an end on January 31, 1955. The effect of this declaration will be that persons in the Armed Forces will cease accruing eligibility as war veterans on January 31, 1955.

Entitlement to education and training is on an accrual basis. Entitlement is accrued at the rate of 1½ days of education or training for each day of service during the emergency period; therefore, the President's proclamation has the effect of discontinuing accrual of educational entitlement on January 31, 1955, for all persons in service on that date. This will mean that those individuals who have entered the armed services during the past few months will not have the opportunity to accrue sufficient educational entitlement to be of any practical value. A great many persons entered the armed forces during the past few months with the belief that they would have the opportunity of accruing the maximum entitlement to education. Some of these persons maintain that they were urged by armed services recruiters to enter the service and discharge their military service obligation as soon as possible and at the same time gain entitlement to a free college education. I have received letters from service personnel contending that armed services recruiters appeared in high schools last June and urged high school graduates to join the service and stated that they would be entitled to maximum educational entitlement if they entered the service promptly.

In order that those individuals who have entered the service during a recent period will be dealt with fairly, I am introducing a bill which will permit an individual in the armed services on January 31, 1955, to continue to accrue entitlement to education and training on the basis of 11/2 days educational entitlement for each day of service up to the date of his discharge or until he accrues maximum entitlement. Enactment of this bill will permit individuals who have been in service less than 24 months on January 31, 1955, to continue to count their service for the purpose of accruing educational entitlement up to a maximum of 24 months service.

I believe that enactment of this legislation will eliminate the possibility that any individual has been mislead or has been dealt with unfairly and at the same time will serve the basic intent of the Veterans' Readjustment Assistance Act of 1952. I hope that the Veterans' Affairs Committee can give prompt consideration to this question as soon as it

is organized.

Modernized Canal Put Off

EXTENSION OF REMARKS OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. KEOGH. Mr. Speaker, the adjournment of the 83d Congress without acting on the interoceanic canal question has become a topic of considerable public discussion as illustrated by a news story in the September 3, 1954, issue-Atlantic two-star edition-of the Christian Science Monitor by Capt. Frederick L. Oliver, United States Navy, retired, the distinguished naval correspondent of that paper.

Attention is invited to previous articles of Captain Oliver in the Christian Science Monitor on the canal question, which were republished in the Congres-SIONAL RECORD, 82d Congress, 2d session, volume 98, part 10, May 1, 1952, page A2659, and 83d Congress, 1st session, volume 99, part 9, February 12, 1953, page A605.

As an experienced seaman and a respected student of national policies, Captain Oliver's writings always reflect views derived from his broad background of study and observation.

The text of the news story follows: MODERNIZED CANAL PUT OFF

(By Capt. Frederick L. Oliver, United States Navy, retired)

Congress has again adjourned without giving more than passing attention to the need for making the Panama Canal adequate for present-day requirements.

Meanwhile, nature has taken a hand in the past few months by opening wide the long-neglected fissure on Contractors Hill. This sizable rift could result in a tremendous slide toppling into Gaillard Cut, closing the canal to shipping for an indefinite period.

For almost 15 years a group of prominent engineers has been advocating alterations to the canal to correct present deficiencies. Several years ago, interested Congressmen introduced legislation designed to initiate the necessary changes. But thus far Congress has failed to even take action on a bill authorizing the appointment of a commission composed of men with wide engineering, operating, and business experience, to investigate present conditions and recommend the best solution.

The average Congressman apparently does not realize the seriousness of existing conditions, and believes the canal is adequate to carry out its designed purposes.

DREAMS OUTSTRIPPED

When plans for the canal were drawn nearly 50 years ago, it was thought the locks would be large enough to handle any ship the future would produce.

But ship design outstripped the wildest dreams of prognosticators of those days, and today there are a number of ships afloat too large to use the canal locks, with other "toolarge" ships under construction and projected.

In addition, the United States Navy has many ships whose design was severely limited by the lock dimensions. Built as large as possible, these vessels are so tight a squeeze in the locks that, in order to minimize the danger of damaging lock structures and ship hulls, undue time is required for their transits.

During World War II, the inability of vessels of the Queen Mary class to pass through the canal interfered with planned operations

ALTERNATE PLANS

Although the need for increasing the capacity of the canal is recognized by those acquainted with existing conditions, there is a difference of opinion among them concerning the manner in which changes should be accomplished. These differences seem to have crystallized into two alternatives, (a) altering the present canal into a sea-level type or (b) increasing the capacity of the present canal by installing new and larger locks together with certain other changes. The consensus appears to favor the retaining lock-type canal.

After making a detailed study of geophysical conditions along the route of the canal, geologists agree almost unanimously that any large-scale underground disturbance can cause slides or bottom bulges in the cut through the Continental Divide, and the deeper the cut, the greater the danger that disturbances of this character will result.

A sea-level canal would require an enormous amount of excavation to attain a designed depth of 135 feet below the water level of the present canal. There is no possible way to determine accurately how new stresses and strains set up thereby would affect the physical formation of the area around the deep cut, but many experts believe that 2 or 3 times the estimated 1,069,-000,000 cubic yards of excavation would be required to attain a condition of stability.

Proponents of the sea-level canal have largely based their contention on the vulnerability of lock structures to severe damage by bombing. There is no question but that bomb damage, regardless of how the bombs arrive at their objectives, would put the entire canal out of commission for a considerable length of time if a pair of locks were seriously damaged.

However, this argument has been greatly discounted by results now attainable with H-bombs. Regardless of which type of canal is adopted, a properly placed H-bomb can put it completely out of service for an extended period, if not permanently.

This development has strengthened arguments for the enlarged lock-type plan. It is

also far cheaper to construct and much quicker to complete than the sea-level type.

Estimate of cost for the enlarged locktype canal run from \$600 million to \$750 million, the work to be done in from 5 to 10 years, depending upon the urgency attached to the project. It is anticipated that the changeover could be effected with little or no interference with normal operations of the canal.

SEA-LEVEL CANAL

The sea-level type will be vastly more expensive, estimates of cost ranging from \$2½\$ to \$10 billion. While work is in progress, the use of the canal would be disrupted. Estimates of the time needed for conversion vary, but there is no question but that it would be much longer than the time for completing the lock-type changeover.

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include the following letter and brief I have received from Banjamin G. Hull, vice president to the Massachusetts Federation of Labor, A. F. of L., which constitute an interesting and illuminating view on the subject of the large influx of foreign goods upon our shores.

The letter and brief follow:
COMMONWEALTH OF MASSACHUSETTS,
DEPARTMENT OF LABOR AND INDUSTRIES,
BOARD OF CONCILIATION AND ARBITRATION,
Boston, January 4, 1955.

Hon. THOMAS J. LANE,

House of Representatives,

Washington, D. C.

DEAR Tom: I was deeply interested and certainly appreciative of the remarks you made in reference to foreign-made bicycles at our recent luncheon of the Massachusetts Federation of Labor. Everyone who has had the pleasure of meeting and knowing you, knows your deep, sincere interest in those who toil for a living, for you know the hard knocks of life, as you have been through the

I am enclosing a copy of a brief I filed before the United States Tariff Commission, as
you probably know that I appeared before
that Commission last September. You also
know that a resolution was unanimously
passed condemning the large quotas of foreign imports at the Massachusetts Federation of Labor convention last August in
Worcester. I am going to quote some figures
for you, which I'm sure will be of interest.
These figures were compiled by the American
Tariff League from data supplied by the
United States Bureau of Labor Statistics, as
of October 1953.

Country	Hourly earnings	Per hour wage differ- ences
United States	\$1.78 .48 .46 .44 .37 .19 .57 .47	\$1, 30 1, 32 1, 34 1, 41 1, 50 1, 21 1, 31

You readily can see from these figures that the American industry certainly cannot compete. It is because of these figures that the foreign-made bicycle is seiling at \$15 to \$18 below our retail price. Five years ago, 17,000 came into this country. Now, I am going to call your attention to the latest figures which I received yesterday by telephone, which surely are shocking. Last November 1954—get this Tom—120,000 bicycles were shipped to our shores. Just look at this staggering amount. Over 900,000 were shipped here last year, 1954. As a result, the Westfield Manufacturing Co., makers of bicycles for over 75 years have closed their doors completely, throwing approximately 500 employees cut of work. Now, these 500 employees cannot buy products that are made by other workers, which in turn retards other businesses. It is my firm opinion that if the quotas on foreign imports are not drastically reduced immediately, that we are going to face a depression that will make the last one look like a piker.

I don't have to remind you what happened to the watch industry, nor the shoe industry, and is now happening to the fish industry, and is now happening to the fish industry. Here, hundreds of boats are tied up at the wharves and thousands of workers in the fish industry are idle. I could go on and on naming industries that are being affected by foreign countries who are reaping a harvest from this country, at the expense of our industries and workers.

I believe in reciprocal agreements, but these agreements should not be allowed to throw our country into a horrible depression such as we recently went through.

sion such as we recently went through. Our industries have to prosper in order to pay the taxes to keep this Government on the high standard that our boys have fought on the battlefields to preserve from the days of 1776.

With kindest regards, I remain,

Most sincerely yours,

BENJAMIN G. Hull,

Associate Commissioner.

BRIEF BY BENJAMIN G. HULL, VICE PRESIDENT OF THE MASSACHUSETTS FEDERATION OF LA-BOR, A. F. OF L., ON INVESTIGATION NO. 37 IN RESPECT TO BICYCLES

To the Honorable Board of the United States Tariff Commission:

Mr. Chairman and members of the Commission, I am indeed grateful that you, as Commissioners, accorded me the privilege to appear at the recent hearing, and voice my views on the bicycle situation. I also appreciate the privilege of filing this brief.

I have personally been interested in the importation of foreign-made goods for a number of years, going back as far as the time when Japan was at war with China some 15 years ago. At that time Japan was shipping bicycles to the Pacific coast at \$6 apiece, and to the Atlantic coast at \$7 apiece. I contacted the late Senator David I. Walsh and Congressman Allen T. Treadway. Each of them informed me that there wasn't much that could be done. I immediately filed a resolution with both the Massachusetts and American Federation of Labor conventions, which in both instances, were passed unanimously, condemning the importation of Japanese-made goods. Incidentally, this resolution on foreign imports was the first one passed at the A. F. of L. convention held in Denver, Colo., at that time.

At the present time we are being swamped with hundreds of thousands of foreign-made bicycles, which are seriously affecting the jobs of thousands of American workers, and when our workers are unemployed it means our Government is losing Federal income taxes. These unemployed workers losing their earning power seriously jeopardize many thousands of workers' jobs, because the unemployed worker cannot buy what his fellow-American is producing, which finally injures industry, which in turn lessens the revenue for State and Federal taxes.

Thousands of displaced persons have arrived in this country to join with our Amer-

ican workers, and their jobs are also being jeopardized. History has proven to us the results of such action; for instance, the tragic situation that our watch industry has suffered by low tariff and large quotas. Thanks to your Commission and the President of the United States, relief has been given to this industry. Now, the workers of the bicycle industry are facing the same situation, and before it becomes too late I urgently request that your Commission take such action as will protect this industry of long standing.

As far as I am concerned, this question is not a political or a party issue; it boils right down to the fact, are we going to protect the workers of our country who enjoy the standards that this country has worked so hard and for so many years to obtain? Are we going to protect our industries, the workers in which furnish a large part of the revenue to keep America on the high level it

now enjoys?

The Massachusetts Federation of Labor. A. F. of L., believes we should protect these standards and therefore over 600 delegates assembled at its recept convention in Worcester, Mass., unanimously passed a resolu-tion condemning the large influx of foreign goods upon our shores, causing undue hardship on the workers and our industries. Over 6,000 citizens in the western part of Massachusetts signed a petition asking for action to be taken to protect their jobs. The Honorable Governor Christian A. Herter, the members of the House of Massachusetts, the Honorable Senators Leverett Saltonstall and John F. Kennedy, and many Congressmen of this State have signified their stand on this question of foreign imports. All of these believe in a fair reciprocal trade agreement, but they do protest such a huge amount of products that causes many of our industries to close their doors, thus throwing their employees out of employment.

I, as associate commissioner of labor and industries of the Commonwealth of Massachusetts, vice president of the Massachusetts Federation of Labor, and finally president of the Westfield Central Labor Union, plead with your most honorable Commission to grant the request of the bicycle industry in order to help this industry take part in keeping this Government on the continual road

of prosperity, peace, and contentment. Respectfully submitted.

BENJAMIN G. HULL, Associate Commissioner Labor and Industries, Commonwealth of Massachusetts.

Pray for Peace

EXTENSION OF REMARKS

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. RABAUT. Mr. Speaker, yesterday I reintroduced a bill to authorize the Postmaster General to provide for the use in first- and second-class post offices of a special canceling stamp, or postmarking die bearing the words "Pray for

An identical measure which I introduced in the 83d Congress was passed in the House on August 18, 1954, but Congress adjourned before the Senate took action. It is my hope that the bill which I introduced yesterday will be enacted into law during this Congress. This leg-

islation would send the message of "Pray for Peace" on United States mail throughout the land, and to the far corners of the world. It would remind the world of our dependence upon God.

Residual Oil Imports: The Achilles Heel in Our Defense Structure

EXTENSION OF REMARKS

HON, ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. BYRD. Mr. Speaker, inasmuch as the residual oil imports issue affects both the domestic economy and the national security, I believe it important that new Members of Congress be advised promptly of the necessity for action on this vital matter. Those of us who served in the 83d Congress had an opportunity to learn of the great harm that excessive imports inflicted upon the coal industry and affiliated businesses—hard-ships that were steadily intensified from the time the deluge began several years ago through the first half of 1954.

Here we are, 6 months and more than 60 million barrels later, and we find that for the second straight year the equivalent of more than 30 million tons of bituminous coal has been imported into the United States in the form of residual oil. The result is that more coal miners are out of work, more railroaders whose jobs depend upon coal freight tonnage are also unemployed, and more families in West Virginia and throughout other coal-producing States are impoverished. Furthermore, as a consequence of foreign residual oil's illicit trespass upon coal's markets, the coal industry is not now in position to meet the enormous demands that would be made upon it if an emergency were to develop.

National policies which tend to bring hardship to large groups of American citizens, and which are in disregard of the security of our country, must be revised at the earliest possible moment. The responsibility for bringing about the necessary changes in prevailing policies lies with Members of the 84th Congress. Foreign trade policy is one of the first such issues that needs be corrected. By enacting proper limitations on the amount of residual oil that may be imported into this country from refineries in foreign lands, the Congress will be placing a protective covering for what could very well be the Achilles heel in our defense structure, for such a move would help immeasurably in bringing coal's productive capacity to a level in conformity with the Nation's mobilization base requirements.

There are a number of other matters affecting coal which will be discussed from time to time before the new House of Representatives. As representative of the largest coal-producing district in the entire country, I shall apprise my colleagues of conditions in this great industry and, when it is desirable, I shall

relay to this legislative body the suggestions of the miner and his union officials as well as the operator and his appointed spokesmen.

Today I ask unanimous consent to insert in the Congressional Record a recent statement by L. C. Campbell, president of the National Coal Association, and vice president of Eastern Gas & Fuel Associates, whose operations include mines in Boone and Raleigh Counties, which are in the Sixth Congressional District of West Virginia. Later I shall request permission to place in the Record the actual resolutions passed by the National Coal Association's board of directors at a special meeting last month.

Mr. Campbell's statement follows: Competitive Fuels Policy Statement by L. C. Campbell, President, National Coal Association

L. C. Campbell, president of the National Coal Association, announced today the appointment of a special committee on competitive fuels and other matters relating to the meeting of the board of directors of the association held in Washington on December 9 and 10.

Mr. Campbell stated that, "acting under authority of the members in convention at Pittsburgh, November 17 and 18, 1954, I have appointed a special committee on competitive fuels." Those named on that committee are: Raymond E. Salvati, president, Island Creek Coal Co., Huntington, W. Va.; Kenneth A. Spencer, president, Ptitsburgh & Midway Coal Mining Co., Kansas City, Mo.; D. W. Buchanan, Jr., president, Old Ben Coal Corp., Chicago, Ill.; L. Russell Kelce, president, Sinclair Coal Co., Kansas City, Mo.; George H. Love, president, Pittsburgh Consolidation Coal Co., Ptitsburgh, Pa.; A. R. Matthews, president, Pocahontas Fuel Co., Inc., Pocahontas, Va.; C. J. Potter, president, Rochester & Pittsburgh Coal Co., Indiana, Pa.; I. C. Campbell, vice president, coal division, Eastern Gas & Fuel Asociates, Pittsburgh, Pa.; and Harry LaViers, president, South-East Coal Co., Paintsville, Ky.

Mr. Campbell further announced that "pursuant to the authority granted by the members, plus appropriate resolutions adopted by the board of directors in Washington on December 9, the committee held its first meeting on the ninth at Washington and reviewed some of the problems confronting the industry. After careful deliberation, it announced the following objectives, to be viewed in the nature of principles to govern the committee's action:

"1. The coal industry is unnecessarily and severely injured by the importation of residual oil. Therefore, we favor a quantitative restriction on such imports and an equalization of tariffs on residual oil with other petroleum products.

'2. The coal industry is against and will fight the dumping of natural gas at a price less than the average cost at the point of consumption, plus a reasonable profit.

"3. The coal industry is for the control of importation of natural gas to prevent it from supplanting domestic fuels."

Mr. Campbell also stated that "the committee gave consideration to the so-called Phillips decision, dealing with the regulation of the producers and gatherers of natural gas, but the committee at this time has taken no position on the question of whether or not that decision should be retained or reversed."

Mr. Campbell said that "the committee named Tom Pickett, of the NCA staff to act as executive secretary of the committee and he was designated by the committee as its spokesman and the individual through whom all matters pertaining to the ques-tions under consideration must be cleared." Mr. Campbell also stated that, "as a result

of the action taken by the coal executives. the members of the National Coal Association in convention, as well as its board of directors, and in order to avoid any confusion among any elements interested in coal, this special committee is the only group now designated to speak authoritatively for the coal producers of this country on the problems heretofore enumerated."

Mr. Campbell said that "a brief preliminary conference was held by the members of the committee and spokesmen from the oil and gas industry in order that those representatives might understand the objectives of the coal producers as heretofore out-

Mr. Campbell further said, "We expect our committee will receive the active support and assistance of all segments of the coal econ-We will enlist their aid in pushing a legislative program that is to be developed within the framework of the policy decision of NCA's board of directors, adopted on December 9, and the three principles out-lined herein."

Mr. Campbell stated that any person or interested parties who feel that they have anything to contribute to the problems under consideration by this committee should communicate with Tom Pickett, executive vice president of the National Coal Association, Southern Building, Washington, D. C. Washington, D. C., December 17, 1954.

Westerners Support the TVA

EXTENSION OF REMARKS

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. ENGLE. Mr. Speaker, the recent controversy over the TVA has made very clear the mutual interest that the far West and the TVA area have in a sound water and power development program. The McClatchy newspapers, the outstanding newspaper chain in the Central Valley of California, have long been among the most vigorous advocates and defenders of the TVA. I include for the special interest of those in the TVA area and for the other Members of the House generally, a recent editorial in the Modesto Bee, one of the McClatchy newspapers, of December 30, 1954, entitled "Does TVA Pay?":

DOES TVA PAY?

The Tennessee Valley Public Power Association has prepared an interesting report which answers effectively the question of whether TVA contributes its fair share of revenues to local and State governments in the area in which it operates.

The association made a minute study of all the taxes paid on land utilized for reservoirs and on power properties purchased from

private operators.

These amounted to \$3,226,132 in the last

year of private operation.

For the fiscal year ended June 30, 1954, in lieu payments and taxes to the various governments by the TVA and the distributors of TVA power totaled \$9,074,356.

In other words, under the publicly owned operation the payments to local and State governments were almost three times as much as under private operation.

Moreover, industries attracted to the area by low-cost power, the thousands of new homes, the improved farms and the higher

level of income all contributed enormously to local, State and Federal tax collections.

The New York Times pointed out recently that the financing of TVA power facilities costs the Federal Government nothing, since the money is reimbursable with interest

Of the Federal investment of \$803,500,000 in TVA, said the Times, \$81,000,000 already has been repaid to the United States Treas-

The Federal Government in fact contributes nothing to TVA. Rather TVA contributes to the Federal Government. Somebody ought to show these figures to President Dwight D. Eisenhower.

Prayers of the Reverend Dr. Edward L. R.

EXTENSION OF REMARKS

HON, CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mrs. HARDEN. Mr. Speaker, under permission to extend my remarks, I wish to call the attention of the membership of this House to a series of prayers offered by the Reverend Dr. Edward L. R. Elson, pastor of the National Presbyterian Church, on the occasion of the reconvening of the Congress, Wednesday, January 5.

It was my privilege to attend this fine service, along with many other Members of this body and the President of the United States. We gained much from the service, and I ask that the prayers offered by Dr. Elson be printed in the RECORD. They follow:

PRAYERS OF THE REVEREND DR. EDWARD L. R. ELSON AT SERVICE OF INTERCESSION AND HOLY COMMUNION, JANUARY 5, 1955, THE NATIONAL PRESBYTERIAN CHURCH, WASH-INGTON, ON THE OCCASION OF THE RECON-VENING OF CONGRESS

PRAYER FOR THE NATION

Almighty God, our Creater, Redeemer and Judge, bless this Nation with righteousness and truth. Confirm what is right, correct what is wrong, and prosper all such efforts as shall promote Thy Kingdom. Visit our cities, towns, and countryside with a new and lofty patriotism and with pure religion. Abide in our hearts and in our homes. dow the people of this land with nobility and virtue. Strengthen our institutions; deepen the root of our national life in everlasting righteousness. Protect us from enemies without, and weakness and unworthiness within. Enable us to trust one another and to fear only Thee. Make us equal to our high trust, reverent in the use of freedom, just in the exercise of power, and generous in the protection of the weak. In all the decisions of the coming fateful days, grant that we may ever remain a Nation whose God is the Lord; through Jesus Christ our Lord. Amen.

PRAYER FOR THE PRESIDENT

Almighty God, in whose sovereign will is the destiny of men and nations, guide by Thy holy spirit and uphold by Thy might the President of these United States. unto him health of body, serenity of soul, soundness of judgment, sanctified stewardship of office, and a constant and confident faith in Thee. Make him a channel of Thy grace and an instrument of Thy power upon the earth, that righteousness and truth. justice and honor may be promoted and upheld among men and the nations of this world. Let goodness and mercy follow him

all his days; through Jesus Christ our Lord.

PRAYER FOR ALL IN AUTHORITY

Lord God Almighty, guide we pray Thee, all those to whom Thou has committed the Government of this Nation-the Vice President, the Members of the Cabinet, all in positions of executive responsibility, and the judiciary. Grant to them at this time special gifts of wisdom and understanding, of counsel and strength, that they may obey Thy will and fulfill Thy divine purpose; through Jesus Christ our Lord. Amen.

PRAYER FOR THE CONGRESS.

Most gracious God, we humbly beseech Thee, as for the people of this Nation in general, so especially for the Senators and Representatives in Congress assembled; that Thou wouldst be pleased to direct and prosper all their consultations to the advancement of Thy glory, the good of Thy Church. the safety, honor, and welfare of the people; that all things may be so ordered and settled by their endeavors, upon the best and surest foundations, that peace and happiness, truth and justice, virtue and plety, may be established among us; through our most blessed Lord and Saviour. Amen.

PRAYER FOR THE EMISSARY OF THE UNITED NATIONS

We remember before Thee, O Lord, the emissary of the United Nations on special mission to negotiate for the deliverance of men from captivity, remembering that our Lord Jesus Christ came to preach the deliverance of captives and, recovering the sight of the blind, to set at liberty them that are bruised. We beseech Thee to grant unto him and to all whom he consults, high and holy insights, that relations between nations may be lifted into the spirit of Thy Kingdom and a higher way be found for the life of the nations of this earth; through Jesus Christ our Lord. Amen.

PRAYER FOR WORLD PEACE

Almighty God, from whom all thoughts of truth and peace proceed: Kindle, we pray Thee, in the hearts of all men the true love of peace, and guide with Thy pure and peaceable wisdom those who take counsel for the nations of the earth, through Thy Church, through the United Nations, and all other agencies; that Thy Kingdom may go for-ward, till the earth be filled with the knowledge of Thy love; through Jesus Christ our Lord. Amen.

PRAYER FOR COURAGE AND STRENGTH OF CHARACTER

We ask Thee, O Lord, not to take from us our burdens, but to give us strength to carry them; not to deliver us from our problems, but to give us wisdom to solve them, and power to execute the solution; through Jesus Christ our Lord. Amen.

THE LORD'S PRAYER

Our Father, who art in Heaven: hallowed be Thy Name. Thy Kingdom come. Thy will be done on earth as it is in Heaven. Give us this day our daily bread. And forgive us our debts, as we forgive our debtors. And lead us not into temptation; but deliver us from evil; for Thine is the Kingdom, and the Power, and the Glory, for ever.

Judicial and Legislative Pay Increases

EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. O'HARA of Illinois. Mr. Speaker. by unanimous consent, I am extending my remarks to include editorial comment from the two morning newspapers of Chicago on the legislation to increase judicial and legislative salaries proposed by the Citizens' Committee.

The Chicago Sun-Times of December 31, 1954, said:

Pay raises for the legislators, and especially for the judges, are long overdue. Congress should have the courage to do something about it in 1955.

The Chicago Tribune of December 31, 1954, said:

In our opinion, it is a good idea. * * * The incomes of a body of men and women who can vote themselves a raise any time they feel like it have rather lagged behind the average increase in a period of rising salaries and wages. * * It proves that they (men in public office) are timid. In this matter, we suspect, they were needlessly alarmed, because the great majority of the voters will approve the proposed increase.

Unjust Discrimination Against Members of the Armed Forces

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. REED of New York. Mr. Speaker, Yesterday I introduced a bill to correct an inequity of our tax laws which results in an unjust discrimination against members of our Armed Forces.

Last year, in our work on the mammoth new tax law, the House included a provision, section 37, which provided a tax credit equal to 20 percent of retirement incomes up to \$1,200 for individuals aged 65 and over. When the bill reached the other body, this section was amended to provide similar treatment for individuals under 65 with respect to pensions received from a public-retirement system. However, the amendment made by the other body specifically defined the term "public-retirement system" so as to exclude a retirement system operated for the benefit of the Armed Forces. That amendment with the exception I have just described finally prevailed in conference.

As a result, under the law as it now stands, a retired schoolteacher, policeman, fireman, or other civil servant is entitled to the retirement income-tax credit even if he retires before age 65. On the other hand, a member of our Armed Forces who similarly retires before age 65 is not entitled to equivalent treatment. I can find no justification whatsoever for continuing this type of discrimination against individuals who have served in their country's uniform. The bill which I have introduced today simply removes the exclusion the Armed Forces from the definition of public-retirement system. The amendment would be effective for taxable years beginning after December 31, 1953, the effective date of the Internal Revenue Code of 1954.

Communist Aggression Against Ukraine and Other Non-Russian Nations in U. S. S. R.

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1955

Mr. FEIGHAN. Mr. Speaker, during the hearings conducted by the Select Committee on Communist Aggression, a number of Americans who are expert on the subject of the nations enslaved by communism appeared before the committee. One of those experts was Dr. Lev E. Dobriansky, professor of political economy, Georgetown University, and president of the Ukrainian Congress Committee of America. Dr. Dobriansky appeared before the committee on October 18, 1954, at the Chicago hearings, and presented a most informative analysis on the enslavement of Ukraine by the Communists. In his statement Dr. Dobriansky points out that the current threat of aggression from Moscow can be traced back in its roots to Russian imperialism which has plagued civilized mankind for well over 300 years. A warning is also raised on the grave dangers that confront us if we fall for the Moscow trap of peaceful coexistence.

Because of the importance the statement of Dr. Dobriansky bears to bringing about a better understanding of the real nature of international communism, I insert his statement in the Record.

COMMUNIST AGGRESSION AGAINST UKRAINE AND OTHER NON-RUSSIAN NATIONS IN U. S. S. R.

(Testimony by Dr. Lev E. Dobriansky, professor of political economy, Georgetown University; president, Ukrainian Congress Committee of America, at hearings of House Select Committee on Communist Aggression, United States Courthouse, Chicago, Ill., Monday, October 18, 1954)

It is a veritable privilege and honor for me to appear before this singularly outstanding and unique committee of the United States House of Representatives which now is investigating Communist aggression against Ukraine and the other non-Russian nations held captive in the Soviet Union. The distinction of this opportunity to testify on this crucially important subject is sharpened by the fact that these hearings are being conducted here, in Chicago, a great midwestern metropolis which, significantly, is also a mid-way point for the widely distributed communities and branches with affiliations and membership in the Ukrainian Congress Committee of America, of which I am the president. As a thoroughly American organization, representing one and a half million citizens of Ukrainian ancestry, this national body has for over a decade dedicated itself to the prime tasks of informing the American public about Moscow-centered communism in practice, and of broadening its warm understanding concerning the vital and strategic importance of the non-Russian nations in the Soviet Union to the fundamental interests and security of our Nation.

In all sincerity, and solely with objective thought, we join with countless others, in this country and abroad, in complimenting this select House committee and its staff on its extraordinary endeavors and superlatively constructive work in factually unmasking the expansion of Red totalitarianism and its colonial empire and in establishing a solid and secure groundwork for sound foreign policy formulation. It is a simple rule of balanced political behavior that before we can act with intelligent purpose and clear vision and courage we must first come to know, understand, and judge the data and elements with which we are dealing. The sterling contribution of your committee and its investigative work over the past year lies in the full maintenance and enforcement of this rule. It is doubly magnified by the fact that the revealing disclosures of your investigations of Communist aggressions in Eastern Europe, Central Asia, and elsewhere come at an anxious moment when an increasing number of people, sucked in by Moscow's new peace offensive under the tattered Soviet banner of peaceful coexistence are being being lulled into a false sense of security and world peace. The total significance and import of your monumental work will doubtlessly be felt with keener impression and appreciation once the constant, mortal threat of Communist aggression commences to assert itself again in bold, overt strokes of conquest and domination.

Every impartial observer and student of the activities of this committee agrees that its recent second interim report consists of one of the finest and most authoritative summaries of the nature and content of aggressive communuism.1 It is based upon a wealth of concrete, empirical evidence obtained from the direct, horrible experiences of people representing all strata of the slave society and all nations reduced by force under the tyrannical yoke of Moscow. It reflects an investigative approach satisfying every critical test and criterion of comprehensive factfinding, and the salient facts and generalizations presented in this official document are worthy of careful study in all of our educational institutions. The able and distinguished chairman of this committee, the Honorable Charles J. Kersten, of Wisconsin, whose name is honored throughout the free world and consistently reviled in the Red empire, deserves every measure of commendation and praise for his untiring efforts in the cause of freedom; and the people of Milwaukee, whom he so brilliantly represents, have every right to take pride in his preeminent achievements and international reputation.

GROUNDED PERSPECTIVES ON NON-RUSSIAN NA-TIONS IN U. S. S. R.

Contrary to popular impression, facts do not speak for themselves. For their meaning and true proportions they require intellectual insight and evaluation, the exercise of rational measurement, and a coherent arrangement in an intelligible pattern of thought. This committee is in its remarkable way accumulating valuable information and documentary material relating to Communist aggression against the non-Russian nations in the Soviet Union. Such data begin to assume meaningful significance for our knowledge and our political action in the field of foreign policy only when, according to their self-evident factual determinations, they are rationally ordered in terms of the life-process of a nation, in terms of its vicissitudes, indicated aspirations and goals of development. Testimonies on national genocide, mass deportations, terrorism, manmade famines, religious persecution, thought control, underground resistance and general political tyranny refer not to isolated historical phenomena but broader political contexts of national struggle for self-preservation, freedom, self-government and independ-ence—the only contexts in which these basically related experiences can attain to intelligible meaning.

Being intimately familiar with a good deal

Being intimately familiar with a good deal of such data, it is my sole purpose here to present certain grounded perspectives with

Footnotes at end of speech.

regard to Communist aggression against the non-Russian nations in the Soviet Union, chiefly from the overall viewpoint of its crucial relationship to the national interests of our country. These perspectives are amply supported by the types of evidence being furnished this committee, and represent generalized working conclusions of innumerable objective studies on the many non-Russian nations in the Soviet Union, Indeed, the investigations of this committee into Communist aggression against these particular non-Russian nations cannot but reinforce these perspectives and thus constitute a salutary contribution to American public understanding of the nature and complex of the Soviet Union and also to our military and political capacity to capitalize on its patent vulnerabilities and weaknesses.

first major perspective is that the Soviet Union is not Russia, but, in a real sense, an empire within an empire. It consists of Russia, which itself is a federated Republic made of of different peoples and known as the Russian Soviet Federated Socialist Republic (R. S. F. S. R.), and a large number of non-Russian nations which, in the forced context of this primary empire, have been established as individual republics. According to current estimates, in addition to some 100 million Russians, there are about 115 million non-Russians, of which the Baltic nations, White Ruthenia, Ukraine, Georgia, Armenia. Azerbaijan, Cossackia, and Turkestan roughly account for over 90 percent. Inhabiting in their individual countries the broad, strategic periphery of the Soviet Union, these non-Russian nationals not only compose in toto the majority of the total population of the U.S.S.R. but also make up overwhelming majorities in their respective native lands. It is, therefore, a current fallacy, born either of habitual error or purposeful misinformation, to view these non-Russian nations as national minorities. If Poland, for example, were nominally annexed to the Soviet Union, would it be logically sensible to regard this nation as another minority? Obviously not, when we are dealing with nations, peoples, conscious and rightfully proud of their national individualities.

The average American is familiar with the Baltic nations largely because they were fortunate to enjoy a longer period of national independence than these other non-Russian nations with whom, as yet, he is not so familiar. But, in fact, except for this relative release from foreign domination and annexation for scarcely two decades, the experiences of the Baltic nations have been, both prior to the collapse of the Czarist Russian Empire and since 1940, substantially those Ukraine, White Ruthenia, Georgia, and the other non-Russian nations. All possess their individual national histories, distinctive cultures, separate languages, and an unbreakable bent toward national freedom and independence. Each has had glorious periods of such freedom and independence prior to its forcible absorption into the Czarist Russian Empire. Each strives for it today in a wave of enlightened nationalism that is global in character and not restricted merely to Asia.

On the basis of the evidence provided this committee it is utterly essential to under-stand that the year 1917 was the historical moment not only of the Russian Revolution but also of the non-Russian Revolution that led to the creation of the free and independent national republics of Ukraine, Lithuania, White Ruthenia, Georgia, Armenia, and others. The collapse of the Russian Empire was erystallized by this sweeping non-Russian revolution, and it seemed on the basis of typical Communist avowals and pacts that this dark empire was at last finished. For instance, never tiring in his early advocacy of the principle of national self-determination, Lenin wrote "that Russian Socialists who fail to demand freedom of secession for Finland, Poland, the Ukraine, etc.,

etc., are behaving like chauvinists, like lackeys of the blood-and-mud-stained imperialist monarchies and the imperialist bourgeoisie." 2 As a further example, concerning Ukraine, both Lenin and Trotsky addressed themselves through the Council of Commissars of the Russian people on December 4, 1917, as follows: "So far as the international rights and the national independence of the Ukrainian people are concerned, we the Council of People's Commissars, recognize them without reservations and unconditionally." It was not long after that Trotsky's Red army invaded Ukraine and the other non-Russian republics to commit the first act of Russian Communist aggression against foreign states and nations. Long before the West learned to distrust Communist words and contracts Ukraine, Georgia, and others painfully experienced the infamy of Moscow's chicanery.

In historical perspective, then, which is as essential and determining to nations as trained backgrounds are to the understanding of persons, except for the more fortunate Baltic States, the non-Russian nations now in the Soviet Union were the first true victims of imperialist Communist aggression staged in the period of 1919-22. slaught upon the Baltic States 20 years hence and, soon thereafter, the aggressions against Poland, Bulgaria, Rumania, Hungary, and others in what we unrealistically call "the satellite area" represented additional in the extended imperialist chain of Muscovite expansionism. The pattern of Russian Communist aggression did not originate, as many erroneously believe, at the start of World War II but actually soon after the close of World War I. The Red empire was not founded with the forcible annexation of Lithuania, Latvia, and Estonia but actually established its foundations with the conquest and involuntary incorporation of Ukraine, Georgia, White Ruthenia, and others in the Soviet Union in 1922-23.

It should also be observed that Russian Communist involvement in the wars of independence with Ukraine and the other independent non-Russian republics indirectly contributed heavily to the formation and maintenance of the independent Baltic States and Poland after World War I. Trotsky's Red armies advanced sufficiently to knock at the gates of Warsaw, only to be repulsed by combined Ukrainian and Polish We need only contemplate what the forces. course and alternative conditions of history would have been since 1918 had the West supported these new, democratic non-Russian republics; had it understood that this is in reality a century of the demise of empires, as the forces of freedom surge forth among all nations. Indeed, much human life, tragedy, treasure, and blood would surely have been spared as communism would have been forced to face the prospect of asphyxiation in the realm of its origin and genesis; only had we the knowledge, vision, and courage which even today we in great degree need.

Without these guiding perspectives, the tragedies, genocide, national purges, manmade famine, underground resistance, deportations, etc., that have occurred in the non-Russian areas of the Soviet Union since the twenties have in the largest measure no meaning. They are not, as simple and misinformed conceptions would have them, mere internal problems of a state. For within the framework of an empire, whereas in the dark past, nations are uneasily bound together by force, coercion, and terror, such problems and evidences are always of an international character. On all counts, for anyone who carefully reviews the evidence brought before this committee, Moscowcentered communism is in essence a destroyer of nations, including the potentialities

for democratic existence and growth of the Russian nation itself.

Viewing the overwhelming evidence presented on Ukraine alone, one cannot but be constanly impressed by these ruling perspectives. After displaying with courageous strength and passion its undying aspirations for national freedom and independence, Ukraine was given nominal significance as a republic in the Soviet Union, and in the period of the 1920's numerous concessions were made, contributing to a freer cultural activity than ever existed before in the Russian For example, the rewriting and of-Empire. ficial censoring of Ukrainian history, which was an old institution of the Tsarist Russian Empire, lapsed as the leading Communist historical school under the famous Russian historian, Mikhaylo Pokrovsky, acknowledged the true facts of the history of Ukraine since the 9th century. By 1930 this institution was in full swing again as Pokrovsky was sharply censured, his works abolished, and old-styled Russification was renewed by the Communists. The phase of the 1930's highlighted by the famous Kharkov trials, the man-made famine of 1932-33, the purges of 1937 and the Vinnitsia massacres, was, by contrast, one of terror and oppression.

It is no wonder that a full, national reaction to these inflicted experiences burst out upon the German invasion of Ukraine and the Caucasus in the early 1940's. The invasion was largely into these areas rather than Russia itself, and the story is nowhere better summarized than in the work of the German correspondent who witnessed it all. The steady flow of Ukrainian volunteers for the German forces we ignored. * * * The millions of Ukrainians who by themselves could have turned the scales in the east, were not only being left unused, but were actually being repulsed and disillusioned. * methods were replacing the great and splendid idea of the liberation of the east. In place of national independence and freedom, the bit was being drawn tighter." 2 The consequences of this colossal German blunder were many, not least of which was the price paid by countless Ukrainians for their devotion to country and freedom. "There are many Ukrainians in the Uzbek desert towns." writes a New York Times correspondent from a recent visit there, "some of them settled forcibly there as far back as the time of the collectivization program nearly 25 years ago. Others were sent east on charges of failure to resist the Germans or Rumanians when their lands were occupied. As in the case of the Caucasian mountaineers many of the Ukrainians must have had little or no enthusiasm for what they regarded as primarily a Russian cause." *

The formation of the Ukrainian Insurgent Army in 1942 and its heroic exploits to the present day are unparalleled in Eastern Europe. Its fight was against both Nazi German and Russian Communist totalitarianism, and by 1945, Moscow concessions were in order again, paramount among which was Stalin's support of the admission of Ukraine and Byelorussia into the United Nations. As Stalin revealed to Stettinius and others, it was done to appease the intense nationalism raging in these areas; and when some, as Senator Willey last month, seek to reduce the votes of the U.S.S.R. on the spurious notion that these two countries are like the States of Texas and Arizona, they simply do not know what they are talking about and, worse still, are playing into the present hands of Moscow. For, after another phase of purges on the score of "bourgeois nationalism" and the non-Russian significance of the Beria case, Moscow launched at the beginning of this year upon a 6-month celebration of the Pereyaslav Treaty in 1654; significantly, rewriting the history of the relations between Ukraine and

Russia these past 300 years in terms of the former's historic struggle for national freedom and independence.

FROM ASSEMBLED EVIDENCE TO INTELLIGENT

The story depicted above is in substance the story of Georgia, Armenia, Turkestan, Lithuania and others. It is the brutal story of Communist aggression against nations, the Stark details of which form the massive evidence of this committee. "We have the story, what now?", is the proper and appropriate question that every thinking American should raise. The assembled evidence is surely not for academic purposes alone, but rather it should serve as a working basis for intelligent political action, for a sound foundation of policy. With this picture of successive and planned Communist aggression in mind any thinking person could begin to comprehend the explosive centrifuge that exists in the Russian Communist Empire. It provides weapons of political warfare and psychological success that lay at our disposal while we still have time to exploit them.

One would think that at this stage of the cold war, our Government has formulated and carefully worked out a policy toward the Soviet Union and the many nations imprisoned there. Except for our tenuous position concerning the Baltic States, there is no evidence of any such policy, no guide of action to strike at the empire within an empire. The tremendous evidence as-sembled by this committee stands to pro-vide us with a policy that, as always, must be in accord with the moral and political principles of our Nation, as best expressed in our Declaration of Independence and Constitution. It stands to save us from merely drifting along, waiting to see what happens next, always passively adapting ourselves to changed circumstances contrived by a menace that is admittedly planning our de-

Second, this ammassed evidence serves as a bulwark of knowledge thwarting the desperate attempts of Moscow and even some professed anti-Communists with undemocratic totalitarian preconceptions to becloud. tarnish, and mutilate this true picture to the detriment of our own national interests. Some intellectuals, like Corliss Lamont and Owen Lattimore, have presented the Moscow line on the non-Russian nations in the U. S. S. R. in its false entirety. To quote from one of Lattimore's works, "The success of the Russian policy toward minority peo-ples has made the Soviet Union as a whole not only a standard, but the standard of progress from the Ussuri and Amur Rivers to the Pamirs." Other disinformers, even anti-Communists and usually of Russian origin, make a practice of hoodwinking officials unacquainted with the facts through deceptive semantics on the peoples of Russia, dismemberment of country (meaning, With false intent, U. S. S. R. is Russia and all therein are Russians), and other terminological twists that also appear in the Moscow line. Another occupies an important post in the Voice of America, testifies regularly in this disinforming vein, and has painted the German episode in Ukraine with semantic distortion.* Some prepare official documents with similar misleading semantics as national minorities, etc.* Still others in this county, writers, advertised as experts on Russia and communism contribute disinformingly to a distorted picture of the known story; one even unreservedly accepting and employing the official Communist concept of Homo Sovieticus.19

These examples of methodical disinformation, which the direct, experiential evidence gathered by your committee counters, may be easily extended, and if one were to survey at length the futile activities of the American Committee for Liberation From Bolshevism—ostensibly a private organization on which, significantly, two of the quoted experts serve—the American public would be amazed to know as to what is going on. There is good reason to believe that these activities fall in part within the jurisdiction of the assignment given Gen. Mark Clark. Moreover, if one were to inquire into the real, ultimate sources—the why— of these disinforming tactics, it would necessarily involve one in a study of institutional pathology which, fortunately, is being undertaken by students in many quarters in this country."

However, to gather an essential idea of the major source of this detrimental phenomenon, no one, perhaps, portrays it more vividly and cogently than one who suffered much in treasure and kin at the hands of the Communists, namely, Alexander, Grand Duke of Russia:

"It was clear to me then, in the eventful summer of 1920, as it is now in the quieter days of 1933, that in scoring a decisive victory over the Poles the Soviet Government had done what any truly national government would have been obliged to do. However ironical it might appear that the unity of the Russian state had to be defended by the members of the Third Internationale the fact remains that from that day on the Soviets were forced to pursue a purely national policy which happens to be the ageold policy introduced by Ivan the Terrible, crystallized by Peter the Great and brought to a climax by Nicholas I: To defend the borders of the State at all costs and step by step to fight toward the neutral frontier the west. I feel certain that my sons will live to see the day when not only the nonsense of the independent Baltic Republics will be brought to an end, but Bessarabia and Poland will be reconquered by Russia and a considerable remapping of the frontier will take place in the Far East," is

This totalitarian, empire complex, that has wrought so much harm and misery not only upon the conquered non-Russian peoples but also the long enslaved masses of the Russian nation, that functions as a common denominator in the political behavior of both the Russian Communists and some anti-Communists, is, on evidence, not the sole property of a monarchist like Alexander. For example, identifying Russia and the U. S. S. R., and perhaps more, Mr. Kerensky writes: "Russia, a geographical backbone of history should exist in all her strength and power no matter who or how he is ruling her. From this comes his (Miliukov's) testament for us: to be on watchful guard of Russia-no matter what her name is-absolutely, unconditionally and to the last breath." Another, in much of the evidence that can be cited, writes: "They (the Bol-sheviks) are despots and tyrants, they are dictators and fire-spreaders; they are guilty of many crimes against the people save one: they did not dismember Russia," 16 which in the imperialist Russian jargon means em-

The practical importance of this assembled evidence and its effective use becomes even more clear when we think in terms of necessary political warfare and psychological advantage. Its significance is summed up in the conclusion of one of our leading political analysts who took pains to familiarize himself with much of this evidence: "Our proposal must be for the freedom of all nations; a Ukrainian has the same right to freedom as a Pole or a Russian. Only this universal interpretation, which is recommended alike by expedience and justice, will release the centrifugal energy of all the peoples of the Soviet empire, a power which if given a chance to express itself can shatter the imperial structure. It would be ludicrous to in-

terpret the struggle against communism as a fight to preserve the Russian empire. If Russians who claim to be anti-Communists refuse to extend the goal of freedom to non-Russians, then we must wonder whose side such Russians will be on when the show-down comes." ¹⁵ With this conclusion no American can disagree: with this conclusion the full significance of the assembled evidence comes into bloom.

Finally, this assembled evidence is the factual groundwork for a sane and sound American policy of liberation toward all nations, including the non-Russian nations in the Soviet Union. Anyone scanning this evidence cannot but leave with the disturbing thought that behind their neatly staged facade of peaceful coexistence," a colossal bluff now being perpetrated upon the free world, the Communists are busily engaged consolidating their empire, chiefly through the medium of systematic national genocide. In their calculus of world conquest, this genocidal consolidation is primary and basic. With millions of human robots at its disposal, Moscow will have achieved its psychological basis of a reasonable expectation of success in this calculus. Given the initial advantage of attack, it does not even have to regard the second essential variable in the calculus, namely, quantitative superiority in arms, as an indispensable requisite for such expectation; although, with concentrated specialization, it may easily obtain it, both absolutely and relatively, as we are forced to dissipate our resources in sideshows. The third basic variable, its fear of retaliation, will then be inversely related to its estimated ability to create regionalized Pearl Harbors. By allowing the first and dangerously gambling through unprincipled containment on the second variable, we are contributing heavily to their lessened fear of the third variable and to the prospect of a third world war.

Time, to achieve this consolidation, favors Moscow, not the free world. In 1952 both political parties in this country repudiated and disclaimed the policy of containment. Yet this policy is in effect today, allowing the time for Moscow to consolidate and form its springboard for world conquest. Only through a policy of liberation—the real and practical alternative to preventive war, the Soviet-inspired myth of peaceful coexistence and myopic containment-can we obstruct this consolidation for war, sustain the sources of enlightened nationalism and patriotic resistance throughout the Soviet Empire, enhance the insecurity of Moscow within its own imperial realm, and thereby maximize the chance against a global conflict. Once the ultimate Communist calculus of world conquest is understood, little comfort can be taken in the knowledge that we are equipped to retaliate with material power. Moscow possesses such power, too, and may substantially reduce our sources of retaliation. To follow the present policy means to lose the strength and power of our natural allies behind the Iron Curtain and to dangerously expose ourselves to the prospect of defeat in the event of a showdown, no matter how closely bound we may be to our allies in the free world.

The American public has every right to know why, in view of the stand taken in 1952, our Government still pursues the self-defeating policy of containment. It should be given every opportunity to read and study the evidence accumulated by this committee. It should also have the opportunity to ponder and act upon the preliminary recommendations of the committee. Although there is a tactical question concerning its recommendation on the withdrawal of American diplomatic representatives from behind the Iron Curtain, these proposals are girded to fact and evidence as concerns communism in practice rather than hollow theory and

are thoroughly in the tradition of our moral and political principles. The basic question is: Are we as a nation prepared to trade for a few illusory moments of "peace" under the bluff of peaceful coexistence at the longrange risk of grave disadvantage in possible war, even at the risk of our defeat as a nation? This investigating committee, on the basis of its accumulated evidence, can render only one rationally possible verdict.

Our Ambassador to Italy Proves an Effective Force Against Communism

EXTENSION OF REMARKS OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. MORANO. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Appendix of the RECORD a news article by the Associated Presa which appeared in the Bridgeport (Conn.) Post, an article which underscores graphically the splendid, realistic job that the United States Ambassador to Italy is doing to help swing the balance against Communist inroads in that traditionally friendly and historically strategic country.

We are all familiar with, and grateful for, the statesmanlike role Mrs. Clare Boothe Luce played in helping effect a solution to the difficult Trieste situation, which was, until its settlement, recognized as a powder-keg of tension and potential disaster to the Free World.

This Associated Press article reflects another facet of her determined and sagacious conduct in the interests of United States and Free World welfare. It show how she has insisted on measures that will militate against the inroads of communism in the life of Italy. It demonstrates astute understanding of the complex problems facing our envoys overseas-the perpetuation of help to our friends but the firm insistence that no crumbs of benefit fall to the enemy of all free peoples everywhere-international communism.

Mr. Speaker, I am proud to insert in the RECORD this eloquent testimony to the dynamic, sensitive work of our Ambassador to Italy, and I am especially proud to call attention to this exemplary statesmanship because she is a resident of the district I have the honor to represent and is a former Member of this great assembly.

The article follows:

MRS. LUCE'S POLICY HURTS REDS IN ITALIAN FACTORIES

ROME, December 26.—A United States policy of no aid contracts for factories dominated by Red workers is hitting Italian communism where it hurts.

More and more the men at the benches are voting for non-Communist representain shop elections. They want workand Uncle Sam is handing out no offshore procurement contracts where the Communist-controlled Italian Federation of Labor is in the saddle.

United States Ambassador Clare Boothe Luce pioneered this get-tough policy months ago. She ordered an \$18-million ammunition contract canceled after Communists gained strength among workers of the Officina Vittorio Meccanica, near Milan.

Two months later, to prove that the United States meant business, a second contract was withdrawn at Palermo, Sicily. For \$7,528,-000, this order would have provided Italy with a new 1,500-ton destroyer escort at American expense. Cancellation came after factory workers increased the Communist majority on the factory committee even after the United States order.

LEADER WORRIED

Prime Minister Mario Scelba is a Sicilian, and his Christian Democratic government is worried about Communist gains on the Neither wanted unemployment. island. a result, Italy blunted the moral impact of the American cancellation by letting a big contract to the Palermo shipyard.

Nevertheless, word got around among

Italian workers fast.

Ever since World War II the Communists have controlled the Italian Federation of (CGIL), which claims 31/2 million members. This is nearly double the membership in anti-Communist labor groups.

The Communists have been able to wield their strength by electing Communist-controlled workers' commissions in the factories. Shop stewards and union officials chosen for office were handpicked from the Italian Communist Party, which has 2 million members and is the largest outside the Iron Curtain.

Now the workers know there will be no offshore procurement orders for factories whose workers vote these Communist commissions and union officials into office.

United States officials report that since Mrs. Luce's crackdown factory elections have running strongly anti-Communist. Anti-Communists have won even in many former Communist strongholds, they say.

Only last week there was a dramatic example. Fiat's big "Avio" aviation parts plant Turin had a Communist-controlled worker's commission in the past. Last week the workers voted again-1,920 against the Communists and only 77 for them. The Reds failed to win a single seat on the 20member commission.

TO PROTECT CONTRACTS

Experts concede that a man might vote for non-Communist factory council in selfinterest, to protect the contracts which keep him employed, while still voting Communist in national elections.

But they say once Communist discipline is broken, the tendency is for workers to swing away from the Communists in more and more ways. Many voted for the Communists because they believed Red-led unions were the most militant defenders of their economic interests. Now that the workers see their economic self-interest lies elsewhere, according to this line of reasoning, there should be a growing trend away from communism among them.

Behind the scenes, the United States is quietly trying to assist this shift by persuading Italian employers that improved treatment of workers, as well as more workers' benefits, will bring increased production and

cut Communist strength.

Italian industry is notorious in Europe for backward labor practices, although there are such bright spots as the Olivetti company. In the last 2 years, under quiet American pressure, such firms as Fiat have stepped up workers' benefits and improved labor rela-

Mrs. Luce also authored this affirmative Firms with good labor relations and practices are more likely to get United States aid contracts than others. Knowing this, the smart industrialists are getting their labor practices into line.

The results in employee goodwill is beginning to show gradually-and that, too, means fewer Communist workers in Italy.

A Bill To Have the Members of the House of Representatives Recite the Pledge of Allegiance on Flag Day

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. RABAUT. Mr. Speaker, during the 83d Congress, you will recall that my bill, House Joint Resolution 243, to include the words "under God" in the pledge of allegiance to the flag of the United States of America, received unanimous approval and it is now Public Law 396, signed by the President on Flag Day, June 14, 1954. Yesterday, I introduced a House resolution to amend the Rules of the House of Representatives by inserting after "First. Prayer by the Chaplain" the following: ", pledge of allegiance to the flag by the Members," led by the Speaker, to be recited annually, when the House is in session on Flag Day, June 14.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Congress Charts a New Course for Agriculture

EXTENSION OF REMARKS

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. HOLLAND. Mr. President, on December 15 I had the honor of delivering an address at the annual convention of the American Farm Bureau Federation in New York City. I ask unanimous consent that my address be incorporated in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CONGRESS CHARTS A NEW COURSE FOR AGRICULTURE

(Address by Hon. Spessard L. Holland, of Florida)

I am happy, indeed, to be the guest of the American Farm Bureau Federation and to appear on your program today. I was sorry that I was forced, by a very bad throat, to cancel my visit with you at Chicago last year. I count it a very special courtesy that you have invited me a second time.

My association with your splendid organization has been, to me, a succession of pleasant and helpful experiences. At the national level I have found my own thinking on agricultural legislation, in most instances, in quite close accord with your official positions, and I have frequently sought and obtained valuable assistance from the members of your exceedingly capable Washington staff. When you have not agreed with me you have always been courteous and tolerant.

On the State level there is no other organization besides the Florida Farm Bureau which contains strong representation from all branches of our highly diversified Florida agriculture, and which can therefore speak with such authority for the agricultural groups in our State as a whole. In my opinion your approach to all questions, both National and State, has been both constructive and well informed, and I look forward to a permanent continuance of my friendly

I am glad, too, that my appearance today happens to be at the same time as your visit from the Secretary of Agriculture. Mr. Benson. I feel that Mr. Benson has rendered very great service to American agriculture and that his leadership has been fundamentally in the right direction. The sooner we all realize that agricultural problems are economic problems of great national importance and that they may never be dealt with upon any narrow partisan basis, the better it will be for American agriculture and for the American people. In my judgment, Secretary Banson's approach has been courageous and essentially nonpartisan, and I think that Congress has been similarly broad in its reaction. Both Houses of Congress have given Mr. Bonson bipartisan support, which is as it should be.

A noted speaker once said that no greater misfortune could befall any speaker than to be on a program where everybody present knows more about his subject than he does, yet that is precisely the situation in which I find myself. I shall hope, however, that my point of view, as a legislator, may contribute some small new light upon the problems of American agriculture—my subject being "Congress Charts a New Course for Agriculture."

The 83d Congress, during its 2 years, 1953 and 1954, has probably passed more legislation than any earlier Congress which vitally affects agriculture. It is timely to analyze this mass of new legislation to determine what has been the general philosophy of this Congress in enacting laws for agriculture. I shall leave for later discussion the price-support programs, which are included in the Agriculture Act of 1954, the most important single law passed by us. At this time I shall mention three general fields of legislation which the 83d Congress evidently regarded as of great importance to agriculture.

1. EMPHASIS ON INDIVIDUAL RESPONSIBILITY

It is quite clear that the Congress placed much emphasis on the responsibility of the individual farmer and made available additional tools which farmers can use, either individually or collectively, in solving their own problems relating to the production of their crops or to the distribution of their crops in the American market.

The Water Facilities Act, for instance, was expanded and enlarged so as to apply to all areas of the Nation, rather than simply to the arid and semiarid States of the West as heretofore. This legislation will enable and encourage the expansion of conservation practices and improved use of soil and water throughout the Nation by allowing substantial loans to any individual farmer or rancher for water facilities and general conservation development, and much larger loans to associations of farmers. The extended Water Facilities Act also sets up a new program under which, in addition to direct Government loans, many loans for these same purposes may be insured by the Government, thus making commercial loans much easier to obtain. This act should be of great importance everywhere, but particuuarly in drought areas or where reclamation or drainage is under way.

A second act which creates new tools for the use of farm producers is the Watershed Protection and Flood Prevention Act. Its purpose is to recognize the fact that the Federal Government has an interest, in the upper watersheds of streams, in doing those things that go beyond ordinary soil-con-servation practices which already receive some repayment out of Federal funds. As to those things which require collective action, such as the building of dams over the upper steams, where the question is not one of direct flood control, navigation, or waterpower, this act makes it possible to bring about better practices above the dams and improved conditions downstream. This act requires an integrated community approach to the development of small watersheds. The Federal Government participates in the planning and the cost, but the work is done and the project administered by the local soil conservation district or some similar public body, which must also have State approval.

A third new measure, which gives added encouragement to the adoption of conservation practices by farmers, is a section of the general tax revision law under which, for the first time, an income-tax deduction is permitted to the farmer for his reasonable cost of conservation practices up to 25 percent of his gross income.

Additional tools are also given to various groups of producers by two interesting amendments of the law relating to marketing agreements and orders. In the case of grapefruit producers, the law was changed so as to permit the bringing of grapefruit for canning within the terms of a marketing agreement which formerly could only control grapefruit consumed as fresh fruit. If used, this provision will afford an interesting test of whether or not two-thirds of the producers of the fruit, who are equally interested in the sales price of their raw product, regardless of whether it is to reach the consumer in fresh form or in cans, may, with half of the canners joining them, bring to an end a situation under which their processed fruit has sometimes brought them only salvage prices.

Another interesting change in the Marketing Agreement Act, which is applicable in the case of tomatoes, Irish potatoes, avocados, grapefruit and other fruits and vegetables which meet with direct competition from fresh foreign imports, should make the marketing agreements and orders much more useful by applying to imported competitive products the same standards of grade, size, quality and maturity which the marketing agreements impose on the domestic products.

Still another change in the law which makes the farmers much more the masters of their own destiny than heretofore is that by which the Farm Credit Administration is taken out of the Department of Agriculture and made an independent agency governed by a board of 13 members, of whom 12 are named from lists nominated by the farmers who make up the various regional farm credit organizations.

To close on this point, it seems clear to me that the changes in law which I have mentioned, and others which were enacted by the 83d Congress, greatly accentuate both the responsibility and the opportunity of farmers to handle their own problems and also greatly increase the effectiveness of the various helpful tools and devices which are given to them by Federal law.

2. EXPANSION OF RESEARCH

I am sure that every American farmer knows that not only the 83d Congress, but also the present national administration, has placed great emphasis on the expansion of agricultural research and education. This step is in complete accord with the recogni-tion of greater individual responsibility for the farmers, as already mentioned, and is the best method of developing new information which, when passed on to individual farmers, should enable them to produce more economically, more abundantly, and in higher quality, thus giving them increased opportunity to solve their own problems. The plan of reorganization for the Department of Agriculture which was developed by the present administration and approved by Congress combines into one major division—called the Agricultural Research Service—the many agricultural research activities which had been scattered through various divisions under the earlier hodgepodge organization. The fixing of responsibility in one place, as well as the assignment of major importance to the Research Service, properly reflect added emphasis upon the benefits of research as well as upon the educational process by which the new information is communicated to the farmers.

To keep in step with the increased emphasis given to research activities, the Congress appropriated for the current fiscal year 1955 increased funds for research in the amount of \$12,311,000 above fiscal year 1954, much of which is for expanded work in the State experiment stations, and also increased funds for education in the amount of \$3,248,000, most of which goes to the Federal-State Agricultural Extension Service, making a total Federal increase of more than \$20½ million for research and education above the amounts appropriated for last year.

In a further effort to assist the Department of Agriculture in the field of research, a bill was passed in the second session of the 83d Congress which authorized the Department of Agriculture to contract with private persons and agencies for production research, which relates to growing crops in the fields, plant diseases, etc. The Department had already been authorized in the Research and Marketing Act of 1946 to contract for utilization and marketing research and presently is contracting approximately \$1,700,000 in this research, and now that the contract authority is extended to include production research, the amount of contracted research should increase substantially to the benefit of all agriculture.

It is my feeling that the important new emphasis which has been placed on research activities by the 83d Congress will be further expanded in the future, since the beneof research have been so pronounced in the past, and since there can be no possible question as to the propriety of organizing, operating, and financing increased re-search activities by Government. Individual farmers and even groups of farmers are rarely in position to handle research programs adequately, and it is inconceivable to me that there should be any difference of opinion on the fact that we are on sound ground in enlarging the research program for the Federal Government, as well as in its cooperation with the several black in expanding the educational machinery by its cooperation with the several States, and benefits of research may promptly communicated to individual farmers so that they may make effective use of new and valuable information. This, then, is but another important method by which farmers are enabled to help themselves.

3. EXPANSION OF FOREIGN MARKETS FOR FARM PRODUCTS

One of the most important fields of new legislation enacted by the 83d Congress is that of expanding the use of our agricultural products in foreign markets. Agriculture has been acutely conscious of the fact that the major part of the loss in the export trade of our Nation in recent years has fallen on agriculture, despite the fact that many friendly peoples have actual need of our products.

One important accomplishment was the transfer of agricultural attachés in our foreign Embassies from the State Department to the Department of Agriculture. had many disappointing experiences in re-cent years growing out of the fact that the agricultural attachés have been completely controlled by the Department of State. It is, of course, true that the State Department is unfamiliar with agricultural problems and that it has the heavy burden of handling many problems which relate directly to its primary field of foreign diplomatic relations. Nevertheless, our agricultural people have been keenly disappointed that they have been unable to take advantage of promising openings in foreign markets, particularly for the greater export of perishable commodities. Now it will be possible, I hope, for such matters to receive prompt and sympathetic handling by persons experienced in agricultural trade, and I am confident that our for-eign markets will be enlarged thereby. There are now 59 agricultural attachés assigned to 44 posts in 42 countries. They will continue to be stationed at our Embassies, but their activities will be reported directly to the Department of Agriculture, and they will devote their full time to representing United States agriculture. I am sorry to hear that already there is some indication that State Department redtape is reappearing, and I think we should be most diligent to prevent the thwarting of the completely clear intent of Congress in this matter.

The extension of the International Wheat Agreement and the inclusion in the new Mutual Security Act of 1954 of a provision earmarking \$350 million to finance the export and sale of surplus agricultural products both constitute important machinery for the disposal abroad of substantial additional amounts of American wheat and other American farm products.

Perhaps the major effort of the 83d Congress, however, in the field of expansion of foreign markets was the enactment of the Agricultural Trade Development and Assistance Act, which makes available for a 3-year period the sum of \$1 billion for the expansion of foreign use of our agricultural products. Of this, \$700 million is provided to expedite the acceptance of foreign currency for our products by allowing the Federal Government to absorb the difference in exchange, a factor which has heretofore discouraged the sale of our farm products to foreign nations whose currencies were softer than ours. A major difficulty we have ex-perienced heretofore has been not to find markets, but to absorb the loss required by unfavorable exchange rates.

To a certain degree, this large sum will represent a new subsidy of our foreign agri-cultural exports, but much of the investment will not be lost in view of the fact that we have need for foreign exchange in connection with the maintenance of our military forces, our embassies, and other activiin many friendly foreign nations and also in the purchase of needed strategic materials. And so we have strong hope that this Federal financing of \$700 million to increase the use of agricultural commodities for export will enable our Nation to sell more of its surpluses and our private traders to trade more effectively with foreign nations by allowing the Federal Government to absorb the loss resulting from unfavorable exchange rates.

I am happy to report that the Department of Agriculture is pushing this program and, with the cooperation of the State Department, is now negotiating with various nations under the authority of this law. In November it was announced that Turkey was the first to sign a surplus disposal commodity agreement, which provided for Turkey to take \$35½ million of our surplus wheat and feed grains. At about the same time the Department announced the details of a \$85 million surplus commodity program for Japan. I hear that similar negotiations are nearing completion with Pakistan and Yugoslavia.

The remaining \$300 million under the Agricultural Trade Development Act, available, also, for the next 3 years, will permit the President to use our own surplus commodities in said amount in doing errands of mercy, or of strategic national importance, such as those which we have done in East Germany, Pakistan, and India. The President may donate commodities from our overabundance if he determines that such will alleviate human suffering, or will serve our cause in our worldwide conflict with communism.

Still another program coming out of the 83d Congress may not have been noticed by you. We made an appropriation of \$5 million at the request of the President, which is to be used to give our agricultural and other industries the opportunity to exhibit in trade fairs all over the world in an effort to show foreign purchasers what great things are being accomplished through American genius. In his message, the President stated that he hoped to go into not less than 30 of the 75 great trade fairs which are to be held this year. Our Florida delegation has asked for processed citrus to be represented in these fairs because we are proud of the progress which we have made in citrus processing and want our achievements to be better understood by the rest of the world. I am sure that there are similar values in various other industries represented by this great group of producers which would justify exhibits in other lands so that the people there may be more impressed by the fact that free men know how to get things done.

Then, too, our program is expanding for the export of agricultural products through the payment of subsidies from section 32 funds. I shall not enlarge upon this subject, but will say that large sums of money are still available for such use and that they are being helpfully utilized in greater measure than heretofore.

I am sure that all of you recognize that the very large program for the expansion of our exports of agricultural products, which is covered by the measures which I have mentioned and by other acts of the Congress, represents an aggressive and extremely worthwhile effort through which the Nation should enlarge its disposal of surplus com-modities acquired under its price-support programs, and at the same time private initiative will be encouraged, through the use of these new tools, to vastly enlarge its activities in foreign markets. It seems selfevident that much further expansion in this field must be accomplished in the future. The furnishing of more food and other farm products to the people of other nations not only serves a good domestic purpose, but it also enhances our standing abroad, since there is no doubt whatever that millions of people within our sphere of influence badly need the food and other values which flow from our agricultural abundance.

OUR PRICE-SUPPORT PROGRAMS

The principal agricultural measure enacted during the 83d Congress is, of course, the new general price-support law, known as the Agriculture Act of 1954, which, in my opinion, could not have been passed without the vigorous support of your fine organization. I strongly commend your leaders and particularly your president, Mr. Kline, and your legislative counsel, Mr. Woolley, for the strong and effective support which you gave this legislation.

Except for the production of sugar, by producers of both beets and sugarcane, this act, taken in conjunction with the Anderson Act of 1949, which it amends and supplements, covers all agricultural production throughout the Nation, and is therefore of twery great importance to agriculture as a whole, to those industries which supply agriculture, or handle or process agricultural products, and to the general public. This act is the most exhaustive effort to accomplish stabilization of agriculture in time of peace that has ever been enacted by any Congress.

So many different devices and formulas for different branches of agriculture are set up by the act that I can make only brief reference to those programs which apply to the principal agricultural groups. I mention first the program for wool, under which production payments are authorized at a rate not to exceed 110 percent of parity. Since wool is a storable product, of high strategic importance, and since we produce only a fraction of what we need for our own use, this wool program must be strongly differentiated from the other programs which deal with major crops which are already in surplus production or could quickly become in surplus. As to wool alone, we are endeavoring to substantially increase our domestic production.

In the case of only one of the so-called basic crops, tobacco, was the high rigid price support of 90 percent continued as embraced in earlier law. There are compelling reasons for this distinction between tobacco and the other basic crops, chief of which is that tobacco has become such an important crop from the standpoint of the vast public revenue from excise taxes which it makes available to the Federal Government, the States, and the municipalities. It is now a matter of important national concern that a fairly constant level of tobacco production shall continue without heavy surplus or deficit, and that the producers of tobacco shall have a stable economy so that there will be minimum fluctuation of the volume of tobacco production. You know, I am sure, that the annual tax revenue derived from tobacco is about \$21/4 billion, which is about equal to the farm price for a bumper crop of wheat. The 83d Congress increased the penalty for the overplanting of tobacco, but otherwise left the 90 percent rigid price sup-port structure undisturbed, with all of its regulations and controls.

In the case of the other five basic commodities, wheat, cotton, corn, rice, and peanuts, the rigid 90 percent price support program was replaced by a flexible support base, which is at the rate of 82½ to 90 percent of parity for 1955 and 75 to 90 percent in sub-

sequent years.

Of course this return to a flexible price support base was the issue which produced the heaviest controversy, and which also proved to be most highly emotional. I cannot at this time discuss in-detail this grave issue, with which I am sure most of you are completely familiar. Suffice it to say that until World War II flexible price supports had been regarded as the proper and most helpful approach. The 1938 law, which was the most generous peacetime law on the books, prescribed a support program at from 52 to 75 percent of parity. The 90 percent rigid price support program was a war device which was designed to greatly increase production to meet war needs, and which accomplished that end.

When extended into peacetime, the high rigid price support program continued this greatly increased production, which rapidly created large surpluses in the hands of the Government. The losses sustained by the Government in connection with these surpluses became heavy and even greater losses were impending. The warehouse expense to the Government for storing surpluses reached about three-quarters of a million dollars a day. The confidence of the general public and of large segments of agriculture which produce nonbasic supported crops or unsupported crops was also greatly impaired, and dangerous divisions appeared among agricultural leaders and groups.

It seemed clear to me and apparently to the majority of Congress that restoration of a peacetime flexible price support program had become of primary importance, from the points of view of protecting agriculture itself and of being fair to the general public. A flexible price support program had been voted by Congress in 1948 and again in 1949, but its effect had been postponed in recent years. Furthermore, the measure which we enacted this year has for its minimum or floor rate 75 percent of parity, which was the ceiling or highest rate under the 1938 law. It seems to me that this fact alone increases the inducement to farmers to reasonably centrol their production rather than to continue excessive production in order to sell their products to Uncle Sam.

Three other features in the new law were of maximum effect in their application to these five basic commodities, though they also apply to other crops. These three features are, first, the gradual transfer to modernized parity so as to bring the computation to the immediate past rather than to

leave it in the unrealistic, remote past, under which it had generally been based on prices obtaining from 1910 to 1914; second, the provision for so-called set-asides which operate to remove substantial quantities of the surpluses from consideration in figuring the current carryover of supplies for price support purposes; and third, the provision for control of acreage which will be diverted from the excessive amounts of land which were being used in the production of the surplus crops, particularly wheat, corn, and cotton. It is obvious. I think, that these three major provisions in the new law were designed to make the law more reasonable. to cushion the impact of the application of the flexible price support structure to the five basic crops which were affected, and to give greater protection to that vast number of agricultural producers who do not produce either the basic crops or any other price-supported commodity. In passing, I think it is necessary that we shall always remember that the value of the five basic crops now affected by the flexible program is less than 20 percent—less than one-fifth of the total value of our national agricultural production.

It is obvious that the flexible program will allow, at least in part, for essential differences among the several basic crops which were not being recognized under the rigid price support program, and this is highly important. Each basic commodity has peculiar characteristics or unique competition which sets it apart from other basics and from other crops in general, and require for it a distinctive support program. To some extent flexible price supports should allow for these differences. Flexible supports should also greatly increase the responsibility of farm groups which produce basic crops to better adjust their production to the needs of the market and to bring to an end the recent excessive production and dumping on the Federal Government which has given the whole price-support program a black eye and has threatened its very existence.

Many hours could be spent in discussing details of price support for milk and milk products, which presented one of our most perplexing problems. These commodities were not price-supported until wartime, but thereafter the 90-percent support rate was allowed them for some years even though they did not come within the basics, nor within any group on which a rigid 90-percent support was ever contemplated. Milk products are, in some respects, much like Irish potatoes and eggs, on both of which price-support programs proved to be so expensive, so wasteful and so indefensible that those programs were abolished.

Dairy products present a spotty problem, existing on a large scale in relatively few areas where generally local production greatly exceeds the demands of nearby milksheds. This problem pertains to an industry which has not done, for itself, anything like what it should do in decreasing costs, in research, in better distribution and marketing, in diversification, in advertising and in increasing good will and average consumption. Too frequently dairying has played second fiddle to its processors.

And yet the dairy industry presents a very large public problem, vitally affecting many thousands of good people and numerous splendid communities. It received much attention from this last Congress and certainly will receive much attention in the future. The reactions of prices in the industry to the 75 percent price figure which I think was correctly applied by Secretary Benson under the law will be awaited with anxiety. The Congress did not, in this field, change the support setup under the old law because of our feeling that the old provision fairly gives to dairying its full recognition as compared with other price-supported agricultural industries.

As you know we did enact several helpful additions to the dairy products program, apart from direct supports. And we like-wise required an intensive study of dairy problems by the Secretary of Agriculture and his report and recommendation of the best available support program, or alternative programs, by January 3, 1955, which is next month.

Frankness compels me to say that many in Congress favor the entire abolition of price support for dairying—just as was true earlier in the case of Irish potatoes and eggs. There is certainly much public sentiment to that effect. I personally feel that more than any other industry covered by the 1954 law, dairying must show greater alertness, as well as greater willingness and ability to help solve its own problems than it has yet manifested. I shall hope strongly to see indications of such an attitude in the near future, and I congratulate the dairy industry on the good beginning which it is now making.

I regret that time is lacking to discuss the various other programs for price support which are embraced in the new law. Suffice it to say that this new law, together with the Sugar Act, will afford many oportunities for comparison and contrast of differing types of price-support programs, some directly fixed by law and some growing out of the administration of the law by the Department of Agriculture. I am sure that additional progress is possible, which will be reflected in subsequent legislation or changed administrative handling or both, In summary there are certain observations which I wish to make on this vastly important field.

Pirst, products under the flexible program for both basics and nonbasics are not barred by the new law from having 90 percent price support, but to the contrary such support is within reach, if the producers use such cooperation and restraint in production as to prevent the accumulation of disturbing surpluses. I hope that we may never lose sight of this open invitation to agriculture to cooperate more fully with Government as a good partner.

Second, though there are very great differences of opinion in this controversial field of price support, I hope that they may not bring about any further postponement of the use of the flexible price support provisions. It is manifestly in the Nation's interest that a full and fair trial be given to the flexible program, as well as to all the other programs, so that we may have a clear comparison of results upon which to base future decisions. I shall strongly insist upon such a full and fair trial. No one contends for a moment that we have yet attained perfection.

Third, every emphasis must be placed on confining Government controls and regimentation to a minimum and leaving the producer the maximum amount of freedom of action, always assigning greatest importance to his willingness to use restraint and selfdiscipline. In every program and for the overall effort, no unnecessary curbs must be placed on private initiative and on the opportunities for practical and scientific advancement by the development of more economical production methods, improved products, wider consumer demand, new uses of products, better distribution and seiling and every other improvement which can be attained in the American way by keen and ambitious producers. A frozen or static agricultural industry cannot long remain prosperous. We must not forget that for many farm commodities high prosperity already prevails, despite the absence of price support or regimentation. It is my hope that as a result of the great and varied effort which will be under way, and the numerous contrasts and comparisons which will be available, agriculture will be assisted to make tremendous and permanent advances, but always by leaving to the individual farmers a high degree of private initiative. At this point, I want to say that regard-

less of strong differences of opinion which led our Senate Committee on Agriculture to divide, for instance, on an 8 to 7 basis on the flexible price-support program, I recognize that all members of our committee are sincerely devoted to the cause of agricultural producers and are equally anxious to work out the best possible program for a stabilized and prosperous agriculture. I am sure that this same observation applies generally to Congress as a whole, to the personnel of the Department of Agriculture, and to all of the interested producing groups throughout the Nation.

Surely by the combined efforts of all of us, and by taking full advantage of all of the new facts which will be developed in the many and varied programs which will be under way, we shall be able to come up with answers which will bring sound permanent conditions for agriculture, which will be wholly compatible with American traditions.

Historically, American agriculture has always been one of the strongest bulwarks and one of the proudest illustrations of what the American system of private enterprise can accomplish. I strongly hope, and I deeply feel, that it must always remain such a bul-wark and such an illustration. It is my un-yielding conviction that only in this way can agriculture continue to make its maximum contribution to our great American experiment in self-government.

The Heritage of Pennsylvania

EXTENSION OF REMARKS

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Monday, January 10, 1955

Mr. MARTIN of Pennsylvania. President, the Pennsylvania Society of New York, which is the oldest and largest State society in America, held its 55th annual dinner in the Waldorf-Astoria, New York City, on December 11, 1954.

Each year the society awards its Distinguished Service Medal to an outstanding American in recognition of notable achievement. This year it was conferred upon Maj. Gen. Richard K. Mellon, of Pittsburgh, Pa., for his brilliant leadership in civic, business, and military affairs.

The presentation was ably and eloquently made by the Secretary of the Treasury, the Honorable George M. Humphrey. It was accepted by the distinguished recipient in a manner which truly exemplified his humility and sincerity as a real American, serving in the ranks, regardless of his great attain-

The address of the evening was delivered by Robert T. McCracken, Esq., of Philadelphia, chairman of the board of trustees of the University of Pennsylvania, and a distinguished lawyer. His eloquent address was received with exceptional enthusiasm. I ask unanimous consent that Mr. McCracken's remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, distinguished guests, ladies, and gentlemen, when your president asked me to speak to you this evening I inquired from him what I should talk about, replied "about 15 minutes." That is al That is all the help I got from him. So in thinking the matter over it occurred to me that it might not be amiss to talk to the members of the Pennsylvania Society a little about the State of Pennsylvania. For if there is any gathering in the United States before which a native son of that great Commonwealth might do a little justifiable boasting it is this magnificent assembly.

This, by the way, is a practice rarely adopted by the citizens of Pennsylvania. Indeed, I approach it with considerable timidity in the presence of the distinguished gentleman from our sister State of Ohio, a State well known as the mother of Presidents and of outstanding Cabinet officers. Yet it is a practice not unknown to the proud denizens of some other parts of the country. For many years it has been quietly self-assertive in New England; delightfully superior in New York; stubbornly tenacious in Virginia and South Carolina; trumpeted to the sky in Illinois and points west. There is still no lack of it in California, and it is to be encountered without difficulty in what is still called by the loyal citizens thereof the Republic of Texas. But somehow it is rarely exhibited by Pennsylvanians. Rather we are prone to belittle our heritage, or at least not to dwell upon it, and to deprecate whenever we refer to our present situation.

That this is unjust, unfair, and stupid in the extreme, any student of American history and of American economy will instantly proclaim. To begin with, the found-Pennsylvania, or rather the delay in its discovery, was almost a miracle. It was the next to the last of the Thirteen Colonies to be settled. New England, New York, New Jersey, Maryland, Virginia, the Carolinas, were all more or less thriving communities when, in 1681, William Penn persuaded the King to grant him the province of Penn's Woods in payment of a debt owed by the King to his father. And what a province it was. The mystery is that it had been so long overlooked. Bounded by two great rivers and bisected by a third, affording a port on the Atlantic and one leading to the Gulf of Mexico, and with a direct port on the Great Lakes, its commercial potentialities were apparent from the beginning. Of a temperate climate and with a soil so rich that some of its counties are still, after 250 years of cultivation, the most productive agricultural districts of the Nation. Crossed by two mountain ranges which shelter much of it from the destructive winds and devastating storms coming down from the northwest, it presents, among those forest-covered uplands, some of the finest natural scenery in the East, And how could even this far-sighted Quaker have guessed that, hidden in those mountains, were almost unlimited deposits of coal, of iron, and of oil, the three dominating elements of a future economy, which placed the State in the forefront of American production from the moment their use was discovered, and which caused the settlement and growth of populous cities and thriving communities throughout its length and breadth. No wonder that the First and Second Continental Congresses met in Philadelphia, to forge the Declaration of Independence; that the Convention assembled there to draft the Constitution; that Philadelphia became the first Capital of the young Republic; that it was at the time second in population only to London among the English-speaking cities of the world.

Moreover, our State is possessed of anheritage-a thing more subtle, more delicate, yet in its own way quite as influen-tial as those factors which I have just referred. Pennsylvania was founded by a great

gentleman. In mentioning this I do not mean to detract for an instant from the rugged virtues, the dauntless courage, or the indomitable energy of the settlers of other colonies. They built staunchly and well, and their spirit did much to make America. Nor were those qualities wanting in the settlers of Pennsylvania. They were present in full measure in the English and Welsh Quakers, the Germans from the Palatinate, the Scotch-Irish from Ulster. But the province of Pennsylvania was almost unique in that its proprietor was a cultivated English gentleman, with all that term implied in the seventeenth century—a friend of two kings and of many of the noblemen of the realm; endowed with an appreciation of the art of gracious living, of a liberal education, a tolerant spirit, a broad vision. These qualities were immediately apparent in the establishment of the way of life in his "greene country town" of Philadelphia. In point of fact, it is said to have been the first town in the world to be consciously and systematically planned, with its long straight streets running north and south, east and west, its generous gardens, its open squares, its sedate brick houses.

Not satisfied with this, Penn went up the Delaware, chose a favorite site, and built for his own residence the stately mansion of Pennsbury, which became the prototype for the countless dignified and comfortable country houses now to be found in every section of the Commonwealth. Here he lived in state, like an English squire in the midland counties, entertaining lavishly, yet without estentation; enjoying his life in his own domain. The house still stands, re-cently reconstructed and refurbished, and a journey to it is well worth the time and the

very slight effort involved.

Of course, the primary and most significant characteristic of the young colony was the civil and religious freedom which Penn's charter proclaimed and which was from the first consistently observed. Hither came settlers from all parts, worshiping God in many diverse fashions, yet all welcome and free to obey the dictates of their own conscience. Small wonder, then, that Pennsylvania attracted men of unusual attainments-that it became the cultural center of the Colonies and the new Nation. Foremost among them was a young Bostonian, Benjamin Frank-lin by name, who arrived in Philadelphia scarcely more than 20 years after Penn's departure. He came as a runaway apprentice, and he remained to become the first citizen of the province and one of the most remarkable and influential men of all time. And there were many others, men whose influence in the early years of the Nation was profound.

Such was the beginning of this remarkable colony. It was the brightest jewel of the crown. It still is. What other State possesses so great a wealth of natural resources? In what other State are to be found so many productive communities? Or so extensive a system of forest parks, teeming with game of every species? Or so many institutions of higher learning, extending their influence throughout the land?

As I said a few moments ago, we are a modest people, we citizens of the Keystone State; we rarely boast, but instinctively we value our heritage. At least, we desire to retain and enjoy it. Few of us migrate. True, some of the bolder spirits have found their way over here to Manhattan in search of high adventure. They were among the founders of this society, and they preserve it in its full vigor today. But, by and large, we are content with what we have, for, deed, we have so much. We have neither the golden canyons of lower Manhattan nor the Golden Gate of San Francisco, but we do have the Golden Triangle of Pittsburgh, and we have the rolling hills of Montgomery and Chester Counties; the pleasant watered

valleys of the Brandywine country, where fox hunting still flourishes in all its glory; the rich soil and the bursting barns of Lancaster County and the Cumberland Valley: the wild grandeur of the Alleghenies and the counties of the northern tier; the stately Old World aspect of the countryside of the Delaware and Schuylkill Valleys. Once again the many streams, long the carriers of waste and pollution, are pure, sparkling, transparent, and the natural habitat of trout and bass. Still there is more game for the hunter than in any other State in the Union. Now, more than ever before, a network of perfect highways beckons to the traveler, and does not becken in vain. In few other communities are the joys of healthy outdoor life so emphasized. Still the amenities of gracious living are observed, hospitality is generous, the arts appreciated and cultivated, culture encouraged and honored. We have a priceless heritage, a heritage to be cherished and preserved.

Perhaps the most generous acclaim which this great State has ever received from a foreign man of letters is to be found in the closing stanza of a poem by the late Rudyard Kipling. It is included in the collection of stories entitled "Rewards and Fairies." Many of you doubtless know it, but I will close with it nevertheless:

"If you're off to Philadelphia this morning And wish to prove the truth of what I say, I pledge my word you'll find the pleasant land behind

Unaltered since Red Jacket rode that way. Still the pine woods scent the noon

Still the catbird sings his tune,

Still autumn sets the maple forests blazing. Still the grapevine through the dusk

Flings her soul-compelling musk, Still the fireflies in the corn make night amazing.

They are there, there, there with earth im-

mortal (Citizens I give you friendly warning)

The things that truly last, when men and times have passed.

They are all in Pennsylvania this morning."

The President's State of the Union Message

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Record a brief statement which I released on January 10, 1955, regarding the President's state of the Union address, and the comments contained therein on the role of the Federal Government in developing hydroelectric power.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. RICHARD L. NEUBERGER, OF OREGON

In his state of the Union message on January 6, 1955, President Eisenhower abandoned the pretense of an impending Federal power monopoly, which has so long served as a political scarecrow for the opponents of continued public power development in the Columbia River Basin.

Inasmuch as the likelihood of a Federal power monopoly has been cited by Secretary McKay as a main reason for abandoning the magnificent Hells Canyon power site to the Idaho Power Co., I call upon the Secretary to reverse his stand.

At McNary Dam in Oregon, on September 23, 1954, the President warned against Federal operation of a gigantic, overwhelming nationwide power monopoly.

On November 4, 1954, Budget Director Hughes warned against committing the Nation to a policy of establishing a nationwide Federal power monopoly.

In campaign speeches in Oregon, the Secretary of the Interior likewise warned frequently against this so-called Federal power monopoly.

But in his 1955 state of the Union message to the Congress, the President flatly declared that "Federal hydroelectric development supply but a small fraction of the Nation's power needs."

I think this is symbolic of the administration's confusion in the field of power. It emphasizes why our great public-power program in the Pacific Northwest has come to a standstill under this administration. For many months the President and his leading subordinates warned us of the imminence of a Federal power monopoly. Now the President himself tells the Nation that the Federal Government generates only a tiny portion of the country's waterpower.

This, of course, is the true situation, rather than the misleading talk of Federal monopoly used to swing votes last fall. The Federal Government today generates only about 13 percent of our electricity, as contrasted with 81 percent by private utility corporations.

With the President recognizing that Fed-

With the President recognizing that Federal kilowatts are but a small segment of the national total, Hells Canyon cannot be considered as in any way contributing toward a possible Federal power monopoly.

Thus the state of the Union address effectively repudiates one of the principal arguments used to oppose and block a high multipurpose dam in Hells Canyon—the kind of dam advocated in the famous 308 report of the Army engineers.

I urge authorization of such a project by the 84th Congress.

States Rights

EXTENSION OF REMARKS

HON, HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. SMITH of Virginia. Mr. Speaker, I today introduced a very brief and comprehensive bill (H. R. 3) on the subject of States rights, with particular reference to the present rule of the United States Supreme Court that where Congress has enacted legislation on any subject, the States are deprived of all power to enact or enforce similar laws on the same subject even though not in conflict with the Federal act.

What the bill seeks to do is to modify this doctrine so as to permit concurrent jurisdiction in order that the State act, where not in conflict with the Federal act, can be also enforced in the State courts for the protection of the State and its citizens.

The bill reads as follows:

That no act of Congress shall be construed as indicating an intent on the part of Congress to occupy the field in which such act operates, to the exclusion of all State laws on the same subject matter, unless such act contains an express provision to that effect. No act of Congress shall be construed as invalidating a provision of State law which would be valid in the absence of such act, unless there is a direct and positive conflict between an express provision of such act and such provision of the State law so that the two cannot be reconciled or consistently stand together.

For a long time the Supreme Court has held that whenever the Congress enacted legislation on any subject, its jurisdiction becomes exclusive and no State law can be enforced. In late years, as you know, Congress has legislated pretty well all over the waterfront. Congress has stretched the Interstate Commerce laws and the general welfare laws to the point where they cover all the ills of mankind. while the Supreme Court has consistently held to its original decision that when Congress acts all State laws are nullified, whether in conflict with the Federal law or not.

I do not quarrel with the Supreme Court about its consistency in its decisions. As a matter of fact, I devoutly wish that that Court would stand by its own decisions so that we lawyers could know not only what the law is today, but what it will be tomorrow.

Understand, please, that this doctrine that the Federal jurisdiction is exclusive in all cases is not due to any constitu-

tional provision.

On the contrary, the 10th amendment to the Constitution especially reserves to the States all powers not granted, and the Constitution itself only gives to the Federal courts jurisdiction in a very limited number of subjects. You will all re-call from your study of history that a great stumbling block in the adoption of the Constitution lay in the stubborn reluctance of all the Colonies to relinquish any of their sovereign powers, and during the debates preceding the adoption of the Constitution in the various States there developed a general understanding that in order to further protect the sovereignty of the States and the rights of individuals there would immediately be proposed the first 10 amendments to the Constitution, known as the Bill of Rights. The 10th, and final, amendment was the one that specifically reserved to the States and to the people all of the powers not granted to the Federal Government. The principle which I am now discussing and seek to modify is a rule of law enacted by the Supreme Court and has come to have as much force and effect as if it had been adopted as a part of the Constitution. The principle was debated and discussed in numerous early decisions of the Supreme Court, but the final decision which so drastically changed the intent of the framers of the Constitution was decided in 1842 in the famous case of Gibbons against Ogden, and was even then regarded as of such doubtful validity that it was adopted by a divided Court of 5 to 4, and that decision established the flat theory that when Congress passed a law Congress intended that all State laws should be superseded. I seek by this bill to have Congress say it had no such foolish intention in any case unless it said so.

Let me illustrate the iniquitous results of such a doctrine. I will use the decision of the Supreme Court of Pennsylvania that caused me to introduce this bill. I am the author of the Smith Act that, among other things, makes it a crime to teach or advocate the overthrow of the Government by force. Fortyseven of the 48 States have some kind of laws against sedition and subversion. Pennsylvania undertook to prosecute a notorious Communist who was a citizen of that State under the State Sedition The Supreme Court of that State. following the decisions above referred to. decided that as Congress had enacted the Smith Act it had withdrawn from all of the States the power to protect themselves from treasonable acts, and nullified all State laws on the subject whether the Congress intended to do so or not.

I was asked to introduce an amendment to the Smith Act to say that Congress in enacting the law intended no such harmful construction of it.

Obviously that case was merely a symptom of a dangerous disease that threatened to destroy completely the sovereignty of the States and was not the disease itself, and I decided to offer a separate bill to seek a cure of the whole malady.

The bill I have read is the result. To illustrate further, in a similar case of Cloverleaf Co. against Patterson the State of Alabama for the protection of the health of its citizens sought to inspect the product of the Cloverleaf Co., which was engaged in the renovation of butter, some of which was shipped in interstate commerce and subject to inspection under the Federal Pure Food and Drug Act. The Supreme Court held that as Congress had enacted the pure food laws it has assumed entire jurisdiction over the subject and the States were powerless to enforce their laws for the protection of the health of their citizens. I mention that case because the best argument I can think of for my bill is contained in the dissenting opinion of Justice Frankfurter who can. by no stretch of the imagination, be called a reactionary. He said:

The Department of Agriculture not only urged the enactment (of the Federal statute involved in the case), it drafted its provisions. If the Department wanted Congress to withdraw from the States their power to condemn unsanitary packing stock and to confide such power in the Federal Government, it could easily have made appropriate provision in the draft submitted by it to Congress. However, the Department did not It did ask Congress to make some do so. restrictions upon the authority which had been exercised by the States in regulating the manufacture and sale of butter for the protection of their citizens. But the restrictions did not include withdrawal from the States of the power to condemn unhealthful packing stock butter. The sponsors of this legislation, the experts of the Department of Agriculture, could have submitted to Congress appropriate language for the accomplishment of that result. They did not do so. The Court now does it for them even though the Department has no such desire.

To require the various agencies of the Government who are the effective authors of legislation like that now before us to express clearly and explicitly their purpose in dislodging constitutional powers of States—if such is their purpose—makes for care in

draftsmanship and for responsibility in legislation. To hold, as do the majority, that paralysis of State power is somehow to be found in the vague implications of the Federal renovated butter enactments is to encourage slipshodness in draftsmanship and irresponsibility in legislation.

It must be obvious to you that with the multitude of subjects which the Congress is now dealing, that it is inevitably merely a question of time before the States will be deprived of practically all power and sovereignty in enactment and enforcement of laws for the protection of the health and welfare of their local citizens. In many Federal laws action to remedy wrongs must be initiated by some Federal bureau. Under present law, if the Federal bureau fails to act or refuses to act, the citizen is without remedy. In many instances adequate remedy requires immediate injunctive relief. Delay incident to bureaucratic redtape or indifference can mean financial ruin. Such instances have occurred and are occurring with more frequency.

Under present conditions, if the Federal authorities fail or refuse to act, the citizen is utterly without remedy.

The overall objective of the bill was well stated by the President when speaking on the subject of States rights. He made the following statement:

I want to see maintained the constitutional relationships between the Federal and State Governments. * * * For, if the States lose their meaning, our entire system of government loses its meaning. And the next step is the rise of the centralized, national state in which the seeds of autocracy can take root and grow. * * We will see that the legitimate rights of the States and local communities are respected. * * We will not reach into the States and take from them their powers and responsibilities to serve their citizens.

I hope the measure may have the support and active aid of all those who believe in the sovereignty of their States, who believe that local self-government is the best government, and who believe, as expressed by the President, that the rise of the centralized national state creates the atmosphere in which "the seeds of autocracy can take root and grow," to help me to help the President to put life and meaning into his inspired words.

Fair and Reasonable Farm Assistance

EXTENSION OF REMARKS

HON. JOHN J. DEMPSEY

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. DEMPSEY. Mr. Speaker, in view of the fact that I have introduced legislation which will authorize the Farm Credit Administration to make what were formerly known as Land Bank Commission type of loans—H. R. 35—and to authorize extension of the period for making emergency livestock loans by the Farmers Home Administration—H. R. 90—I believe the following editorial from the Roy Record of December 31, 1954. published at Roy, N. Mex., carries

valuable information for the Members of the House of Representatives. This editorial is written by an editor, Mr. Karl Guthmann, who has firsthand, accurate knowledge of the needs of the farmers and stockmen, particularly in those areas which have been plagued by drought conditions for several years. The serious drought condition which has extended into its sixth year in many parts of the great Southwest is reported by agriculture experts as being even worse now than a year ago. Manifestly it is the obligation of this Congress to take cognizance of this grave situation and legislate fair and reasonable assistance for this important segment of the Nation's economy which is confronted with serious damage, even ruin, because of conditions beyond its control.

The editorial from the Roy Record follows:

Taking the lead at the recent national convention of the American Farm Bureau Federation, attended by more than 8,000 farmers from across the Nation, was the New Mexico delegation which secured the approval and adoption of a resolution which would be of immeasurable benefit to farmers and stockmen over a wide area. In this it is note-worthy to realize that because of unprecedented drought no less than 914 counties in 17 States of the Nation have been designated as being within the disaster area. Realizing the plight of the smaller operator within this hard-hit realm, the Farm Bureau resolution recommends that in areas designated by the Secretary of Agriculture moves will be taken by the Government to preserve the family enterprise.

First, the resolution proposes that the time limit for making emergency loans should be extended beyond the present 2-year period which expires next July. Who is there who can say that the emergency will have passed within a few months and the rolls will be cleared of those in need of a Government loan in order to forestall disaster and bankruptcy? As a provision of the loan facility, the Bureau recommends a policy which would permit the orderly liquidation of emergency loans over a 10-year period, where time is needed. Present plight of many of the farmers and stockmen in the disaster area gives ample proof that rejuvenation is something not just around the corner, but an obstacle which will require many months, and even years, for adjust-ment and salvation. Not an lota out of line is the Farm Bureau's resolution in recommending that emergency loans be made at the lowest possible rate of interest. When it is considered that billions in international loans made by our Government years ago have drawn no interest, along with a forgotten principle, it is reasonable that the loan made to preserve those of distressed agriculture be made as easy as possible. An interest rate covering the actual carrying charge—say 3 percent—would be a gesture which would make it possible for many of the hard-pressed ones to survive. Too, meritorious is the Farm Bureau resolution provision that a loan program should be set up through FHA which would enable farmers and ranchers to consolidate into one item all their financial obligations, excluding real estate mortgages, but including interest on real estate loans and taxes. It is recommended that provision should be made in the emergency loans to permit the borrower, where necessary, to make reasonable land payments from the sale of farm products. Taking up the provision which has been sought locally for many months, to aid the smaller operator on farm and range, the Bureau resolution asks Congress to provide additional farm mortgage credit comparable to the former Land Bank Commissioner loans in drought and disaster areas. It is noted that a bill which would reestablish the Land Bank Commissioner loan passed the Senate in the last session of Congress, but died in House committee.

An important point of the Bureau's resolution is that which would revamp the method of distribution of emergency feed, this being of particular concern to the stockraising area where livestock feed brought in from distant fields is no little item of expense. The program laid down for distribution has been found unworkable and burdensome in certain areas, and for this reason the Bureau advocates a broad and more equitable method. It is certain that this objective will be accomplished if our lawmakers in the Nation's Capital will provide laws with the provisions set forth in the resolutions adopted by the national convention of the American Farm Bureau Federation.

Right To Work Legislation

EXTENSION OF REMARKS

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. GOLDWATER, Mr. President, because of the right to work laws which are in effect in various States of the Union, and because the subject is now receiving a great deal of attention from labor unions and management, I ask unanimous consent to have printed in the Appendix of the Record a very excellent editorial published in the Wall Street Journal of January 5, 1955.

There being no objection, the editorial was ordered to be printed in the

RECORD, as follows:

REVIEW AND OUTLOOK ONLY ONE QUESTION

Our Mr. Galpin reports from Washington that what may be the biggest labor issue of 1955 is now building up a full head of steamy debate. The fight is over the right-to-work laws now in force in 17 States and to be introduced this year in many more State legislatures.

The State laws ban compulsory union membership under powers granted in the Taft-Hartley Act. Thus the unions face a battle on three fronts: They will try to have the Congress repeal that State authority and so legalize compulsory membership; they will try to have these State laws repealed where they have been already enacted, and they will try to prevent enactment in other States.

Other groups which support the right of the States to ban forced membership in unions are on the other side in the fight; their purpose is to retain these State powers and to promote enactment in those of the 44 State legislatures which will meet this

year.

The unions, Mr. Galpin reports, say that those who advocate such right-to-work laws have but one objective: To weaken the unions so that labor costs may be kept down. The union leaders say that the laws do weaken their powers. They say that if a man doesn't have to belong to a union, it will cut down dues collections and also hamper new organizing. Because of the laws, local union leaders must devote more time to educating workers to join unions and to stay in them. This, they say, is lost time; union organizers ought to be occupied in organizing new plants, promoting the growth of the labor movement, and thus making for stability.

Since these are the tasks of labor unions, it is unfair to make them more difficult by passage of right-to-work laws.

Let us, for the moment, suppose that everything the unions say about those who support legislation banning forced union

membership is correct.

Let us suppose that their true purpose is to keep down labor costs; the purpose of unions is to get more wages, more fringe benefits, and shorter hours for their members, all of which successfully pursued bring labor costs higher. These controversies are a natural outgrowth of the protective instincts of both unions and management. So it is neither unusual nor wrong for businessmen to seek to keep their labor costs within reason.

Let us also suppose that the right-to-work measures will hamper organization, collection of dues, and make more troublesome the running of a union. It would be extremely pleasant for union leaders if union affairs were so well organized that they had little or nothing to do, and so we don't blame them for trying to make their task easier. But the purpose of a union is not to make easier the tasks of the leaders; the purpose should be to serve the best interests of the members. And the union's task is to convince men that the union serves their interests.

The difficulty here, however, is that none of this argument has anything to do with the basic issue at hand. The reasons the unions give for opposing the right-to-work laws and the reasons they ascribe to those who support such laws are far off the mark.

The issue is not whether the laws banning compulsory union membership make it easier for management and troublesome for unions. Plainly, it is a moral issue, and plainly stated we do not think it a difficult one to decide.

Only one question need be answered: Should a man be forced unwillingly to join a union in order to earn his keep?

REA Co-ops Pay Their Share of Taxes

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, it was with keen interest that I read an article in the January 1955, issue of the Wisconsin REA News entitled "Electric Co-op Members Pay Whopping Tax Bill." Under leave to extend my remarks, I wish to insert this news article in the RECORD.

Before I insert this article in the Record I should like to comment briefly on the REA cooperatives of Wisconsin and other States. The REA cooperatives have done an outstanding job of bringing power to rural America, electric power which means that farmers can enjoy some of the conveniences previously reserved for the people in urban areas. In addition to the power factor, REA cooperatives have also brought billions of dollars worth of business to the main streets of hundreds of small towns.

On top of this, REA cooperatives also pay taxes—something which is never given too much publicity. As the article from Wisconsin REA News indicates, the 32 electric co-ops in the State paid a

total of \$386,541.29 to the State of Wisconsin in 1953 on power purchases.

The congressional district which I have the privilege of representing is one of the strongest REA areas in the Nation. I note that the 10 electric cooperatives in the 9th District of Wisconsin—which serve 11 counties—paid a total of \$114,-000.97. This figures out to 29.8 percent of the total payments.

The Wisconsin REA News article, which I commend to my colleagues for their study, is as follows:

ELECTRIC CO-OP MEMBERS PAY WHOPPING TAX

The 85,000 members of Wisconsin's 32 rural electric cooperatives made the largest State tax payments in their history when their organizations remitted a whopping \$386,541.29 to the Wisconsin Department of Taxation on 1953 power purchases.

The payments are made on a license fee assessed at 3 percent by the cooperatives on both wholesale and retail gross dollar sales.

The payments were almost 11 percent higher than a year ago when payments totaled \$348,862.37. These taxes are actually paid by the rural people receiving co-op service in the State—inasmuch as the tax represents an expense of providing the service.

The money will be shared by 53 counties and their tax units—cities, villages, and town governments. Again largest payments will go to Grant County, where \$33,206.57 will be shared by the tax units. Other substantial payments include Buffalo, \$27,069.16; Vernon, \$22,475.21; Rusk, \$16,258.10; Clark, \$18.876.09; Barron, \$14,935.19; and Chippewa, \$14,621.72,

Cooperative members served by organizations purchasing wholesale power from Dairyland Power Cooperative actually pay the tax twice inasmuch as it applies to both wholesale and retail sales. Dairyland's total license fee payment was \$117,051.12.

Largest distribution cooperative payment was made by Vernon, for \$17,313.59; closely followed by Barron, \$17,253.30.

Below is the list of payments and gross receipts:

	Gross receipts 1953	License fees, at 3 percent

Our Foreign Policy

EXTENSION OF REMARKS

HON, HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. WELKER. Mr. President, in my opinion, Judge Jim Gossett, who publishes his articles in the Gooding (Idaho) Leader, is one of the greatest columnists whose writings it has ever been my privilege to read.

He has written four excellent columns on the subject of our foreign policy.

I ask unanimous consent that the first of these articles, published on December 9, 1954, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Appendix of the Record, as follows:

(By Judge Jim Gossett)

The deadliest threat to these United States in the cold war is not the menace of armed aggression to ourselves or to other free peoples of the earth: it is the increasing evidence of willful blind ignorance being the basic factor upon which our attitude towards the Communists is being shaped. It is the persistence in the top levels of the executive branch of our Government in giving wishful thinking priority over reality in forming our foreign policies, and in allowing the influences of other countries to take precedence over considerations for the best interests and security of this country.

This danger is being compounded and gravely worsened by the calculated propaganda being broadcast throughout the land raising high hopes for peaceful coexistence, for it is raising in the breasts of our people a great hope that is based upon nothing except an illusion. It was this same illusion that led to the dreadful betrayals of Tehran and Yalta; it was this same illusion that led to the American diplomatic rape in Korea; and it is an indication of the absolute determination of our leaders to impute to the character of the Communists something that just is not there.

Your correspondent is a Republican, but under no circumstances would we present to our readers the idea—or even the suggestion of the idea—that we consider the present American foreign policy to be any better, or stronger or less wavering than it has been for the past 20 years. In fact we think that It is a continuation and a sort of deteriorated continuation of exactly what we suffered under Truman and Roosevelt. This peaceful coexistence idea has received the attention of many writers in every part of the country—usually the unfavorable sort of attention.

No one wants war, it is true. But from the attitude of our State Department one would think that the Communists are the exception to this; that they want war and will seize the first opportunity to begin one. However, nothing could be further from the truth. The Communists desire a world war even less than do we, for at least three vital reasons. They are: First the Communists are getting what they want without a war; secondly, the Communists do not think that they can win a war with us at this time; and thirdly, it is never the policy of the Communists to resort to open warfare when there is hope of achieving their aims by any other means.

The apologists for our milk-sop reactions insist that we will alienate our allies by any warlike acts that we commit. And while it is admittedly true that there is some fear in parts of Europe and in Southeast Asia that we might start a preventative war against the Reds, this uneasiness is far outweighed by the loss of face we have suffered in Asia from being duped, outbargained and just plain being abused by the Reds. As we wointed out in another article our defeat in Korea and the humiliation of our French allies in Indochina are but two of a series of prestige-shattering incidents of which we have been the victim.

Our presitge in the Orient, if any such we have left, is at a new all time low. American citizenship and a United States passport offer less protection than a paper parasol. Worse, the uniform of our Armed Forces seems now to be an invitation to violence rather than an emblem of respect and protection in Asia. Mao, the Red boss of China, is reportedly using the Peping radio to scornfully broadcast that America is not even capable of protecting her own citizens and men in uniform. And current events in East Asia are lending credibility to his words.

Asia are lending credibility to his words. The State Department is attempting to show that we must act as we do because we are the leaders of the free world; that we must set an example of patience and tolerance to those who are counting heavily upon us. May we point out here that any leader, to be effective, must command the respect of those he is seeking to lead. And no people create respect for themselves by allowing others to shove them around and make fools of them. There is one hell of a lot of difference between forbearance and timidity.

Now, on top of the thousands of lives lost in Korea, on top of the unspeakable brutalities inflicted on American servicemen taken prisoner in that military tragedy; and on top of the treachery and violations of the terms of that peace that the Reds have perpertated, we have an American warplane shot down by Russian fighters and 11 American alrmen (prisoners of war who should have been returned to us long ago) imprisoned as "spies" by the Chinese Communists.

Secretary Dulies says that this country will "react vigorously" but "without allowing ourselves to be provoked into action which would be in violation of our international obligations and which would impair the alliance of free nations." What will we do? Protest as we have done a thousand times before to no avail? In the name of the Almighty, what sort of "international obligations" and "alliances of free nations" are these that would force us to submit "protesting" to these outrageous acts?

Dulles has said further that we are bound by the United Nations charter to settle "international disputes" by exhausting every "peaceful means." Is the shooting down of an American plane and the killing of an American soldier an "international dispute"? Or is it murder? Is the imprisonment of 11 American servicemen who should have been sent home long ago an "international dispute"? Or is it kidnaping and a deliberate violation of one of Dulles' high-sounding "international obligations" duly entered into by and between this country and the Reds?

Is the primary duty of the United States Government to the people of this country, by whose leave and for whose purposes it solely exists? Or is its supreme loyalty to the United Nations, of which our deadliest enemy is a member? What do you think the answer would be if the question were asked of the "next of kin" of those slaughtered in Korea, killed (murdered is better) in "incidents," and either missing or imprisoned behind the iron and bamboo curtain?

Next week I'm going to tell you the truth about this pipe dream of "peaceful existence"; I'm going to use the words of the Reds themselves, and of our British allies who want us to "quiet down."

Right-To-Work Legislation

EXTENSION OF REMARKS

HON, BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent article entitled "Labor Trains Guns on Right To Work," written by Joseph A. Loftus, and published in the New York Times of this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR TRAINS GUNS ON RIGHT TO WORK— REPEAL OF STATE LAWS CURBING UNIONS IS NOW NO. 1 TARGET, REPLACING TAFT-HARTLEY

(By Joseph A. Loftus)

Washington, January 9.—Organized labor's No. 1 target today is not what it used to be.

Instead of the Taft-Hartley law, the most emotionally loaded issue for union leaders is the so-called State right-to-work laws.

Campaigns to repeal these laws, and to resist the threat of others, are going forward with an intensity that rivals the conflicts over the Taft-Hartley measure.

The campaigns have eluded the national notice that the fight over Federal legislation commanded because they are diffused among the 17 States that have such laws and a few others where advocates propose to enact them. Maryland is one of the major battlegrounds between the unions and those who would put a right-to-work law on the statute books.

PROPAGANDA LABEL SEEN

A right-to-work law forbids the closed shop, the union shop and any other form of compulsory union membership. The name given to these laws has been chosen by its advocates. The unions regard the name as a propaganda label, since few persons care to be in the position of saying flatly that an individual does not have the right to work.

All that such laws purport to guarantee is a right to work where a job vacancy exists and the employer wishes to hire or retain an individual employee, union membership requirements to the contrary notwithstanding. The unions contend the laws are designed for only one purpose-"to weaken labor unions and to lower standards of wages and working conditions."

Clergymen of all faiths have been brought into the controversy, so intense are the campaigns. The Machinist, weekly publication palgns. The Machinist, weekly publication of the International Association of Machinists, AFL, is devoting lead articles on three successive weeks to Catholic, Protestant, and Jewish clergymen who find that these laws are immoral.

MUCH MATERIAL PUBLISHED

The American Federation of Labor published an illustrated booklet and other material to combat the State laws, and the Congress of Industrial Organizations published a 172-page book analyzing them.

Some impetus for this drive comes from a high officer of the Eisenhower administration, James P. Mitchell, Secretary of Labor, contends that the laws do not aid industry in the States that have them, contrary to

opposite beliefs.

It is noted that only a few of the States with right-to-work laws are Republican-controlled. In general, the laws are more apt to be repealed in the Republican rather than the Democratic States. The latter are chiefly southern States in which antiunion sentiment is stronger.

With the right-to-work States predominantly Democratic, Secretary Mitchell asks in effect: Which political party is the bet-ter friend of organized labor? Labor leadter friend of organized labor? ers reply that Mr. Mitchell and the administration could demonstrate their good faith by pushing a Taft-Hartley amendment that would make the State laws inoperative.

Nevada and Arizona are exceptions. Nevada's average hourly earnings in manufacturing in 1953 were \$2.08, Arizona's \$1.88, These compare with \$1.97 in California, \$1.77 in Connecticut, \$1.79 in New York, \$1.82 in New Jersey, \$1.65 in Massachusetts, \$1.79 in Pennsylvania, and \$1.77 for the country as a whole.

In the right-to-work States, corresponding figures included \$1.69 in Iowa, \$1.31 in Florida, \$1.23 and \$1.24 in North and South Carolina, \$1.40 in Virginia, \$1.14 in Missis-

sippi, and \$1.21 in Arkansas.

The States now having the law are: (Republican-controlled) Iowa, Nebraska, North Dakota, South Dakota, and Nevada; (Democratic-controlled) Florida, Georgia, North Carolina, South Carolina, Virginia, Alabama, Mississippi, Tennessee, Arkansas, Louisiana, Texas, and Arizona.

The best chances for repeal, it is believed, are in Iowa, a Republican State; Alabama and Arkansas. Fights also are brewing, or are in full swing, in Missouri, Oklahoma, Wisconsin, Kentucky, California, Colorado, and Maryland.

PER CAPITA INCOMES RISE

The States with these laws have been industrializing in recent years and their per capita incomes have been rising. But data available at the Labor Department show that in average hourly earnings, they run far behind such States as California, Connecticut, New York, New Jersey, and others, where the union control laws do not exist.

The unions have not abandoned their fight to make substantial changes in the Taft-Hartley law, but they do not expect much success before next year's election.

The narrow margin of Democratic gains in the House and Senate, although providing control, is not believed enough to help adopt such revisions.

In the meantime, the unions are concentrating on another threat, which they pre-sumably regard as greater and where pros-pects of success look better.

The Hudson Division of the American Motors Corp.

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, January 10, 1955

WILEY. Mr. President, last Wednesday, January 5, was an important landmark in the history of the American automotive industry and in the history of industry in the State of Wisconsin.

The first automobiles of the Hudson division of American Motors Corp. were at that time produced in my State. American Motors is, as everyone knows, the new enterprise formed from the merger of two great-name companies-Nash-Kelvinator and Hudson, Important civic ceremonies marked the landmark event in the cities of Milwaukee and Kenosha.

The great American auto-traveling public wishes well for the American Motors Corp., and we, of Wisconsin, proudly welcome Hudson to our State. We wish American Motors prosperity in serving America's ever-expanding transportation needs. Vigorous, healthy competition, as furnished by strong, vital companies, is the key to an ever higher standard of iving for America.

I send to the desk a writeup of the January 5 event, as carried in the Thursday, January 6, issue of the Milwaukee Journal, along with an editorial from the

same issue.

I ask unanimous consent that they be printed in the Appendix of the RECORD. There being no objection, the article

and editorial were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of January 6, 1955]

HUDSON WELCOMED BY TWO STATE CITIES-NEWCOMER'S FIRST PRODUCTION IN MILWAU-KEE, KENOSHA MARKED BY CIVIC AFFAIRS

The impressive record of firsts for Hudson automobiles was joined by a rookie Wednes-day and Thursday, as the Hudson division of American Motors Corp. officially produced its first cars in Wisconsin.

In Milwaukee and Kenosha, where the American Motors automotive plants are major factories, evidence of the occasion was exhibited by civic affairs in which com-munity leaders welcomed the newcomer to Wisconsin manufacturing activity, and company officials pledged their efforts to be good citizens of Wisconsin.

In its 45-year history under the Hudson Motor Car Co. name, the Hudson organization pioneered many mechanical improve-ments in the automobile and built more than 4 million Hudsons.

Transplanted from its native Detroit as a result of the Hudson and Nash-Kelvinator Corp. merger last May, Hudson has raised its sales goal for 1955 to a substantial 125,000 units.

OUT FOR MORE SALES

Offering a restyled line of 1955 models bearing various engineering advances, in-cluding a V-8 engine for the first time, Hudson is determined to capture a bigger share of the auto market, according to N. K. Van-

Derzee, vice president in charge of the division's sales. He made that promise in two talks Wednesday in Milwaukee and was expected to repeat it at the ceremonies to be held in Kenosha Thursday.

For the two Wisconsin cities, the 2 days foretold increasing importance in automotive manufacture. Competition in the industry admittedly is rugged, but American Motors officials—from president George Romney down—are convinced that the corporation's products can win public acceptance.

Employment in the AMC factories here and in Kenosha now is approaching 9,000, and workers are being taken on steadily as production schedules of 1955 cars are stepped up. Before the new Hudsons and Nashes are shown in dealers' showrooms in early February, several thousands must come off the assembly lines to stock the dealers.

FIRST BY DESIGNATION

In the brief ceremonies at the Milwaukee body plant Wednesday morning, bodies representing the "first" made here were rolled down conveyor lines and "dropped" onto the big trailer trucks that shuttle them-six at a time—to the Kenosha assembly plant.

Actually production started about mid-December, with the "first" designation being reserved for Milwaukee and Kenosha output Wednesday and Thursday, respectively, for the sake of having a starting point.

Thus, in Kenosha Thursday, a sparkling light-blue Hudson Hornet Hollywood hardtop sedan was to be recognized as the first production car. This vehicle, fully equipped with all optional equipment, was to be presented by Hudson to Alan Ameche, the all-American football player from Kenosha who has starred for the University of Wisconsin for the last four seasons.

SEAMANS ARE PRESENT

E. W. Bernitt, vice president in charge of manufacturing and procurement of American Motors; VanDerzee; Joseph Mueller and John Weiland, works managers of the Kenosha and Milwaukee plants, respectively; Mayor Frank Zeidler, William A. Mann, president of the Milwaukee Association of Commerce; William H. Wagner, chairman of the association's industries committee; and Milton J. McGuire, president of the Milwaukee Common Council, appeared Wednesday as the speakers at the body plant program and at a civic luncheon sponsored by the association of commerce at the Schroeder Hotel.

Among the guests were Harold and Irving Seaman, Milwaukee brothers whose family founded the former Seaman Body Co., a company which subsequently became the body plant for Nash Motors. That plant today is the body plant wherein both Nash and Hudson bodies are fabricated.

CAR TO BE SHOWN

By resolution of the Milwaukee Common Council, Wednesday was Welcome to Hudson Day in Milwaukee.

Kenosha city officials likewise have issued proclamation welcoming Hudson to that city, where the observance was to get under-

way Thursday afternoon.

A tour of the assembly plant was to be followed by a brief program in which Ameche was to participate. His presence for the event involved a bit of hasty traveling, as he has been practicing with the North team of gridiron stars which will play the South team Saturday in the Senior Bowl game at Mobile, Ala.

BERNITT THE SPEAKER

The so-called first Hudson then was to be put on display before the Kenosha Eagles hall, where a civic dinner Thursday night was expected to attract about 750 persons.

Expected to be among the Thursday night guests was Governor Kohler. Bernitt, who was works manager of the Kenosha plant until his advancement last fall to vice president of manufacturing and procurement for AMC, was to give the principal address. Winding up the evening and the program

was to be a stage show of top talent.

[From the Milwaukee Journal of January 6, 1955]

STATE'S PLACE IN AUTO INDUSTRY

The start of production of Hudson automobiles in Wisconsin has been officially recognized with ceremonies in Milwaukee, where the auto bodies are being manufactured, and at Kenosha, where the sleek new automobiles are being assembled.

The start of production is just that—a beginning. It offers promise, but not yet fulfillment, of a bigger and broader role for Wisconsin in the automotive field. But the potential now exists for more jobs, expanded payrolls and a stimulation for all business.

Under the new name of American Motors Corp., the fortunes of Wisconsin's 50-year-old Nash organization and the 45-year-old Hudson company are joined. The new company has vigorous leadership. It has received piedges of support from the business community and government and assurances of cooperation from highly skilled labor.

But success of the expanded venture lies in public acceptance of the product. For in the highly competitive auto world, only sales count.

As a hopeful partner, all Wisconsin wishes the new company success and prosperous years in which their constantly improved products will continue to be manufactured and sold in increasing numbers.

American-Flag Vessels Under Foreign Registry

EXTENSION OF REMARKS

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. SALTONSTALL, Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent editorial from a recent issue of the New York Times on the subject of our merchant marine and its importance to our country.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

THE NEW SHIPS

During the past year 163 new oceangoing ships showed their pennants in the port of New York and received the harbor's traditional warm welcome. The world's merchant marine long ago passed the prewar mark in tonnage, and in most of the maritime nations the shipwrights and joiners are still busy, with more orders waiting.

There is significance in the fact that only a few of last year's roster of new vessels flew the flag of this country. Our own shippards are hungry, with labor forces diminished and few private orders in prospect. Moreover, the merchant marine is being whittled down by the transfer of many United States-flag ships to the so-called refugee flags of other nations, notably Liberia, Panama, and Honduras. These are ships that are of no commercial value under our flag because high operating costs make it impossible for them to compete with tonage of other nations.

With these discouraging facts before us it is heartening to read the recently announced joint project of American President Lines and the Federal Maritime Board to expand this world-girdling company's fleet over a 10-year period at a minimum cost of \$175 million. In time, some of these 19 ships will complete their global maiden voyages and show up at the roadstead off Ambrose Channel entrance, and come in for their whistled greetings. We all respond to the sight of a new ship standing in from the sea, and especially so if it is our own.

Our Foreign Policy

EXTENSION OF REMARKS

HON, HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. WELKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the third of a series of four articles on our foreign policy, written by Judge Jim Gossett and published in the Gooding (Idaho) Leader of December 23, 1954.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Judge Jim Gossett)

One cannot but wonder what catastrophe will eventually halt the headlong rush of this country and her allies into a permanent policy of all-out appeasement toward our implacable enemies, the Communists; towards certain disaster. One must wonder, too, how much more of the free world must be sacrificed to prove to our policymakers that moral pressure alone cannot influence the actions of people to whom there is no such thing ar moral pressure—for the simple reason that they have no morals.

Why, we cannot but ask, if we are complete internationalists whose every action and attitude must be governed by the dictates of the United Nations Charter, must we look only to the prohibitions imposed upon us by that charter and ignore the few positive courses of action permitted us under its terms? Why shall its influence upon us always be negative in that it always tells us what we cannot do instead of positive in telling us what we can or should do?

To a large extent, it is the fault of our leaders—certain of our leaders, that is. Even the fantastic idealism that inspired and imbues the U. N. Charter occasionally touched its feet to the ground in making some practical provisions for situations which must inevitably occur that cannot be solved by a sweet smile, a few million dollars, or a self-righteous "turning of the other cheek." We are in one of those situations now with Red China and, unbelievable but true, we have available to us under the terms of our sacrosanct U. N. Charter a forceful, effective measure.

I refer, of course, to the naval blockade of Red China that has been proposed by Senator Knowland of California. (And for which suggestion, I may add, he has had his ears figuratively boxed by the White House et al.) The naval blockade has been endorsed by all four members of the United States Joint Chiefs of Staff, which, significantly, includes Gen. Matthew Ridgway. The idea was vetoed by President Elsenhower on foreign-policy grounds. Doubtless this yeto is intended to fit into the Eisenhower-

Dulles statements of "vigorous" actions within the framework of the U. N. Charter; the White House had said that the President feels that a naval blockade would be "war action."

But a naval blockade is within the provisions of the U. N. Charter. Article 42 of the charter sets forth that the Security Council "may take such action by air, sea, or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea, or land forces of members of the United Nations." And the United States is a member of the United Nations. We are never for one instant permitted to forget it.

And, of course, it is well known by our military that a naval blockade against Red China would be very effective—and President Eisenhower is the top military man in the land. Our civil authorities denied us the fruits of just such an action in the Korean war; the reason being given was that we did not want to get into a "war" with China. For some reason, the fact that around a million Chink Commies were in North Korea killing American soldiers did not seem sufficient provocation for us to "risk" a war with China.

Now once again comes this ignoble representation that we cannot risk a war with Red China; that we cannot defend our citizens and servicemen by militant action. Are we deemed so utterly stupid as to not know that in actuality, we are at war with Red China right now? What we signed in Korea to stop the shooting was not a peace treaty; it was an armistice—an agreed cessation of active hostilities to allow for the arrangement of the terms of a final peace,

The Chinese Communists have deliberately and openly violated the written pledges of that armistice in at least six different ways and on numberless occasions, any single one of these violations would justify the U. N., before the world and under international law, in resuming a shooting war against the Reds at any time. Our cautious, almost timid, policies would indicate that we alone are afraid of war; that our adversaries will eagerly seize on any pretext to start a war. Why is this?

The evidence right in Washington is all to the contrary. Ambassador Chip Bohlen, just back from Russia, has stated clearly that the Kremlin is in actual terror of an atomic war, that they are in mortal dread of the hydrogen bomb, and they admit it. And Admiral Strauss, Chairman of our Atomic Energy Commission, has lately released an interview in which he states that we are appreciably ahead of Russia in the H-bomb.

Secretary of Defense Wilson has just made a most significant public release to the effect that the United States is stronger than the Soviets. He said further: "Too much has been said about the rising power of the Soviets and too little about our own strength." He said also, that Americans should speak out more about their own strength, and political ideals and less about the power and beliefs of Soviet Russia. Could not these statements of his be much more appropriately directed at the White House and the State Department than at us?

Are we lacking allies in the Far East if we become embroiled with Red China? What about Syngman Rhee's magnificent ROK army that is straining at the bit? What about Chiang Kai-shek's 600,000 Nationalist Chinese soldiers on Formosa that are crying for the chance to hit at the commies? Are we afraid we will not be supported by the British and French—our so-called principal allies—over there? To get down to earth, with the exception of their ridiculously small token forces, how much help have they ever given us in the Far East?

The Senate majority leader, the very able Senator KNOWLAND, of California, is doing the American people an incalculably great service by speaking out in the Senate in protest against our policies of futility. He at least has not forgotten that we are the most powerful nation on earth, perhaps the most powerful nation in recorded history.

Drawing a Line on Federal Control

EXTENSION OF REMARKS

HON, BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine editorial which was printed in the Phoenix Gazette of Wednesday, January 5, 1955.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

DRAWING A LINE ON FEDERAL CONTROL

What could be a major crossroads in the struggle to preserve free enterprise from too much Federal regulation faces the new Congress. It will consider legislation amending the Natural Gas Act of 1938.

The key point of this legislation will be to exempt from the Federal Power Commission's control the gas sold by independent producers to pipeline companies which transport it across State lines. It is not a new point. The Kerr bill in 1950 did the same thing but was vetoed by President Truman.

But the need for such legislation now has new urgency. Last June the Supreme Court ruled that the 1938 act does apply to independent producers as well as to the pipeline companies. Unless the act is changed, the FPC will have the unwanted and virtually unworkable function of trying to set prices of gas produced under widely differing conditions. For every well brought in, many dry holes may have been put down by a producer at high cost. Some wells produce both oil and gas, others only one or the other. Different lease and royalty prices complicate the pricing base, and there is also the conflict between State and Federal regulation.

Yet these practical considerations, baffling as they are, come second in importance to the danger of another long step on the road to socialism. If independent gas sales can be regulated, oil sales almost have to be, too, since the two resources exist side by side. The philosophy of such regulation could logically be extended to coal, or to almost any commodity.

At the heart of the situation is the basic reason for any Government regulation of industry in a democracy during peacetime. This regulation is consistent with democracy when a monopoly or semimonopoly exists. A utility company marketing gas or electricity at retail comes in that category. So does a pipeline company transmitting gas. But the gas-producing industry, with many separate units large and small, is one of the most competitive and nonmonopolistic enterprises.

Moreover, as in the production of oil, its initial stage is exploration. Millions of dollars can be sunk in failures before a paying well is struck. Obviously the threat of price fixing at the wellhead puts a straitjacket on this highly speculative venturing.

If the Federal act is not amended, price fixing with respect to sales of gas transmitted interstate could lead to production for sale only within the producing State. Five States—Texas, Kansas, Louisiana, Oklahoma, and New Mexico—have 88 percent of the proved gas reserves and 84 percent of the Nation's current production. States like Arizona, which produce no natural gas but share in the growing nationwide use of this fuel, would be starved out of the picture.

The Court ruling has shown up a weakness in the law which must be corrected. Competition will keep natural gas prices down. Price fixing will only endanger the growth of a vital industry, with the longrange threat of unlimited Federal control.

Our Foreign Policy

EXTENSION OF REMARKS

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES Monday, January 10, 1955

Mr. WELKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the fourth and last of a series of articles on our foreign policy written by Judge Jim Gossett and published in the Gooding (Idaho) Leader of December 30, 1954.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Judge Jim Gossett)

Five days ago we celebrated the greatest of the Christian holidays with the warmest of all sentiments, Christmas at home. We enjoyed at the festive board and in the gifts under the tree all of the material blessings of free people. In the bright, gay comfort of our homes we experienced, perhaps somewhat subconsciously, the spiritual exultation and harmony of feeling that is inherent in any great religious festival. We savored deeply of the rapt, eager faces of our children, transported in the enchantment of the occasion.

Two days hence we celebrate again a joyous event—the new year. The new year at ime for sweeping aside the disappointments and unhappiness of the past with the new broom of brave resolutions and new hope for the future. A new year in which the failure of yesterday shall be but the lessons which will teach us how to improve tomorrow. A time for looking ahead with renewed hope.

Except for their families and a few friends, how many of us have had the beauty of the season darkened by thoughts of those 13 boys in the uniform that have made and kept us free, who are spending this Christmas and New Year's in the bleak wretchedness of a foul Chinese prison thousands upon thousands of miles from those they love and all that they hold dear? What sort of bright hopes and brave resolutions are surging through their breasts. How light and gay are their hearts as they, mayhap, close their eyes and seek in their imagination to escape the dank filth of prison?

What hymns of love and faith are ringing in their ears? What star of Bethlehem is shining before their eyes and gladening their hearts? Can they now have a burning belief in the goodness of man and the greatness of God to see them through? Or do they feel the hopeless melancholy of those who have been forsaken—forgotten? How hollowly must ring in their memories these words from the Declaration of Independence: "We hold these truths to be self-evident, that all

men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

And even more emptily must echo these words with which the Declaration ends: "And for the support of this Declaration, with a firm reliance on the Protection of Divine Providence, we mutually pledge to each other our lives, our fortunes and our sacred honor."

Now my friends and fellow Americans, are we acting like people who have pledged our lives, our fortunes and our sacred honor? We, the greatest power among nations, permitting 13 Christian boys in the uniform of the United States of America to rot in a heathen jail—to lie in degradation, the power of life and death for them clutched in the blasphemous fists of the godless Chinese Communists?

What are these boys doing? They were not foolish businessmen whose greed kept them over long in a place against which they had been warned. They were not irresponsible tourists who heedlessly and needlessly placed themselves in jeopardy. They were soldiers in the honored uniform of their country carrying out their duty in the defense of you, and of me and of their fatherland and all for which it stands. They are illegally held, against all the laws of God and man and in defiance of international

agreement and the solemn pledges of armistice.

They are in all verity kidnaped from our bosom by brigands—international pirates—who have demonstrated their disregard for honor and law and justice by this their very act. Does the law negotiate with criminals? Do honorable men contract with thieves and cutthroats? Do the courts accept the word of convicted perjurers? Does a brave man submit to the dictates of a pickpocket?

Shall we negotiate until most of these boys are dead or mad? Shall we continue to permit these boys to be used as instruments to force diplomatic dignification of these international highwaymen? Shall we negotiate away still further the slim margin of honor and security our people still have—and end up once more in a disgraceful ransom deal? Shall these boys be allowed to believe that they have been abandoned by their God and their people to the brutality of barbarians?

The Communists in China have denied God, law, honor, morals, ethics, and truth. How can we negotiate, in any conscience and to any effect, with the beasts of field and forest? Their regimes are founded on force and violence, they exist by force and violence, they govern by force and violence, and they believe in and respect only force and violence. Shall we deny them their chosen dish by refusing to tell them: "Our boys now or the iron fist of American might in your teeth."

As that warm feeling comes over you when you notice the resemblances, the mannerisms—the vague little grin—in your child that remind you of dad, turn your thoughts to the families of those 13 boys across the Pacific Ocean. Each of these resemblances and mannerisms—these little smiles—that are filling you up with love and pride are inflicting burning wounds on those families, a desperate rush to hide from the children the bitter, scalding tears of utter unhappiness. They are reminders of the loved one who isn't there—who may never be there.

I believe in the words in our Declaration of Independence, "we pledge to each other our lives, our fortunes, and our sacred honor," were intended to mean just what they say; I believe in the Constitution which implements them; and I believe in the God which has graced us with the power to carry out our mandates. And I do not believe that the obligations of our Government to the British, the French, or to anyone else supersede its obligations to our own pecpie.

Resolutions of East Atlanta Post, No. 159, American Legion, Department of Georgia

EXTENSION OF REMARKS

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. DAVIS of Georgia. Mr. Speaker, on September 28, 1954, the members of East Atlanta Post, No. 159, of the American Legion, Department of Georgia, adopted two resolutions, dealing respectively with the usurpation of legislative functions by the executive and judicial branches of the Federal Government, and with the length of the terms of office of Members of the United States House of Representatives.

On December 7, 1954, that post of the American Legion, Department of Georgia, adopted a resolution protesting the trial of members of United States military forces by the courts of foreign countries under provisions of certain treaties.

Under unanimous consent granted, I insert these resolutions herewith:

Whereas article 1, section 1, of the Constitution of the United States reads as follows: "All legislative powers herein granted, shall be vested in a Congress of the United States which shall consist of a Senate and House of Representatives"; and Whereas in recent years the powers of the

Congress of the United States is being usurped by the executive and judicial branches of our Government to the detriment of our people and to the Government itself; and

Whereas George Washington in his Fare-well Address said: "If in the opinion of the people the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amend-ment in the way which the Constitution designates, but let there be no change by usurpations for though this in one instance may be the instrument of good it is the customary weapon by which free govern-ments are destroyed": Therefore

Resolved, That members of East Atlanta Post, No. 159, the American Legion, Department of Georgia, memorialize the national executive department to petition the United States Congress to rededicate its Members to the duties of legislative powers vested in it by the Constitution, before usurpation by the executive and judicial branches of our Government causes the Congress to be abolished, since the Senate and House of Representatives are elected by the people to serve

in this capacity; further

Resolved, That a copy of this resolution be
furnished our representatives in Washington,

Unanimously adopted this September 28, 1954.

J. H. DRUMM. Commander. W. B. JONES, Adjutant.

Whereas the Constitution of the United States provides that Members of the House of Representatives shall be elected by vote of the people in their respective district every 2 years; and

Whereas at the time of the adoption of the Constitution traveling and communications were remote, and the 1800 census shows United States population at 5,308,483; and

Whereas in this new age of wireless radio and television communication being in-

stantaneous, travel by airplane makes ready connection with a population of 150,697,361 shown in the 1950 census: Therefore

Resolved, That members of East Atlanta Post, No. 159, the American Legion, memorialize the national executive committee to petition the United States Congress to adopt necessary legislation to provide that the Constitution be amended to elect Representatives to Congress every 4 years, which will give a Member elected to Congress a more reasonable chance and more time to devote to constructive legislation rather than spend so much time each 2 years campaigning for election. Effective with the 84th Congress; further

Resolved, That a copy of this resolution be furnished our Representatives in Washington, D. C., and to the Atlanta Journal and Constitution.

Unanimously adopted this September 28,

J. H. DRUMM. Commander. W. B. JONES, Adjutant.

Whereas the ratification of the interna-Whereas the ratheation of the interna-tional treaty law of July 15, 1953, by the United States Senate which places the United States military in foreign lands un-der the jurisdiction of foreign courts; and

Whereas this law if permitted to continue in effect can be detrimental to all troops in foreign lands by being arrested on trumpedup charges simultaneous with an attack, which would dwarf the Pearl Harbor attack beyond comprehension: Therefore

That members of East Atlanta Resolved. Post, No. 159, memorialize the department executive committee to petition the national executive committee to investigate the effect of the July 15, 1953; ratification by Congress of the NATO status of forces treaty law, which we are advised supersedes the Constitution for men drafted by the United States Government and placed in foreign lands, to be governed by the courts of said lands without the protection of the United States Constitution, while in uniform defending our Constitution; further

Resolved, That a copy of this resolution be furnished our Representatives in Washington.

Unanimously adopted December 7, 1954. J. H. DRUMM, Commander. W. B. JONES, Adjutant.

The Late Dwight L. Rogers

SPEECH

OF

HON. JOSEPH L. CARRIGG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 5, 1955

Mr. SIKES. Mr. Speaker, I yield to my friend and colleague the gentleman from Pennsylvania [Mr. CARRIGG].

Mr. CARRIGG. Mr. Speaker, in expressing my sympathy to the widow of DWIGHT ROGERS on the passing of her husband and in expressing my sympathy to the delegation from the great State of Florida, I can only say that DWIGHT ROGERS and I were geographically and politically as far apart probably as the poles, he being a Democrat and I being a Republican, and he being from the great State of Florida and I being from the great Commonwealth of Pennsylvania. But during the last year, I have the privflege of living with him very closely for a week or 10 days on one of the committee trips throughout the West, and I came to know DWIGHT ROGERS as one of my fondest friends. I know there is a saying that it is holy and wholesome to pray for the dead. My prayer today is that Almighty God in his charity and mercy will grant to the soul of DWIGHT Rogers eternal peace and also grant strength to Mrs. Rogers that she may carry the heavy cross which has been bestowed upon her.

Commonsense About Alaska

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. BARTLETT. Mr. Speaker, Alaska was honored to have as a visitor in November Mr. Ralph D. Paine, Jr., publisher of Fortune magazine. Mr. Paine traveled widely in the Territory, and I still am receiving letters from different communities expressing the pleasure of the writers at having had the opportunity to meet and talk with Mr. Paine. During the course of his stay with us he addressed the Alaska Chamber of Com-Mr. Paine's analysis of the merce. Alaska situation was factual and practical. It was most interesting to me and to many others that he came to the conclusion that statehood is essential if Alaska is to make the progress to which its resources entitle it.

I take pleasure in offering here the text of Mr. Paine's talk before the Alaska Chamber of Commerce:

[From the Anchorage Daily Times of November 15, 1954]

FORTUNE PUBLISHER CITES NEED FOR STATEHOOD

(An address delivered to the Alaska Chamber of Commerce by Ralph D. Paine, Jr. publisher of Fortune magazine)

It is a very real pleasure for me to be here tonight. To see Alaska for the first time is an experience too few Americans have en-joyed. I expect to see more of this great frontier in the next few days, as much as I possibly can. And I do not expect it to disappoint me.

In preparing for the honor or addressing you tonight it didn't take long to see that I would look pretty silly if I did not say something about Alaska statehood. And finally I was forced to put it up to my associates in this fashion; "If Time, Life, and Fortune do not have a position on statehood, I don't have a speech."

One fact grew on us as we studied the questions that we felt had never been given proper weight. It is a simple fact and an easy one to remember. If it were properly publicized in the United States, I believe you would gain immense support in no less than 47 States. And that is the fact that the instant Alaska achieves statchood the Lone Star State of Texas ceases to be the biggest State in the Union.

This was obviously not a determining fac-But after further study and much discussion we came to a conclusion. This conclusion can be stated quite simply. tonight, Time, Life, and Fortune are in favor of statehood for the great frontier Territory of Alaska.

Now I know the question of statehood is not a simple one. Able and honest men differ on it. The differing arguments are powerful and persuasive. Certainly the conditions in the two Territories seeking admission to the Union, Hawaii and Alaska, cannot be compared.

I share the general American respect for President Eisenhower's military judgment, but I cannot believe that he has been adequately informed on Alaska. If there are any real military advantages to Territorial status, I have never seen a convincing case. If Hawaii presents no military problems, it is hard to see how Alaska would.

It may be of small comfort to you but the admission of new States has always been bitterly opposed. At the Constitution Convention in 1787, Gouverneur Morris, an eminently sound Philadelphian, foreseeing the creation of many new States west of the Alleghenies, argued for a rule of representation which would secure to the Atlantic States a prevalence in the national councils.

A little later, in the debate over the admission of Louisiana which led to further debate about the next tier of Western States seeking statehood, an impassioned Congressman from Massachusetts cried: "You have no authority to throw the rights and property of this people into a 'hotch-pot' with the wild men on the Missouri."

But the wild men of the frontler would not be downed. One of the early petitions for statehood is also reminiscent. With the wit and wisdom of the true frontiersman the unknown author of this petition addressed Congress thus: "Some of our fellow citizens may think we are not able to conduct our affairs and consult our interests; but if our society is rude, much wisdom is not necessary to supply our wants, and a fool can sometimes put on his clothes better than a wise man can do it for him."

The frontier shaped and determined American political philosophy, American society and the American economy. Our democratic ideals, our individualism, our extraordinary ingenuity and adaptability and our energy are the product of 3½ centuries of ever changing frontier experience. We need the frontier. We need Alaska in our national life.

These values which have so enriched our national life derived from the experience of aucceeding generations of men and women—not necessarily ladies and gentlemen—in their assault upon the wilds and the wilderness. No other word is appropriate. The assault upon the frontier of North America was conducted with the zeal and determination of a great and victorious army.

It is fashionable today to bemoan and regret the excesses of the pioneers; to talk of the spoilation of the continent, the rape of its resources. How else could this job have been done; the settlement and development of most of the continent in a short 100 years?

What is so often forgotten today is that the incessant, driving energy of American frontier society was lightened and animated by enduring ideals. They were ideals which We, their descendants, take for granted and call by such trite names as "the American way of life" or, that sorry commonplace, "the free-enterprise system." It was a freeenterprise system all right, but the frontiersinen saw it in perspective in terms of means to ends, and the ends were not just the good society but the ever better society. Each generation of sacrifice in this neverending effort to improve the common lot, Contributed to the most revolutionary force in the world, then and now, the American achievement. What stirs the masses of Asia, the so-called working classes of Europe, or the peons of Latin America, even the natives of Africa? Communism? No. Communism

promises, falsely and wickedly, a shortcut to the American achievement, and with all our faults, those ideas are more closely approximated in the United States of America today than at anytime in history.

When the rough, tough job of populating the continent was finished, it was time to take stock, and only then. And the beginnings of the conservation movement date back to the closing of the continental frontier. Perhaps policies suitable to the continental United States today are not wise for this new frontier of Alaska. Perhaps Alaska, the 49th or 50th State, should restudy the creative forces loosed upon the continental frontier between 1790 and 1890.

It would be wasting your time to catalog for you the known and suspected resources of Alaska. At this convention you have heard many experts who know far more about them than I will ever know. This territory, one-fifth the size of the continental United States, is one of the true frontiers remaining on the face of the earth. There are parts of Africa which offer Europe its last best chance to regain economic and social vitality. There is the vast interior of South America. There is Siberia which the Russians like to think is their Great West. And there is Alaska, and the friendly territory of Canada. History tells us that the development of Canada and the development of the United States generally run parallel courses, and we should study our neighbor closely; Canada is in an extraordinary period of development.

However rich these last great frontiers

However rich these last great frontiers are, they all share in the same deficiencies, people, and capital.

If you look to the east—here I mean to the west to Siberia—you can see some spectacular development going on. The methods may be effective but they will never be our methods. If we arrested millions of citizens and shipped them to Alaska; if there had been a total disregard of the relative economic value of investment, Alaska, too, might boast of its Yakutsk and its Magadan or its Kola Peninsula, all based on forced labor. Perhaps Russia's Arctic scientists may have something to offer us, but for the rest I suggest that we will have to look elsewhere.

More particularly, I suggest that the best place to look for guidance in developing a new frontier is to look to our own unique American experience. After all, we are history's greatest experts on continental development, socially and politically as well as economically. The advance of the American pioneers from the original tidewater colonies to the shores of the Pacific is the epic of settlement and development.

And in the next few minutes I would like to recall for you a few of the things that contributed to successful settlement and development of the continental United States. These first principles, evolved in the trial and error of American frontier history, may still be valid for an Alaska which is the present American frontier. I suggest that, as citizens of a future State, you consider these two things; first the importance of land policy and second the question as to whether conservation policies which are valid in the continental United States are applicable to a frontier like Alaska.

Let us consider first the importance of land policy.

For nearly 200 years land policy was a burning issue in American politics and had the attention of 6 or 7 generations of leading statesmen. As early as 1650 the frontier towns of Massachusetts, towns that are now the suburbs of Boston, were complaining bitterly about absentee ownership. The marks of different land policies can be seen to this day by simply driving from New York State across the border into Connecticut. Massachusetts and Vermont. Eastern New York developed under a system of landed

proprietors and tenant farmers; New Englanders were freeholders, and the pride and industry developed by the New Englander can still be seen in the contrast between eastern New York and New England in the villages and countryside on either side of the State lines.

Squatting was always a thoroughly respectable method of land disposal. Grants and sales of large tracts for development were highly successful. Federal policy went through various phases in various places, culminating in Lincoln's Homestead Act. The phrase "land office business" became a permanent part of the American language. But whatever the particular policy at any particular time, whether it was by sales, by grants, by preemption or by homesteading, the objective of the policy was always the same; get the land into private ownership.

I am not competent to specify land policies for Alaska. I do, however, believe that the objective should be to get land into private hands, as speedily as possible. And I suspect that no one policy will suffice. Alaska is almost a subcontinent, so large and so varied that many methods will be necessary to get a substantial amount of land into private hands.

A cursory reading of the Interior's Bulletin on Information Relative to the Disposal and Leasing of Public Lands in Alaska, suggests that the present laws might be improved. The idea of the 160-acre homestead seems to me to be totally obsolete. The economics of modern agriculture require tremendous investments in machinery and equipment and large acreage to use them on. The capital requirements of an ordinary independent farmer in Iowa or Illinois today are around \$200,000. In the milksheds of the East it is not considered economic to operate a dairy farm with less than 100 milking cows. There are cattle areas in the Mountain States where one is foolish to operate less than 10,000 acres and 50,000 is safer.

To talk of homesteading 160 acres is like talking about 40 acres and a mule. It would be more realistic to start talking about 1,000 acres and a bulldozer. I am under no illusion that Alaska's destiny is to be a great agricultural state. But agriculture is always important.

Another aspect of land policy that should be reconsidered is land speculation. Land speculation is as old as America, an honored tradition. George Washington died the richest man of his time and most of his fortune was made in land speculation.

Land speculation should carry no opprobrium in a frontier country. Nine-tenths of the towns and cities of the continental United States owe their origins to bold, courageous, and farsighted men engaged in land speculation.

Thus the first guide from American history to successful settlement and development is sound land policy. The objective is to get land out of the public domain and into private hands. Make it easy but above all make it profitable.

And frontier land policies at this late date are better handled by a State than by the Federal Government. When you get state-hood get as much land as you can. The Department of the Interior is the law in 35 percent of the land in the 11 Western States; in Nevada it runs to more than two-thirds of the total. Texas, which is not only big but also smart, made local ownership of all land a condition of entry into the Union.

The second guide to frontier development is to be found in the 19th century attitude toward natural resources. This attitude runs directly contrary to most contemporary thought on the subject. The phrase of the day is: "It belongs to the people." I'm not sure I know what that phrase means—if it means anything. It is clear that the monu-

Excerpt From Report of AFL Executive Council on Taft-Hartley Act Changes

EXTENSION OF REMARKS

HON, BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. GOLDWATER. Mr. President, during the 2d session of the 83d Congress certain amendments proposed to the Taft-Hartley Act were recommitted to the Committee on Labor and Public Welfare. I have often wondered why that was done and what the facts behind the action were.

This morning my question was answered when I read the AFL executive council's own words, reprinted from pages 67 and 68 of its report to the convention of the AFL held at Los Angeles on September 20, 1954. The excerpt explains how the AFL blocked the Taft-Hartley Act changes.

I ask unanimous consent that the excerpt from the report be printed in the Appendix of the RECORD.

There being no objection, the excerpt from the report was ordered to be printed in the RECORD, as follows:

As reported, a few minor, favorable proposals were contained in the bill, but the major proposals were so objectionable it was recessary for us to oppose it in its entirety.

Many amendments, most of them very objectionable, were pending when the Senate began consideration of the bill on May 3, and as the Senate then had 36 Senators who voted against labor previously for Taft-Hartley and only 13 who voted favorably with the remaining Members divided 17 favorable, 17 unfavorable with 13 doubtful, it was realized the bill could not be defeated as the Senate stood 30 favorable, 53 unfavorable, and 13 doubtful, so it was decided to endeavor to recommit the bill.

Not having the votes to do this we realized, before the Senate began debating the bill, that we would be obliged to resort to parliamentary maneuvers to accomplish our purpose.

When debate began in the Senate on the bill, after Chairman SMITH had made his speech in behalf of it, Senator Goldwater presented his very objectionable amendment. This amendment turned all labor matters back to the States. This was most objectionable to practically all Democratic and Republican Senators from Northern States as there are now 17 States, mostly in the South. who have right-to-work, non-union-shop laws, and the amendment would have given further impetus to the migration of industry to these Southern States, and we were advised that if the Goldwater amendment was adopted that all southern Senators would be obliged to vote for the bill. We, therefore, permitted the debate to continue for a couple days and then Senators Ives and LEHMAN presented fair labor practice amendments. This, of course, put the southerners on the spot because they were obliged to oppose this and it also did the same for the Republicans who, as a party, are supposed to favor the proposal. The A. F. of L. was opposed to a FEPC proposal being added to a labor bill.

We then made arrangements with Senator Hill to offer the motion to recommit before any amendments were voted on and as all factions were fearful and more or less confused, they voted to recommit the bill, 50 to 42.

Senator Hall did a magnificent job in presenting his recommittal motion and every Democratic Senator voted for recommittal with Republican Senators Langer, Malone, and Young joining them, as did Independent Senator Wayne Mosse.

Prior to all this, President Meany presented a statement to the Senate Committee on Labor and Public Welfare in regard to the bill. He also sent an analysis of the bill, with a letter, to all national and international unions, State federations of labor, central labor unions, and Federal labor unions, requesting them to contact their Senators in opposition to it. Also he sent a letter to all Members of the Senate just prior to the time the vote came on recommittal, asking them to vote for recommittal.

The leading newspapers of the country have stated that the recommittal of this bill was the greatest legislative defeat President Eisenhower has received in either session of the 83d Congress.

The bill is dead for this session.

Imports of Foreign Residual Fuel Oil

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mrs. KEE. Mr. Speaker, today I introduced in the House of Representatives a bill to establish quota limitations on imports of foreign residual fuel oil. This bill is designed to check the present unfair competition now facing the coal industry of the United States. The continued unrestricted flow of cheap, foreign residual fuel oil created this unfair competition.

The depression now existing in the coal producing areas of the United States is unprecedented in the history of the entire industry. It is heartbreaking to see the mass unemployment; workers denied the right to employment through no fault of their own in one of America's major and most important industries. This unemployment, with its resultant unrest, has also spread to the railroads and other major industries dependent upon the production of coal.

On a recent trip to Europe I had an opportunity to see at first hand a number of communities where industrial recovery has been slow and real prosperity is still not in sight. Let me point out, however, that nowhere did I find the economic stagnation that has enveloped the coal producing communities of West Virginia since foreign residual oil began its relentless surge into the fuel markets of the east coast.

To my way of thinking, our first obligation is here at home, and for that reason I would say that the time for action is long since past due. From experience we know that the executive branch of government will not correct this grossly unjust situation. In fact, it has yet to take the first effective step to limit this importation of foreign residual fuel oil. Therefore, this limitation of imports must come through Congressional action and we must act now.

13

In conclusion, let me point out that this same foreign product has washed out coal production capacity that is vital to a defense program. If an emergency should come, none of the platitudinous statements about high levels of trade will be of any value in meeting the demands of a stepped-up industrial effort in a fuel-hungry mobilization economy. We will need coal and more coal, but we will not get it unless we act now to keep our coal mines open in the interim period.

Our Foreign Policy

EXTENSION OF REMARKS

HON. HERMAN WELKER

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. WELKER. Mr. President, I ask unanimous consent that the second of a series of four article dealing with our foreign policy, written by Judge Jim Gossett and published in the Gooding (Idaho) Leader of December 16, 1954, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Judge Jim Gossett)

Now how about this peaceful coexistence idea that has been spouted out of Washington all over the country? Is there now or has there ever been any possibility of Russia honestly giving any thought to that concept, except strictly on a temporary basis as fitted their needs and as worked into their master plan as a necessary tactle? Our State Department seems won over by the idea that they are acting nasty but they are talking softer, on the side, than they have been doing.

Is that something new? Is this the first time the Kremlin has talked nice and offered to play along with the boys? Is it possible that the Russian Government really means what it is saying in spite of what it is doing? Their actions speak for themselves; they give reason to believe that the Soviets are determined to keep on killing Americans and stirring up every conceivable trouble for the United States as long as they can get away with it. They say they are going to be good boys from here in through. I repeat, can we believe them?

Flatly, positively, and absolutely no. The Communists themselves have been telling us that ever since they existed as a recognizable "ism." To use the words of their original and greatest dupe in this country, Franklin Delano Roosevelt, they have told us "again, and again, and again." In 1847 Karl Marx, the father of communism, wrote into his Communist manifesto: "The Communists disdain to conceal their alms and views. They openly declare that their ends can be obtained only by the forcible overthrow of all existing social conditions."

In the collected works of Lenin we find the following: "International imperialism disposing of the might of capital cannot coexist with the Soviet Republic. Conflict is unavoilable, and here is the greatest difficulty of the Russian revolution, its greatest historical task, that of provoking the international revolution."

There is one high-flying phrase in that quotation that needs explaining. Just what does Lenin mean by "international imperialism disposing of the might of capitalism"?

Any nation that is non-Communist is one that is "disposing of the might of capital"; any nation that has become the object of Communist subversion, aggression, or de-

struction is imperialist.

The best example of all is our own United States. We are certainly a big nation "disposing of the might of capital," and we are called imperialist a thousand times each day by the Commies, in spite of the fact that we wish no territorial gains, political aggrandizement, or have no selfish world motives at all. And in spite of the fact that that we annually give away billions of dollars in money and goods to promote the weifare of other nations.

Now what has the late Joe Stalin had to say in this regard? For just one example (and there are thousands) let us take the often quoted passage from his letter to young comrade Ivanov of February 12, 1938, which is: "The existence of the Soviet Republic next to a number of imperialist states for a long time is unthinkable. In the end either the one or the other will have the better of it." (Never forget that any and all nations become automatically imperialist according to Communist doctrine simply by virtue of being capitalistic and, therefore, non-Communist.)

All right, you say, that was Marx, Stalin, and Lenin. Couldn't they have changed? How's about right now? Here is what Mr. Sam Watson had to say on October 21 last about a conversation he had just had with Nikita S. Khrushchev, the number two man in the Soviet Union. (Mr. Watson is a British Labor Party executive and a Mine Workers Union representative just returned from Soviet Russia and Red China.)

Mr. Watson says: "You can rest assured that the following paragraph sums up correctly the outcome of my conversation with Nikita S. Khrushchev." And here's what Khruschev said: "Coexistence in the field of trade—immediately; coexistence militarily and diplomatically—on terms; coexistence ideologically—never." (Ideologically means beliefs, aims, basic philosophy, reason for existing.") In this connection you must remember that the Communists do not believe in the Almighty—they are strict atheists. Marx, Lenin, Stalin, Malenkov, Khrushchev, and Molotov are their gods.

You must also always remember that the only reason for the existence of the Reds is world communism, accomplished by violent world revolution. The words of Marx, Lenin, Stalin, etc., are their supreme law, their religion, and the only thing in which they believe.

Referring to Khrushchev's words: "Coexistence in the field of trade—immediately"; the Soviets are not able to produce such things as consumer goods, locomotives and machine tools in the quantities they need. It is temporarily to their advantage to trade with us: as to "coexistence militarily and diplomatically—on terms," it means on their terms they have everything to gain and nothing to lose because they are winning in the diplomatic field now.

You may ask: "But do the Communists deliberately talk one way and act another, never meaning what they say; saying and doing things purely for a temporary advantage?" Read this from the 27th volume of Lenin's collected work, pages 84 and 85: "that history usually moves in zigzags, and that Marxists (Communists) must make allowances for the most complex and whimsical zigzags of history is indisputable. * * Every zigzag of history is a compromise, a compromise between the old, which is no longer strong enough completely to reject the new, and the new, which is not yet strong enough completely to overthrow the old. Marxism deems it necessary to resort to compromises."

In other words, saying or doing anything that is, or seems, inconsistent with their

avowed aims is absolutely O. K. for the time being, so long as it serves their purposes. Hence their "peace offensives," their talk of coexistence—or their nonaggression pact with Hitler. Lies and deceit are, admittedly, one of the basic tools of the Commiss—used to throw the other guy off balance. We will close with a splendid example—that of Yalta.

When the puppet government in Poland got worried about Stalin's promise at Yaita of "free" elections in Poland to replace them, Stalin sent this word to them by Bulganin, while the Yaita Conference was still in progress: "The Yaita declaration is a scrap of paper. It was necessary to satisfy Roosevelt and Churchill—but we will not abide by it." And, of course, that didn't.

What in heck do they mean by peaceful coexistence?

Reliable Allies

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Recorp a very thoughtful column by Walter Lippmann, which appeared in the Washington Post of last Thursday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW
(By Walter Lippmann)
RELIABLE ALLIES

At the end of last week when M. Mendes-France had just managed to push the Paris accords through the Assembly, official Washington let it be known that they were sick at heart about the instability of France and full of doubts about her reliability as an ally. Now it may be interesting to know how these officials feel. But it would be even more interesting if they showed that they had given the problem more serious thought. For the problem is not new, it is very serious, and it is highly complicated. To make it known to the world that you do not trust your ally is a remarkably poor way of promoting an alliance. For your ally will repay your distrust with his distrust.

The best way, it seems to me, to begin thinking about French instability and reliability is to realize that the French, and not by any means the French only, have been sick at heart about the instability of the United States and full of doubts about our reliability as an ally. The decline of American prestige has been very great in the past 3 years. The decline is directly related to the instability of the Executive in relation to Congress during Truman's last year and Eisenhower's first 2 years. We are shocked, and rightly so, at the irresponsible destructiveness of the French Assembly. But we must realize that our friends throughout the world have been no less shocked by our own version of this same kind of irresponsible destructiveness.

Our own instability is not so obvious as the French because the President does not resign as does the French Premier. But our own instability, which is having enormous consequences, comes from the same malady. It comes from the enfeeblement of the executive power in relation to an aggressive and aggrandized Assembly. This produces an instability which has caused doubt about the reliability of the alliance. The instability in France has raised the doubt whether the French would resist a Soviet aggression. The instability in Washington has raised the doubt whether we might let ourselves be unilaterally pushed or provoked or seduced into taking the steps that would bring on a world war.

It is much easier to cure the instability under the American than under the French Constitution. For our Constitution was carefully designed by the Founding Fathers to avoid this particular instability. The Constitution was designed to produce a government in which the initiative and the leadership are in the President, in which the Congress advises, refuses, consents, inquires, but does not itself govern and administer. The system is weighted in such a way that normally a President can take the initiative and hold the leadership, and in doing so win general national support. The Government works well when it is operated as a Presidential Government. It works very badly when the President is weak, and when he appeases a Congress which is in a mood to usurp the executive power. The Government worked very badly for these very reasons in reconstruction after the Civil War, under Harding after the First World War, and under Truman and Eisenhower since 1951.

The French Constitution, on the other hand, is designed to produce a weak executive who is no match for an all-powerful Assembly of Deputies. The drama of M. Mendes-France has been his attempt to make work an unworkable constitution, to wring decisions out of an Assembly which is so set up that its whole intent and energy are against the taking of national decisions. M. Mendes-France has performed a remarkable personal feat. But a country cannot be made stable and be governed well by personal feats. It is hard for the observer to see how France can achieve stability without a reform of the constitution.

As for the reliability of alliances, the best insurance is not to forget that no alliance is ever absolute, that all alliances are relative to historic circumstances and subject to the vital interests of the country. There is no such thing as an alliance which will work automatically at all times under all conditions. Even in the very closest alliances there will always be in time of crisis a moment of decision, when in fact it has to be decided whether the people will support the war in the form in which it is proposed to them. We are, for example, closely and intimately allied with Great Britain. But the alliance would not be automatic for a war which began in the Far East and took the form of an American intervention.

When we think about the reliability of an alliance, we are really asking ourselves how far and under what circumstances it would work automatically. The answer to that question is of the greatest consequence in military planning, and we can be quite sure that it is a question that the Russians never forget to think about. We can be sure, too, that if they are planning a military aggression, they will plan it in such a way as to prevent the NATO alliance from working automatically. They will produce a confused situation which divides the allies, not a simple and obvious situation—such as a march toward Paris—which unites them automatically.

automatically. Thinking about the reliability of our allies we shall, therefore, do well to shun moral judgments and to translate our doubts into a cool appraisal of how far, in which of the possible situations, the alliance will work automatically. For when an alliance is not automatic, which is almost all the time, good diplomacy consists in taking nothing for granted, in taking no one, no matter how fashionable and popular he may be at the moment, as definitely lined up, and in recognizing that an alliance is a tie that has to be renewed continually.

ments, perks, and any other elements of the national historical heritage should be preserved, not as wealth or assets with a dollar value but as a service to the American people.

Largely by accident the Federal Government is the owner of certain remnants of the total stock of resources which for the most part has long since passed into private hands. In certain cases, notably the national forests, this came about by deliberate choice. And, again, I am not talking about the preservation of national monuments or the maintenance of national parks.

But that is far different from treating straight economic assets as a trust for the economic benefit of the general populace. If private individuals can see ways of exploiting resources, the Government should dispose of them in an equitable fashion. Everyone will gain; what makes this subject a political issue, of course, is that some will gain more than others. Throughout the history of the continental frontier sheer envy of this kind was rare. As long as everyone gained, the fact that some gained more than others was not regarded as particularly wrong or wicked. Indeed it was rather applauded.

The revenues from Federal operation in the economic field at best are peanuts in the budget. Far better the Government enjoy the added taxes from successful exploitation by private individuals or corporations.

Another concept which runs along with the "belongs-to-the-people" thesis is orderly development. The development of the United States was a very disorderly affair. Our system allows for a great many mistakes but it does have the supreme advantage of preventing total mistakes. There is continuous self-correction; there are always alternatives.

It is my impression that there is a tendency on the part of the Great White Father in Washington to believe that Alaska should be developed in an orderly fashion—that is, planned from the top down. I say let the Alaskans plan for themselves.

In the opening and exploitation of the frontier, many hard choices have to be made. After the Civil War when the American frontier was moving across the Great Plains, the choice had to be made between the settlers and the buffalo. As the slaughter of the buffalo mounted, cries of outrage arose from the East. Gen. Phil Sheridan, then in command of the Southwest, said bluntly: "Either these plains are to be opened to the settlers or they are to be left to the buffalo. They cannot accommodate both."

cannot accommodate both."

Again, let me emphasize that I'm in complete sympathy with sound conservation policies. I'm even in sympathy with deliberate preservation of great tracts of wilderness, just for the sake of wilderness. But I'm inclined to think that people can get overly worried about these matters. Northern New Hampshire and Maine are still wilderness after 300 years, actually increasingly so as the old farms are abandoned and revert to forest land.

I am also for reasonable regulation of private exploitation. But this again is not a matter for worry. This is not the 19th century when the great corporation and large-scale enterprise was wholly new. Today the potential control of private enterprise is almost complete. Federal power over corporate enterprise is assured and absolute.

Moreover, the great modern corporations have changed and developed a sense of their social obligations and a broadened concept of their own longtime interests. No modern pulp or lumber company wants to strip the Tongass Forest. If nothing else deterred them, their own sense of self-preservation would dictate the practices of sound forestry.

Alaska should make every effort to attract the great corporation. For the corporation of today is prepared to make the tremendous investments that Alaska needs. Look what is going on in Kitimat in British Columbia. There the Canadian Aluminum Co. is pioneering on a scale never before witnessed on this continent—and all with private capital. And British Columbia will never regret it.

If the United States people wish to keep Alaska as a sort of jet-age supercolossal national park, then the Department of the Interior is the logical keeper of the park. But the American people have never expressed that desire, and never will. The American people want to see Alaska developed as all our other frontiers have been developed. If Alaska needs help from the Federal Government for its development, there is plenty of precedent. There is plenty of precedent right at home in the western States today.

So I say, if Alaska wants statehood Alaska should have statehood. Moreover, when it gets statehood I predict that things will start to happen here. Americans have always shown bursts of creative energy when they were released from political and social conditions to which they were opposed.

Alaska's present dependence on Washington is not healthy; it is certainly not healthy for Alaska and it's not healthy for the Union. Every effort which can be made to cut down, dispense and diffuse the fantastic empire of the Department of the Interior is sound and constructive statesmanship. This is said with no personal feeling whatever. Interior is full of devoted and intelligent public servants. But the history of the Department as a whole has been one of relentless aggrandizement of Federal power. The purpose set forth over the years by the Congress was for Interior to service not rule.

The kind of people that Alaska needs are people who find the pervasiveness of the Federal Government in domestic affairs irksome and discouraging. The kind of people Alaska needs are people who want fresh opportunities. The publications of the Department of the Interior would persuade me to go to Canada, not Alaska. There is too much Federal Government in Alaska to tempt anyone with the pioneering spirit.

And I would like to see Alaska a pioneering land, feeding back to the older States something they have lost and which they need—a fresh infusion of frontier experience. The continental United States of America is growing crowded; there are too many people crowding in upon the great metropolitan areas. The traffic problem, now to be found in every town and hamlet, will not be cured by superhighways and slum clearance, America needs space. The necessities of a highly complex society, the terrible pressure of urbanization, have made deep inroads into the independent spirit of our country. And the independent spirit, as we have known it in America, is a product of frontier traditions.

Let Alaska's contribution to our national life be not only gold and salmon and forests and minerals. Let Alaska's contribution be the revitalizing of the independent spirit in America.

So far this evening I have talked of Alaska only in terms of its relations to the other 48 States. I would be remiss if I did not at least mention the larger role of Alaska, the role of Alaska and the world. I was billed on this very broad subject, and if I have neglected it, it is only because I believe it is imperative that Alaska's relations to the Union be settled first. This is of paramount importance.

But in conclusion I would like to open the focus upon Alaska and the world. And I wish to do it not in my own words but in those of the great historian of the American frontier, the late Frederick Jackson Turner. This magnificent Harvard historian gave the commencement address at the University of Washington in June 1914, just a few weeks before the world of our fathers disappeared into the nightmare of World War I, the true opening of what Sir Winston Churchill has called this terrible century.

Standing before his audience in the Northwest on the eve of Europe's disintegration, this historian, this eastern historian, who understood America as few Americans ever have, Frederick Jackson Turner uttered some rare and prophetic words.

Remember, please, that this is 1914, before the incident at Sarajevo at a time when America was still preoccupied by its internal development. Remember, too, that the speaker was the man who wrenched the teaching of American history away from the stale chronicles of foreign and domestic dates, and channeled it into a true understanding of the frontier as the dominant force in the creation of the United States of America.

The words I will leave with you in conclusion are the words of Frederick Jackson Turner on a June morning in 1914 to the graduating class at the University of Washington. These were his prophetic words:

"In the Facific Northwest the era of construction has not ended, but it is so rapidly in progress that we can already see the closing of the age of the pioneers. Already Alaska beckons on the north, and pointing to her wealth of natural resources asks the Nation on what terms the new age will deal with her, Across the Pacific looms Asia, no longer a remote vision and a symbol of the unchanging, but borne as by mirage close to our shores and raising grave questions of the common destiny of the people of the ocean.

"The dreams of Benton and of Seward of a regenerated Orient, when the long march of westward civilization should complete its circle, seem almost to be in process of realization. The age of the Pacific Ocean begins, mysterious and unfathomable in its meaning for our own future."

God bless the State of Alaska. Thank you very much.

Pius Is Ranked Among Greatest Popes

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 10, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a column by Drew Pearson, paying his respects to the life and work of Pope Pius XII.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WASHINGTON MERRY-GO-ROUND (By Drew Pearson)

PIUS IS RANKED AMONG GREATEST POPES

I shall never forget my audience with Pope Pius XII. It is difficult to describe one's impression upon meeting him—great gentleness, great depth of understanding, deep insight. But most of all I came away thinking that if our governmental leaders could have his understanding, peace would not be the clusive thing it is today.

I have been thinking about that audience during the Christmas season—obviously not a very happy Christmas for those in the Vatican worried about His Holiness' health.

The Vatican is a matchless setting for this entirely different and equally compelling man. You pass by the Swiss guards with their striped uniforms, holding their efficient-looking halberds, then up a broad flight of stairs, across a courtyard and up more stairs to a reception room filled with soldiers, whose uniforms, designed by Michel-

angelo, become progressively more magnificent as you move from one room to another.

after a wait in the final antercom, His Holiness entered. You could not help contrast the magnificence of the room with his simplicity, his ascetic face, his magnetic personality.

It was easy to understand why students of the Vatican agree that Pius XII will go down in history as one of the greatest pontiffs in the 2,000-year tradition of his religion, as well as one of the most brilliant men of his time.

The Pope's Humor

It was also easy to understand the truth of a story told about his audience with a group of Genovese pilgrims, when a small boy, kneeling for his blessing, suddenly looked up at the kindly pontiff and blurted

"Holy Father, when I grow up I'm going to be like you. I'm going to be pope."

There was a shocked silence. But Pius

smiled.

"Ah, my son, you do not know what you wish for yourself," he said.

The Pope's sprightly sense of humor also manifested itself when, at Castel Gandolfo, the Vatican summer residence, a great throng

of pilgrims had gathered for his blessing. Pius spoke so many languages that he seldom had need of an interpreter. So he began addressing each bloc of pilgrims in their own language. He spoke to one group in French, another in German, another in Spanish, until the meeting became like a game, with various foreign contingents humorously challenging the pope to say something in their tongue.

Plus joined in good-naturedly, continuing the linguistic welcomes until he had spoken in English, Polish, Hungarian, Dutch, and Portuguese. Finally a pilgrim with a River Liffey accent standing in a group the pontiff had overlooked spoke up:

"Your Holiness, we from Ireland."

With a laugh, the pope promptly said, "Cead mille failthe," Gaelic for "A hundred thousand welcomes."

His economic views

Pius XII is frequently compared with his Predecessors, Pius XI and Leo XIII, both of Whom were known for their social consciousness. All three thought along the same eco-nomic and political lines and did not hesitate to speak with great frankness.

Leo XIII and Pius XI were noted for their

"de rerum novarum" and "quadragesimo anno" encyclicals, which spoke out against economic exploitation of the workingman and the unfair distribution of wealth. Plus XI was quite blunt on the subject, declaring:

"The discrepancy between wealth and misery cannot be tolerated by the Christian conscience."

Decrying a system that recognized the rights of property at the expense of the individual and the family, Pius XI called for a fairer distribution of income and wider participation by labor in economic life. It is the duty of the state, he said, to stimulate increased productive enterprise and a more equitable distribution of the national income.

Plus XII, his successor, expressed himself in the same or related vein, but he branched out as well on other economic problems affecting underprivileged working classes.

He is a strong advocate of a just law for healthy housing," and even favored socialized medicine, provided it didn't conflict With the moral principles of respect for man and family.

Plus XII kept up the battle against Hitlerism and fascism begun by his predecessor, Plus XI, and won the gratitude of Jewish peoples by aiding in their escape and opening the doors of the Vatican to Nazi refugees. Pius and communism

Pius XII had his first, personal brush with the Communists back in 1919 when, as Archbishop Pacelli, he was papal nuncio to Ba-varia, where the Reds had seized power in Munich and set up a Soviet republic. When Communist bullets crashed through a window of his residence, the man who was to become pope calmly faced his attackers and refused to leave, even when a loaded pistol was shoved against his chest.

"Here I am and here I will remain," de-clared the future pope. "There is no power

on earth which can move me."

Faced down by the archbishop's unflinching glare, the Red leader lowered his gun and departed.

Though he entered the priesthood relatively late in life, Pius' roots had been in the Vatican for generations. His father was a Vatican lawyer, while his grandfather, Marcantonio Pacelli, founded the Vatican newspaper, L'Osservatore Romano, about 95 years ago

His visit to the United States in 1936 as the Vatican Secretary of State will long be remembered, as will his admiration for

"I have seen the sources of America's in-exhaustible strength," he declared after his visit here. "I have seen the industrial centers and the limitless natural wealth, the development of which are eloquent of the genius of America, a country great in the high destiny God has assigned to it.

"And I pray to Almighty God that the influence of the United States may always be exerted for the promotion of peace among all peoples,

Rivers and Harbors and Flood Control

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, in the month of December I headed a group committee representing the National Rivers and Harbors Congress which had an audience with the Bureau of the Budget, in Washington, regarding the civil functions at the coming session of Congress. This group included representatives from the States of California, Florida, Louisiana, Maryland, Iowa, and the District of Columbia, and they undertook to state the case for flood control and rivers and harbors work to the Bureau of Budget for every section of the Nation. Following this, the National Rivers and Harbors Congress sent out to its members a newsletter, a copy of which is presented for inclusion in my remarks. I think this matter is an extremely important one and will be of interest to every Member of the Congress. The newsletter is as follows: NATIONAL RIVERS

AND HARBORS CONGRESS, Washington, D. C., December 27, 1954. To the Members of the National Rivers and Harbors Congress:

During the course of the current month, the National Rivers and Harbors Congress took strong action to help build up the budget recommendations for civil functions in the coming session of Congress. President OVERTON BROOKS led a strong committee

from the National Rivers and Harbors Congress which called up the Budget Bureau and talked to its officials for over an hour. On this committee were representatives from the States of California, Florida, Maryland, Louisiana, Idaho, and the District of Columbia; and the committee therefore spoke for the entire country.

We pointed out to the Bureau of Budget

that for the last 4 years budget recommendaations for rivers, harbors, and flood control work had been steadily falling in the face of further inflation which constantly lessened the purchasing power of the dollar. We further pointed out that the needs of the country have been steadily increasing with our growing population and that the pressure due to long delay in starting projects had been steadily increasing. We showed that this was the case although our national policy had been to pour billions of dollars into foreign aid, neglecting or postponing the development of internal improvement in our own Nation.

Your committee recommended to the Bureau of Budget three important policies, namely:

1. A larger yearly budget for civil functions until this recommended budget shall reach the figure of \$650 million per year.

2. A policy of recommending new starts in order that many projects approved for years

may be given the green light.
3. The build-up of a backlog of new projects badly needed by this country in the rapid development of our internal resources. In other words, waterway development should keep pace with road, highway, and airway development.

Officials of the Bureau of Budget to whom we talked made no comment regarding the backlog. In reference to the first suggestion, namely, an increased overall budget, these officials indicated that some relief could be expected in recommendations made year after next to the Congress. During that year, some of the very large multiple-purpose dams will be completed and funds will then be available.

Mr. Carl H. Schwartz, Chief, Resources and Civil Works Division, made the statement in reference to the second suggestion that consideration was being given to "new starts" to be recommended to Congress for approval for the coming fiscal year; and that informa-tion regarding this matter would be released to the public during the early part of 1955. While we did not get all that we wanted, I feel that our committee accomplished a very useful mission on behalf of our membership and as your president, I am passing this information on to you.

Yours for a happy and prosperous New Year,

Cordially yours.

OVERTON BROOKS, President.

New Orleans Housing Improvement and Slum Prevention Plan

EXTENSION OF REMARKS OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. BOGGS. Mr. Speaker, New Orleans is blazing a trail in housing rehabilitation.

Our program is being conducted with complete cooperation at all levels of government. It is headed by a publicspirited citizens committee. I believe that the Members will be interested in reading a summary of the program and its operation, which is included herewith:

GENERAL STATEMENT OF THE OPERATION AND HISTORY OF THE NEW ORLEANS HOUSING IM-PROVEMENT AND SLUM PREVENTION (REHA-BILITATION) PROGRAM

Here in New Orleans, where we are operating a rehabilitation program on an area basis, it became evident soon after we launched mass inspections in our designated areas that securing good contractors, and honest ones, was going to be a real problem. A cursory examination of the situation showed that there were no more than a round dozen firms contracting 90-percent, or thereabouts, of all

of the work in these areas.

The problem, therefore, was to reach contractors who might be interested, tell them our story, get them to agree to do the work we were requiring them to do, to do it satisfactorily, and at fair prices. An added problem too was that as this program is functioning under the guidance of the city of New Orleans, none of its staff personnel could be permitted to single out individual contractors in making recommendations to property owners. After a series of conferences and small meetings between staff members of the city's division of housing improvement and slum prevention, small contractors, large organizations engaged in the building trades and the rehabilitation committee of the New Orleans Chapter of the National Association of Home Builders, it was decided to call an open meeting of all interested contractors, or individual tradesmen, to discuss the situation. Approximately 200 men attended the meeting held in July 1954 to listen to speeches by members of the city housing division of the Citizens' Advisory Committee on Housing Improvement and Slum Prevention. They were submitted copies of a fair practices code and were asked to sign it, in return for the privilege of being listed as eligible for work in rehabilitation areas. The code, attached, gave the necessary license to the list, which numbered some 65 names originally. The list is used to satisfy requests of property owners for recommendation as to contractors. The owners must choose their own, and they are free to ignore the list. Within 30 days over 100 contractors had been placed on the list, and within the same period one was dismissed from the list for doing defective work. The list is being policed by the property owners and by the contractors themselves. It is helping to bring about a greater awareness of the need for good work done at a fair price. Competitive bids are, and always have been, urged for all property owners in rehabilitated areas in New Orleans.

FINANCING ORGANIZATION

It became evident early in the program also that while the city fathers and the small group of citizens who had pledged their zeal in rehabilitation were thoroughly convinced of our program's merits, someone would have to tell other important facets of community life how the program affected them. Financing, to the rehabilitation-minded workers, could be managed, for the bulk of the properties to be rehabilitated. The problem, however, was to convince sufficient lending agencies of the economic value of rehabilitation area loans. In June 1954, the citizens' committee invited every lending agency in the city to send repre sentatives to a meeting for the specific purpose of telling this story to the lending agencies. As a result, 17 New Orleans banks and savings and loan associations today are making a steady practice of catering to rehabilitation area property owners. These lending agencies have been provided with maps indicating where the rehabilitation areas are located. And, as a regular service, the agencies are kept informed of any changes or additions made to these areas in opera-

The homesteads soon thereafter appeared before the citizens' committee executive group and presented this problem:

What is to be done in the case in which a regular client goes to the homestead and expresses an interest in a piece of property but states he is not interested in buying that property if, later on, the property would become encumbered should the city's minimum housing requirement be enforced in the property's area?

After much deliberation, the executive committee decided and urged the housing improvement division to extend an inspection service to take care of such individual problems, but to waive requirements for enforcement of the minimum housing laws, until such time when the area in which the property is located comes under rehabilita-

Today, because of this service, the lending agencies naturally feel that the threat of new requirements being placed on much of the city's old property in the foreseeable future is no longer a danger to their busi-

SUBSIDIARY COMMITTEES

Established as working subsidiaries of the citizens' advisory committee are the follow-ing committees: Relocation, technical, financing, public relations and education, legal.

Individual members of the executive committee have been assigned as liaison for one the specific committees listed above, as follows: Walter M. Barnett, legal; Ivan M. Foley, financing; Edgar B. Stern, Jr., and Adm. W. F. Riggs, Jr., public relations and education; Clifford F. Favrot, technical; F. Poche Waguespack, Sr., relocation.

Relocation: The relocation committee has arranged for 100 units in public housing and works through other organizations and with owners of large quantities of rental property in providing units for temporary and permanent relocation of persons displaced as a direct or indirect result of the program's operation.

Technical: Members of the technical committee have revised the fence ordinance in cooperation with the staff personnel.

They have given advice to owners on specific structural and repair problems; advice on contracts, zoning violations, and solution through the informal hearings scheduled for homeowners.

They serve as technical counsel to the legal committee in the framing of new ordinances.

Financing: The financing committee is, of necessity, composed of a larger number of members than any of the other working committees. Its members serve regularly (dividing the workload among themselves) as advisors to the division and property owners at hearings held for property owners.

The committee has framed proposals for a "fight blight fund" method of financing hardship cases which, in time, will form the operational procedure when the need for such a fund becomes necessary.

The committee members, individually, as-sist property owners in the work of financing by advising them on procedures of financing. The interests of the property owners are represented by this committee, primarily.

The committee also serves as liaison between the program and the city's lending (At present, there are 11 memagencies. bers on this body. All are officials of lend-ing agencies or related organizations.)

Public relations and education: The public relations and education committee has accomplished the almost herculean task of selling every group of community life, important in the work of rehabilitating the city's blighted housing, on the idea that the program is necessary and vital to them.

This has been done through package programs in neighborhoods where rehabilitation about to begin. A similar procedure is scheduled for the postrehabilitation period in each area. The prerehabilitation program

works in this manner:
Approximately 2 weeks before inspections begin in an area designated by the city planning commission for rehabilitation, meetings are called for all of the property owners in the area. A package program, consisting of addresses by citizens' advisory committee and staff members, literature, and project slides, is presented. Following this is a question-and-answer period. This package is designed to inform completely the property owners who attend on everything that is to be done in their neighborhood under the program, and everything they are expected to do. Following these meetings, which are held as often as is necessary to reach all of the property owners, the same procedure is used for all of the tenants, except that a "package for tenants," which is tailored to suit the interests of tenants only, is pre-sented. In these tenants' sessions the audiences are told that in return for all of the conveniences and advantages of modern living they are to receive, they should expect to pay more. What is a fair rate? The program spokesman, in effect, states that the tenant should expect to pay 20 percent, or \$1 out of every \$5, he earns on his living quarters. If he is paying more than that rate he is living too well and should find more economical quarters. If he is paying less than 20 percent, he and his family are entitled to better quarters. The tenants are urged to follow the 20-percent rule of thumb. It is gratifying to reveal that proponents of the program have found that prevailing rents in rehabilitation areas before repairs are approximately only 5 to 10 percent of the occuants' incomes. Therefore, sizeable increases do not cause the hardship which many critics are inclined to claim. There are exceptions, of course. There always are. We would say that in 85 to 95 percent of the cases in any particular area that is what we find. instances where the rents are high before repairs, it is usually easy to convince the owner that he will find himself out of the market if he increases his rents.

Subsequent meetings are held during rehabilitation for purposes of (1) encouraging owners who are delaying repairs; (2) bring owners of adjacent property together to solve their mutual fence problems; (3) to conduct hearings in the areas for the convenience of owners who cannot appear at the downtown office during regular office hours.

Sequence of all presentations, except hear-

ings, is as follows:

A citizens' committee member gives the principal address, followed by a projected slide talk and address by staff members. slide talk is done by the assistant chief, in charge of education, who also MC's the program. A question and answer period follows all meetings.

Legal: The legal committee overseas and assists in the preparation of all laws pertaining to the proper functioning of the rehabilitation effort. It does this with the cooperation of the division staff and of the city attorney's office. In addition, this committee is responsible for much of the investigative work necessary in the interpretation of existing laws which pertain to housing, Federal financing, and so forth.

Executive: The executive committee, which meets once a week, is composed of six members, elected by and from among the members of the citizens' advisory committee. The chairman and two vice chairmen serve for both the mother group and the executive committee.

Members of the executive committee pass on all matters pertaining to the entire program. They interest themselves in matters of operation as well as of broad policy. Where investigative, or technical knowledge and work is required, this committee often delegates matters to one or more of the subsidiary committees. In general, it is the responsibility of the division staff, therefore, to concern itself principally with operational matters. The three top officials participate in all weekly executive committee meetings as well as most of the subsidiary committee meetings.

Members of the executive committee serve as principal spokesmen for the program in all matters involving other city government organizations or agencies.

OTHER ADVISORY ORGANIZATIONS

The city officials' advisory committee: Members of this group, who, like members of the citizens' advisory committee, are appointed by the mayor and approved by the city council, meet once a month with the mother organization—the citizens' advisory committee. This group functions as one composed of representatives of specific agencies which are, by nature, related to the rehabilitation program. Unlike the membership of the mother committee, which is on an individual basis, the city officials' committee members may send proxy representatives to the regular monthly meetings.

Miscellaneous: From time to time, other civic organizations of the city render certain minor services to the program. Among these groups are the Council of Social Agencies, the League of Women Voters, the Young

Men's Business Club.

Enforcement activities: A total of 55 squares are being surveyed preliminary to application through HHFA for the renewal assistance offered under the Housing Act of 1954. This will be the first concrete application of Federal assistance to the renewal area, as defined by President Eisenhower's study committee and the HHFA staff.

Prevention of new slums; coordination of other department activities: Members of staff and citizens' committee are well aware of the threat of evergrowing new slums which, in most cities, come into existence faster than existing blight can be stamped out. Many tours of suburban areas of the city where such conditions were underway 6 months ago have been made by rehabilitation program workers. It was decided by the citizens' committee that this problem could be solved through strict enforcement of existing laws. The departments of the city government charged with enforcing these laws were informed, and their officials taken on these tours.

Training new personnel: One month of training with veteran personnel serving as instructors in classroom fashion was given to 14 young general inspectors. Veteran field inspectors, who were to serve as their supervisors, acted as instructors in the fields of plumbing, electrical work, building construction, fire prevention, health and sanitation. Following this month indoors they spent the next 60 days in the field performing supervised inspection routines by the veteran. The workload for the enforcement supervisor is such that detailed analysis of inspection has been impossible.

The inspectional staff with the rental combinations by so many of the homeowners have already outstripped the capacity of the supervisory staff.

The president of the New Orleans chapter of the National Association of Cost Accountants has appointed a committee of 3, composed of 1 partner in a public accounting firm, the assistant treasurer of public utilities, and a staff member of another accounting firm, to assist the department in the development of statistical methods and reporting. It is estimated that the cost of rehabilitating the housing that is inspected in the New Orleans area will run between \$9 million and \$18 million per year, or a total for the 45,000 units of \$90 million to \$180 million. This does not take into consideration the amount of every construction work,

such as streets, drainage, sewerage, sidewalks, public building and playgrounds that will be developed as a corollary to the rehabilitation of the houses. Retall buying of home merchandise and similarly "educated" expenditures can only be guessed at, but should approximate the same levels found in many of the better areas.

HISTORY OF THE NEW ORLEANS REHABILITATION PROGRAM

The present operation of a rehabilitation program designed to eliminate through conservation and reconstruction all housing blight in New Orleans, as well as to prevent the growth and spread of future slums, was no spontaneous achievement.

Months of research and planning by a citizens' study committee on housing, a group appointed by the mayor and approved by the city council, led to the creation of the necessary legislation and the new division of city government to cope with the big problem. The chamber of commerce, in the spring of 1953, instigated the initial move by petitioning the city for action through a citizens' group. The study committee was appointed as a result.

This committee enlisted the aid of the Tulane University Urban Life Research Institute, which group made a detailed study and report on the city's housing needs. Members of the committee went on junkets to other cities, principally Charlotte, N. C., and Baltimore, Md., to study rehabilitation programs firsthand.

On the basis of all findings, the committee recommended the following to the mayor: (1) Pass the necessary laws for establishing a separate department of city government to enforce all laws pertaining to good housing and to educate the public on the need for good housing in order to obtain the greatest amount of voluntary rehabilitation possible; (2) budget for and establish the necessary departments; (3) create a permanent citizens advisory committee to replace the study committee.

All of this was done. The city employed G. Yates Cook, author of the Baltimore plan for housing rehabilitation, to help the city and the citizens' advisory committee organize the program.

A permanent staff, composed entirely of workers protected under State and city civil service laws, was recruited and trained.

Heading the citizens' advisory committee is Mr. Clifford F. Favrot, a New Orleans capitalist with a flare for directing large operations. Heading the staff is Col. Shelton P. Hubbard, a retired Army colonel whose last assignment was director of operations for the port of Pusan during the Korean conflict. Hubbard formerly had served the city as director of the department of street sanitation.

Birthday Anniversary of the Honorable Sam Rayburn

SPEECH

OF

HON, ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. WIER. Mr. Speaker, from the North Star State to the Lone Star State I want to extend to the Speaker not only my own personal congratulations, and wishes for many more happy years to come, but speaking for the Minnesota delegation, we all join in sending our congratulations to that great leader from the Lone Star State.

4-H Clubs Have Origin in Newton County Corn Club

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. DAVIS of Georgia. Mr. Speaker, on October 30 an important milestone was reached in Georgia in the activities of 4-H Club work. A magnificent 4-H Club center was dedicated at Rock Eagle Park in Putnam County.

It was my pleasure and privilege to attend this dedication in company with Sid Truitt, of Fulton County, who has been one of the greatest friends to 4-H Club members in the State of Georgia. It was a beautiful day, and many thousands of people from Georgia, and some from other States, were present to witness and participate in the ceremony.

A splendid article concerning this 4-H Club center and concerning the origination of 4-H Club work was written by Mr. J. O. Martin, of Atlanta, and published in the Covington News on October 28, 1954. This is a very interesting article, and I include it herewith as a part of my remarks:

4-H CLUBS HAVE ORIGIN IN NEWTON COUNTY CORN CLUB—HISTORY OF CLUB RECALLED ON CENTER DEDICATION EVE

(By J. O. Martin)

On October 30, Georgia will dedicate her 4-H Club center at Rock Eagle Park in Putnam County. This project has been under construction for several months and has cost \$2½ million. It will accommodate 1,200 club members at any one time. The 4-H Clubs in the United States have a membership of approximately 3 million, the largest youth membership in the world. It succeeded the Boys Corn Club, which had its origin in the Newton County Boys Corn Club organized in 1904. The history of this club, written in 1911, although never published, is printed below.

THE ORIGINAL BOYS CORN CLUB OF THE SOUTH

Practically every county in the Southern States has had a Boys Corn Club and now have a 4-H Club, and the question is often asked, How did it all come about?

It happened in this way: In the issue of the Covington Enterprise, published December 23. 1804, there appeared the following notice, headed, "A Corn Contest." "It gives me pleasure to announce that during the coming spring there will be a contest among the school boys of Newton County as to who can make the best showing in corn culture. This will be a contest to interest the farmer boys and have them show their fathers how we can succeed on the farm, even when cotton is 7 cents per pound. Several handsome prizes will be offered." Signed: G. C. Adams, County School Commissioner, Newton County.

RULES

On February 3, 1905, there appeared in the Covington Enterprise this item, under the caption "Rules of the Corn Club."

caption "Rules of the Corn Club."

1. The contest is open to all Newton County boys between the ages of 6 and 18 who shall have been enrolled in one of the county's public schools during the present term.

2. Notice of entering the contest must be given to G. C. Adams, county school commissioner, by March 15.

3. All work of raising the corn, such as preparing the soil, fertilizing, planting, and

cultivating must be done by the contestant himself.

4. There are no limitations as to the variety of corn planted, kind of land, or extent of field. It may be grown on upland or bottom, on 1 row or 10 acres.

5. The corn must be pulled and weighed by disinterested committees, when thoroughly dry.

COMMENT BY COMMISSIONER MERRITT

When the above plans were discussed with W. B. Merritt, State school commissioner, he said: "I think it an excellent plan. I had hoped to introduce more of an agricultural feature in many of the schools in the State, and this is a good way to begin. We will see how it succeeds in Newton, and if it succeeds there it will be introduced all over the State.

INTEREST CREATED ELSEWHERE

On March 31, the Enterprise said: "No contest ever inaugurated in the county has aroused the interest and enthusiasm the corn contest has among the boys of the public schools of Newton County. There are 101 boys enrolled at the office of Commissioner Adams. Beyond the borders of Newton a live interest is being taken in the contest and every mail brings letters asking for particulars and details of the contest. These The two letters come from many States. The two great agricultural papers of the North, the Country Gentleman and the American Agriculturist, have-requested details for publication.

The Houston (Tex.) Daily Post of April 5, said: "Many good things come from Georgia and not the least meritorious is that of the corngrowing contest in Newton County, inaugurated by the county school commissioner, G. C. Adams. The plan is to give a suitable prize to the farmer boy who raises the best crop of corn. The southern farmers have devoted so much time, area, and attention to cotton that corn production has been very much neglected. Even Texas with annual production of 150 million bushels is frequently compelled to import corn from the North. A yield of 200 million bushels in Texas would not be too much. The Post would like a number of contests similar to this one in Georgia. They would tend to stimulate interest in corn production and eventually in the upbuilding of our stock industry.'

Among the State papers that commented editorially was the Atlanta Journal which said: "This is an excellent idea. As a means for stimulating the activity of the farmers As a means in raising other things besides cotton the Newton County scheme appears to be an excellent one. It should be tried in every county in the cotton States and not only corn contests should be inaugurated but several farm product contests as well." Atlanta Constitution gave a long editorial under the heading: "The Germ of a Great Idea.

PLANS FOR CONTEST OUTLINED

In September, Mr. Adams sent the following notice to the boys who were contesting: "You will please gather your 20 ears of corn in the presence of a disinterested person by October 1. It must be shucked, sacked, and nailed in a ratproof box and brought to Covington not later than October 7th. It will be weighed on very sensitive scales and the exact weight marked on each box. exhibit will be held in the county courthouse, October 16. Congressman L. F. Livingston will speak, and others.

You will please write out as much information as you can about the time of planting, kind of soil, distance, kind of corn planted, kind of fertilizers used, how cultivated, number of ears that grew to the stalk, and any other information of interest.

Thirty-two boys exhibited corn and the following were awarded prizes:

1. George Plunkett; weight of corn. 29.9. pounds; prize, Oliver Chilled plow, donated by J. R. Stephenson.

2. Tom Greer; 27.8 pounds; prize, Farmers' Encyclopedia, donor American Agriculturist.
3. Paul and Walter Cowan; 25.4 pounds;

prize, Country Life in America, donated by Prof. W. L. Weber.

4. Oscar Owens; 24 pounds: prize, Farmers'

Book, donated by American Agriculturist. 5. Phonso Rogers; 23.9 pounds; prize, sack of fertilizer, donated by Virginia-Carolina Chemical Co.

6. Marvin Payne; 23.9 pounds; prize, one sack Newton County High Grade Fertilizer,

donated by A. H. Hays.
7. Abbie Ogletree; 22.13 pounds; prize, subscription to American Agriculturist, donated by same.

2. Henry Edward; 22.13 pounds, prize, book

The judges were: Clerk of court, Maj. John B. Davis; ordinary, Capt. J. D. Heard; and Tax Collector W. S. Ramsey.

The speakers of the occasion were: Congressman F. L. Livingston, J. C. McAuliff, I. S. Payne, Prof. H. H. Stone, and P. D. Coffee.

CONTESTANTS

The following boys who are in the picture below had exhibits at the show, October 16, 1905

Tom Greer, Ethridge Hay, Carl Adams, Fay Peek, Frauk Elliott, Phonso Rogers, J. D. Boyd, Jr., Willie Savage, George Plunkett, Alva Adams, Walter Wingate, John Crew Sullivan, Laudy B. Harwell, Forest H. Treadwell, Henry Adams, Abbie Ogletree, Robert Beam, Joe Stone, Perlis Blackstock, Charles Ogletree, Wilbur L. Davidson, Oscar Owen, Joe Lasseter, T. S. Eason, Henry Edwards, Paul and Walter Cowan, Marion R. Payne, Henry Elliott, William Middlebrooks, Roy

OTHER EXHIBITS

In addition to the corn exhibits, there were

the following private exhibits:

M. R. Paine, a stalk of Brazilian silk cotton, said at that time to be worth 20 cents per pound.

T. H. Hardman, stalk of cotton with more than 300 bolls on it; also a beet, weighing 61/2 pounds.

A. M. Owen, a bushel of Long Tom and Owen's Choice Corn, grown on upland,

weighing 60 pounds.

John M. Dearing, Japanese cane.

D. T. Stone, Stone's Corn, showing from 3 to 5 ears to the stalk.

R. E. Everett, garden products, tomatoes,

peppers, etc.
Capt. J. M. Pace, stalk of celestial pepper,

2 feet high and 2 feet wide.

A. A. Crutchfield, Georgia gourd whose handle was 4 feet 9 inches long, with bowl with one-half gallon capacity.

John P. Thomson, hickory nuts, said to be largest in the country.

E. H. Plunkett, bunch yams.

REPORTS READ BY PRIZE WINNERS

George Plunkett: "I selected a piece of second-year bottom land, then took a 2-horse plow and broke it thoroughly. One month later I broke same with a 1-horse plow, then laid off rows with a 2-horse middle burster, making rows 5 feet apart. Used 1 load of barnyard manure, putting it in very thick in bottom of lay off furrow, and then took a 4-inch scooter and subsoiled the land, mixing the manure with soil. Then put in a mixture of acid phosphate and cottonseed meal at the rate of 200 pounds per acre, dropping corn 3 feet in drill, which was covered with a 2-inch scooter. I first ploughed it with a 3-inch scooter, 2 furrows to the row, using a left hand wing; I then gave it a

second ploughing, listing the middles with a turner and siding with 18-inch scrape. Did not replant or hoe the corn at all." This won first prize.

Tom Greer: "On May 29 I broke my land and harrowed it until thoroughly pulverized. On May 31, it was laid off in rows 4 feet apart, and manured with stable manure and commercial fertilizer. The corn was dropped in hills 3 feet apart in the drill and covered with a small plow. June 15 it was hoed and thinned to 1 and 2 stalks to the hill. On June 26, it was plowed again as before; the third ploughing was given on July 8, when a turn plow with scrape attached was used. The wing was turned toward the corn so that the dirt would be thrown toward the row. The variety was large, with cob and grown on bottom land." This won second

Paul and Walter Cowan: "Our corn was grown on chocolate loam soil and it was medium poor. We turned and subsoiled the land April 25, and the next day we laid off rows 5 feet apart. A liberal amount of stable manure was used with 300 pounds of com-mercial fertilizer per acre. The hills were mercial fertilizer per acre. The hills were planted 3 feet apart, and cultivation by hoeing and harrowing was done as rapidly as possible. No ploughing was done at all. quit working it June 4. Just before a rain we scattered potash and nitrate of soda on the ground at the rate of 50 pounds, to the The variety planted was Kelly's Choice. From 2 to 3 shoots grew to the stalk, but we pulled off all but one." This method won third prize.

Oscar Owen: "I broke my land close and deep and made my rows 31/2 feet wide; put 35 pounds of guano on one-fourth of an acre and planted the corn 3 feet in the drill. This was done April 18. At the first plowing I put six furrows to the row, with a small scooter plow and then hoed and re-planted the corn. When I plowed it the sec-ond time, I put 2 furrows to the row, with a sweep, and the third plowing 4 furrows to the row. It was then hoed thoroughly. There were 1 and 2 ears to the stalk." method won fourth prize.

In editorial comment, following the contest, the American Agriculturist said in part: "We take pride in sending the news abroad and the accomplishments of these schoolboys are known wherever English farm lit-erature is read." During 1906 the State During 1906 the State University of Georgia organized a Statewide club. In this connection it is a fact, worthy of note, that through the leadership of Mr. Adams two other innovations made their imprint in 1902, in the new era of education in the South—namely, the construction of the Mixon Consolidated School, the first in the South where children were transported. and the organization of the Newton County oratorical contest, the first county school meet anywhere.

Mr. Adams was 1 of 13 children whose father was a farmer and local minister. His schooling was academic and he married and became the head of a family while in his teens. However, he yearned for an education, so sent a younger brother. Homer, to Peabody College who, after graduating lived with him and taught him every lesson that he had learned. Thus Mr. Adams became known as a Peabody graduate by proxy. was then elected principal of Classical Palmer Institute at Oxford where he taught higher math and foreign languages to the children of the professors of Emory College at Oxford. From then on his record of achievement stands as follows: Superintend ent of Newton County schools; principal Fifth District Agricultural and Mechanical School, Monroe, Ga.; member Newton Board of Education; again superintendent Newton County schools; member Georgia State Left islature; and one term as commissioner agriculture.

Who Promoted Peress?-Light at Last

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. WALTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of January 9, 1955:

WHO PROMOTED PERESS?-LIGHT AT LAST

Who promoted Peress?

Who was responsible for advancing this fifth amendment captain to a fifth amendment major in the United States Army? Who decided to give this New York dentist an honorable discharge even after his record of Red affiliations was specifically brought to the Army's attention?

At long last, in a 10,000-word Army report, e have an answer which says something. Not everything. But something. And for the first time responsibility in the Peress case is fixed, as follows:

Responsibility for the promotion falls on Army routine, in which many of the 61

officers noted were involved.

Responsibility for giving Peress an hon-orable discharge rests on Counselor of the Army John G. Adams and Lt. Gen. Walter L. Weible.

Responsibility for the hush-hush secrecy falls upon Secretary of the Army Stevens, who says he now makes the names public because his previous action "was misinter-

preted in some places."

In evaluating this Army report on the Peress case, it may be useful to recall briefly, some of its history. Peress was commissioned as a captain on October 15, 1952. He went on active duty on January 7, 1953. Meantime, he had invoked the fitth amendment in refusing to answer loyalty questions in an Army questionnaire. This led to an Army probe which started February 5, 1953.

The following October Peress was pro-oted to major. That is now explained as moted to major. routine. Not explained is why the Army Probe of Peress did not interrupt the routine.

It was in January 1954 that Peress ap-beared before the McCarthy investigating committee and invoked the fifth amendment 33 times. He refused to say whether he had tried to recruit soldiers into the Comnunist Party, or whether Red meetings had been held at his home.

On February 1, in the light of the above, Senator McCarrhy notified the Army of the altuation and urged a court-martial. and Weible conferred, decided to give Peress

an honorable discharge anyway.

Why wasn't Peress court-martialed? Army Wyers doubted there was sufficient evidence. But there seems to have been no real effort to get any. Why wasn't Peress given a dishonorable discharge? It is argued that the procedure would have delayed his departure from the Army.

But certainly an honorable discharge from the United States Army ought to mean more than a piece of "Boxholder" mail to be handed out willy-nilly, far and wide. It is

supposed to be a badge of honor.

What happened after that was equally stupid. One effort after another was made to cover up. On February 23, 1954, Stevens anounced a new regulations which would prevent a repetition of the Peress case. But hot until October 30, 1954, did Stevens give CCARTHY a list of 30 officers involved in the case, and that was "confidential."

Now we find the list of 30 has grown to 61. Now we find the list of 50 has given official inquiry on Peress got the facts, but that no real at-

tention was paid to them.

Despite the 10,000 words, this is not the end of this case. It should be borne clearly in mind that the issue here has nothing to do with the Army-McCarthy hearings, which ignored the Peress matter. The issue here has nothing to do with the methods of the McCarry committee, his abuse of witnesses, or his condemnation by vote of the Senate.

The issue here is not only Peress but one of elementary good faith. Had the Army laid the facts on the line at the outset, had it been frank instead of evasive, all those long Senate hearings and the subsequent bitter controversy never would have occurred.

Among the several lessons of the case none is more important than its demonstration of the right of the American people to the truth about public affairs.

Unemployment in Pennsylvania Coal Fields

EXTENSION OF REMARKS OF

HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release:

Congressman DANIEL J. FLOOD, Democrat, of Pennsylvania, expressed concern, in a statement made today in Washington, with the failure of the President's state of the Union message to deal with the chronic unemployment problem in the coal fields in Pennsylvania. Congressman FLOOD, who represents Luzerne County in the anthracite coal fields in northeastern Pennsylvania, made the following statement:

"I was terribly disappointed that the President, in his state of the Union speech, failed to mention, in any way whatsoever, the desperate economic problems which are well known by the Government to exist as a chronic unemployment condition, in the anthracite and bituminous coal fields in Pennsylvania, and in particular am I concerned with this situation in the anthracite coal fields in northeastern Pennsylvania centered

in Luzerne County.
"In his message to the joint session of the Congress, I quote, '1954 was the most prosper-ous year in our country.' Yet in the 1954 year end, total nonfarm employment is about 1 million below the level of the previous year. The average unemployment in 1954 was nearly 2 million higher than in 1953.

"In Luzerne County we have over 25,000 unemployed men between the ages of 18 and 60, who are employable and eager and anxious for jobs. Seventy-five percent of these men veterans of our Armed Forces. hoped that the administration would recommend a public-works program, on a standby basis for the Nation at large, but for immediate application to any distressed area if and when the percenteage of unemployed to the employable population reaches a danger mark to be determined by the United States Department of Labor in conjunction with all other United States Government agencies and State agencies which would be concerned also with this specific problem. It is said that the world cannot be free as long as any of its people anywhere are slaves. I say that this Nation cannot be considered as prosperous as long as the Government ignores and refuses to help the Nation's basic fuel industry and fuel potential, which is coal; and at the same time being indisputably aware of all the facts, fails at this time to propose and use all its influence, the great prestige of the President himself, to pass legislation in the form of a public-works program to give immediate employment to all who seek employment in these distressed areas.

Without going into detail, I would like to make it clear that by public-works program I mean an intelligent, constructive and desirable plan of necessary and essential and worthwhile projects which will contribute to the permanent general welfare such as schools, hospitals, sanitariums, and so forth.

'I have given much thought to this matter and I am preparing now the necessary legislation which I will introduce in the House within the next 30 days."

Coexistence Calls for Strength

EXTENSION OF REMARKS OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. MADDEN. Mr. Speaker, last week the committee investigating Communist aggression filed its final report. If every Member of Congress would read the findings of the great work done by this special committee and if its recommendations are followed, Communist aggression would be greatly curtailed and the people behind the Iron Curtain would be given much-needed encouragement in their fight against Soviet slavery.

The following editorial by Mr. H. B. Snyder, of the Gary Post-Tribune adds some more helpful suggestions to this

problem:

COEXISTENCE CALLS FOR STRENGTH

There has been a lessening of Russian talk about peaceful coexistence. As has been the Reds' habit, when one propaganda campaign falls to score, they turn to another one.

The coexistence story had some takers for a while. But recently it has been losing them, and the West has put coexistence on a basis the Russ don't like so well. For the western nations are recognizing that there can be peaceful living alongside Russia only so long as the West is sufficiently strong to defend itself and its friends.

This week brought two interesting comments on the coexistence talk, from far different sources.

In a delayed Christmas address, Pope Pius XII in Rome warned that it can become real peace only when the West stands up for its beliefs and the East allows truth to cross inside the Iron Curtain.

In Washington a special House committee, which Gary's Representative RAY MADDEN has served, cautioned that accepting the Soviets' offer of peaceful coexistence will only give them time to destroy the world. And the committee urged increased funds to take the message of the free world to the peoples of Red-dominated lands.

Russia's aim, the committee said, was to gain time, delude the free world as to its real intentions and destroy the alliance of non-Communist nations. Red actions since rati-fication of the Paris agreements became probable have confirmed the committee's view.

Of course there can be coexistence, but it can be a safe coexistence for the West only when we maintain both the military and economic strength to hold back the Reds in both fields of action. If we weaken in either area, we give them the opportunity to move in. They have demonstrated they will seize either opportunity whenever it is presented, and in this hemisphere as well as the other.

As for the captive peoples, we owe them a sincere effort to tell them the facts about what the free world is accomplishing, to keep up their hopes and keep alive the spirit of resistance to tyranny. Our concern is not that of trouble making for the Russians, but of keeping faith with peoples who lost first in a fight for freedom against the Nazls and now have fallen victim to another totalitarian regime. If the unrest in the satellite lands is a worry to Moscow, the worry is of the Kremlin's own making.

We can give no hope to the satellite peoples and can gain no security for ourselves, how-ever, in any coexistence that is not based on the free world's ability to stand strong and

Is UNESCO Subversive?

EXTENSION OF REMARKS OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. SCOTT. Mr. Speaker, under unanimous consent, I insert an article by the distinguished writer, Mr. Roscoe Drummond, entitled "Is UNESCO Subversive?" Mr. Drummond's article follows:

WASHINGTON

(By Roscoe Drummond) IS UNESCO SUBVERSIVE?

Isolationist groups in the United States are continuing to try to whip up hostility to the United Nations. One of their principal targets is UNESCO (the United Nations Educational, Scientific, and Cultural Organiza-tion), and in their book it ought to be put on the Attorney General's list as subversive.

Is UNESCO subversive? Is it really engaged in some conspiracy to poison the minds of free peoples or undermine the govern-ments of the free nations? Is it wittingly or unwittingly a tool of the Iron Curtain countries?

For the answer to these questions it seems to me useful to turn to some one whom we should have reason to trust and who is close to its operations. Such a person is 1 of the 2 United States congressional advisers to the 8th Conference of UNESCO which has just concluded its meetings at Montevideo. Uruguay. He is Representative Hugh Scorr, Republican, of Pennsylvania, himself a former chairman of the Republican National Committee.

Mr. Scorr has just been spending a month at the UNESCO sessions, familiarizing him-self with its work and becoming well acquainted with its personnel. I have received extensive correspondence from Mr. Scorr while he was on the spot in Montevideo, and his answer to these questions is a considered and unequivocal no.

No: UNESCO is not subversive in any way; quite the opposite. It is engaged primarily in countries where education and science are relatively undeveloped, and where the experience and skills of other nations can be helpful. It has neither the wish nor the power to impose its activities upon any country, and is not presently carrying out any program at all in the United States.

UNESCO is an organization of 72 independent, sovereign states-except so far as the Soviet satellites are neither independent nor sovereign-connected with the U. N. as one of its specialized agencies. It sends technical advisers to member countries on request, but it does not give material aid except in small amounts for demonstration purposes.

Representative Scorr reports the following as among its most valuable activities:

UNESCO has helped 40 countries increase their educational opportunities for children and adults, train teachers and improve their educational system. It has been especially active in the education of adult illiterates so that, as he says, "They can take a more responsible part in community development."

It has given some financial aid and con-ducted fund-raising campaigns to help rebuild schools, colleges, and libraries in war-

ravaged lands.

UNESCO has helped train scientists in less developed countries, aided scientific research for improvement of economic conditions, and set up international research centers,

UNESCO assists in the exchange of knowledge in such fields as history, philosophy, and languages, and stimulates development of li-braries and museums. It has arranged exhibitions of famous paintings, and aided in the translation of great works of literature. More than 300 artists and writers took part in a UNESCO meeting in 1952 in the interest of the "freedom of artists."

UNESCO awards fellowships and study grants to educators, scholars, writers, youth leaders, trade unionists and other specialists. These fellowships are used particularly to help specialists in less-developed countries prepare themselves better to take the lead in programs of educational and scientific development.

Not very subversive.

Representative Scorr reports that at the Montevideo conference, the Soviet Union led its usual drive to force the admission of Red China, and that the UNESCO nations defeated the move by 41 to 6.

Not very subversive. Representative Scorr reports that at Montevideo, the UNESCO countries amended by a vote of 49 to 9 the UNESCO constitution to make sure that its executive board can take no initiative to go beyond the policy directives passed by the general conference.

Representative Scorr emphasizes that UNESCO not only has no intention but has no authority to impose its will on member states, that member states "are free to carry out its suggestions and programs as they see fit."

Sorry, but UNESCO just doesn't seem to be subversive.

Don't Bankrupt the American Crabbing Industry

EXTENSION OF REMARKS

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. MACK of Washington. Mr. Speaker, Japan, last year, supplied about 60 percent of all the canned crab that was sold in the United States. American producers supplied only about 40 percent.

Despite the fact that there is, under existing law, a 221/2 percent ad valorem-on value-tariff on imported canned crab and a 15 percent ad valorem duty on fresh and frozen crab, Japan dominates the American crab market. Japan is able to do this because wages in canned food industries are 8

cents an hour for women and not more than 191/2 cents for men. American wages in the crabbing industry are many times those paid workers in Japan. In fact, most workers in the American crabbing industry are paid more for an hour's labor than the corresponding Japanese worker is paid for an entire day's work.

Despite the fact that Japan already sells 60 percent of all the canned crab marketed in the United States, the Committee on Reciprocity Information has announced that it will consider at an international conference at Geneva in February granting reductions in the existing 221/2 percent tariff on canned crab and 15 percent on fresh and frozen crab. If these crab tariffs are reduced, I am convinced American crab producers will lose most of the 40 percent of the domestic sales they still enjoy. If this happens the American crabbing industry will face ruination and bankruptey.

American canners have invested millions of dollars in building fine, modern, and sanitary canneries that are a model of cleanliness for the packing of crab. Fishermen have invested other millions in fishing boats and gear. A lowering at Geneva of the existing tariffs on crab will wipe out most of these investments. The fishermen and the cannery workers are not the only ones, however, who will suffer if the American crabbing industry is wrecked, as it surely will be, if existing crab tariffs are lowered.

Boatbuilders, the manufacturers of crabbing gear and those who supply goods and services to fishermen and cannery workers also will suffer.

Even under existing tariffs, Japanese producers are giving the American crabbing industry a tough time. In 1950, crab imports from Japan were 1,761,000 pounds and by 1953 had increased to 3,860,880 pounds. Crab imports from Japan more than doubled in those 3 years

During the same years, the American canned crab pack declined from 137,490 cases to 114,886 cases, a decrease of more than 20 percent.

In short, during the years 1950 to 1953, the latest years for which complete statistics are available, Japan increased her shipments of crab into the United States by more than 100 percent and our domestic American pack of crabmeat declined 20 percent.

There is a strong feeling among most Americans that our country should do nothing that in any way will aid or strengthen Russia whose leaders, nowadays, are doing everything they can to embarass and harass the United States. If we, at Geneva, lower tariffs in an effort to aid Japan, we are apt also to be helping Russia.

If additional markets for Japanese crab are opened in the United States by lower tariffs on crab imports, Japan, then naturally, will seek to expand her crab take and crab production. Under the Yalta Treaty the Allies gave to Russia great areas of the crabbing waters which Japan, previously, had owned, controlled, and fished.

Japan to fill orders for the expanded American market, which will be created

for Japanese crab if tariffs on crabmeat are lowered, undoubtedly, will buy crab from the Russians and pack it under a canned-in-Japan label and then ship this Russian crab into the United States. Or, if not that, Japan could obtain from Russia at a price fishing rights for Japanese fishermen to fish the waters that once belonged to Japan but which we, at Yalta, gave to Russia. Thus, opening our American market to increased imports of crab by lowering existing tariffs could prove to be of great financial benefit to the Russians.

The American crabbing industry is not the only American industry which will suffer from the increased influx of foreign crab meat which the lowering of crab tariffs will encourage. All American shell fish industries-oyster, lobster, and shrimp industries-also will be hurt.

If Japanese shipments of crab into the United States increase due to lowered tariffs-and these shipments will increase if tariffs are lowered-the imported crab produced by low-wage, lowliving standard Japanese labor, will be sold at prices below that of shrimp, oysters, lobsters, and other shellfish. As a result of low priced Japanese crab flooding our market, the price on crab cocktails will drop below those made of other shellfish. Oysters, shrimp, and lobster will have to meet these lower Japanese crab meat prices which American oyster, lobster, and shrimp producers cannot do because they, like those in the American crabbing industry, cannot compete with Japanese cannery labor which is paid as little as 8 cents an hour.

We also have a great and growing oyster industry on the Pacific coast which if the import duty on oysters is lowered at Geneva will suffer in the same ways the American crabbing industry will suffer.

In one community on Willapa Harbor. named Nahcotta, there are 5 oyster canneries, each of which employs 50 to 70 people. Other canneries operate on Willapa Harbor. This oyster industry is rated as a \$10 million one. It can be greatly weakened, even wiped out, by further growth in the oyster imports from Japan.

Most of those who are engaged in the oyster and crabbing industries of the Pacific coast have their life savings invested in canneries, boats, and gear. Their continued activity is of utmost importance to all the people in the fishing communities where these businesses operate. Lowering of tariffs on Japanese crab and oysters very well might make ghost towns out of these fishing communities.

Rules of Procedure

EXTENSION OF REMARKS

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. SCOTT. Mr. Speaker, when the rules of the 84th Congress were before

the House for adoption I proposed an amendment in the form of House Resolution 61, a resolution which was approved by the Subcommittee on Legislative Procedure of the Committee on Rules of the 83d Congress. This sub-committee was composed of the gentleman from Colorado [Mr. CHENOWETH], the gentleman from Virginia [Mr. SMITH], and myself as chairman.

Since this amendment was not adopted at the beginning of the session I plan to request the Committee on Rules to hold a hearing on this proposal.

House Resolution 61 provides as fol-

House Resolution 61

Resolved, That paragraph 25 (a) of rule XI of the Rules of the House of Representatives is amended by striking out "standing" and by adding at the end thereof the fol-lowing: "The rules of committees are hereby made the rules of subcommittees so far as applicable. Committees and subcommittees may adopt additional rules not inconsistent with the Rules of the House."

SEC. 2. Paragraph 25 (e) of such rule is amended by inserting ", finding," after "measure."

SEC. 3. Paragraph 25 (g) of such rule is amended by striking out "standing committees or their subcommittees" and inserting in lieu thereof "committees."

SEC. 4. Paragraph 25 of such rule is amended by adding at the end thereof the following new subsection:

"(h) Unless otherwise provided, committee action shall be by vote of a majority of a quorum.

SEC. 5. (a) Paragraph 26 of rule XI of the Rules of the House of Representatives is amended by inserting "(a)" after "26." and by adding at the end thereof the following new subsections:

"(b) No person shall be employed for or assigned to investigative activities until approved by the committee.

"(c) Unless otherwise provided, subpenas to require the attendance of witnesses, the giving of testimony, and the production of books, papers, or other evidence shall be issued only by authority of the committee, shall be signed by the chairman or any member designated by the chairman, and may be served by any person designated by the committee, the chairman, or the signing member.

(d) No witness shall be compelled to give oral testimony for broadcast, or for direct reproduction by motion picture photography, recording, or otherwise in news and entertainment media if he objects.

"(e) Oaths may be administered and hear-Ings may be conducted and presided over by the chairman or any member designated by the chairman. Unless the committee otherwise provides, one member shall constitute a quorum for the receipt of evidence and the taking of testimony; but no witness shall be compelled to give oral testimony before less than two members if, prior to testifying,

"(f) Witnesses shall be permitted to be advised by counsel of their legal rights while giving testimony, and unless the presiding member otherwise directs, to be accompanied by counsel at the stand.

"(g) Witnesses, counsel, and other persons present at committee hearings shall maintain proper order and decorum; counsel shall observe the standards of ethics and deportment generally required of attorneys at law. The chairman may punish breaches of this provision by censure or by exclusion from the committee's hearings, and the committee may punish by citation to the House as for contempt.

"(h) Whenever the committee determines that evidence relating to a question under inquiry may tend to defame, degrade, or incriminate persons called as witnesses therein, the committee shall observe the following additional procedures, so far as may be practicable and necessary for the protection of such persons:

"(1) The subject of each hearing shall be clearly stated at the outset thereof, and evidence sought to be elicited shall be perti-

nent to the subject as so stated.

"(2) Preliminary ctaff inquiries may be directed by the chairman, but no major phase of the investigation shall be developed by calling witnesses until approved by the committee.

"(3) All testimony, whether compelled or volunteered, shall be given under oath.

"(4) Counsel for witnesses may be mitted, in the discretion of the presiding member and as justice may require, to be heard briefly on points of right and procedure, to examine their clients briefly for purposes of amplification and clarification, and to address pertinent questions by written interrogatory to other witnesses whose testimony pertains to their clients.

"(5) Testimony shall be heard in executive

session, the witness willing, when necessary to shield the witness or other persons about

whom he may testify.

"(6) The secrecy of executive sessions and of all matters and material not expressly released by the committee shall be rigorously

"(7) Witnesses shall be permitted brief explanations of affirmative or negative responses, and may submit concise, pertinent statements, orally or in writing, for inclusion in the record at the opening or close of their testimony.

"(8) An accurate verbatim transcript shall be made of all testimony, and no alterations of meaning shall be permitted therein.

"(9) Each witness may obtain transcript copies of his testimony given publicly by paying the cost thereof; copies of his testimony given in executive session shall be furnished the witness at cost if the testimony has been released or publicly disclosed, or if the chairman so orders.

"(10) No testimony given in executive session shall be publicly disclosed in part only.

"(i) Whenever the committee determines that any testimony, statement, release, or other evidence or utterance relating to a question under inquiry may tend to defame, degrade, or incriminate persons who are not witnesses, the committee shall observe the following additional procedures, so far as may be practicable and necessary for the protection of such persons:

'(1) Persons so affected shall be afforded an opportunity to appear as witnesses, promptly and at the same place, if possible, and under subpena if they so elect. Testi-mony relating to the adverse evidence or utterance shall be subject to applicable pro-

visions of part (h) of this rule.

"(2) Each such person may, in lieu of appearing as a witness, submit a concise, pertinent, sworn statement which shall be incorporated in the record of the hearing to which the adverse evidence or utterance

"(j) The chairman or a member shall when practicable consult with appropriate Federal law-enforcement agencies with respect to any phase of an investigation which may result in evidence exposing the commission of Federal crimes, and the results of such consultation shall be reported to the committee before witnesses are called to testify therein.

"(1) Requests to subpena additional witnesses shall be received and considered by the chairman in any investigation in which witnesses have been subpensed. Any such request received from a witness or other person entitled to the protections afforded by part (h) or (i) of this rule shall be considered and disposed of by the committee.

"(m) Each committee conducting investigations shall make available to interested persons copies of the rules applicable there-

SEC. 6. Rule XXII of the Rules of the House of Representatives is amended by adding at the end thereof the following new paragraph:

7. All bills and resolutions to authorize the investigation of particular subject matter shall define such subject matter clearly, and shall state the need for such investigation and the general objects thereof."

Mr. Speaker, I have also included copies of various reports of our Subcommittee on Legislative Procedure containing these and other recommendations which will be found elsewhere in this issue of the Congressional Record.

Rules of Procedure

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. SCOTT. Mr. Speaker, under leave granted I would like to have the following report of the Subcommittee on Legislative Procedure of the Committee on Rules of the 83d Congress inserted in the Concressional Record.

House Resolution 571 has been reintroduced as House Resolution 61 of the

84th Congress.

SUBCOMMITTEE ON LEGISLATIVE PROCEDURE (Statement by Mr. Scorr to the Committee on Rules, May 1954)

Your subcommittee was appointed June 10, 1953, to make a study of legislative procedure with particular reference to procedure governing the conduct of investigations by congressional committees. This summary of findings and recommendations which I am submitting today is in the nature of an interim report. In the past 11 months we have held extensive hearings, have studied various pending proposals and suggestions made to us, and have developed a proposed set of rules which is submitted, in its latest version, herewith.

A formal analysis and report, intended to accompany the proposed rules, is in preparation. This latest revised draft is submitted meanwhile, for consideration by the full committee, in order to expedite its being re ported out in final form at an early date. copy of House Resolution 571 is attached.

I am deeply appreciative of the contributions of both my colleagues, Mr. SMITH and Mr. CHENOWETH, have made throughout this undertaking. We have differed among our-selves from time to time, so our conclusions in which we all now concur-have resulted from deliberation, discussion, and a good measure of amiable give-and-take. The end product of our efforts is doubtless much improved on this account.

THE NEED FOR RULES OF PROCEDURE

Public interest in problems relating to congressional investigations has been growing steadily. In recent years, the entire Nation has been made conscious of the sweeping powers vested in Congress for the purpose of conducting factfinding inquiries. It is unfortunate that the public knows so little of the scores and hundreds of routine investigations which are quietly and efficiently conducted each year by committees of Congress, and that only the most sen-sationaly and controversial fall under the spotlight.

But because of this distorted observation, and because a few regrettable episodes have been so widely publicized, a large segment of the public has come to believe that congressional investigations are not infrequently unfair, or even outright abusive of the rights of persons affected.

At the same time, and this impressed your subcommittee very much, both Members of Congress and responsible members of the public at large seem urgently aware that the coin has another side, that persons called as witnesses before these congressional bodies have sometimes contrived, in their turn, to affront the investigators, to defy their powers, and generally to frustrate the investi-gative purpose without being in any way

penalized or punished therefor.

So the apparent need for rules of pro-cedure is twofold, to satisfy everyone concerned that proceedings before investigating committees will be held to reasonable stand ards of fair play, on the one hand, and to assure potentially defiant witnesses that congressional committees have adequate powers to get tough if they need to, on the other. As will be emphasized hereafter, the danger of weakening the necessary powers of committees has been kept in view throughout this work; your subcommittee adopted as a starting premise the proposition that no rules of procedure would be proposed which could operate in any way to impair the legitimate investigative activities of congressional committees.

Thus while a need for rules of procedure exists, and while the promulgation of such rules is strongly recommended, yet we note that even the word rules is almost too restrictive in its connotations. What is called for seems more accurately describable as principles, i. e., precepts of fair play, set forth for the guidance of committees and

the reassurance of witnesses.

Your subcommittee heard more than a score of witnesses, including 10 Members of Congress and representatives of bar associations, labor groups, church groups and vet-erans' organizations. The testimons organizations. The testimony was overwhelmingly in favor of an exercise of Congress' rule-making powers in this field, though we were repeatedly warned of the danger already noted, i. e., the danger of unduly restricting Congress in the process.

One witness, the Honorable George Meader, urged upon us the proposition that under the doctrine of Christoffel v. U. S. (338 U. S. 84 (1949)), any rules whatsoever, promulgated to govern the conduct of investigations by congressional committees, would subject committee action pro tanto to review by the courts. Representative MEADER therefore opposed all rule-making efforts. We have given this point careful study, and have concluded that the doctrine of the Christoffel case (wherein the Supreme Court relied upon a rule of the Senate for guidance in interpreting and applying a Federal per-jury statute) would be inapplicable to rules of the type it is recommending.

In sum, it is concluded that rules of procedure for committee investigations are both necessary and proper-with the reservation that such rules should be conservatively cast to serve as standards of guidance without imposing burdensome procedural restric-tions. Committees are not courts, It is mistake to equate committee hearings with the highly technical and formalized procedures that have been developed in the judicial domain. Your subcommittee has carefully rejected proposals and suggestions which appeared to be cast in the rigid form of judicial rules.

Furthermore, we have taken a relatively conservative position in other respects as The original version of House Resolution 447, prepared to consolidate all the seemingly meritorious ideas and suggestions which had been submitted in the hearings and in earlier bills and resolutions, contained

a number of features which have subsequently been deleted. The version submitted herewith by your subcommittee is the product of repeated revisions, so that it represents a fair minimum, and in no sense a radical maximum.

At the end of this presentation we shall summarize briefly, for your information, the more important additional suggestions which have been considered and rejected in our deliberations.

Finally, in concluding this presentation, we shall note briefly three pending bills which would strengthen the hands of investigating committees, and which are deemed appropriate for consideration and endorsement by your subcommittee since they also concern procedures, and tend to complement the rules proposed herein.

EXISTING RULES

The power of each House of Congress to determine its own rules of procedure is directly conferred by the Constitution (art. I, sec. 5, cl. 2). It seems clear that this is the appropriate power to be called into play for the instant purpose. Determining procedures to be followed by its committees is within the province of each House of Congress, and should not be attempted by joint action of the two Houses; for even if formity between the two were insisted upon and achieved at the outset, each would re-main free to depart from the uniform pattern at any time. Rules currently in force in the Senate differ materially from those now observed by the House of Representatives.

Indeed, it is precisely this absolute, unqualified, and continuous control by each House over its own rules that provides ultimate assurance against the dangers of unduly hampering House proceedings, if the new provisions are adopted as House rules. No rule thus adopted will be enforcible, as a practical matter, if the House does not wish to enforce it; and no rule will remain binding, as a precedent or otherwise, if the House wishes to drop it. This is the status of existing rules. It is the status properly to be accorded the new provisions recommended by your subcommittee. Even the rights directly conferred on witnesses (and there are only three—see paragraph 26 (d), (e), and (f) of the draft) would merely operate to excuse witnesses who relied on them from compulsion, i. e., from punishment for con-tempt. They do not create any basis for outside intervention.

The present rules of the House of Representatives number 42; of these, only 3 relate to committees. Rule X governs the creation and composition of the House's 19 standing committees; rule XI determines the powers and duties of committees; and rule XIII concerns procedures for the calendaring and consideration of the reports of standing committees.

Matter pertaining to the investigative function thus logically belongs in rule XI.
This rule contains in turn 29 numbered paragraphs, of which only 2. paragraphs 25 and 26, presently relate to the general factfinding powers and functions of committees.

The amendments which your subcommittee proposes are therefore designed to be incorporated within paragraphs 25 and 26 of rule XI. The existing text of these two paragraphs is unaffected, except for slight editorial changes. Thus the structure of the rules is undisturbed and the entire proposal (except the slight addition to rule XXII, on the subject of resolutions) consists only of enlarging 2 subdivisions of 1 rule.

ANALYSIS OF PROPOSED RULE

The changes proposed to be made in the present text of paragraph 25 (i. e., by the draft attached), are indicated in the following full reproduction thereof; their purpose needs no elaborate explanation. They merely broaden the paragraph so as to make it applicable to special and select committees and to all subcommittees, as well as to standing committees:

"25. (a) The rules of the House are hereby made the rules of its committees so far as applicable, except that a motion to recess from day to day is hereby made a motion of high privilege in said committees. The rules of committees are hereby made the rules of subcommittees so far as applicable. Committees and subcommittees may adopt additional rules not inconsistent with the rules of the House.

"(b) Each committee shall keep a complete record of all committee action. Such records shall include a record of the votes on any question on which a record vote is demanded.

"(c) All committee hearings, records, data, charts, and files shall be kept separate and distinct from the congressional office records of the Member serving as chairman of the committee; and such records shall be the property of the House and all Members of the House shall have access to such records. Each committee is authorized to have printed and bound testimony and other data presented at hearings held by the committee.

"(d) It shall be the duty of the chairman of each committee to report or cause to be reported promptly to the House any measure approved by this committee and to take or cause to be taken necessary steps to bring the matter to a vote.

"(e) No measure, finding or recommendation shall be reported to the House from any committee unless a majority of the committee were actually present.

"(f) Each committee shall, so far as practicable, require all witnesses appearing before it to file in advance written statements of their proposed testimony, and to limit their oral presentation to brief summaries of their argument. The staff of each committee shall prepare digests of such statements for the use of committee members.

"(g) All hearings conducted by committees shall be open to the public, except executive sessions for marking up bills or for voting or where the committee orders an executive session."

The new subsection (h), added at the end of paragraph 25 (by sec. 4 of the draft) establishes the general principle, "unless otherwise provided," that all committee actions shall be taken by vote of a majority of a quorum of the committee. This is a very generalized provision intended to suggest that committee authority must not be usurped by the chairman or by any individual member, unless the same has been specifically delegated.

The present language of paragraph 26 of rule XI, incorporated into the rules from the Legislative Reorganization Act of 1946, is unchanged by the draft, and reads in its entirety as follows:

"26. To assist the House in appraising the administration of the laws and in developing such amendments or related legislation as it may deem necessary, each standing committee of the House shall exercise continuous watchfulness of the execution by the administrative agencies concerned of any laws, the subject matter of which is within the jurisdiction of such committee; and, for that purpose, shall study all pertinent reports and data submitted to the House by the agencies in the executive branch of the Government."

The meat of the proposals contained in the draft are incorporated in the new subsections to be inserted immediately after the present text of paragraph 26. These begin at page 2, line 9 of the draft, and will be briefly explained in the order in which they appear.

26 (b). This recognizes a new problem which has proved acute in some instances, namely, the authority of any single member to select people to go forth as investigators and to deal with the public in the name of

the committee. It is believed that the committee itself should have the final say in this matter, at least in the rare instances when controls become important. Note that regular professional staff members hired by standing committees are already subject to a similar requirement (rule XI-27 (a)).

26 (c). This subsection on the issuance and service of subpens is paraphrased from the special provisions in rule XI which control the subpena powers conferred specially on three standing committees (rule XI-2 (b), 8 (d), and 17 (b). Such subpens are to be issued "only by authority of the committee" unless the committee makes other provisions and, in effect, delegates its authority to the chairman or a single member. The terms as to signature and service are intended to be as broad as possible to defeat any purely technical attack on the validity of a committee subpens.

26 (d). This is the first of the three absolute rights conferred personally upon witnesses appearing before committees. It is the right to be spared compulsory appearances in news and entertainment broadcasts via television or radio, if the witness interposes an objection. It is noteworthy that some of the views expressed to the subcommittee on this point supported a far stronger rule, namely, an unqualified prohibition against such coverage of committee hearings. Your subcommittee believes that the instant middle-of-the-road provision affords adequate protection.

26 (e). The first sentence of this subsection affirms the statutory power of any member to administer oaths, and resolves all questions as to who may preside over committee hearings. The second sentence deals with the thorny problem of whether one member may sit alone to hear witnesses and receive evidence. It is very desirable to establish the validity and regularity of the one-man quorum in ordinary circumstances, because of the holding in the Christoffel case alluded to above. But at the same time socalled one man subcommittees have been severely criticized from time to time. The proposal therefore contains two safeguards: It is specified that the committee may "otherwise provide," i. e., may pass a rule of its own imposing a more rigid quorum requirement; and—the second absolute right conferred on witnesses-no one may be compelled to testify before a single member if he makes timely objection. In the latter event, at least two members must be present to hear the testimony. Consideration was given to requiring the presence of more than two members and/or members representing more than one political party, but it was concluded that two would suffice to prevent the abuses sometimes charged to one alone, while the requirement as to partisan repre-sentation might make it possible for a minority to block a committee's work entirely by merely absenting itself.

26 (f). This is the third absolute right of witnesses, to be "advised by counsel of their legal rights." Counsel may also accompany the witness at the stand "unless the presiding member otherwise directs." The last-noted limitation is to make it perfectly clear that counsel may be ordered to stand aside if he indulges in the commonplace practice of coaching the witness so that the latter is in effect merely parroting the testimony of his adviser.

26 (g). This subsection merely prescribes general standards of behavior for counsel and other persons attending the hearings. The chairman's right to punish by censure or exclusion and the committee's right to cite offenders to the House are specifically noted.

26 (h). Into this subsection have been gathered all the seemingly meritorious protections which have been urged from time to time for the special benefit of witnesses involved in investigations aimed at their own

reputations or possible guilt. Emphasis on the fact that the rules are really mere precepts and principles of fair play are obviously most apposite here.

It will be noted that the introductory language of subsection (h) leaves complete and absolute discretion in the committee as to the application of all which follows. The entire subsection applies only "whenever the committee determines" that some particular evidence to be adduced may tend to injure some particular person or persons to be called as witnesses—and even after such a finding the committee is bound only to follow the specified procedures "so far as may be practicable and necessary for the protection of such persons." Thus, it will be seen that the sudivisions of subsection (h), numbered (1) through (10), truly have the force of suggestions of fair play, and nothing more.

gestions of fair play, and nothing more.
Subdivisions (1) through (3) of 26 (h) are
self-explanatory. Subdivision (4) pertains
to the rights of counsel (i. e., under these
circumstances, where the witness is somewhat in the position of a defendant), and
it will be noted that here, out of an excess
of caution, still further qualifications have
been added: "in the discretion of the presiding member" and "as justice may require."
The rights, so diluted and qualified, are: to
be heard briefly by the committee in argument, to examine their own clients briefly
for clarification, and to question other witnesses by means of written interrogatories
submitted through the committee.

Subsection 5 provides that to the extent necessary to shield the witness and other persons about whom he may testify, testimony should be taken in an executive session, if the witness is willing. The last clause is in recognition of an opposite consideration, namely, the possibility of affording protection to witnesses against potential abuses of the secret session, which your subcommittee considered and abandoned. Subdivisions (6) through (10) appear to be self-

explanatory.
26 (i). This subsection is designed to protect persons who, while not called as witnesses, may nevertheless be injured by evidence adduced before a committee. Note that the same elaborate modifications, reducing the entire subsection to a mere affirmation of principle, are incorporated in the introductory language. The two sub-divisions that follow merely give persons so affected a double option: to appear as witnesses in their own behalf (and to enjoy the benefits and protections conferred by 26 (h) if they do so), or to submit a sworn statement in lieu of such appearance. words "under subpena" have been added merely to assure payment of mileage fees, etc., which are available only to witnesses appearing under compulsion, in case extensive travel is necessary to enjoy the benefits of the provision.

26 (j). This is another provision which is rendered advisory only by insertion of the words "when practicable," and which is narrow in its application but potentially important when it does come into play. Whenever investigating committees approach fields where Federal law-enforcement agencles are active, there is danger that the former may defeat efforts of the latter. An unimportant Communist hanger-on, example, called as a witness by an investigating committee, might easily defeat longlaid plans to apprehend and prosecute his important bosses; and the same is true of other Federal law enforcement, including the enforcement of regulatory statutes and the punishment of tax evasion. This subsection therefore suggests that a representative of the committee should confer with Pederal law-enforcenment agencies involved, and should report the results of such conference back to his colleagues before the committee plunges into the field.

26 (k). This provision concerns a problem which occasionally presents itself where a witness, or a nonwitness involved in a particular hearing, believes he has a meritorious case for demanding that the committee should call additional witnesses on his behalf. It is simply specified that such requests shall be considered by the committee itself if they emanate from a person who has been found to be threatened with injury under subsections (h) or (i).

26 (1). This requirement is self-explanatory. It is contemplated that if rules such as those proposed here are adopted, a single standard print could be made available for use and distribution by all committees having need of them.

Finally, the new paragraph proposed to be added at the end of rule XXII—which pertains not to procedure but to the form and content of petitions, memorials, bills, and resolutions submitted to the House—is offered as a suggested improvement in the investigative process at another point, namely, in relation to the subjects upon which investigations are authorized in the first place. Resolutions calling for special investigations are presently sometimes worded so generally that it is not clear what is sought to be studied, and the suggested language would enjoin the sponsors of such measures to take pains to reveal and justify the objects which they are pursuing.

ADDITIONAL PROPOSALS REJECTED

As has been emphasized already, the draft resolution analyzed in the foregoing discussion is conservative in scope and operation. Several of the proposals now pending in the House go further. Your subcommittee studied all of these with care, and considered, besides, numerous suggestions offered in the course of the testimony it heard.

The features which are noted hereafter were rejected during the deliberations of your subcommittee, and are not contained in the final version of our draft resolution. Nonetheless, several of the most interesting are discussed briefly, since it is believed they will likely be the subjects of further discussion when the final version of the draft is reported.

Generalizing the investigative power: Under present rules of the House of Representatives, as established by the Legislative Reorganization Act of 1946, only three standing committees enjoy subpena powers-Appropriations, Government Operations, and Un-American Activities. Other standing or select committees desiring to send for persons or papers must seek and obtain special authorization from the House for this purpose. It is noted that such powers are vested in all committees of the Senate by a single blanket provision. While a similar provision would make for greater uniformity of authority and practice among House committees, it would, at the same time, remove a potentially important check, i. e., the necessity of affirmative action by the House before any but the three named committees is entitled to make use of these investigative prerogatives.

The witness' absolute right to be heard in public: There is some basis for urging that witnesses should be entitled. If they insist, to be interrogated in public rather than before a secret session. It was suggested to your subcommittee that secret hearings could be used as star chamber proceedings to place the witness at a very unfair disadvantage. Nevertheless, the opposite consideration seemed more weighty: Certain witnesses, especially uncooperative individuals summoned from the executive branch, could seriously embarrass certain inquiries by demanding publicity. The executive session is more frequently a device for protecting witnesses than a threat, and it is to be hoped that other safeguards, such as the requirement of an accurate transcript in the case of witnesses whose reputations are in jeopardy, etc., will prove adequate. Note that the phrase "the

witness willing" has been retained in subsection (h) (5) (draft, p. 4, line 13), as a suggestion that the witness' desire to be heard publicly ought always to be taken into account.

Appeal, review, or enforcement machinery: It has been suggested that reference should be made to the manner in which rules governing the conduct of investigations might be enforced. Proposals embracing elaborate enforcement provisions were considered. It is recognized that enforcement problems in connection with rules of procedure differ slightly from problems relating to general rules of the House in that personal, adversary interests of outsiders are not at stake in usual applications of the latter.

Nevertheless, we believe elaborate machinery and detailed procedures should not under any circumstances be considered for this purpose, for essential flexibility would be sacrificed thereby. At most, an informal submission of problems arising under such rules might be made at the outset to some body less than the full House, e. g., to the Rules Committee or a similar House group. This matter seems best left open for further consideration after experience has been accumulated with actual problems of enforcement, etc.

The right of cross-examination: Opinions are widely divided on whether counsel for a witness should ever be permitted to cross-examine his client or other witnesses directly. After carefully considering the alternatives, your subcommittee decided to recommend the use of written interrogatories only. In appropriate circumstances, the committee could still permit limited cross-examination if it wishes to do so; thus the omission merely serves to discourage potential abuses by contentious advocates.

RELATED PROPOSALS IN PENDING LEGISLATION

In conclusion, we wish to note briefly three bills now pending before the House, which deserve consideration in connection with these proposed rules of procedure: H. R. 4975 and H. R. 6899, introduced by Mr. Keating, and H. R. 7955, introduced by myself.

H. R. 4975 would greatly improve the machinery now available to congressional committees to deal with persons who refuse to testify or otherwise to comply with committee subpenas and orders. At present, the only recourse for a committee when so defied is to submit a resolution citing the defiant person for contempt before the full House, after which, if the resolution is passed, the matter must be referred to a United States attorney for prosecution as a criminal offense under title 2, United States Code, section 192.

The result is delay, often amounting to months or even years, before the issue comes to trial. And in consequence, contempt convictions under this statute are very rare; defying the authority of congressional com-mittees has become relatively safe; excepting the cases of Communists, Federal courts have bent over backward to exonerate persons hailed before them under this statute. Under Mr. KEATING's proposal, the committee would be given another alternative. It could address itself forthwith to a Federal district court, and make application for an order of the court compelling obedience to its own subpens, etc. If the relief sought by the committee were improper for some reason, the defiant witness would be entitled to a hearing and to immediate exoneration; the committee's position proved sound, immediate compliance would be compelled, by the sanctions of the court's own plenary contempt powers. It is noteworthy that the proposal has ample precedents. Federal agencies such as the FTC, the SEC, the ICC, Federal etc., have long enjoyed precisely this power in aid of their fact-finding prerogatives, and have found it to work admirably for all parties concerned.

Mr. Keating's second bill. H. R. 6899, is an immunity measure, aimed at reviving the powers once enjoyed by Congress under title 18, United States Code, section 3486, but which have been virtually dead for many years. With such powers, congressional committees could once again overcome pleas of privilege under the fifth amendment by granting immunity for any incriminating effects of testimony sought to be compelled. Such legislation in slightly different form has already been favorably acted upon by the Senate, (S. 16, 83d Cong.). H. R. 6899 has the unqualified endorsement of Attorney General Brownell, and has also been formally approved by the American Bar As-The passage of such immunity sociation. The passage of such immunity legislation would tend to reduce or eliminate a number of difficulties now encountered in congressional investigations dealing with controversial matters.

My bill, H. R. 7955, makes a simple change in the existing congressional contempt statute, title 2, United States Code, section 192, by adding the offense of misbehavior. At present, a witness whose affront consists not in defying the authority of a committee but in offensive conduct in its presence, etc., is not punishable under the statute. Committees have occasionally been obliged to put up with very serious abuses on account of this deficiency. H. R. 7955 corrects the situation, so that such offenders can be properly dealt with in the courts.

Rules of Procedure

EXTENSION OF REMARKS

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. SCOTT. Mr. Speaker, under leave granted, I insert the following statements concerning House Resolution 571, 83d Congress. This resolution has been reintroduced as House Resolution 61, 84th Congress.

RULES OF PROCEDURE, HOUSE RESOLUTION 571

Representative Hugh Scott, Republican of Pennsylvania, today introduced a revised version of the proposed rules of procedure for committees in the House of Representatives being developed by a subcommittee (Scott, chairman; Chenoweth, Republican, of Colorado; Smith, Democrat, of Virginia) of the House Rules Committee. The new resolution is House Resolution 571. Scott emphasized that this final version has yet to be considered by the full Rules Committee of the House. He added that he had been assured of such consideration by the full committee (of which he is a member) in the near future.

Said Scorr, "This is the product of more than a year's work; we have been through four revisions, and I feel that we are very close to a final version which should be acceptable to everyone."

The Scott subcommittee was created in 1953 to make a study of House Resolution 29 (introduced by Representative Keating, Republican, of New York) and other proposals then pending on the subject of rules of procedure. After holding extensive hearings, the subcommittee introduced a set of rules incorporating its own views, together with ideas and suggestions it had received. This was House Resolution 447, introduced on February 17, 1954. Subsequently, House Resolution 447 was widely circulated for criticism, and modified in successive revisions. House Resolution 571 is the result.

Senate Resolution 253, introduced on May 24, 1954, by Senator Bush, Republican, of Connecticut, for revision of the Rules of the Senate, closely follows the Scott subcommittee's proposals for House Rules revision. The similarity between the two resolutions may serve to expedite action during the present session of Congress. Both Scorr and Bush are urging their respective Houses to take action on these proposals at once.

"I think the administration tends to share our viewpoint; the American people want something to be done to insure fair play before congressional committees. rent interest is at an all-time high because of the televised hearings which have attracted so much attention to the whole investigative process. There is a widespread feeling that the pursuit of desirable ends requires clear statement of the ground rules governing the means (i. e. the methods) em-

"In both Houses, rules proposals have become so popular that there is no serious question of partisan disagreement. Our subcommittee's work has proved more timely and fruitful than we dared hope. My only regret is that we did not have the benefit so much support and emulation earlier, when the calendar was less crowded with

priority items.

"The only substantial difference between House Resolution 571 (and Senate Resolution 253) and those currently sponsored by our Democratic colleagues is in the matter of enforcement of the rules we propose. Our subcommittee considered suggestions as to special enforcement procedures and rejected them-at least for the present-on the ground that the mere adoption of a real set of ground rules will probably suffice. When everyone knows the fules, no one will be likely to flout them. The whole trouble now is that there is no accurate standard to measure by. The American people have a very strong sense of fair play. If we give them something definite to judge by, they will insist on reasonable compliance. And of course Congress already has ample enforcement machinery if it wants to compel obedience to its rules by its own Members."

Scorr explained that his resolution is proposed for adoption by the House of Representatives only, since the existing rules of the House and the Senate differ in some particulars and since neither House could be expected to surrender exclusive power over its own proceedings. The resolution is thus in the form of an amendment to the existing rules of the House (a feature accepted in the

Bush resolution in the Senate).

In brief summary, the resolution provides: 1. All committees and subcommittees of the House are to be subject to uniform rules of procedure.

All committee action must be approved by a vote of a majority of a quorum of the committee (or subcommittee).

3. Committee personnel to be assigned to investigative activities must be approved by the committee.

4. The committee shall have control over the issuance of subpenas, unless it expressly delegates this power.
5. Witnesses shall have the absolute right

to bar television and radio broadcasting of their testimony if they object to it.

6. One-man quorums are allowed only if the witness is willing to give his testimony before a single member; otherwise, on de-mand of the witness, at least two members must be present. This is designed to meet criticism of the so-called one-man subcommittees, without, at the same time, unduly hampering committees in the conducting of routine hearings.

7. Witnesses are given an absolute right to

legal counsel.

8. All participants in a hearing must observe proper order and decorum, subject to censure and punishment.

9. Whenever a witness is likely to be injured in his reputation or defamed or incriminated, by the nature of the inquiry, the committee will be expected to follow certain additional procedures:

(a) The subject of each hearing must be clearly stated and all evidence adduced must be relevant to the subject.

(b) No new line of investigation can be developed until the committee approves it.

(c) Everyone appearing in such proceed-

ings must testify under oath.

(d) Counsel for witnesses may address the committee briefly and may ask questions of his own client to clear up points on the record. Questions to other witnesses, when pertinent, may be submitted in writing.

(e) Executive sessions must be used to

protect the witness when necessary.

(f) The secrecy of executive sessions must be protected.

- (g) Witnesses will be permitted to submit brief-written statements for inclusion in the record.
- (h) An accurate transcript must be kept. Transcript copies must be made avail-(i) able to the witness.

(j) No testimony heard in executive session shall be released in part only.

10. Anyone, not being called as a witness, who is named in a derogatory or irresponsi-ble fashion in a hearing shall be entitled to appear promptly as a witness and testify in his own behalf, in refutation of charges or alleged "smears," or to submit a written statement for incorporation in the record. This provision is designed to protect innocent persons from unwarranted assaults upon their reputations by any participant in, or before, an investigative committee.

11. The committee will be required to consult with law-enforcement agencies, such as the FBI, before undertaking investigations into areas where they might conflict with law-enforcement activities. The purpose of this is to avoid blundering into criminal cases which the enforcement agencies have already prepared-a real danger where extensive undercover work has been done but not vet

presented to a grand jury.

12. The committee will entertain proper requests to call additional witnesses, from witnesses or others who feel that such additional testimony is necessary in their behalf.

 The foregoing rules of procedure shall be freely available to all interested persons. It is essential that witnesses be advised of the "ground rules" relating to their rights and responsibilities.

14. Resolutions introduced in the House for the purpose of authorizing investigations must specify exactly what is proposed to be investigated and what is expected to be accomplished by the investigation.

Additional Statement by Representative Hugh Scott, Chairman, Subcommittee on Legislative Procedure, House Rules Com-MITTEE ON HOUSE RESOLUTION 571, AND IN-TERIM REPORT RELATING THERTO

Mr. Chairman and gentlemen, I am submitting today an interim report on the work of our subcommittee in developing rules of fair play to be proposed for congressional committees.

Because of the heavy workload that always falls on this committee during the last weeks of a session, it has not been possible to secure an earlier hearing. Also, we have wished to avoid any interpretation of these proceedings as being in anyway in conflict with hearings before a committee of the other body. The objects of general rules of fair play are much broader than any of the issues that attracted so much attention during recent hearings; it would have been harmful to confuse the two-just as, I think, it was greatly harmful to let people confuse the televised proceedings with courtroom standards or practices as much as they did.

I aimed from the outset to be able to have

a set of rules revision proposals considered by our full committee and reported out to the House before this session ended. That is still my hope. The American people are

concerned with the problem; the President has alluded to it a number of times; and it is an exclusive, internal responsibility of ours which must be met, in recognition of the need for clarification of existing rules.

The full analysis and formal report referred to in our interim report has been deferred to await this presentation. But we can complete it rapidly if you wish to act

before adjournment.
Otherwise, I suggest that you authorize us to prepare and submit our formal report on or before the opening day of the first session of the new Congress. If I have the honor to serve again next year, and if we have not achieved our goal before then, I intend to offer these revisions of the rules as the first order of business when we reconvene.

We have worked long and carefully and our proposals are sound. One additional item, which has been developed in the deliberation of the recently-formed Senate subcommittee addressing itself to the same subject, is a special limitation on the creation of subcommittees-whether the chairman can do it or whether only the full committee ought to have the power. In my opinion this would have to be "committee action," subject to the rule we propose at lines 3 and 4 of page 2 of House Resolution 571. But you might wish to consider it specially.

In concluding, let me reaffirm my strong disagreement with the estimable people who have suggested from time to time that all new rules are undesirable. To some of these, the existing rules are seemingly as sacred and inviolable as the Ten Commandments; to others any efforts to establish principles of fair play raise the terrifying spector of total interference and total failure of the workings of Congress. These attitudes are totally unrealistic.

Here, for example, is an excerpt from this immutable body of preceipts, House rules XIV, paragraph 7, provides (and has always provided) that "during the session of the House no Member shall wear his hat." This ironclad pronouncement is unqualified by any limitation as to the places where it applies, nor does it make any exception for our charming lady colleagues. So, literally and in the inflexible tradition urged upon us, we wear headgear anywhere in or out of the Capitol during a session at the peril of clashing head-on with the overbearing wisdom of our ancestors in the matter. And worse than that, any John Doe opposing a law we have enacted, if he can show a hatted Member at the time of the vote would have a clear argument that we were acting in violation of our rules-ergo, the law is not a law at all. Incidentally, while our rules forbid wearing hats, there is no prohibition against the carrying of firearms.

Despite my respect and affection for some of the people who have expressed similar alarm over our proposals, I think it may be fairly observed that there is nothing sacroscant about the rules governing the conduct of the House. If the occasion arises for improvement in our laws, we change the laws. If our present rules do not meet present day situations, it is worse to endure them supinely than to change them intelligently.

Rules for Investigators

EXTENSION OF REMARKS OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. SCOTT. Mr. Speaker, under leave granted, I would like to have the following editorial from the Washington Post

and Times Herald, dated Sunday, January 9, 1955, inserted in the Congressional Record:

The editorial follows:

RULES FOR INVESTIGATORS

Floods of advice and suggestions on how to control congressional investigations are sweeping in upon both the House and Senate. Especially notable on the House side is the proposed fair code of procedure that Representative Hugh D. Scorr tried without success to get before the House when it adopted its rules on the opening day. It is the product of extensive study by the previous Congress. On the Senate side, the Jenner subcommittee and Senators WATKINS and HEN-NINGS are competing for the spotlight on the reforms they have offered. Mr. WATKINS' suggestions grew out of the experience of his select committee which recommended the censure of Senator McCarthy. Mr. Hennings drafted his set of rules after studying the recommendations of the American Association.

The important point is that both Houses have before them thoughtful studies of investigative procedure and a wealth of advice as to the reforms that should be adopted. Not all of this advice is sound, as witness the Jenner subcommittee's self-serving defense of one-man hearings. But Senators WATKINS and Hennings have shown how the one-manhearings problem can be handled without danger of impeding any important inquiry. If the new Rules Committees would bring together the best of the proposals that have been made, they could give witnesses muchneeded protection and save Congress from at least some of the discredit that now clings to it because of uncontrolled investigations.

No doubt the new leaders feel that the Republicans, having failed to impose restraints on their investigators when some of them were running wild, should not be allowed to put over the neglected regulations just as the Democrats take the helm. The greatest pressure for reforms of this sort usually comes from the minority. But many Democrats are also clamoring for the adoption of rules for investigating committees, and in any event partisanship should not stand in the way of an important reform. The Democratic Members complained bitterly about the license assumed by some GOP investigators. They cannot now turn their backs upon corrective measures without raising a large question as to their sincerity.

Address of Joseph H. Cohen, General Manager, Atlantic Gelatin Division of General Foods Corp., at Woburn, Mass.

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, it is a great pleasure for me to place in the Congressional Record a letter and address by Mr. Joseph H. Cohen, general manager of Atlantic Gelatin Division of General Foods Corp., located at Woburn, Mass.

Thirty-five years ago Mr. Cohen began the making of gelatin in Woburn. Today the industry he established then has become the largest of its kind in the world. To visit this fine industry is indeed an event of memory. The physical properties, plant, grounds, and equipment are of the finest. The management is excellent and the employees are of the best. Throughout the entire industry there seems to be a spirit of happiness and cooperation. The men and women associated with Mr. Cohen have worked loyally together to make their industry the best of its kind.

The people of Woburn, Mass., are very grateful and very proud of the achievements of Mr. Cohen and the men and women of Atlantic Gelatin.

On this 35th birthday celebration, I extend my congratulations and my best wishes for another 35 years of successful, happy industrial operation in our community.

ATLANTIC GELATIN,
DIVISION GENERAL FOODS CORP.,
Woburn, Mass., October 4, 1954.
Hon. Edith Nourse Rogers,
House Office Building,
Washington, D. C.

DEAR MRS. ROGERS: It was indeed a privilege to have you as our guest at the 35th anniversary celebration of the founding of Atlantic Gelatin, and I sincerely appreciate your participation and interest in this happy event.

As you requested, I am enclosing a copy of the address I made on this occasion. I am deeply honored that you wish to have my remarks published in the CONGRESSIONAL RECORD and thank you for your thoughtfulness.

I hope that you can visit us again soon. Sincerely yours,

JOSEPH H. COHEN.

Address by Joseph H. Cohen, General Manager of Atlantic Gelatin Division of General Foods Corp., Woburn, Mass., at the 35th Anniversary Celebration of the Company on October 2, 1954

I am happy to have this opportunity to welcome you today. Birthday celebrations are always joyful occasions and I am indeed glad to be able to participate in one at any time. This particular birthday, however, is something very special—something that has meant a great deal in my life and the lives of many good people of this community.

Atlantic Gelatin is celebrating today the 35th anniversary of its organization. A charter was granted to this company on September 25, 1919, and ground was broken for the construction of the plant in October.

As in any business starting out, it was necessary to have money for a factory, materials, and equipment, as well as for other expenses. Fortunately, as founder of the company, I was able to enlist the support of five important tanners to back me in this enterprise. They shared my belief that gelatin could be made and sold at a price that customers were willing to pay and that the business would grow and prosper. These backers were. Widen-Lord Tanning Co., Creese & Cook Co., Northwestern Leather Co., Thayer Foss Co., and J. S. Barnet & Sons. To these people we owe our very existence. It took imagination, it took initiative, it took courage, and it took cash.

As I look back at the beginnings of the Atlantic Gelatin Co., I marvel at our ability to have evolved such a fine, handsome, and stable industry as we have today. Although the plant was a good one in those early days, many changes have been made. It stands today as the best gelatin manufacturing plant in the world, embodying the latest developments from the fields of chemical engineering and food technology. Our problems of production and quality manufacture at first were very great. But we persevered.

bringing to all of these problems the wisdom and light of science until we could say proudly that we manufactured a good, clean, wholesome product of outstanding quality. Quantitatively, we have made excellent progress too. For starting with a productive capacity of a million pounds a year we now have the capacity to produce over 24 million pounds of gelatin a year. Today we represent the largest gelatin manufacturing concern in the world. We are also a member of General Foods Corporation, the largest manufacturers of processed foods in the world.

An organization like Atlantic is not an impersonal abstract institution. On the contrary, it is a very live, human, throbbing enterprise. It is like a large family; the welfare of the whole is reflected in the welfare of each individual member. Those who have participated in our growth and development should have a sense of achievement over what they have helped to create. To each member of our company—in factory, office, sales, and laboratory, I want to extend my heartfelt thanks for the contribution he or she has made to our general welfare. It would have been impossible to record this splendid record of growth and achievement without the loyalty and devotion of the men and women of Atlantic Gelatin.

I also want to pay a long overdue tribute to the wives of our employees. Too often we are inclined to overlook the part they play in our great industrial civilization. Experience points out very clearly that an employee who comes from a home where contentment, happiness, family solidarity and a feeling of security reigns, is a good employee. We recognize the fact that the ladles of our homes are the helpmates who see to our comfort and happiness, and peace of mind.

Probably the most important reasons for the rapid growth of Atlantic Gelatin was the happy business and friendly relationship that developed between the company and its customers and suppliers. We have been most fortunate in this respect. In order to obtain an adequate supply of satisfactory raw mait has been necessary to purchase terials. throughout the world. Similarly, in order to sell our product, it has also been necessary to have loyal friends. Those who have had business relations with us have learned that they can count on our integrity, on our sense of decency and fair play, on our willingness to help our customers solve their production problems and on our human interest in their welfare. This attitude has brought rich and satisfying dividends, not only in profits but also in the host of friends Such relafor Atlantic all over the world. tionships are of inestimable value in the smooth and successful functioning of a business as interesting and as complex as the manufacture and use of gelatin.

One of our first customers was the Genessee Pure Food Co., of Leroy, N. Y., which later became the Jell-O division of General Foods Corp. This company soon became our biggest customer and today take two-thirds of our total gelatin production. Ours, indeed, has been a fortunate company. At times in other industries, when the wheels of production were slowed down and people were thrown out of work, we continued to offer steady employment and to operate our plant on a 24-hour basis. We have been fortunate in other ways, too. Not only have we had an increasing demand for our product but the officers and staff of General Foods have stood by loyally with advice and technical support and with that moral encouragement which is so essential for growth and success. On this occasion I want to pay tribute to them.

It may well be said that the development of the gelatin industry in the United States has paralleled the remarkable growth of our country as a whole, and that Woburn has contributed toward this achievement more than any other American community. Woburn was, in fact, the logical place for a successful gelatin company because it was for many years the world's largest hide and leather center and therefore a great source of supply of raw material for the production of gelatin. Massachusetts is the gelatin

capital of the world.

I want to say that we at Atlantic Gelatin have always had a sincere desire to carry our share of the load as a responsible member of the community and to contribute as individuals and as an organization to the welfare of the ocmmunity. You have all been wonderful friends and neighbors to us and I assure you that we intend to continue our efforts to make you feel that Atlantic Gelatin is as good for Woburn, Stoneham, Winchester, and other neighboring communities as these communities are for Atlantic Gelatin.

In closing, I want to say that I feel excited and happy over this occasion. I hope that you will find our house in good order, that you are pleased with the reception and treatment you receive, and that you will go away with a warm glow of kindly, friendly interest and affection. I hope too that you will have a sense of pride in the achievements in which you have played a part and a feeling of confidence in our future.

We have built our house on faith, on courage, on hard work, on good will, and on happy human relations with all concerned. Our foundation is secure. Our house is substantial. The future beckons. Let us look to this future with the hope that labor, management, and stockholders will continue to work together to make a still bigger and better Atlantic Gelatin. With an excellent record of achievement behind us to serve as a stimulus, I am confident of our continued success and growth.

A Department of Urbiculture

EXTENSION OF REMARKS

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. YOUNGER. Mr. Speaker I am today reintroducing my bill for the creation of a Department of Urbiculture at Cabinet level to deal with the special problems and welfare of municipalities.

These include such economic and social problems as slums, dope, juvenile delinquency, housing, and smog.

Smog, fast becoming a nationwide problem in metropolitan areas, was mentioned by the President in his state-ofthe-Union message as a problem in need of a strengthened combative program. This would fall under the jurisdiction of the new department, if created.

The bill, which I introduced last July shortly before adjournment of the 83d Congress, has created tremendous interest among Washington legislators, who feel it could lead to the solution of one of the most important problems of American cities,

When the Department of Agriculture was established in 1862, 80 percent of the population lived on farms. Now the situation is reversed, with 85 percent in urban communities and only 15 percent rural.

It is only natural then that Government emphasis should be placed on solving the problems of this new majority of urban dwellers as it formally was for the majority of rural dwellers.

The bill, which has received extensive press coverage on a national scale, has brought forth a volume of correspondence from interested citizens and groups approving the action.

The term urbiculture was a coined word to describe a "new science" which would result from the discovery and application of natural law to the utilization of urban lands.

The new department would consolidate the urban functions of various other Federal agencies—notably Home Finance, Housing, Public Health, Department of Justice—which have dealt with areas of the problems of city folk.

Size and Weight Limitations on Parcel Post

EXTENSION OF REMARKS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. BROYHILL. Mr. Speaker, it was my privilege in the 83d Congress to sponsor in the House of Representatives a bill designed to repeal the discriminatory Public Law 199 of the 82d Congress, and restore parcel-post size and weight to the historic limits in effect for 20 years prior

to January 1952.

Eight days of hearings were held a year ago this month on the subject of parcel-post size and weight limitations by the St. George Subcommittee on Postal Operations. Ninety-four witnesses submitted statements to the subcommittee urging repeal of Public Law 199. They represented all segments of business; two farm organizations and other agricultural and consumer groups. There were spokesmen from the Post Office Department; a witness appeared for a postal workers' organization, and one from a housewives' organizationall urging repeal of the law. There were only five witnesses appearing in opposition, all representing the Railway Express Agency, or the railroad intereststhe only interests in all the world that stand to gain anything under this inequitable law that operates to the inconvenience and expense of all senders of small parcels.

Letters poured in to the Members of this body, urging passage of my bill. Many of my colleagues told me of their hope that my bill would be favorably reported in committee so they could vote for its passage on this floor. The advisory council to the Committee on Post Office and Civil Service in the other body said quite forthrightly that Public Law 199, 82d Congress, should be repealed, and weight and size limitations should apply uniformly to all post offices.

But, in spite of the overwhelming support for my bill, it was never reported out of committee.

On Wednesday, January 5, 1955, I again introduced a bill to restore the

parcel-post size and weight limits to the reasonable limits the postal patrons of this country had come to look upon as standard through 20 years of use.

Enactment of my bill will be looked upon as desirable by the vast majority of the people of this country, including the Post Office Department, whose own figures show that its financial position would be bettered by some \$70 million a year by repeal of Public Law 199. Enactment of my bill will greatly facilitate the flow of goods to market and to the ultimate consumer, with a maximum of convenience and economy through the use of the nationwide distribution system now held by the Post Office Department and paid for by the users of parcel post, with the ultimate savings in distribution costs going to the consuming public.

I know that the beneficiaries of the special advantages under Public Law 199 will again wave the banner of free enterprise. But, Mr. Speaker, the only interests who stand to benefit by retaining Public Law 199 on the statute books are not really free enterprise at all; they are

a wholly owned monopoly.

On the other hand, my bill will have the support of at least two of the major farm groups. It will be upheld by the housewives of America, many of whom trudged back home with their relatively small packages in the recent Christmas season, because Public Law 199 had denied them the use of their own postal facilities for mailing those packages of good cheer. My bill will have the support of all businessmen, but particularly the small businessmen who are unable to hire traffic experts or cooperate in joint shipping endeavors to save themselves heavy transportation expenses. My bill will have the support of such business organizations as the National Retail Dry Goods Association, which is very well known for its espousal of ideas for good government, and which is on record for not opposing any postal rate increases necessary to put the Post Office Department on a self-sustaining, efficient operating basis

Mr. Speaker, I ask for the support of every Member of this body for my proposal to repeal Public Law 199. Passage of my bill would be to place the interests of 160 million American people above those of a single special interest.

Health Bills

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. WOLVERTON. Mr. Speaker, on the opening day of the 84th Congress I introduced several bills to make available means by which facilities to promote the health of our people would be more generally available than at the present time.

The seven bills I have introduced are designed to help the American people to bear the burden of hospital and medi-

cal expenses and to provide for a more effective use of available Federal funds in promoting the health of the American people. These bills are the result of very extensive hearings and committee consideration of health programs proposed to the Committee on Interstate and Foreign Commerce during the 83d Congress during which I had the privilege of being chairman of the committee.

My first bill-H. R. 397-is a bill to amend the Public Health Service Act to provide mortgage-loan insurance for hospitals and medical facilities. The purpose of this bill is to stimulate investment of private capital in the construction of hospitals and medical facilities and thus to increase the availability of adequate medical facilities in which health services may be rendered to the American people. This bill would supplement the hospital-construction amendments-Public Law 482, 83d Congress-by channeling private funds into the construction of hospitals and medical facilities.

My second bill-H. R. 398-is a reintroduction of the bill, H. R. 7700, introduced by me during the 83d Congress.

This bill is based on the same principle as my first bill, but the mortgage-loan insurance provided for in the bill for hospitals and medical facilities would be available only for hospitals and medical facilities used in connection with voluntary prepayment health plans. These plans, of which the Kaiser Foundation in California and the Health Insurance Plan of Greater New York, and Group Health Association, Inc., of Washington, D. C., are outstanding examples, have been particularly successful in furnishing comprehensive medical care to the members and subscribers of these plans in return for monthly premiums paid by the members and subscribers.

My third bill-H. R. 399-which is a reintroduction of H. R. 6950, 83d Congress, is designed to assist nonprofit associations offering prepaid health service programs to secure necessary facilities and equipment through long-term interest-bearing loans advanced to such associations by the Federal Government.

While the first three bills introduced by me are designed to facilitate the construction of hospitals and medical facilities, my fourth bill-H. R. 400-is designed to provide improved protection for an increased number of our citizens under prepayment health plans. This bill is a reintroduction of H. R. 8356 which was reported favorably by the Interstate and Foreign Commerce Committee during the 83d Congress. The bill would establish a limited Federal reinsurance service with a self-sustaining fund derived from reinsurance premiums paid by the sponsors of health service prepayment plans participating in the program.

My fifth bill-H. R. 401-is a reintroduction of the bill, H. R. 6949, introduced by me during the 83d Congress. Like my fourth bill, it is designed to expand health services through the medium of Government reinsurance. However, the bill is limited to non-profit associations which render or secure medical and hospital services and does not extend to commercial health insurance companies. This bill is of particular importance, I feel, because it sets forth minimum standards which insurance plans must meet in order to become eligible for reinsurance under the plan

proposed by the bill.

My sixth bill-H. R. 402-would amend the Internal Revenue Code and authorize a deduction up to \$100 for income-tax purposes for any taxpayer. and \$100 for each of his dependents for insurance premiums or fees paid to health insurance companies and voluntary prepayment plans. This deduction would be in addition to deductions for medical expenses now authorized under the Federal income-tax laws. This deduction would stimulate individuals to prepay their medical expenses by participating in health insurance plans.

My last bill-H. R. 403-is a reintroduction of H. R. 7397 introduced by me during the 83d Congress. This bill was reported favorably by the Committee on Interstate and Foreign Commerce and was passed by the House of Representatives. The purpose of this bill is to promote and assist in the extension and improvement of public health services by providing for a more effective use of available Federal funds.

It is my hope that this series of bills will enable the Committee on Interstate and Foreign Commerce—and in the case of the tax deduction bill, the Committee on Ways and Means-and the House of Representatives to give careful consideration to plans designed to ease the economic burden which illness, and particularly prolonged illnesses, places on the American people. The 83d Congress enacted much-needed amendments to the Hospital Survey and Construction Act. It is my hope that the 84th Congress will follow up the action of the 83d Congress by enacting several of the measures which I have introduced.

A Corkscrew

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Punxsutawney Spirit: A CORKSCREW

Does the Tennessee Valley Authority provide an honest yardstick of the rates that should be charged by the power industry in general?

It doesn't-in the view of a man who certainly should know-Brig. Gen. Herbert Vogel, newly appointed TVA head.

Speaking before the Memphis Engineers Club, General Vogel said that if TVA "were to assume the obligation of paying interest at any reasonable and proper rate" it would have to increase its charges for power or cut payments to the Government. He said also that if TVA is to be a true yardstick consideration will have to be given to paying interest and to at least allowing on paper for taxes. Then he added, "Yardsticks also include profit, which any industry is entitled to make.

In other words, TVA rates are cheap only because TVA's customers are, in effect, sub-sidized by all the rest of us. The authority pays no interest on its huge investment, pays no Federal taxes, and makes only small token payments in lieu of taxes to State and local

governments.

This is an especially timely matter now. with all the hubbub over the contract whereby a private, taxpaying utility group is to build a \$107 million plant to supply power to an atomic energy installation in Arkansas. It is argued that the power could be provided at a lower rate if funds were given TVA to expand and produce it. Actually, the difference in rate is accounted for by the tax and interest factors.

Under present conditions, to sum up, the TVA vardstick has the shape of a corkscrew.

Penalty for Sale of Narcotics

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. YOUNGER. Mr. Speaker, I am today introducing a bill which provides for the death penalty or life imprisonment for anyone convicted of the sale of narcotics or marihuana to minors.

Selling narcotics to young people, in my estimation, is the most vicious crime that can be committed and it must be stopped through drastic Federal legislation calling for the death penalty for

I feel that the introduction and distribution of narcotics to teen-agers in the Nation's high schools condemns them to a fate worse than death and should be punished by death or life imprisonment to offenders.

My decision to introduce the bill has been endorsed in statements from numerous parents throughout my San Mateo County district and environs.

A typical parent wrote a letter in which she said:

My son is now 23 years old but has been on the stuff since he was a teen-ager, and if this bill is passed it will not only protect my son from further contamination from this evil, but also save many boys and girls from a slow death.

She went on to state:

My son is at present serving a term in prison for forgery. Of course, he wanted money for this stuff and would do anything to get it.

Several doctors have written me their enthusiastic endorsement of the bill.

I also propose that marihuana, not now included as a narcotic under Federal definition, be incorporated in its definition by this bill.

I cite the logic of the Lindbergh law, which has virtually stopped kidnaping in the Nation through fear of the death penalty, in strong support of the bill.

Hon. George Holden Tinkham

EXTENSION OF REMARKS OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. MARTIN. Mr. Speaker, some years ago one of our Members was George Holden Tinkham, of Massachusetts. He was a recognized student of history and economics. His advice was often sought and found of great value. Since retiring from Congress, he has continued his travels over the world and this year was the subject of a special article in the well-known London News Chronicle. The article follows:

HE'S LOOKED US OVER SINCE 1888, AND NOW-THESE WISE OLD EYES SEE DANGER-HE'S OFTEN RIGHT

(By Michael Gilderdale)

To look at him you might be tempted to call him Rip Van Winkle. For George Holden Tinkham, Esq., of Boston, Mass., aged 83, has a fine gray beard and eyes that gaze mildly on the world, as if they had been closed long years in sleep.

But when you listen to his soft New Eng-land drawl and see his eyes brighten and twinkle in animated discussion, the name that springs to mind then is Lincoln—or even Gladstone.

The resemblance is not farfetched, for Mr. Tinkham was, and indeed still is, a politician in the grand manner, a man who took his seat in Congress as a Republican for 28 years, and whose eyes sighted political truths long before the facts confirmed them.

SIXTY-FIVE YEARS TRAVELING

Yesterday in London, on his annual visit to England-he has visited Europe almost every year since 1888—he talked modestly about himself, about the warning he gave and which we in Britain and they in America never heeded.

On February 17, 1933, Lincoln's birthday, he rose in the House and in a carefully pre pared speech told his fellow Americans that within 6 years there would be a world war precipitated by the Polish question and in-volving, through Britain, the United States.

Mr. Tinkham was right, just as he was in 1912 when he foresaw the First World War, and later the 1929 slump that hit his own country.

He predicted the failure of the Versailles Treaty, and yesterday apologetically but categorically stated:

"Neither can the United Nations succeed. There are too many nations participating, too many divers philosophies which cannot be reconciled.

"Since the Napoleonic era there has never been an arms race that was not followed by war. And now we have the greatest arms race of all time."

DIFFERENT FEARS

Of our differences with our American cousins he said: "The United States fears communism more than war. Europe fears war more than communism."

But this prophet is not a philosopher of gloom. His well-based opinions stem from, originally, a study of history at Harvard University and an intimate acquaintance with the world and the ways of man.

He was one of the first to voice a persistant 10-year opposition to prohibition. "Drink? No, sir—not at 83. But in my day I drank most anything, and liked nothing better than your English ale."

He likes to think the reason for this is his Anglo-Saxon blood, for his Devon fore-bears went West in 1620 with those other stalwarts in the Mayflower.

LIKE GIRBON

Marriage never came his way.

"Women," he says, "you can't live with them and you can't live without them. But if I had married I could not have done all that I have done."

And "all" includes hearing Gladstone

speak in the Commons in 1888.

One regret only has this gentle elder atesman. An ambition he could never statesman. realize: "I would have liked, more than anything else, to have written history the way Gibbon did.'

The National Interest

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kane Republican of Kane, Pa.:

THE NATIONAL INTEREST

Where does the national interest lie? If we take the freely-given and largelyunsolicited advice of some groups, it would appear that the national interest doesn't lie in the same direction as the interest of Northwestern Pennsylvania and the community of Kane.

A case in point is the recent announcement by the Committee for Economic Development. It says, to wit: "It is in the national interest of the United States to continue a policy of gradual and selective tariff reduction. As the strongest economic power in the free world, the United States has a special responsibility for liberalizing tradethe responsibility of leadership."

All right, so we have a responsibility to the world. What about our responsibility to the American workingman? Haven't we responsibility, for instance, to the coal miner, the workers in the Pennsylvania oil fields and to the manufacturing employees of the area? It would also seem that we have some responsibility for the future security of the United States.

Right at this moment, the hard-pressed coal industry and the Independent Petroleum Association are striving vainly to convince the Government that some should be placed on the flood of foreign oil which is pouring in on the United States. Their argument is that the foreign products are competing unfairly with those of American firms. The result is less work for Pennsylvanians and a limiting of domestic operations. This latter concern is more serious than appears on the surface. For, in the event of an emergency, such as war, we couldn't count on that foreign fuel. We'd have to rely primarily on what we could produce in this country. If we are forced to limit production of our fuel in peacetime, it will be that much harder to expand it to the required capacity to meet demands of another global war.

We have no quarrel with sane and sensible tariff revision so long as the welfare of the American workingman and the Nation's security are well protected. However, experience has taught us that too many of the freer trade advocates are more concerned with the welfare of other nations than is good for the United States.

Certainly at this time of domestic unemployment and world uncertainty, the best interest of this area does not lie in the direction of any general reduction in the tariff struc-ture. We've just had 20 years of such re-ductions and the process is beginning to hurt. Especially since the nations to which we have been so magnanimous have shown little, if any, disposition to reciprocate.

Dangerous Gamble

EXTENSION OF REMARKS

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. JONES of Missouri. Mr. Speaker, the usually conservative Globe-Democrat, recognizing the danger that accompanies a recommendation of one of President Eisenhower's commissions, is editorially supporting the views of President Fred V. Heinkel of the Missouri Farmers Association who has so forcibly emphasized the mistake that would be made if the United States Soil Conservation Service be discontinued.

I hope that this administration will thoroughly consider all of the basic factors involved and which are so clearly pointed out in the accompanying editorial before considering the recommendation of this special commission. I further hope that the Members of Congress will join in the views expressed by President Heinkel which have been further endorsed by the St. Louis Globe-Democrat, as follows:

DANGEROUS GAMBLE

There are many functions usurped by the Federal Government in recent years which should be returned to the States. We have supported some of the proposals to decentralize governmental functions and put the responsibility where it belongs, at the State or local level. However, there are other func-tions which can best be administered by the Federal Government. One of these vital functions is the conservation of this Nation's soil and water resources.

A subcommittee of President Eisenhower's Commission of Intergovernmental Relations has recommended that the United States Soil Conservation Service be discontinued and the responsibility for saving our soil passed on to the 48 States with funds to be on a matching basis. A transition period of 5 years is proposed for making the change. It is significant that only one representative of the farmer, who is most vitally concerned, is a member of the subcommittee. He is Hershel D. Newsom, master of the National Grangeand he voted against the recommendation.

In our judgment the subcommittee has failed to consider several basic factors in making its recommendation. The United States Soil Conservation Service, which is an agency of the Department of Agriculture, furnishes technical and other services to soil conservation districts and to farmers who are cooperators in the soil districts. The Soil Conservation Service assists in planning conservation practices, which are carried out by the farmer and paid for by him. It furnishes no financial aid. In short, the SCS is an agency comparable, say, to the United States Public Health Service, which no one thus far has suggested abolishing as an infringement on State rights.

Until the SCS was established in 1935, little was done about soil conservation in this country. Under the leadership of the SCS, progress has been rapid in the last 2 decades. There are now soil districts in 2.500 of the Nation's 3,000 counties. Approximately

the Nation's 3,000 counties. Approximately 80 percent of the farmland of the country is now receiving benefits from the SCS's

constructive program.

Fred V. Heinkel, president of the Missouri Farmers Association, warns in the Missouri Farmer that if the SCS is crippled as is proposed in the recommendation, soil conservation in this country-and in Missouri-will be set back at least 20 years. The United States cannot afford such a setback. population is growing at the rate of 2 million a year-and at the same time our good farmland is being taken out of production because of erosion at a rate of 500,000 acres a year. Today we have just a little over two acres of tillable land per capita. Unless we can preserve our natural resources of soil and water and increase the fertility of the land, we will face the danger of being a have-not nation in food within the lifespan of this generation.

The subcommittee proposes in effect that we gamble by dividing the conservation program into 48 pieces. It is a risk we cannot afford to take. Instead of delaying the program of conservation, we need to accelerate it by strengthening the work of the SCS.

The Late Dwight L. Rogers

SPÈECH

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 5, 1955

Mr. CRAMER. Mr. Speaker, I would join in the remarks of my distinguished colleagues from Florida in expressing my sincere regret and the sense of deep loss that has come to our State with the passing of one of its outstanding leaders and great Congressmen, Dwight L. ROGERS. It was not my pleasure to know him well. It was my privilege to have met Mr. Rogers and to have known well his many great efforts in the Florida legislature and in these Halls of Congress. From his many close friends and associates I feel that I have been privileged to learn of the many great achievements that are counted in his long record of service. Mr. Rogers was an outstanding Floridian whose great personal charm and friendly nature made friends for himself and our State wherever he went. He was counted among the most able men in this legislative body and the reflection of his labors for Florida and the Nation is clearly shown in the development of our State and the dignity of our country. Such men are not to be replaced. We who serve here now may only persevere in emulating their patterns of achievement and devoted serv-

At this time I would express my humble regret and join with all his many friends and neighbors in bereavement over his passing.

To his widow and devoted family I extend my deepest sympathy.

Make the Most of the New Tax Law

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend, including excerpts, I am inserting in the Record an article entitled "Make the Most of the New Tax Law—Uncle Sam Gives Farmers an Income-Tax Break This Year," by H. L. Tinley, which appears in the January issue of the Country Gentleman, the magazine for better farming.

I wish to state in connection with this insertion in the RECORD that the proposed attempt to repeal this law will have my firm opposition. The article is as follows:

MAKE THE MOST OF THE NEW TAX LAW

After 75 years of tugging and hauling at the old tax code, Congress finally got around to passing a new law in 1954, and now that you're ready to start figuring how it affects you, you'll be more pleased than otherwise.

You don't have to file your final return and pay the tax until April 15, 1955, provided you have filed an estimate by January 15. If you don't file an estimate, your return

and tax are due on January 31.

Now you can charge the expense of soil and water conservation off against current income. You can deduct, in an amount up to 25 percent of your gross income, the construction expense of drainage ditches, ponds and earthen dams, water courses, leveling, grading and terracing, contour furrowing, construction and maintenance of diversion channels, removal of brush and planting of windbreaks. If these costs exceed 25 percent of your gross income, you can carry the excess over to the following year.

Several methods can be used to speed up depreciation, instead of using the so-called straight-line method which, in the case of a building worth \$10,000 with a 10-year life, calls for \$1,000 to be depreciated each year. Speedup cannot exceed, as a rule, taking more than double the straight-line depreciation amount the first year, then lesser amounts in each succeeding year, so not more than three-fourths the cost is recovered in first half of your asset's useful life.

The grain-storage-depreciation law is important. You can write off new buildings and equipment built or purchased in 1954 used for this purpose within 5 years, at 20 percent a year. The USDA sponsored this idea to get more on-the-farm storage built, and it really worked. Incidentally, don't try to apply this fast depreciation schedule to other buildings.

You now can carry back net operating losses for 2 years, or carry over, or forward, up to 5 years. This law, formerly a 1-year carryback, was a lifesaver to some feeders when the bottom fell out of the market in 1953. Here's an example that shows how it might now work for you:

Let's assume that in 1953, John Angus, a Nebraska feeder, had a net profit of \$10,000 but in 1954 he showed a net operating loss of \$5,000. When he paid his 1954 tax, John could go to his internal revenue director, and ask to carry this \$5,000 loss back to offset some of the \$10,000 profit he made in 1953—and he probably can do it. His 1953 tax then would be based on \$5,000 net income

and he would be entitled to a refund. Let's make the situation worse: Suppose John lost \$50,000 in 1954 instead of \$5,000. He could go back 2 years and wipe out first the \$12,000 profit he made in 1952, and the \$10,000 profit he showed in 1953, then—providing the internal revenue people agree with him—he would be entitled to the full return of all of his 1952 and 1953 taxes. Though he can only go back 2 years, he can go forward 5 years, and could offset the balance of his 1954 loss, some \$28,000, against the first profits to come during the next 5 years. Here's a word of warning. When you start fishing for a tax refund, Uncle Sam is likely to put on his bifocal glasses and give your last year's return an exhaustive study.

So much, then, for the parts of the new law that particularly affect farmers. You'll also benefit from the provisions that apply to all taxpayers, such as:

MEDICAL EXPENSES

In the past you could only deduct medical expenses in excess of 5 percent of your adjusted gross income; now they need only be 3 percent. Maximum medical deductions have been doubled. Now the limit is \$2,500 for each individual named on the return, before it was only \$1,250. Along this same line, this year you can only deduct the cost of medicines and drugs when they exceed 1 percent of your adjusted gross income. But here's a word of warning. Just because you bought tooth paste, face powder, and mouth wash from a drugstore, don't show their cost as medicine and drugs on your tax form; you're asking for trouble if you do.

CHILDREN'S EARNINGS

Congress finally licked this problem, and it's been a real headache in the past. Now if your youngster is under 19, don't worry if he makes over \$600 a year. When this happened in the past, you lost a dependent. Even if he or she is over 19, it's still O. K. to deduct if they are a full-time student at an educational institution during some part of 5 months of the year.

DEPENDENTS

This year you can claim as a dependent—with a \$600 exemption—any individual dependent upon you for over half of their support, and providing that individual is living with you. Relationship is no longer so important.

CONTRIBUTIONS

The limit for charitable contributions is hiked this year from 20 percent of the "adjusted gross income" to 30 percent. There's a string attached, though. This extra 10 percent must be given to churches, schools, or hospitals.

When you start figuring your tax, here are some "Do's" and some "Don't's:

Be sure you keep operating expenses separate from personal expenses. Charity, alimony, and doctor bills are personal deductions. Machine hire, feed, taxes are operating deductions.

Be sure you and your wife file jointly; it's generally advisable.

Be sure, if you're buying a farm, to have your real-estate agent give you a report showing the purchase price allocated to each item such as house, barn, and so on, with its estimated life.

Be sure if you're selling your farm to see if it isn't more profitable taxwise to sell before the crops are harvested; usually it works out that it is. The selling price allocated to these crops is then treated as long-term capital gains—not as ordinary income.

Be sure you keep accurate records. Nothing will get you into trouble faster than poor records, and nothing will bail you out of trouble quicker than good ones.

And here are the don'ts:

Don't pay unrealistic wages to small children who do typical farm chores. Nothing makes revenue agents more curious.

Don't claim capital-gains treatment on purebred helfers that are sold in the usual course of your business of raising and selling purebred stock. However, there is a good way of getting around this-let the heifers drop

Don't try to catch up on depreciation of items overlooked in previous years by deducting too much depreciation this year. If last year's was forgotten, you can't pick it up

this year.

And here's a final suggestion. Sam is making a pretty decent profit off your farm, it's good to know how he figures out his There isn't much you can do about changing the lease you have with him, but there is a lot you can do in figuring out which are his dollars and which are yours. Get a tax expert to line up your farm, and give you a series of recommendations that you can follow all year.

Agriculture Must Tell Its Story

EXTENSION OF REMARKS OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. HOPE. Mr. Speaker, under leave to extend my own remarks in the RECORD, I submit herewith a copy of a speech which I made at the annual meeting of the National Grange at Spokane, Wash., on November 16, 1954:

ACRICULTURE MUST TELL ITS STORY (Address by Hon. CLIFFORD R. HOPE, of Kansas)

I greatly appreciate the honor which you have conferred upon me by inviting me to address this 88th session of the National

I am a member of many organizations, but in none do I value my membership more highly than in the Grange. I must confess that I am not a working Grange member. I am proud to have been a member of the Pioneer Grange near Lakin, Kans., for more than 20 years, but my work in Washington makes it impossible for me to attend many

meetings. That is my loss.

In Washington I have enjoyed and profited by my association with the officers and representatives of the National Grange at national headquarters. I have had the privilege of working with three great Grange leaders—National Master Louis J. Taber, National Master Albert Goss, my dear friend for many years, and now with our present able and distinguished National Master, Herschel Newsom, and his associates in the Washington office.

Today as always the Grange represents the best in American rural life. During almost a century of service it has exerted tremendous influence for good in the life of farmers throughout the length and breadth of the land.

Since 1867, the Order of Patrons of Husbandry has adhered to the covenant of its declaration of purpose so well stated in these words: "To develop a better and higher manhood and womanhood among ourselves; to enhance the comforts and attractions of our homes and strengthen our attachments to our pursuits; to foster mutual understanding and cooperation; to maintain inviolate our laws and to emulate each other in labor; to hasten the good time coming.'

There is something inspiring and stirring in these words. They ring with a constant reminder that while we have just pride in the accomplishments of our fraternity, the challenge of the work yet ahead transcends all else.

We are meeting here in Spokane in the midst of a critical period, both for this Nation and for the world which today is divided into armed camps in a state of cold conflict.

Bombs are not falling, but the men in the Kremlin are frank to tell us that they are waiting for the day when the economy of this and other free countries will collapse; when people will be hungry and ragged in the streets.

On that day they hope communism will ride triumphantly over freedom.

I do not know whether we can keep Russia from dropping bombs on this country. I do know our best hope is to maintain a position of strength.

That means not only military strength, even more important, it means economic and moral strength.

I sincerely believe that while we must maintain our defenses in a military way, our greatest protection against Communist domination throughout the world lies in the field of economic and moral strength.

Even more than on force, the Kremlin is betting that America does not have the economic and moral strength to win a cold war.

This puts a great responsibility upon the men and women who live and work on the farms of our country.

Historically, we know that depressions begin on the farms.

The lessons of history teach us also that the moral strength of every nation has found its greatest bulwark in the people living on the land.

It is of the utmost importance, therefore, that agriculture in this country remain the strong economic and moral force that it has

been in the past.

Whether it does or not constitutes a great challenge to such an organization as the National Grange, because all is not well with agriculture. For several years past our na-tional income as a whole has been increasing; our population is growing by leaps and bounds; but at the same time farm income is declining and people are leaving the land.

A hundred years ago almost 70 percent of our people were farmers, and even as late as 1910 a third of them were directly engaged in agriculture. Today less than 14 percent

live and work on our farms.

It is a great tribute to the industry and efficiency of our farmers, however, that, although their numbers have been declining both relatively and actually, since 1939 we have increased our over-all agricultural pro-duction by more than 40 percent. This has enabled us to not only take care

of the needs of an increasing population for food and fiber, but it has enabled us also to carry on a great moral and economic battle against communism because we have had food and fiber to feed and clothe hungry and distressed people in all parts of the world.

If we win the cold war the part played by the farmers of America will stand out in bold

relief.

Along with the decline of agricultural population great changes have taken place in the whole economic structure of agriculture.

Until comparatively recently farming was largely a self-contained industry. The farm produced most of the family food; woodlots and forests most of the fuel; horses and oxen produced on the farm furnished the power. They were fueled by hay and grain grown on the farm. The farm produced its own fertilizer.

There was little expense for hired labor, because families were large, and work was interchanged with neighbors.

Taxes were negligible. Capital investment was low. Interest charges were unimportant.

In other words, until comparatively recent times the farmer had little need for cash

Contrast that with the situation of the farmer today—not only the big farmer and the medium-sized farmer, but even the little farmer requires a heavy cash outlay to carry on his operations.

He must purchase his power on the farm in the form of tractors and other equipment. He must buy gasoline and distillate as fuel.

He must buy fertilizer. Hired labor is costly, if he can get it.

His large investment in plant and equipment, and necessary working capital makes interest charges an important item.

He has a heavy outlay for insurance and taxes.

In other words, the farmer today is in the same position as any other businessman.

He must have substantial cash receipts to meet his current operating expenses, and his prices must be high enough to pay for these charges and lay aside a reserve for depreciation, to say nothing of the reasonable profit to which he is entitled as legitimately as any other businessman.

So while the market price of farm products may have been unimportant in the past, today it is everything and it determines whether or not a farmer is going to be able to stay in business.

Thus one of the greatest if not the greatest problems of the farmer is to have some-thing to say about the prices of the things he buys and the things he sells.

With few exceptions his costs are determined by someone else. He has no bargaining power to enable him to reduce them.

he consumes electric power, the price

is fixed by a public commission.

The wages of his hired labor are fixed by competition with industrial enterprises where wages, hours, and working conditions are determined by collective bargaining between well entrenched labor unions and industries which can pass high labor costs on to con-

His taxes, his transportation costs in getting his products to market centers, his insurance rates are all fixed by the action of State and Federal agencies.

The price of his fuel, his fertilizer, and his farm machinery and equipment is not the subject of bargaining as far as he is concerned.

He pays what the seller demands.

On the other hand, with certain unimportant exceptions, and in the absence of help from farm programs the farmer has nothing to say about the price of his products. If he ships his cattle and hogs to Kansas City or Chicago he takes what the buyers offer him, and they all offer him substantially the same.

His alternative is to ship his livestock home

When he takes his grain to market he doesn't say how much he will take for it.

He says, "How much will you give me?"

Furthermore, the farmer is subject to all the vagaries of the weather as well as the destructive effects of plant diseases and insect pests. These factors very largely netermine his yields, and his unit cost of production depends upon the yield.

His corn may make 80 bushels an acre one year and 40 bushels the next. In the latter case, assuming that his expenses are the same, the cost per bushel is twice as much as it was in the previous year.

That is not to say that good farming does not pay or that efficiency does not reduce

costs. The point is that no farmer can tell in advance what his costs are going to be.

What other businessman could stay in business if his costs and selling prices were determined by someone else and the quantity and quality of his product was determined in most cases by weather and other factors beyond his control?

It is the recognition of these facts which has brought about Government farm programs in recent years. The fundamental purpose of these programs has been to enable farmers to maintain some balance between supply and demand in connection with the marketing of their products.

Most of these programs have been on a trial and error basis. We have been dealing with something new, and have had to feel our way as we went along, but they have been reasonably successful. Changes have been made as we went along, and a considerable variety of programs has been developed.

I do not want at this time to get into the controversy over price-support programs except to say that experience has demonstrated as we have gone along that the Grange position is right, and that our greatest mistake as far as farm programs is concerned, is to attempt to apply one magic formula, one cure-all, that will answer the problems of all agricultural products.

Furthermore, I think we have to recognize that there are some commodities which do not adapt themselves to direct price-support programs.

That great man in agriculture, Albert Goss, warned us years ago that there is no such cure-all and that there are almost as many problems as there are commodities.

I remember he used to tell our committee that just as we can't cure appendicitis with castor oil or smallpox with surgery, we must have a bag full of remedies as a country doctor carries a bag full of different pills, so to speak.

Our experience has demonstrated the value of attempting to tailor a program to meet the needs of a particular commodity.

Take the case of-sugar, with which many of you are familiar. The sugar program stands by itself. It was worked out to meet the particular needs of that commodity, and it has worked more successfully, perhaps, than any other program.

The same can be said of the tobacco program. Ninety-percent price supports with strict controls have worked so well on that commodity that practically everyone has agreed—no matter what his views might be as to other commodities—that such a program should be continued for tobacco.

In the last Congress, recognizing the fact that wool has peculiar problems of its own, we set up a wool program to meet the needs of that commodity.

All of this is in accord with the views expressed by President Eisenhower in his message to Congress on January 11, 1954, entitled "Recommendations Affecting the Nation's Agriculture."

In that message he said, and I quote: "No single program can apply uniformly to the whole farm industry. Some farm products are perishable, some are not; some farms consume the products of other farms; some foods and fibers we export, some we import. A comprehensive farm program must be adaptable to these and other differences, and yet not penalize one group of farmers in order to benefit another."

In the farm bill which the House Committee on Agriculture reported to the House, we carried out the policy recommended by the President in this regard. That is, we provided for keeping tobacco supports at 90 percent of parity with strict controls. We set up a separate program on wool. We did not deal with the sugar program because that has always been carried out as separate legislation.

But we went further than this in applying the principle laid down by the President, in that we set up a plan for wheat along the lines of the cerificate form of a two-price system.

We set up some special provisions for the dairy industry and directed the Department of Agriculture to make a study of two price plans for rice. The Senate did not go along with us with respect to the new program for wheat nor with most of our provisions relating to the dairy industy.

In conference we were able to keep many of the dairy provisions, however; among them a provision directing the Secretary to make a special study of dairy price-support programs, including the self-help plan proposed by dairy producers.

The final form of the bill also contained the direction to the Department of Agriculture to make a study of a two-price system

In these matters we had the invaluable support of your great leader, Herschel Newsom, one of America's greatest farm leaders of all times, who speaks with a strong, clear

voice on all agricultural problems.

To sum it up, I feel, that while agriculture in the overall may be one big industry, contained in it are a great many smaller industries, some of which are in a degree in conflict with each other.

No one plan can meet all of the many problems.

In the overall program, we must keep and use the best tools we can devise but at the same time we must constantly study and test new approaches, always keeping in mind the interests of both farmers and all of our citizens.

Personally, I want to use fixed supports when fixed supports work best. I want to use flexible supports in areas where they work best. I want to employ marketing agreements and orders where they work best.

I want to manage and remove surpluses in such a way as will be in the best interests of farmers, consumers, and taxpayers.

However, while I feel we should be flexible as to the tools and methods that we use, in our objectives where agriculture and the good of this country are concerned, we should be rigid and inflexible.

What I want to see is economic equality; that is, a fair share of the national income for agriculture. I believe that this is only simple justice, and furthermore I am convinced that the health of the whole economy and the well-being of all our people depend upon it.

There are of course many vital Government programs in agriculture besides those relating to price supports, including soil and water conservation, adequate credit, research, education, cooperative marketing, expansion of markets, crop insurance, rural electrification and telephones and many more.

I shall not go into them at this time, but there is one thing we must stress in all of our programs: that is the encouragement and preservation of the family type farm,

We hear too much talk now about getting rid of the so-called inefficient farmer, of consolidating his land with somebody else's and sending him to town to look for a job. I am afraid this may cause some people to believe that a small farmer is an inefficient farmer. Quite often the case is drectly the contrary.

One great motivation, one of the strengths of our free-enterprise system, is the hope of every young man that some day as a reward for his labor and frugality he may have his own farm or his own small business.

We have long since realized the dangers of monopoly in business through enactment of our antitrust laws. It is equally as important that we protect the opportunities for individual ownership in agriculture,

So it would behoove all of us to talk less of liquidating the so-called inefficient farmer and put greater emphasis on improving the position of the family farm. We should do everything possible to improve and adapt machines, methods, and programs to make this the most productive and prosperous unit

of agriculture. Otherwise we will be locing one of our greatest moral assets, both in agriculture and in the Nation.

I mentioned a while ago that those engaged in agriculture now represent less than 14 percent of our population. That poses a real danger for agriculture, because it means that only a comparatively small number of our people understand its problems. And so great have been the changes in agriculture that even men and women who grew up on farms a generation ago and have since gone to the cities know little about agriculture and its problems today.

I think it is entirely possible that at least 80 percent of the people of this country have little or no knowledge of the problems which now confront the farmers of this country. This is a dangerous situation because the farmer must depend upon the understanding of the people in the cities if he is to obtain economic equality and justice through fair and just laws and economic policy.

Moreover there seem to be influences at work that tend to separate the interests of rural and urban peoples, and which are even building conflicts among the farmers themselves

selves.

Our Committee on Agriculture took note of this in presenting to the House the Agricultural Act of 1954, when in our report we said, "the committee deplores any tendency in the consideration of farm programs toward a separation of the interests of the farmers and our great consuming population of the cities. These interests are one and the same. They are inseparable. Stability of agriculture is equally as important to urban people as to people on farms."

Many thousands of fine people whom we respect differ with us on the nature or even the need of a farm program.

They are intelligent people.
They are fairminded people.
But they have been misinformed.

We of agriculture are largely at fault because we have the poorest public relations of any large group in our national life. That is the situation which must be changed not only in the interest of agriculture but of the country as well.

Frankly I am amazed at some of the misconceptions which exist in the minds of nonfarmers with respect to farming.

There is no use denying that this misinformation exists.

What we must do—all of us who are interested in agriculture—is to frankly face the situation and then take steps to build up better public relations for the farmers of this country.

It isn't a difficult thing to do provided we get out and do it, because all that needs to be done to refute the erroneous impressions which exist is to tell the truth—the real truth about farmers and their problems. What are some of the misconceptions that

we find in the minds of nonfarmers?

Well, for one thing we find an impression among a lot of people that farmers as a class are getting rich.

We find that there are many who think

We find that there are many who think that farm prices and food prices are high with respect to other prices.

There are others who think that farm programs have worked to the disadvantage of consumers.

There are still others who are convinced that agriculture is being subsidized in vast amounts by the Federal Government and that Government subsidies are exclusive to agriculture.

Not one of these misconceptions is based upon fact, and their very existence demonstrates that in some way agriculture has failed to get its story across to the country.

Take the first misconception I mentioned: that farmers as a class are getting rich.

I know of no reason why the opportunities which other Americans have to achieve

material prosperity should not also apply to farmers, and it is true that some farmers frugality and good management

have achieved a competence.

But the answer to those who think that farmers are getting rich as compared to the rest of the population is given by the cold statistics compiled by the Department Agriculture. These figures show that in 1953 the farm population had a per capita income of \$882, including cash from marketings, Government payments, value of home consumption, and rental value of buildings.

For each person in the nonfarm population

the average income was \$1,898.

Thus the average income of a person on the farm is less than half of that of the average person living off the farm.

But tell that to your nonfarm friends and

see how many of them believe it.

Now perhaps the greatest resentment against farmers and agriculture comes from the prevalent fallacy that farm prices and food prices are high with respect to other prices. Before going into that, I think it should be pointed out that of each dollar spent by the American housewife for domestically produced food, 57 cents now goes for processing, marketing, and transporta-tion charges. The farmer receives 43 cents.

That figure has been going down year by year since 1946, when the farmer's share was 52 percent and the processor's and distribu-

tor's share was 48 percent.

This is reflected in the fact, as shown by a study made by the Committee on Agriculture, that as of last July farm prices had fallen approximately 19 percent since 1951 while in contrast, retail food prices remained right at the postwar peak.

at the postwar peak.

Since 1948 the price of wheat has declined
32 percent, but the price of bread has advanced 23 percent. The amount of wheat in
a 17-cent loaf of bread comes to 23/4 cents.

In June, New York and Chicago housewives paid 25 cents per quart for milk delivered at their doors, while farmers who supply milk to the Chicago market received 61/2 cents per quart for class I milk and farmers participating in the New York City market received 9½ cents for this milk.

Similarly, there is less than 30 cents worth

cotton in a \$3.95 cotton shirt.

In the case of tobacco, Federal, State, and local taxes on the 1953 crop amounted to almost three times as much as farmers received for that part of their crop consumed in the United States.

The Grange had something to say about middlemen in its declaration of purpose written in 1874 and now called the Farmers Declaration of Independence: "For our business interests, we desire to bring producers and consumers, farmers, and manufacturers into the most direct and friendly relations possible, hence we must dispense with the surplus of middlemen, not that we are unfriendly to them, but we do not need them. Their surplus and their exactions diminish our profits."

We want no surplus of middlemen or unfair profits among them at the expense of the producers on the farm. In all fairness, however, the consumer should understand the essential part distributors, processors, and transporters play in the drama of food and that much of the costs added to food after it leaves the farms is due to the consumer's demand for better processing, new mixtures, improved sanitation and more convenient and attractive packaging, plus increased labor costs in processing, distribu-

tion, and marketing.

The food industry must continue to give consumers what they want and what they are willing to pay for. But at the same time the industry should let consumers know that these increased costs occur after the products leave the farm and do not add to the income of the farmer.

And that brings me to the third fallacy I mentioned a while ago, namely, that farm programs have worked to the disadvantage of consumers.

The fact is consumers get more and better food today with an expenditure of a smaller percentage of their total income than at any other period in history.

Figures prepared by the Department of Agriculture show that in 1929 the average factory worker could buy 6.4 pounds of bread with an hour's earnings. Today the average hour's earning will buy 10.3 pounds.

The average hour's wage would buy 1 pound of butter in 1929 and 2.6 pounds today; 3.9 quarts of milk in 1929 and 7.9 quarts today; 1.4 dozen eggs in 1929 and 2.9 dozen today; 17.7 pounds of potatoes in 1929 and around 30 pounds today; 4.4 No. 2 cans of tomatoes in 1929 and 10.3 cans today; 1.2 pounds of round steak in 1929 and 2 pounds today, and so on down the list.

Our earliest farm programs began in 1929. Thus it will be noted that this large reduction in the price of food in relation to wages has occurred during the years of the development of the present program, which has for its overall aim a parity of income for agricul-

In other words, it is clear that consumers have gotten the greatest real reductions in of food and fiber during the time of growth toward farm income stability.

And then we come to the belief that agriculture is being subsidized in vast amounts by the Federal Government and to a greater

extent than other industries.

While it is the hope of all of us in agriculture that modifications of our programs which will better balance supply and de-mand, and the tailoring of specific programs to meet the needs of particular commodities, plus improved marketing policies and practices will reduce and perhaps in time eliminate most agricultural subsidies, I think we should point out to our friends in the cities that the subsidy is the oldest economic principle known in our Government, and only in fairly recent years has it been used to any appreciable extent to protect agriculture.

The First Congress in 1789 set up a subsidy program to encourage the development of an American merchant fleet. Many billions in subsidies have gone to business and industry. The House Appropriations Committee in January 1954, published figures indicating subsidies amounting to about \$45 billion have been paid to business and to consumers during and since World War II. A large part of this was in business reconversion payments.

In contrast, farm price supports and surplus removal operations for the 20 years up through 1953 cost enly \$3,500,000,000, or 1 percent of the value of crops and livestock

marketed.

What is the answer to all of this? I think it has very largely with agriculture itself.

I think it should be the first duty of the Department of Agriculture, of farm organizations, of the farm press, and of the cultural committees in Congress to tell the truth about agriculture and to point out to those who are misinformed on these matters just what the facts are.

We must plant a new crop-a universal crop with a universal harvest-a harvest of understanding. We must tell the people in the cities what they do not know—tell them of the fallacies that tend to separate us.

Let them know that the people on the farms have less than half the average income of people who live elsewhere.

Let them know that fewer than half the farm homes in the United States have running water. They perhaps will be surprised at this, but it is true.

Tell them that farmers cannot conserve their soil and maintain its fertility for fu-

ture generations unless they have adequate

incomes with which to do it.

Emphasize the social and moral values as well as the general economic necessity of maintaining the prosperity of the familysize farm.

Tell our city friends why we need the farm program, that as an individual the farmer has no control over the prices he receives and no adequate way of adjusting his production to the total market demand for his commodities.

Ask how long our free-enterprise system would last if all industry operated as must the producers of major crops in agriculture producing 11 months in the year and selling on overflowing markets at one season, not at what producers fix as a fair price as an industry, but at what buyers are willing to pay.

Tell them the safety of the consuming population requires that we have on hand more food than can currently be used, that this margin of safety is known as a surplus in the market place and constantly depresses the farmer's prices unless we have a farm

program.

Tell them that one carload of potatoes on the market in New York City-just one more car than is needed-can depress the price of potatoes all over the United States.

Impress upon all our friends that we must recognize the interdependence of all segments of our economy; that what we are talking about is a tremendous economic problem affecting every phase of our national life; that any farm program must be fair to farmers and consumers alike and serve the best interests of all our people.

All of us who are interested in agriculture must have a part in this public relations program to convince the consumers that the farm problem is everybody's problem.

I know of no organization or group better fitted to undertake leadership in such a program than the National Grange. With its background of almost 100 years as a great farm organization, its record of standing for the solid traditional American virtues, with the prestige that comes from generations of wise leadership, and with the respect in which it is held by farmers and nonfarmers alike-the Grange and its officers and members can do much to bring about that sympathetic understanding by everyone of the problems of the people who live on the land.

I am sure that this is a matter which has been given consideration and attention by the officers and leaders of this great fraternity. I am bringing it up today because I am convinced of its urgency and impor-

It is a problem which canot be met in a passive way. It constitutes a challenge and an opportunity which I am sure must appeal to you as leaders in agriculture and as good citizens who are striving to make a better nation of this great land of ours.

Hon. Sam Rayburn

SPEECH

HON. JOE M. KILGORE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1955

Mr. KILGORE. Mr. Speaker, you have been honored on the occasion of your birthday by many of this great Nation's most esteemed people. I hope that it is not presumptuous of me, as a freshman Congressman, to speak at least for me and the people of Texas' great 15th District in offering congratulations on your anniversary and a prayer that many more years are yours to serve our Nation and guide this, the greatest deliberative body the world has yet known.

It has never before been my pleasure to serve with you, but it has been my pleasure to closely watch you and your activities through my comparatively few years. It is my extreme pleasure to now be a Member of this body and to be among those to wish for you, on behalf of the 15th District of Texas, many, many happy returns of this memorable

Post Office Department Report

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following excerpt of an article by Mr. Jerry Kluttz, of the Washington Post and Times-Herald, which appeared in the November-December 1954 issue of the Postmasters Gazette, gives a fine synopsis of the accomplishments that resulted from the recommendations made

by the Subcommittee on Postal Operations of which I had the honor to be chairman during the 83d Congress.

My colleagues on this subcommittee were Messrs. Withrow, Gross, Bonin, Broyhill, Jarman, Dowdy, Boland, and Reams. I am sure they are as gratified as I am with the work and accomplishments of our subcommittee.

POST OFFICE DEPARTMENT REPORT

The House Postal Subcommittee, headed by Representative KATHARINE ST. GEORGE, Republican, of New York, conducted a management survey of postal operations and its recommendations already placed into effect have saved Uncle Sam an estimated \$70 million annually.

The St. George group took the lead in

urging the Department to set up a personnel division, a promotion plan for its employees, and a classification plan for its jobs.

It recently asked the Post Office Depart-

ment to report to it the action taken on each of its recommendations. A summary of them follows with the Department's comment on each.

1. A review of the qualifications of the supervisory force.

Post Office Department reported: "A study is being made of the most practical manner to accomplish this."

2. Uniform pay for custodial employees in the Federal service, including postal emplovees.

Post Office Department reported: "New grades and salaries will be proposed for them."

3. Postmasters be required to take leave during their terms of office.

Post Office Department reported: "Liquidation of leave applies to postmasters."

4. Procurement of qualified transportation specialists in the postal servicee.

Post Office Department reported: Bureau of Transportation is headed by an Assistant Postmaster General. The policy is to fill all key positions in the Bureau with qualified specialists."

5. Separation of management function from the Inspection Service.

Post Office Department reported: "Creation of a new organizational element in the service dealing with management studies and procurement of several qualified manage-ment aides to make specialized management studies (estimated saving, \$23 million)

6. Revision of labor-management relations in the postal service, including elimination of job-ticket procedures in the Chicago Post Office.

Post Office Department reported: "A major objective of the Bureau of Personnel is improvement in management-employee relationship. Job-ticket procedures at Chicago

7. Revision of procedures and use of costascertainment system.

Post Office Department reported: "Studies of the cost-ascertainment system have been made and action taken as indicated from studies."

8. Establishment of a firm policy with respect to management of post-office cafe-

Post Office Department reported: "Investigations were conducted and corrective action as indicated taken."

9. Establishment of a forms-control pro-

Post Office Department reported: "A forms-control program has been inaugurated and is in effect."

10. Conference of postmasters and key supervisors.

Post Office Department reported: "Such conferences have been held and contemplated in the future."

11. Visits of top policy officials to large post offices.

Post Office Department reported: The Department favors this recommendation and it is being carried out."

12. Postmasters should have more authority to act on management problems.

Post Office Department reported: tralization has helped accomplish this recommendation. Postmasters have been given authority to act on many additional mat-

13. Addition of qualified technical personnel to handle the research and development program.

The Post Office Department reported: "Qualified engineering personnel have been engaged from private industry and other governmental agencies to work on this program."

14. Analyses be made of space utilization in the major post offices, including possible establishment of parcel-post processing units outside congested areas.

The Post Office Department reported: "Buildings Management Section, under a newly created Division of Real Estate, is setting up a space assignment and utilization unit which will have this responsibility. Regional supply centers will be established in large cities removed from the main post office !

15. Discontinue storage of 35 million paid postal-savings certificates.

Post Office Department reported: "Public Law 487, approved July 14, will bar all claims on certificates after 6 years. will permit destruction of the 35 million certificates now in storage (estimated sav-

16. Revision of administrative examination of postal-savings business.

The Post Office Department reported: "Central examination has been discontinued, now under authority of the regional accounting offices (estimated saving, \$100,000)."

17. No certificates for postal savings be issued for less than \$25 (stamps could be

The Post Office Department reported: "Two-dollar certificate eliminated; \$1,000 and \$2,500 certificates provided, thus eliminating a large number of \$500 certificates."

18. Limitations on exchange of postal savings certificates of at least 60 days.

Post Office Department reported: "Law requires certificates be payable on demand. However, a charge of 10 cents for each certificate is now being made if they are cashed within 30 days of issuance (estimated sav-ing, \$300,000)."

19. All claims of \$25 or less be settled by local postmasters.

Post Office Department reported: "The Department believes all claims should be handled by specialists. Requirements have been liberalized and the Department feels this has greatly improved this matter."

20. Analysis be made of fourth-class post offices whenever vacancy in office of post-master occurs to determine if office should be continued.

Post Office Department reported: "One thousand fourth-class post offices have been closed in 12 months."

21. Consolidation of fourth-class post of-

fices on light rural routes.

Post Office Department reported: "Nine thousand five hundred and one extensions to rural routes were placed in effect in fiscal year 1954, resulting in closing of small post offices in many instances."

periods between visits of Longer inspectors to fourth-class post offices (now annually).

Post Office Department reported: "Department did not concur in this recommenda-

23. Establishment of a ratemaking board with the Post Office Department.

Post Office Department reported: "Department concurs but feels it should be established by law. A Division of Postal Rates has been set up within the Department."

24. Uniformity in size and weight of par-

cels sent through the mail.

Post Office Department reported: "The Department concurs in this recommendation."

25. Simplification of budgetary, allotment, and payroll procedures and controls in the Department.

The Post Office Department reported: "Such a project is now underway."

26. Elimination of accounting and reporting by small post offices.

The Post Office Department reported:

"This is being studied and corrective action taken where deemed advisable."

27. Requirement that third-class mallers sort their mail by zones for delivery in large

The Post Office Department reported: "The Department is constantly urging zoning numbers on mail and furnishes zone information on mailing lists

28. Arrangements should be made for late pickup at selected letter boxes in most large cities.

Post Office Department reported: "This has been accomplished in most large cities."

29. Modification on restriction on giving overtime work to regular employees.

The Post Office Department reported: "This was accomplished at Christmas time when it was felt it was more effective."

30. Consolidation of responsibility for financial management of the Post Office Department under a top-level management

The Post Office Department reported: "This has been accomplished by a newly organized Bureau of the Controller."

31. Establishment of an internal audit organization to report to highest authority in the Department.

The Post Office Department reported: "A Division of Internal Audit has been established with the Director reporting directly to the Controller."

32. Concentration of accounting activities at points where operations are controlled.

The Post Office Department reported: "Regional controllerships are being established."

33. Development of work-measurement standards.

The Post Office Department reported: "Projects are underway."

34. Accounting personnel should be hired under general schedule classifications.

Post Office Department reported: "This is being carried out."

35. Reduction of the number of allotment accounts

Post Office Department reported: "This is being effected."

Centralization in one office of final au-

thority to grant allowance to the field.

Post Office Department reported: "This is being studied."

37. Elimination of formal accounting by district post offices.

Post Office Department reported: "Plans are underway to accomplish this."

38. Establishment of a pay lag.
Post Office Department reported: "Depart-

ment recommend Congress pass a biweekly pay bill."

39. Centralization of payroll operations of small post offices in regional accounting

Post Office Department reported: "This recommendation is being carried out."

40. Elimination of duplication of retire-

ment records.

Post Office Department reported: "This is being studied and will soon be accomplished."

41. Discontinuance of payment of salaries

Post Office Department reported: "Payments to departmental employees and mail equipment shop employees are now being made by check.

42. Centralization of departmental payroll operations.

Post Office Department reported: "All payroll and leave functions for departmental employees have been transferred to the Bureau of the Controller.'

43. Delegation of authority to effect auto-

matic promotions.

Post Office Department reported: "Studies are being made of this matter.

44. Adoption of a biweekly pay period.
Post Office Department reported: "The Department is supporting a bill to accomplish this."

Political Exaggerations

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. HOSMER. Mr. Speaker, the following editorial appeared in the January 6, 1955, issue of the Long Beach Press-Telegram newspaper. It sets the record straight and I commend it to my colleagues:

POLITICAL EXAGGERATIONS

The righteous indignation expressed by Democratic congressional leaders over GOP campaign language is an amusing hypocrisy.

We're aware that the virtue of intellectual honesty has taken beatings on occasion from members of both political parties. And we don't think evil on one side justifies evil on the other. But it is only fair to keep the record straight.

The Democratic leaders complain of alleged remarks that they interpreted to be the impugning of the loyalty of Democrats, and they even want some apologies. Their

sensibilities were not so easily shocked in past times when genuine and unmistakable insults dropped upon Republicans.

It is strange that the men who tolerated the campaign language of their colleague. Harry Truman, in 1948 and 1952 are so sensitive to the relatively mild utterances of Vice President Nixon in 1954.

Their main complaint is that Nixon recharged them with disloyalty. Nixon repeated the disputed remarks during a campaign visit to Long Beach, and we made no such interpretation. He did charge the administration of Harry Truman with evading the issue of communism in Government, but the charge was laxity and obstinacy, not disloyalty. The evidence Nixon submitted consisted of repeated remarks by Truman that investigations of communism in Government were mere red herring tactics.

If apologies are due, perhaps the Democratic congressional leaders should consider a sort of bargain deal.

They could apologize for Harry Truman's charge that the Republican 80th Congress aided the power lobby in "crudely and wickedly cheating" the people; or for his charge that the House Un-American Activities Committee was "more un-American than the activities it is investigating"; or that "powerful forces" like those that created European fascism were "working through the Republican Party" to "undermine" American democracy; or for his comparison of "all this Republican talk about communism" with the anti-Catholic "whispering campaign" of 1928

Exaggeration, as we see, is a familiar tool

of political campaigning.

It is a tool which the Democratic leaders have already begun to use in the campaign of 1956. The fact is that they want the people to believe that the Democratic Party has been grossly insulted, in order to gain sympathy.

We may expect more of this sort of thing, from both sides, as 1956 draws nearer, even though it does seem incongruous for politicians to appeal to the sense of fair play of the public by unfairly distorting the position of the opposition.

The only defense the public has against such tactics is to judge candidates by what they say, not by what their opponents say they say.

Red "Soldiers in Smocks" Perverting United States Art

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include therein an article written by William F. Alder, of California, on the subject of Communist infiltration of American art.

This may not be a new subject called to the attention of Congress and the American people, but the article does indicate clearly how far Communists have already penetrated art in the United States and is in support of my own efforts during the last few years on the same subject. I addressed the Congress 3 or 4 times on different occasions in order to expose this danger and to preserve legitimate art in the traditional American way as we have always known it in our

land. I commend this article to the reading of every Member of Congress. RED "SOLDIERS IN SMOCKS" PERVERTING UNITED STATES ART

(By William F. Alder)

As one studies the record of Communist infiltration into every facet of American life, there can be no doubt as to its aim, its penetration to the very grassroots and the pattern of its approach.

As stated in my previous article, art offers a blatant example of this. William Z. Poster, chairman of the Communist Party of America at the time, made this statement in the April 23, 1946, issue of the Communist maga-

zine New Masses:

"There must be a clear understanding that art is a weapon in the class struggle. That not only is art a weapon but a very potent one as well. Moreover, rising revolutionary social classes instinctively realize the importance of art as a social weapon, have always forged their own art and used it to challenge that of the existing ruling classes."

Foster's association of art with the ruling classes is indicative of the Communist's true grasp of its potency, for its victims—the proletariat—cannot be counted as potential purchasers of fine art. Only in a lesser degree than formerly are the artists of today dependent on patrons for their livelihood. In the days of Da Vinci, the real artists were given the full patronage of princes and wealthy merchants. Likewise today, our outstanding artists become renowned because of the recognition of their talents by persons of wealth whose patronage confers the accolade of fame.

In every walk of life there are those misfits who would substitute the position of others for their own out of envy for the apparent ease by which a contemporary gains wealth and high public regard. the motivating cause of the original move-ment by would-be artists, hacks and fallures, in Europe who attempted to organize a guild-a trade union-of professional artists and thus gain control of the profession and eventually starve out of existence the reigning successful members of their craft. Unable to exist out of their own talents, these would-be artists followed the course of iconoclastic members of any calling who cannot out of themselves compete highly skilled and therefore continuously employed craftsmen. They see in a tightly knit, self-serving organization controlled by themselves, the only feasible safeguard for their hapless mediocrity.

ART'S PIED PIPERS

Thus was the Artists' Equity Association formed under the leadership of this William Z. Foster, who is enlisting the big names in art necessary to act as Pied Pipers—the Rock-well Kents, Paul Robesons, et al.—for the rabble, was careful to mask his ultimate purpose under the customary party line, "the liberation of the proletariat."

In this lies the danger to the innocent American artist in his career who unknow-ingly joins this Artists' Equity Association. These young artists, however, soon learn that unless their art conforms to the unorthodox standards of modernism they cannot secure even honorable mention at the vast majority of exhibitions held in the United States.

This Communist-front Artists' Equity Association was formed at the Modern Museum of Art, New York City, in April 1947. It is an extension of the American Artists' Con-gress, which is listed in our Government printed pamphlet Citations as a Communistcreated and controlled organization.

Another leading protagonist of this organized movement is one William Gropper, a clever cartoonist, but an infinitely more clever revolutionist, who has a House Un-American Activities Committee record of 60 radical affiliations. He is a regular contributor of subversive cartoons to the Communist newspapers, New Masses, New Ploneer, The Worker, Daily Worker, and Soviet Russia Today.

A letter by this Gropper, addressed to his superiors to Moscow, points unmistakably to the meticulous attention every section the country, including California and the entire west coast, is receiving from the organized hierarchy channeled through the Museum of Modern Art and the John Reed Club, its alter ego, in the city of New York.

Quoting Gropper's reply to Moscow, in

"In reply to your cable requesting me to report on my activities and action in fighting the imperial war, allow me to state, in short,

as follows:

1. I have held exhibitions of cartoons, drawings, and paintings on the imperialist war and the defense of the Soviet Union throughout the west coast of the United States of America, like Berkeley, San Francisco, Los Angeles, and in galleries in New York City.

"2. At present I am at work on a mural painting to be exhibited in the Museum of Modern Art, which thousands of people visit weekly, and shall register my protest by exposing the war plot against the Soviet Union

in this painting.

"3. I am also organizing, through the bureau of the John Reed Club, a counter exhibition to be held in the galleries of the John Reed Club by its members. The artist group of the John Reed Club has also been active in painting postcards and streamers for demonstrations

"With revolutionary greetings,
"WILLIAM GROPPER."

SOLDIERS IN SMOCKS

One could continue at great length to enumerate the present-day active soldiers in smocks in conjunction with the presently militant, subversive organization known as Artists' Equity.

The Communist art that has infiltrated our cultural front is not the Communist art of present-day Russia. The Communist-inspired art we Americans call modernistic is communism's weapon of destruction. It was exported to us as a part of Russia's program for world domination. Present-day art in Russia has return to the traditional, represensational form, for only such art can be used for constructive propaganda.

The art of the isms with which we are now submerged, it must be remembered, is not an American conception, but was imported for the sole purpose of overawing. overriding and overpowering the fine arts

of our traditional inheritance.

If one but stops to consider the appearance of the suffix "ism" in the American vernacular, he will instantly realize that it stemmed from Europe and is not an American word form as regards its application It started with such terms as dadaism, futurism, constructivism, suprematism, cubism, expressionism, surrealism and abstractionism, just to name a few, all of which have no place in American art, but are strictly invidious imports from an effete and wholly decadent, immoral coterie of European nihilists.

The leaders among this movement to clamp confusion and false premises upon the minds and lives of all Americans were, of course, Picasso, Braque, Leger, Duchamp, Dali, and sculptor Alexander Archipenko. Believe it or not, Archipenko recently was added to the faculty of Oregon State Uni-

versity to teach sculpture.

Archipenko is notorious also for his specialty of flame-like, nude female torsos, usually sans arms, legs, and even heads.

Way back in 1935, Earl Browder, as general secretary of the Communist Party in America, helped implement the next sinister act of the Moscow plot to gain control of art and literature in the United States as part of its plan to destroy and take over he whole American economy. This was the for-

mation of the League of American Writers as an active section of the International Union of Revolutionary Artists and Writers with headquarters in Moscow. Its affiliate, the American Artists' Congress was organized

the following year.

Membership of the League of American Writers included most of the radical minded

art and book critics.
Attorney General Tom Clark, in letters to the review board, cited the League of Ameri-

can Writers as Communist and subversive. That this plan is being carried out with dedicated persistence and characteristic stealth of a movement now gone underground, as FBI Chief J. Edgar Hoover warned, there can be no doubt. Communist Gropper's personal invasion of the west coast on behalf of the "imperialist revolution" is but a drop in the bucket as regards the continuous and constantly augmented attacks on west coast thinking and ethical standards.

OJAI VALLEY VISIT

The most recent example of this proselyting in Ventura County centered in Meiners Oaks, Ojai Valley. Here we find a group of gullible Americans listening with rapt attention to a lecture by a traveling, self-styled Marxist missionary notorious for his anti-American subversive activities, Joe R. Starobin, who was invited to attend a meeting of so-called Progressives in the home of Mrs. Elma Kays.

Asked by a reporter whether he was a member of the Communist Party, Starobin said his political views are well known but that So. just his beliefs are his own business. to keep the record straight and tag this Starobin for what he is, we cite from the Fourth Report of the Joint Fact Finding Committee to the 1948 California Legislature.

On page 186, Joseph Starobin is listed as being a member of a subsidiary Communist front created by the notorious American Youth for Democracy, parent of a number of innocent sounding organizations. He was among the leaders of the Friends of the Campus branch. Again, on page 226, Joseph Starobin is listed as one of the sponsors of the Conference on Constitutional Liberties in America, along with Gerhart Eisler, William Z. Foster, Eugene Dennis, and a host of others.

Again, on page 3377, he is cited as being editor of the New Masses, a notorious Com-munist publication which was the monthly organ of the National Student League which headed a revolutionary movement among the students of high schools, colleges, and universities. Again, regarding the New Masses, he is listed as being connected with the com-bined magazines, Main Stream and New Masses, under the title, "Masses," which was suppressed by the Government for its subversive policies.

Among the names listed with his in this connection were those of William Gropper, John Howard Lawson, Paul Robeson, the late Vito Marcantonio, and a dozen others. Again, en page 342, Starobin appears in the role of a newspaper writer for the People's Daily World which is the west coast mouthpiece of the Communist Party.

It was a matter of pained admission by the Joint Fact Finding Committee of California that the People's Daily World "utilizes the service of the United Press, and on many occasions garbles the press items furnished by the United Press in bending the news to the Communist Party line. Apparently the United Press can do nothing about it.

So, if there is any lurking doubt as regards the underlying purpose of the meeting held in the home of Mrs. Emma Kays in Meiners Oaks, Ojai Valley, the concluding words of the editorial printed in a Ventura newspaper of July 9, 1954, would seem to It said: "If Ventura cover the situation. It said: "If Ventura County doesn't have a trifle of Communist hang-over in its midst, it will do until a redder one comes along."

Diplomatic Relations Between the United States and the Soviet Union

EXTENSION OF REMARKS

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Monday, January 10, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Case for Severing Relations With Soviet Rulers," written by David Lawrence, and published in the U. S. News & World Report of December 17, 1954. The article traces the diplomatic relations of the United States with the Soviet Union.

I am informed by the Public Printer that the article is estimated to make 71/4 pages of the RECORD at a cost of

\$580

There being no objection, the article was ordered to be printed in the RECORD. as follows:

THE CASE FOR SEVERING RELATIONS WITH SOVIET RULERS

(By David Lawrence)

(EDITOR'S NOTE.-Is it time to break diplomatic relations with Communist Russia? Has United States only aided Soviet rulers by recognizing a Government that openly seeks 16 years to overthrow this Nation? For American Presidents avoided relations with the Kremlin. For the last 21 years recognition has been extended. All through this period official records show agreements violated, hostile acts committed, warnings of Soviet intent to injure United States. American Government today is talking of peaceful coexistence and still hopes to do business with the Communist rulers of Russia. What follows is a study of official records—the warnings that began 35 years ago. They read as if they were written yesterday.) L WHY RECOGNITION WAS WITHHELD IN THE 1920'S

To understand what is fundamentally involved in the question of severing diplomatic relations with the Soviet Government, we must reexamine the facts of our own troubled relations with Soviet Russia-the facts in the period prior to the resumption of diplomatic relations with Moscow in 1933.

We must study especially the basis on which recognition was originally extended, and review particularly the solemn agree-ments and pledges made by the Soviet Union which have since been flagrantly violated.

As we look at the history prior to the initiation of our present diplomatic relations with the present Soviet Government in Moscow we find a remarkable record. It is evident that few people today who discuss the question have ever read the actual documents in the case.

In the first place, 16 years elapsed while this very question of resuming diplomatic relations was argued, not only in the forums of the world, but in the diplomatic correspondence between the United States and various governments, other than Russia.

The first document which it is important to note was a message sent on August 2, 1920, by Bainbridge Colby, Secretary of State in the Democratic administration of President Woodrow Wilson, to the American Ambassador in Great Britain, Norman Davis. It read in part as follows:

It is the feeling of the American Government that recognition of the Soviet regime or negotiations with it involves sacrificing moral strength for the sake of material gains,

advantages which will prove to be temporary and bought at a very high price. This Government feels that no permanent and just settlement of eastern European affairs can be thus attained. The revulsion felt by the civilized world against the tyranny holding Russia in its power is shared by this Government. This tyranny disregards all principles upon which dealings and relations between nations are founded and is not freely chosen by any considerable part of the people of Russia. A permanent and wise solution of the problem of Russia, it would seem, cannot be reached until there is put into effect a plan whereby all elements of the Russian people will be represented effectively for the consideration of the reciprocal needs, political and economic, of the different regions which made up imperial Russia.'

On August 10, 1920, Secretary Colby, in a communication to the Italian Ambassador in Washington, who had inquired on behalf of the Italian Government concerning the views of the United States with respect to the Russian advance into Poland, wrote as

"That the present rulers of Russia do not rule by the will or the consent of any considerable proportion of the Russian people is an incontestable fact. Although nearly 21/2 years have passed since they seized the machinery of government, promising to protect the Constituent Assembly against alleged conspiracies against it, they have not yet permitted anything in the nature of a popular election. At the moment when the work of creating a popular representative government based upon universal suffrage was nearing completion the Bolsheviki, although, in number, an inconsiderable minority of the people, by force and cunning seized the powers and machinery of government and have continued to use them with savage oppression to maintain themselves in power.

"Without any desire to interfere in the internal affairs of the Russian people, or to they suggest what kind of government should have, the Government of the United States does express the hope that they will soon find a way to set up a government representing their free will and purpose. that time comes, the United States will consider the measures of practical assistance which can be taken to promote the restoration of Russia, provided Russia has not taken itself wholly out of the pale of the friendly interest of other nations, by the pillage and oppression of the Poles.

"It is not possible for the Government of the United States to recognize the present rulers of Russia as a Government with which the relations common to friendly govern-

ments can be maintained. This conviction has nothing to do with any particular political or social structure which the Russian people themselves may see fit to embrace. It rests upon a wholly different set of facts.

"These facts, which none dispute, have convinced the Government of the United States, against its will, that the existing regime in Russia is based upon the negation every principle of honor and good faith, and every usage and convention, underlying the whole structure of international law; the negation, in short, of every principle upon which it is possible to base harmonious and trustful relations, whether of nations or of individuals.

"The responsible leaders of the regime have frequently and openly boasted that they are willing to sign agreements and undertakings with foreign powers while not having the slightest intention of observing such undertakings or carrying out such agreements. This attitude, of disregard of obligations voluntarily entered into, they base upon the theory that no compact or agreement made with a non-Bolshvist government can have any moral force for them. They have not only-avowed this as a doctrine, but have exemplified it in practice.

"Indeed, upon numerous occasions the responsible spokesmen of this power, and its official agencies, have declared that it is their understanding that the very existence of bolshevism in Russia, the maintenance of their own rule, depends, and must continue to depend upon the occurrence of revolutions in all other great civilized nations, including the United States, which will overthrow and destroy their governments and set up Bolshevist rule in their stead. They have made it quite plain that they intend to use every means, including, of course, diplomatic agencies, to promote such revolutionary movements in other countries.

"It is true that they have in various ways expressed their willingness to give 'assurances' and 'guarantees' that they will not abuse the privileges and immunities of diplomatic agencies by using them for this purready referred to, such assurances and guarantees cannot be very seriously regarded.

"In the view of this Government, there cannot be any common ground upon which it can stand with a power whose conceptions of international relations are so entirely allen to its own, so utterly repugnant to its moral sense. There can be no mutual confidence or trust, no respect even, if pledges are to be given and agreements made with a cynical repudiation of their obligations already in the mind of one of the parties. We cannot recognize, hold official relations with. or give friendly reception to the agents of a government which is determined and bound to conspire against our institutions; whose diplomats will be the agitators of dangerous revolt; whose spokesmen say that they sign agreement with no intention of keeping them."

The foregoing note was delivered to all embassies and legations of the United States abroad. This was the deliberate opinion of the Department of State under a Democratic administration.

Let us look now at the viewpoint of the United States Government as expressed in a Republican administration when the Secretary of State was Charles Evans Hughes, who had served previously as an Associate Justice of the Supreme Court of the United States and was later to become Chief Justice of the United States.

Mr. Hughes, on March 21, 1923, addressed a delegation of the Women's Committee for Recognition of Russia. During that address he said:

"As I said to the representatives of your organization a year ago, the fundamental question in the recognition of a government is whether it shows stability and a disposition to discharge international obligations. Stability, of course, is important; stability is essential. Some speak as though stability was all that was necessary. What however would avail mere stability if it were stability in the prosecution of a policy of repudiation and confiscation? In the case of Russia we have a very easy test of a matter of fundamental importance, and that is of good faith in the discharge of international obligations.

"I say that good faith is a matter of essential importance because words are easily spoken. Of what avail is it to speak of assurances, if valid obligations and rights are repudiated and property is confiscated? This is not a question of the rich or of the poor. It's a question of principle. * * *

"Here is a simple test. We have in this case no need to speculate, as of what avail are assurances when we find properties taken, without compensation or restoration, obligations repudiated-properties of all sorts, the investments of one of our great life insurance companies, for example.

"Not only would it be a mistaken policy to give encouragement to repudiation and confiscation, but it is also important to remember that there should be no encouragement to those efforts of the Soviet authorities to visit upon other peoples the disasters that have overwhelmed the Russlan people. wish that I could believe that such efforts had been abandoned. Last November-last November Zinoviev (head of the Communist International) said: "The eternal in the Russian revolution is the fact that it is the beginning of the world revolution.'

"Lenin, before the last Congress of the Third Internationale, last fall, said that, "The revolutionists of all countries must learn the organization, the planning, the method and the substance of revolutionary work... Then, I am convinced,' he said, 'the outlook of the world revolution will not be good but

excellent.'

"And Trotsky, addressing the Fifth Congress of the Russian Communist Youths at Moscow last October-not 2 years ago, but last October-said this: "That means, comrades, that revolution is coming in Europe as well as in America, sytematically, step by step, stubbornly and with gnashing of teeth in both camps. It will be long protracted, cruel and sanguinary.'

"Now I desire to see evidences of the abandonment of that policy. I desire to see a basis for helpfulness. We want to help. We are just as anxious in this department and in every branch of the administration as you can possibly be, to promote peace in the world, to get rid of hatred, to have a spirit of mutual understanding, but the world we desire is a world not threatened with the destructive propaganda of the Soviet authorities, and one in which there will be good faith and the recognition of obligations and a sound basis of international intercourse."

A few months later in the same year, July 9, Samuel Gompers, president of the American Federation of Labor, wrote to Secretary Hughest and asked for an expression of his views on the American position regarding the Russian Soviet power. The labor leader said it had been the consistent contention of the American Federation of Labor "that the Soviet power cannot be recognized because it is an autocracy forced upon the people of Russia without their consent and against their will and maintained in the same manner.

Mr. Gompers added that he could not see where good crops or an improving economic condition, including an acknowledgment of Russia's financial obligations, could change the American position regarding recognition "as long as the principle of tyranny remains.

Mr. Hughes, on July 19, made a lengthy reply in which he said in part:

'The fundamentals of the Russian situation are pretty generally understood in the United States and have made a profound impression upon the thought of our people. We are constantly made aware of this in the Department of State by the various ways in which public opinion makes itself felt in the seat of Government. We learn of the hope of America that Russia should have the opportunity of free political expression and that she should be enabled to restore her economic life and regain prosperity and once more to take her place among the nations on the basis of mutual helpfulness and respect.

There can be no question of the sincere friendliness of the American people toward the Russian people. And there is for this very reason a strong desire that should be done to place the seal of approval on the tyrannical measures that have been adopted in Russia or to take any action which might retard the gradual reassertion of the Russian people of their right to live in freedom. * * * in freedom. *

"We are not concerned with the question of the legitimacy of a government as judged by former European standards. We recognize the right of revolution and we do not attempt to determine the internal concerns of other states. .

"When there is a question as to the will of the nation it has generally been regarded as a wise precaution to give sufficient time to enable a new regime to prove its stability and the apparent acquiescence of the people in the exercise of the authority it has assured. The application of these familiar principles, in dealing with foreign states, is not in derogation of the democratic ideals cherished by our people, and constitutes no justification of tyranny in any form, but proceeds upon a consideration of the importance of international intercourse and upon the established American principle of non-intervention in the internal concerns of other peoples.

"But while a foreign regime may have securely established itself through the exercise of control and the submission of the people to, or their acquiescence in, its exercise of authority, there still remain other

questions to be considered. "Recognition is an invitation to Intercourse. It is accompanied on the part of the new government by the clearly implied or express promise to fulfill the obligations of intercourse. These obligations include, among other things, the protection of the persons and property of the citizens of one country lawfully pursuing their business in the territory of the other and abstention from hostile propaganda by the one country in the territory of the other. In the case of the existing regime in Russia, there has not only been the tyrannical procedure to which you refer, and which has caused the question of the submission or acquiescence of the Russian people to remain an open one, but also a repudiation of the obligations inherent in international intercourse and a defiance of the principles upon which alone it can be conducted. • • •

"What is most serious is that there is conclusive evidence that those in control at Moscow have not given up their original purpose of destroying existing governments wherever they can do so throughout the world. Their efforts in this direction have recently been lessened in intensity only by the reduction of the cash resources at this disposal. * *

"While this spirit of destruction at home and abroad remains unaltered the question of recognition by our Government of the authorities at Moscow cannot be determined by mere economic considerations or by the establishment in some degree of a more prosperous condition, which of course we should be glad to note, or simply by a consideration of the probable stability of the regime in question.

"There cannot be intercourse among nations any more than among individuals except upon a general assumption of good faith. We would welcome convincing evidence of a desire of the Russian authorities to observe the fundamental conditions of international intercourse and the abandonment by them of the persistent attempts to subvert the institutions of democracy as maintained in this country and in others. It may confidently be added that respect by the Moscow regime for the liberties of other peoples will most likely be accompanied by appropriate respect for the essential rights and liberties of the Russian people themselves.

"The sentiment of our people is not deemed to be favorable to the acceptance into political fellowship of this regime so long as it denies the essential basis of intercourse and cherishes, as an ultimate and definite aim, the destruction of the free institutions which we have laboriously built up, containing as they do the necessary assurances of the freedom of labor upon which our prosperity must depend."

The diplomatic documents in the foreign relations of the United States are filled with episodes confirming, incident by incident, the views expressed by Secretary of State Hughes, Operations of the Communist Party throughout the world were the subject of many interesting communications which are printed in the records.

There were even denials by the Russian Government that it was intimately connected with the Communist International, and there was a time when Moscow endeavored to creat the impression that it no longer favored international operations by the Communits Party abroad.

II. MISGIVINGS ABOUT RECOGNITION IN 1933

We come then to the period immediately preceding the recognition of the Soviet Government in 1933. The published documents of our diplomatic history show that, during the period of 16 years in which the United States Government refused to extend recognition, there was no evidence of any important change in the policy of the Soviet Government. But the economic pressure inside Soviet Russia became intense, and it was evident that the Moscow Government needed the recognition of the United States in order to carry on trade with this country and other countries. So a determined effort was made by the Communists to try to impress the new administration in Washington, the Democratic administration of Franklin D. Roosevelt and the New Deal, that the time had come for recognition and a change.

Notable is the document prepared by Robert F. Kelley, Chief of the Division of Eastern European Affairs in the Department of State, dated July 27, 1933, which was handed to President Roosevelt by the Acting Secretary of State on that date.

Having determined to take a chance on recognition and the resumption of diplomatic relations, there was a desire, at the same time, to impose conditions so as to achieve, through the very act of recognition, some of the agreements which it had not been possible to attain before.

The Kelley memorandum said:

"In order that the United States may derive from the recognition of the Soviet Government the benefits which normally follow the recognition of a foreign government, the recognition of the Soviet Government should involve the establishment of relations with Russia on a basis which would render possible the maintenance of friendly cooperation between the Governments of the United States and Russia, and the development of trade and intercourse between the two countries.

"The experience of countries which have extended recognition to the Soviet government has shown pretty conclusively, it is believed, that there are serious obstacles in the way of the establishment of the relations with Russia on such a basis, and that so long as these obstacles remain, official relations, established as a result of recognition, tend to become, in view of the extraordinary nature of these obstacles, the source of friction and ill will rather than the mainspring of cooperation and good will.

"It should seem essential, therefore, that every endeavor should be made to remove these obstacles prior to the extension of recognition. Until a substantial basis of mutual understanding and common principles and purposes has been established, official intercourse, with its increased contacts, is bound to lead to friction and rancor.

"Formal diplomatic relations may be established, but the substance of a useful relationship will be lacking, as much for the Russians as for ourselves, unless and until we have cleared up the existing difficulties through mutual agreement and work out a modus vivendi for the future."

This document is of transcendent significance. It shows not only the basis on which recognition was extended, but it justifies in every respect the withdrawal now of that recognition through the severance of diplomatic relations because the original con-

ditions became an integral part of the act of recognition.

The Kelley memorandum went on to say: "The fundamental obstacle in the way of the establishment with Russia of the relations usual between nations in diplomatic intercourse is the world revolutionary aims and practices of the rulers of that country. It is obvious that, so long as the Communist regime continues to carry on in other countries activities designed to bring about ultimately the overthrow of the government and institutions of these countries, the establishment of genuine friendly relations between Russia and those countries is out of the question.

"Even when these activities do not constitute a present menace to the established order, the systematic interference of a foreign power in the domestic affairs of a country constitutes ipso facto a source of deep resentment and unavoidable friction. The persistence of such interference after diplomatic relations have been established leads inevitably either to the rupture of relations—as has taken place in the case of England, China, and Mexico—or to serious tension and the reduction of the existing diplomatic relations to a barren, meaning-less relationship—as has taken place at times in the case of France, Germany, Poland, et cetera.

"It would seem, therefore, that an essential prerequisite to the establishment of harmonious and trustful relations with the Soviet Government is the abandonment by the present rulers of Russia of their world revolutionary aims and the discontinuance of their activities designed to bring about the realization of such aims. More specifically and with particular regard to the United States, this prerequisite involves the abandonment by Moscow of direction, supervision, control, financing, et cetera, through every agency utilized for the purpose of Communist and other related activites in the United States."

The memorandum pointed out furthermore that the Soviet Government had been unwilling to observe "certain generally accepted principles governing the conduct of nations towards each other," because it refused to respect the rights of citizens of other States, and that international obligations had been rejected, which the experience of mankind "has demonstrated are vital to the satisfactory development and maintenance of commerce and friendly intercourse between nations."

Cordell Hull, Democrat, who was Secretary of State at the time, requested Judge Walton Moore, Assistant Secretary of State, and William Bullitt, who subsequently went to Moscow as the first American Ambassador, to prepare memoranda on the more important "conditions and understandings that might be considered significant in connection with the development of plans for the recognition of the Russian Government."

Mr. Bullitt, in his memorandum, said:

"Whatever method may be used to enter into negotiations with the Soviet Government, it seems essential that formal recognition should not be accorded except as the final act of an agreement covering a number of questions in dispute. Before recognition and before loans, we shall find the Soviet Government relatively amenable. After recognition or loans, we should find the Soviet Government adamant."

Mr. Bullitt wrote that there were three important conditions which in his opinion had to be met before recognition could be forthcoming. He outlined these as follows:

"1. Prohibition of Communist propaganda in the United States by the Soviet Government and by the Communitern.

"2. Protection of the civil and religious rights of Americans in Russia which are inadequately protected under current Russian practice (e. g., 'economic espionage').

"3. Agreement by the Soviet Government that the act of recognition shall not be

retroactive to the foundation of that Government (which is the usual practice), but shall take effect only from the day on which it may be accorded. This is essential to protect both our Government and many citizens and corporations from suits for damages."

The Bullitt memorandum said further: There are, of course, scores of other questions involved in resuming normal relations with Russia. Our position would be strongest, I believe, if all these questions, whether legal, economic, or financial nature, should be handled as a unit in one global negotiation, the end of which would be signature of the agreements and simultaneous

recognition." Negotiations proceeded, and by an exchange of notes in the latter part of 1933 recognition was formally extended.

The exact language of the exchange of notes is of vital importance to examine now, because the documents are equivalent to a treaty which must be honored by both nations if the signatures are to mean any-

When formal recognition was finally extended on November 16, 1933, the action was taken through an exchange of letters be-tween the Soviet Commissar for Foreign Affairs, Maxim Litvinov (who came to Washington especially for the occasion), and the President of the United States.

The language of the two notes is identical.

Mr. Litvinov wrote:
"My Dear Mr. President: I have the honor to inform you that coincident with the establishment of diplomatic relations between our two Governments it will be the fixed policy of the Government of the Union of Soviet Socialist Republics:

1. To respect scrupulously the indisputable right of the United States to order its own life within its own turisdiction in its own way and to refrain from interfering in manner in the internal affairs of the United States, its Territories, or possessions.

"2. To refrain, and to restrain all persons in Government service and all organizations of the Government or under its direct or indirect control, including the organizations in receipt of any financial assistance from it, from any act overt or covert liable in any way whatsoever to injure the tranquillity, prosperity, order, or security of the whole or any part of the United States, its Territories, or possessions, and, in particular, from any act tending to incite or encourage armed intervention or any agitation or propaganda having as an aim the violation of the territorial integrity of the United States, its Territories, or possessions, or the bringing about by force of a change in the political or social order of the whole or any part of the United States, its Territories, or possessions.

"3. Not to permit the formation or residence on its territory of any organization or group-and to prevent the activity on its territory of any organization or group, or of representatives or officials of any organization or group-which makes claim to be the government of, or makes attempt upon erritorial integrity of, the United States, its Territories or possessions; not to form, subsidize, support, or permit on its territory military organizations or groups having the aim of armed struggle against the United States, its Territories or possessions, and to prevent any recruiting on behalf of such organizations and groups.

'4. Not to permit the formation or residence on its territory of any organization or group—and to prevent the activity on its territory of any organization or group, or of representatives or officials of any organization or group-which has as an aim the overthrow or the preparation for the overthrow of, or the bringing about by force of a change in the political or social order of the whole or any part of the United States, its Territories or possessions.'

It is interesting to observe that President Roosevelt in acknowledging receipt of this note in his letter to Mr. Litvinov gave exactly the same assurances as the Soviet had given to us in the numbered paragraphs above.

It is significant, too, that on the same date separate letters were exchanged, on the subject of religious freedom, in which Mr.

Roosevelt said to Mr. Litvinov:

"As I have told you in our recent conversations, it is my expectation that after the establishment of normal relations between our two countries many Americans will wish to reside temporarily or permanently within the territory of the Union of Soviet Socialist Republics, and I am deeply concerned that they should enjoy in all respects the same freedom of conscience and religious liberty which they enjoy at home. *

"The Government of the United States, therefore, will expect that nationals of the United States of America within the territory of the Union of Soviet Socialist Republics will be allowed to conduct without annovance or molestation of any kind religious services and rites of a ceremonial nature, including baptismal, confirmation, communion, marriage and burial rites, in the English language, or in any other language which is customarily used in the practice of the religious faith to which they belong, in churches, houses, or other buildings appropriate for such service, which they will be given the right and opportunity to lease, erect, or maintain in convenient situa-

We will expect that religious groups or congregations composed of nationals of the United States of America in the territory of the Union of Soviet Socialist Republics be given the right to have their spiritual needs ministered to by clergymen, priests, rabbis, or other ecclesiastical functionaries who are nationals of the United States of America, and that such clergymen, priests, rabbis, or other ecclesiastical functionaries will be protected from all disability or persecution and will not be denied entry into the territory of the Soviet Union because of their ecclesiastical status."

Again Mr. Litvinov wrote to President

Roosevelt assuring him that the right "to free exercise of liberty of conscience and religious worship" and protection "from all disability or persecution on account of their religious faith or worship" was guaranteed by the fixed policy of the Soviet Union and that it was supported by various laws and regulations existing in the various republics of the Soviet Union.

Almost immediately after the acts of recognition occurred, the Soviet press declared that the United States had been "comto restore diplomatic relations and there began a series of events which showed clearly that those who had had misgivings before were not wrong in their assumptions as to what might happen after diplomatic relations had been resumed.

We find Ambassador Bullitt shortly afterward writing to Secretary of State Hull "in regard to several instances in which the Soviet Government does not seem disposed to carry out understandings between it and the Government of the United States."

We note on August 14, 1934, Mr. Hull writing to Ambassador Bullitt in Moscow as follows:

"Since recognition was accorded the Soviet Government the Department has followed the Communist movement in the United States for the purpose of ascertaining whether the propaganda pledges contained in Mr. Litvinov's note to the President of November 16, 1933, are being observed. Furthermore, various individuals and organizations, such as the American Federation of Labor, have laid before the Department evidence tending to show violations of the pledges.

"The Department believes that the following transactions, evidence of which seems indisputable, constitute such violations and in particular of the pledge covered by paragraph 4 of Mr. Litvinov's note. .

You should emphasize that, as Mr. Litvinov is certainly aware, the American people are most sensitive with respect to interference from foreign governments in their domestic affairs and that our Government is hopeful that the Soviet Government will take appropriate means to prevent further acts in disregard of the solemn pledges he gave in its behalf."

Ambassador Bullitt reported from Moscow on October 5, 1934, as follows:

'In accordance with the instruction contained in your August 14, I protested today to Litvinov orally and informally with regard to direction from Moscow of the activities of the Communist movement in the United I informed Litvinov that if at the Cominterm Congress, which is scheduled to take place in the month of January, there should be attacks on the Government of the United States or indications that the Communist movement in the United States is being direced by Moscow the most serious consequences might result; that the Government of the United States was as sensitive as the people of the United States to any interference in our internal affairs by agencies of foreign countries. Litvinov replied that he did not even know that the Comintern Congress would take place and that he was not aware of any activities of this nature. . .

"I think I might go so far as to intimate to Litvinov verbally that we might sever diplomatic relations if the Comintern should be allowed to get out of hand. *

Then on October 8 Secretary of State Hull sent a note to Ambassador Bullitt in which

"Without making any statement to Lit-vinov that diplomatic relations might under certain circumstances be severed, it is highly desirable to give him the impression that in case of a violation of pledges he made when here and failure to agree to that settlement on such reasonable terms as we have proposed, the relations between the two Governments will inevitably be less close and friendly than anticipated, and the reason for our Government doing many things contemplated may disappear.'

Again we find Ambassador Bullitt on July 19, 1935, writing to Secretary of State Hull as follows:

"Contrary to the comforting belief which the French now cherish, it is my conviction that there has been no decrease in the determination of the Soviet Government to produce world revolution. Diplomatic relations with friendly states are not regarded by the Soviet Government as normal friendly relations, but 'armistice' relations, and it is the conviction of the leaders of the Soviet Union that this 'armistice' cannot possibly be ended by a definitive peace but only by renewal of battle. The Soviet Union genuinely desires peace on all fronts at the present time, but this peace is looked upon merely as a happy respite in which future wars may be prepared.

"I feel sure that the Department must have received many reports that the Soviet Government has abandoned the idea of world revolution and that the convictions I have expressed above may seem ill founded. I can only say that my own observations, without exception, have convinced me of the accuracy of my statement. I have yet to converse with a single leader of the Soviet Union who has not expressed his belief in the necessity of world revolution."

This was the view of Ambassador Bullitt, who had gone to the Soviet Union with a very friendly attitude toward the regime there, and who had indeed participated in the negotiations leading to the extension of recognition. But he was quickly disillusioned when he came into actual contact with the Russians in Moscow.

Ambassador Bullitt on August 21, 1935, in a message to the Department of State, pointed out how Litvinov's pledges had been violated and describing in detail the meeting of the Communist International, together with the attacks made upon the United States at that meeting. Urging that President Roosevelt make a speech giving utterance to his views concerning the activities of the Communists inside the United States, Mr. Bullitt wrote:

"I venture to suggest that henceforth the law excluding Communists from the United States should be applied rigidly and that you should instruct all American Missions to refuse visas to Soviet citizens unless they present entirely satisfactory evidence that they are not and have never been members of the Communist Party or Communist International, and are not candidates for admission to the Communist Party or Communist International and are not members of the Profintern."

Instead of a speech by the President, a note was sent to the Russian Government on August 25, expressing the protest of the United States. Attention was called to the Litvinov pledge and to its violation at the meeting of the "All World Congress of the Communist International," and the note added:

"The Government of the United States would be lacking in candor if it failed to state frankly that it anticipates the most serious consequences if the Government of the Union of Soviet Socialist Republics is unwilling, or unable," to take appropriate measures to prevent further acts in disregard of the solemn pledge given by it to the Government of the United States."

The Russian Government answered the note on Aguust 27 by saying that it could not take upon itself "obligations of any kind with regard to the Communist International"

Secretary of State Hull on September 1, 1935, issued the following statement to the press:

Press:
"The recent note of this Government to reply of that Government raises the issue whether that government, in disregard of an express agreement entered into at the time of recognition in 1933, will permit organizations or groups operating on its territory to plan and direct movements contemplating the overthrow of the political or social order of the United States. For 16 years this Government withheld recognition-as did many other governments-mainly for the reason that the Soviet Government had failed to respect the right of this Nation to maintain its own political and social order without interference by organizations conducting in or from Soviet territory activities directed against our institutions.

"In 1933 this Government, observing the serious effects upon peace and prosperity of the many partial or dislocated international relationships throughout the world, took up anew the question whether the United States and the Soviet Union, two of the largest nations, could not find a way to establish more natural and normal relations, which would afford a basis for genuine friendship and collaboration to promote peace and improve material conditions both at home and abroad.

"After various stipulations in writing had first been carefully drafted and agreed upon by representatives of the two governments, recognition was accorded to the Government of the Soviet Union by this Government in November 1933. One of the most important provisions of the agreement thus reached was the pledge of the Soviet Government to respect the right of the United States 'to order its own life within its own jurisdiction in its own way and to refrain from interfering in any manner in the internal affairs of the

United States, its Territories, or possessions.'

"The essence of this pledge was the obligation assumed by the Soviet Government not to permit persons or groups on its territory to engage in efforts or movements directed toward the overthrow of our institutions. * * *

"In its reply of August 27, 1935, to this Government's note of August 25, 1935, the Soviet Government almost in so many words repudiated the piedge which it gave at the time of recognition. * * If the Soviet Government pursues a policy permitting activities on its territory involving interference in the internal affairs of the United States, instead of 'preventing' such activities as its written pledge provides, the friendly and official relations between the two countries cannot but be seriously impaired."

III. "LISTENING POST" OF DOUBTFUL VALUE

Already, by November 24, 1937, we were finding that the value of an American Ambassador in Moscow as a "listening post" had been very much exaggerated. In a memorandum written on that date, George F. Kennan, of the Division of European Affairs in the Department of State, said:

"The Soviet policy in general: When this Government has sent ambassadors to the Soviet Union it has had a right to expect that they would be welcomed with some-thing more substantial than formal words, and that they would be accorded by the Soviet authorities that measure of cooperation which is essential if their missions were to contribute to advancing American-Soviet relations. But the experience of the two Ambassadors [William C. Bullitt and Joseph E. Davies | who have represented the United States in the Soviet Union, compels one to the conclusion that the Soviet Government has made it a policy to place every possible restriction on the activities and contacts of foreign missions in that city. The Soviet leaders appear to welcome the presence of foreign envoys in Moscow as something contributory to Soviet prestige; but they make it very evident that in their opinion these envoys-like well-trained children-should be seen and not heard.

"In this they have little cause to fear retaliation on the part of foreign governments. The Soviet diplomatic missions abroad constitute only one (and not always the most important) of the channels through which Russia's foreign affairs are directed. The situation in many countriesand particularly in the United States-is such that it is an easy matter for Moscow to eircumvent the governments of these countries and to deal directly with private individuals, firms, and organizations. has its trade delegations, its local Communist parties, its foreign newspaper correspondents, and its various disguised agents, to help it in these efforts. Thus the Soviet leaders have been able to proceed to curb the scope of activity of the Moscow diplomatic corps, confident that no retaliatory measures which might follow could effectively disturb their own business with the outside world. • • •

"The presence of an American Ambassador in Moscow has apparently led to little if any change in the activities carried on in the United States by the Communist International. In 1934 (1935) this Government was compelled to make formal protest in connection with the meetings in Moscow at the Seventh All-World Congress of the International. Despite this protest there is evidence that Soviet leaders are continuing to exercise authority over a certain political group in this country and are requiring members of this group to serve political interests which have nothing in common with those of the United States."

Secretary of State Hull reveals his record of a conversation on January 13, 1938, with the Soviet Ambassador in Washington, when he read to him a memorandum which said in part:

"Ever since diplomatic relations between the United States and the Soviet Union were established the American Government has earnestly sought to make a real contribution toward maintaining them on a close and friendly basis by effecting solution of a number of matters which have been the source of irritation if not, indeed, of friction. That success has not attended its efforts is due, in part at least, to the attitude that has been evidenced by the Soviet author-

"Indeed, the American Government has been constrained, in view of the conditions under which the American Embassy in Moscow has functioned ever since it was established, to consider whether the value to it of that mission is sufficient to warrant the maintenance of the Embassy on the present scale."

There are many references in the foreign relations documents showing that American Embassy officials abroad were experiencing more and more difficulty in dealing with the Soviet Government. Thus, Loy Henderson, United States Chargé d'Affaires at Moscow, wrote to Secretary of State Hull on February 1, 1938, as follows:

"1. It should be considered as axiomatic that the ruling forces of the Soviet Union have always considered and still take the view that the presence of foreign diplomatic representatives in the Soviet Union is an evil which world conditions force them to endure:

"2. In order that the effects of this evil may be reduced to a minimum, they consider it advantageous to follow a policy which will tend to restrict the influence, prestige, and effectiveness of the diplomatic missions in Moscow;

"3. This policy is expressed in part by the adoption of measures, the purpose of which s to discourage the maintenance of large missions, to cause the population of the country to look with suspicion or at least with lack of respect upon these missions, to restrict the activities, freedom of movement, and number of contracts of members of these missions, and to cause members of these missions gradually to acquire a feeling that if they forfeit the good will of the Soviet authorities by fearlessly and resolutely defending the interests of the Governments which they represent they are likely to encounter increased difficulties in operating their chanceries and households with a reasonable degree of effectiveness and economy and in performing the various duties imposed upon them by their Governments, and are even likely to be attacked openly or privately as saboteurs of Soviet relations with their respective countries;

"4. One of the most effective instruments which the Soviet authorities possess for the execution of this policy is their power to decide by means of the formulation and interpretation of customs regulations the conditions under which diplomatic missions may bring articles into or take them out of the country;

"5. The Soviet customs, laws, and regulations are deliberately so worded that if given a strict interpretation the life of members of diplomatic missions in the Soviet Union would be so unpleasant and the cost of the upkeep of such missions so expensive that comparatively few governments would endeavor to support diplomatic representation in that country;

"6. Since in present world conditions, the Soviet Government feels that it is necessary for it to maintain diplomatic relations with other countries, it follows the policy of interpreting and applying the customs regulations in such a manner as not to cause foreign governments to withdraw their missions from the country;

"7. The Soviet authorities apparently are of the opinion that at the present time most diplomatic missions in Moscow are maintained by governments which feel that under existing world conditions their representations in the Soviet Union must not be withdrawn even through the conditions under which such representations are compelled to work are difficult;

"8. This opinion and the rise of antiforeign feeling, particularly noticeable during the past year, undoubtedly partially explains the increasing degree of strictness with which Soviet customs regulations are

s enforced:

"9. This strictness will increase until it runs counter to opposition of a nature that will cause the ruling forces to find it to be the best policy to call another temporary

breathing spell;
"10. If, therefore, the American Government and other governments maintaining diplomatic missions in Moscow permit without protest curtailments of the courtesies accorded by Soviet customs officials to their diplomatic representations, new and more serious curtailments of such courtesies may be expected in the future;

"11. In view of the impossibility of obtaining in Moscow supplies for office and household and of the exorbitance of Soviet import and export duties, the matter of customs courtesies is much more serious in the Soviet Union than in most countries; and

"12. Since merchandise in the United States is plentiful and since exports are not subject to export duties, customs courtesies mean much more to the American Embassy in Moscow than they do to the Soviet Embassy in Washington."

Discourtesy to envoys

This same situation is discussed further between Secretary Hull and the Soviet Ambassador. Here is a quotation from a memorandum by Secretary Hull written on March 26, 1938:

"After talking on another subject, the Russian Ambassador then brought up the question of the complaints in the memorandum which this Government handed to him some weeks ago relative to unsatisfactory treatment of our officials and employees and American travelers in his country. He un-dertook generally to deny most of these complaints, adding that he would soon present

a memorandum on the subject.

'I stated that disagreeable as the small pinpricks were, there was a worse phase that our Government has in mind and that is the atmosphere created there of inconvenience and indifference and of more or less uninviting hospitality to those who go into Russia, including the constant espionage and interference with Russian employees of American citizens in the Embassy and Chancery at Moscow; that it prevents this country from improving the relations between the two countries as we are so desirous of doing, especially from the standpoint of promoting peace and mutual welfare; that regardless of the accuracy or inaccuracy of the charges presented, we are seriously handicapped in this broad way and I consider that extremely important.

"I concluded by saying that if, after we had recognized Russia, that country and this country and Great Britain and France had gone forward in the exercise of normal relations and in developing their combined moral influence for peace, the unpleasant experiences in both the Far East and in Europe would have been reduced at least 50 percent, whereas the present policies of Russia in these small ways are seriously handicapping such supremely important efforts. * * *"

The most authoritative commentary on what happened before and after diplomatic relations with Soviet Russia were formally begun in November of 1933 is to be obtained from a reading of the Memoirs of Cordell Hull (published in 1948 by the Macmillan Co.).

Mr. Hull's analysis

Mr. Hull reviews the events leading up to the negotiations for the resumption of diplomatic relations and tells how, in advance of the step, he had called to the attention of the President that the United States should face the practical considerations concerning the conduct of the negotiations. He writes in his book:

"Consequently, I told the President we had two powerful weapons which can be used to bring about a favorable settlement of some, if not all, of our outstanding problems with

the Soviet Government.

"I am convinced, from the experience of other countries, that, unless we utilize every available means of exerting pressure on the Soviet Government in order to obtain a settlement of outstanding problems, there is little likelihood that such problems can be satisfactorily solved. It is evident that if loans of any considerable amount should be extended to the Soviet Government, except as a part of an agreement involving a satisfactory settlement of such problems, one of our most effective weapons would be taken from our hands—possibly the most effective-since the Soviets, it is believed, prefer at the moment credits to recognition. I concluded by recommending that no loans be extended except as part and parcel of a final settlement of our relations with Russia.

Thus our approach to the question was different from that of other nations then maintaining diplomatic relations with Russia. Those nations recognized Russia first and then began to discuss the questions in dispute between them. The results were generally disappointing. Having obtained part of what she wanted, Russia became less disposed to make concessions to obtain the

remainder.

"In some respects we stood to gain more than Russia by a restoration of diplomatic relations. Without relations, the Russians were probably much better informed about conditions in America than we were about the situation in Russia. The Soviets were in close touch with what was going on here through their Amtorg, or trading office, in New York, an information bureau in Washington, and the American Communist Party.

Mr. Hull describes the negotiations in the agreements that were formally signed and

then writes:

"But our efforts toward closer relations were again to be negated. The Communist International, with headquarters in Moscow, continued to support Communist propagan da and activities in the United States. We made verbal complaints to Moscow, without result. Finally Russia permitted the holding of an All-World Congress of the Communist International in Moscow from July 25 to August 20, 1935. American Communists attended and took part in discussions and plans for the development of the Communist Party in the United States. Here was a flagrant violation of the pledge of noninterference given us on November 16, 1933, and we could not let it pass without protest. By agreement with the President, I sent through Ambassador Bullitt a strong note to the Soviet Government:

"'The Government of the United States would be lacking in candor if it failed to state frankly that it anticipates the most serious consequences if the Government of the Union of Soviet Socialist Republics is unwilling, or unable, to take appropriate measures to prevent further acts in disregard of the solemn pledge given by it to the Gov-

ernment of the United States.

"But the Soviets replied with the astounding assertion that 'it is certainly not new to the Government of the United States that the Government of the Union of Soviet Socialist Republics cannot take upon itself and has not taken upon itself obligations of any kind with regard to the Communist International.' They refused to accept the protest. In other words, the Communist International, although intimately connected with the Soviet Government, could do what it wanted in American internal affairs without interference from that Government.

"In publishing both notes, I issued a statement in which I said: 'In view of the plain language of the pledge, it is not possible for the Soviet Government to disclaim its obligation to prevent activities on its territory directed toward overthrowing the political or social order in the United States. And that Government does not and cannot disclaim responsibility on the ground of inability to carry out the pledge, for its authority within its territorial limits is supreme and its power to control the acts and utterances of organizations and individuals within those limits is absolute * * *. If the Soviet Government pursues a policy of permitting activities on its territory involving interference in the internal affairs of the United States, instead of "preventing" such activities, as its written pledge provides, the friendly and official relations between the two countries cannot but be seriously impaired.'

"We were now back almost to where we had started. We had official relations with Moscow, but they rested on no bedrock of friendship and cooperation. Try as I might, could not establish the sound relationship I deemed so necessary not only for the two countries but also as a counterweight for peace in the scales tipping more sharply toward war."

IV. A ROAD TO NEGOTIATION

The foregoing record demonstrates conclusively that we can utilize the severence and possible resumption of diplomatic relations as an instrument of policy and that it can be, moreover, the basis for extensive negotiations.

By severing diplomatic relations with all the countries behind the Iron Curtain, the United States will in reality be adopting a policy that could prevent war and lead to

a state of peace in the world.

Severance of diplomatic relations with the government at Moscow actually means opening up the road to negotiation for peace. It means, in effect, negotiation with the only sovereign that can make peace, namely, the people of Soviet Russia.

Such a policy should not be put into effect in a mood of pique, as if it were related to a single act that had produced irritation in our midst. It should stem from the moral force that has been the root of American idealism throughout our history.

Many persons who have conscientiously opposed this course when it has been suggested do not take into consideration the act that severance of diplomatic relations, like its predecessor step, the opening of diplomatic relations, is a fundamental concept which can have a constructive aim. They fail to realize that it can be a constructive, rather than a destructive move and that it can conceivably awaken the world to the ways by which we can avert the outbreak war. It can accomplish more than threats or counterthreats to use military force alone.

While it is true that severance of diplomatic relations has sometimes immediately preceded the outbreak of war, this has not at all been true in those instances where the diplomatic break has been based upon differences in fundamental policy, as contrasted with instances where some overt act led to the break itself.

History shows more instances in which a diplomatic break is an intermediate step toward peaceful intercourse rather than a final step toward war.

Within the last 2 years. Soviet Russia severed diplomatic relations with both Israel and then Australia; episodes in the evolution of her international policies. It didn't lead to war in either case.

It is contended that there are advantages in maintaining a listening post behind the Iron Curtain and that this factor is of such importance as to outweigh all moral considerations. While such an argument has some merit it suggests an excuse for inaction rather than a basic reason. For too often the philosophy of moral cowardice, which consults its fears rather than its conscience, winds up with the self-same crisis that a policy of timidity and forbearance sought to avoid.

If every time we contemplate some step in the evolution of our moral policies we are urged not to offend the other side, to repress our indignation, and so to conduct ourselves as not to antagonize tyrants who are every day oppressing millions and millions of people, then indeed it may be that western civilization has started on the road to decay and disintegration. There is no obligation resting upon us to consult our enemies about what to do about our enemies. We must not be frightened by our own self-created bogeys.

No better demonstration of the power of moral force in world policies could be given than that which occurred during the administration of President William Howard Taft, when the government of the Czar refused to honor the passports of American citizens if they happened to be Jews. To the credit of the Taft administration be it said that the United States notified the Russian Government that an American passport applied equally to all citizens and that there could be no discrimination between them, if the treaty which had been signed by the Russian Government were to be honored.

The Russian Government refused to change its policy, and the United States denounced the treaty as no longer in effect.

Nobody suggested at the time that by offending the Russian Government we would create a situation of international tension which could lead to war. Nobody suggested that the United States yield to expediency and recognize a practical situation, because the anti-Semitic policy was an internal problem in Russia at the time.

As to the argument that it is valuable to have American diplomats behind the Iron Curtain to listen, the record there proves this is an advantage of dubious value.

Very little information that comes through official quarters is any different from that which is broadcast by the Moscow radio or the radio stations of its satellities. Most of the information that has been obtained by the United States Government concerning conditions in Russia has come from sources other than the Embassy. Naturally the most valuable facts about internal conditions come from the hundreds of thousands of persons who travel across the borders during the course of the year in business, professional, and cultural pursuits of various kinds. It is obvious that Americans living in a restricted area in Moscow are not necessarily the best sources of information about Russia. The nationals of various countries who travel back and forth are better qualified to keep us informed, particuthose who have contacts with former residents of the Soviet Union, namely nationals of Soviet Russia now in exile.

Severance of diplomatic relations would impress the Soviet people, but much would depend upon exactly how the policy was executed. If it appeared as a mere manifestation of anger it would lose its moral force.

If our argument were focused, however, on the pledges that have been broken and on the agreements that were entered into by the Soviet Government and dishonored, it would profoundly impress the people of Soviet Russia. With the opportunities we now have for disseminating our point of view throughout the globe, it would be practicable for our own Government to make a forceful presentation of all the reasons for the severance. The very debate would draw attention to the moral issues which have so long been neglected.

The severance of diplomatic relations, therefore, would be not a negative but an affirmative act. It would mean that the American people had opened their hearts and minds to the peoples of Soviet Russia and dealt with them directly in an effort to find some means of bringing about peaceful relations between the peoples. It would give hope where there is now despair. The Red army in particular, which must make the major sacrifice in the event of war, would be especially interested to learn why America had found it impractical to deal with the present rulers in the Kremlin. For the Moscow government has never been portrayed inside Russia as the big obstacle to world

Obviously this obstacle, namely a government in Moscow which dishonors pledges, is something which, if emphasized to the Russian people would in due time make them realize they were being represented by a government that can suddenly plunge them into war. It is a government which does not give the people an opportunity to express their wishes—a government which has become a menace to them and to mankind.

It will be said that, with the censorship of the press inside Russia, the documents sent forth by the United States would not be printed, but as news about them came over the radio this in itself would direct attention to the restrictions upon the relations between the two countries growing out of the censorship and the suppression of the free flow of opinion. Radio and word-of-mouth would give it full publicity in the end.

The severance of diplomatic relations would permit a minute review of all the experiences, incidents, episodes, and controversies between the United States and the Soviet Union beginning in 1933.

The mere narration of these events would be enlightening to the public opinion of the world.

It would reveal America as acting in selfdefense against the encroachment of Communist agents and saboteurs.

It would constitute the greatest blow that could be struck by means of moral force, thus demonstrating to the world that the decent opinion of mankind can be more important as a means of bringing peace than the threats to use military force alone.

For when we sever diplomatic relations because of the breaking of pledges, dishonoring of agreements and the disregard of international obligations, we base our action on the highest standards of human conduct.

Our spokesmen, on the one hand, declare frequently that we do not want war. We cannot, on the other, fail to use the weapons of moral force which reach into the hearts and minds of people to prevent war.

It takes courage to exercise moral force. Even the counsel of those who propose the exercise of moral force is rejected as "leading to war." Yet the only road really open to those who shrink from the use of moral force is more and more appeasement, and finally war, because the overt acts of an arrogant enemy inevitably produce war.

V. WOULD THE ALLIES JOIN US?

The question will be raised as to the practicality of such a step in the event that our allies do not take similar action.

American leadership cannot be forfeited, nor can our expression of our free opinions be restrained merely because temporarily there is no agreement with us on the part of other countries.

Precisely because other governments may not concur at once, our opportunity for debate would be widened. It would lend emphasis to the discussion. On the so-called practical side—to those who believe that it is important to have a "listening post behind the Iron Curtain"—it should be mentioned that the American Government would have ready access to any of the diplomatic reports of any of the other governments during the interval while we who have severed diplomatic relations wait for the others to do so.

But this very interval would be of farreaching importance. We would be urging upon our own allies that they take a course of action similar to ours. This debate would have a profound effect inside the Soviet Union. For the discussion itself would afford an opportunity anew to draw attention to the spy rings and infiltration campaigns which actually have been carried on by Soviet agents in the United States, Canada, Australia, Guatemaia, Britain, France, Italy, Japan, and almost every one of the free countries.

It would not be necessary for the debate to be limited in length. It might go on for several months, with the United States pressing powerfully on the morale-force side, and with the allies one by one coming to our side as they gradually recognize the futility of further negotiations with the Kremlin government itself, or else as they perceive a change in government control there and finally an attitude which could conceivably bring about a new and better understanding between Soviet Russia and the rest of the world.

The Soviet Government itself is outwardly indifferent nowadays to the problem of maintenance or discontinuance of diplomatic relations with non-Communist countries. It believes evidently that the western world would maintain them no matter what happened. Our failure to exercise more leverage in this situation by raising the question of whether we care to continue diplomatic relations has recently brought repeated instances of disrespect for our representatives in Moscow.

Today we seem to be unconcerned about exercising any leverage at all against the Soviet Government. We appear to be passively acquiescing in every act of the Soviet Union. We find ourselves in a strait jacket because we, of course, will not precipitate a war, and the phrase "likely to precipitate war" is directed inside America against any policy except abject acquiescence.

Those who argue against precipitating war cannot have it both ways. They cannot, on the one hand, urge that our Armed Forces be immobilized, and on the other hand insist that we shall not take any steps to advance our cause in the court of world opinion.

Wielding moral force

Our only opportunity today in the court of world opinion is to mobilize moral force. And the biggest instrument of moral force is in our hands, namely, the severance of diplomatic relations. It is logical, legal, and clear cut and can be earried on to assure in the end the peace of the world.

Precisely as we laid down the basis for recognition by written conditions, so we can lay down the basis for the withdrawal of that recognition or the severance of diplomatic relations, and also the basis for resumption when the original conditions of 1933 have been fully met by the Soviet Union.

When there is an opportunity for the resumption of diplomatic relations we would be in the position of discussing a new state of affairs in which the Soviets would be making concessions to the rest of the world. We would not remain in the fixed position in which we are today taking affront after affront without really doing anything to impress our enemies that we might make a countermove that could be effective.

We shall not cease to express our own Government's views merely because of the discontinuance of one form of technical communication between the United States Government and the Soviet Government. With radio and newspapers and the reports of those who go back and forth across the border there are many ways to discuss our relations with Russia and to bring home to the people there our views besides the method of formal diplomatic notes, which have really grown less and less effective anyway in recent years.

Basis for new policy

The true meaning of the severance of diplomatic relations, moreover, would not be lost upon the world as a whole. It would have a significance far more than the actual change which involves the withdrawal of a few diplomats from Moscow. For it could form the basis for a new policy in negotiating with the Russian peoples—a new setup as between the United States and Soviet Russia.

America must take the leadership in such a moral cause. Those who say it is theoretically right to discontinue relations with the Soviet Government but not expedient are unintentionally condoning evil and destroying the hopes of the oppressed peoples.

The Soviet Government today has only contempt for vaciliation in an adversary. That's because again and again we have been pushed back and insulted without showing the slightest bit of spirit in protest.

The long history of the periods prior to the outbreak of war shows that when a nation fails unequivocally to express its viewpoint and to maintain its honor and insist upon the fulfillment of solemn pledges it gives the impression of craven weakness, and ultimately it is overrun by an enemy, which miscalculates and thinks that it can win an easy victory.

The way to prevent world war III is to assert our moral position and to indicate clearly and persistently to the peoples of Soviet Russia that it is their government which is pushing us slowly but surely into a larger conflict.

As a warning against such a large conflict the severance of diplomatic relations can have a sobering effect. It can focus attention on the real issues between our Governments and the dangerous steps that have been taken by the Kremlin government to infiltrate our own territory in an attempt to set up agencies to overthrow our Government. Our Department of Justice, our Federal courts, our congressional committees for the last 10 years have recorded in official testimony the acts of Soviet agents on our territory.

The question naturally will be asked as a corollary: What effect would the severance of diplomatic relations have upon our relations with the United Nations?

Strictly speaking, the question of the maintenance or severance of diplomatic relations with a particular government is not related in the legal or diplomatic sense to the membership which a particular nation may have in an international organization set up for specific purposes. Thus many governments now in the U. N. recognize Red China although it has not been admitted to the U. N. Conversely, there are governments recognized by the United States and diplomatic relations are maintained with those governments, but they are not members of the United Nations, though of course eligible for such membership.

It cannot be denied, however—and in fact it should be emphasized—that there is a moral relationship between the position of the United States with respect to the severance of relations with the Soviet Union and continued membership of the Soviet Union in the United Nations.

For example, all of the arguments we have made for the nonrecognition of the Government of Red China and for its nonadmission into the United Nations are on all fours with

those which can logically be made for our severance of diplomatic relations with the Soviet Union and for its expulsion from the United Nations.

It is not logical, on the one hand, to say that we will not admit Red China to the United Nations because of its aggressive policies and at the same time permit the Soviet Union to remain in the United Nations while it continues its aggressive policies toward other members of the United Nations.

It has been frankly acknowledged by the representatives of the Soviet Union in a formal meeting of the United Nations Assembly that the Moscow government sent arms and ammunition to the Chinese and North Korean Governments, and thus aided and abetted in that aggression, even though the United Nations by formal resolution had called upon all its members to refrain from sending arms to assist the aggressors.

In this connection, a few weeks ago Ambassador Henry Cabot Lodge, in a CBS radio-television discussion with some newspaper correspondents, was asked the question concerning the membership of the Soviet Union in the United Nations. The colloquy ran in part as follows:

"Question: Mr. Ambassador, could we get back to that word 'peace-loving' for a moment? Now, do we understand that a country, to be a U. N. member, must be peace-loving—by implication be part of a club of very peaceful, law-abiding nations? It seems, for example, to begin with Russia wasn't one in 1945, and Russia was one of the original signers of the U. N. Charter—

Mr. Lodge. "Well, I think that in 1945 and 1946, at San Francisco, the United States assumed that Russia was a peace-loving nation, and the whole United Nations was based on the assumption that the alliance between the United States and the Soviet Union would continue, which, of course, was a very false—tragically false—assumption. Certainly, if we had thought at that time that the Soviet Union believe in war as an instrument of national policy, we would not have joined the United Nations with her."

From the foregoing it is clear that the Soviet Union has no moral right to continued membership in the United Nations. The League of Nations did expel the Soviet Union from that organization. The United Nations ought to have the moral courage at least to suspend the membership of the Kremlin tyrants. The seat can be declared vacant by the action of the Assembly.

It is this moral issue which is raised not only in the continued membership of an aggressor nation in the United Nations, but also in the refusal of all forward-looking nations to countenance the admission of Red China into the United Nations for the same reasons.

So by a single stroke in severing diplomatic relations we would be reopening the whole question of whether the present government of the Soviet Union should remain in the United Nations. This probably would not be decided immediately. But the moral effect of a thorough discussion would be felt around the globe. Step by step the moral forces of mankind would concentrate on evils which are now upsetting the peace of the world.

VI. AN ACT OF SELF-DEFENSE

So, to summarize, the severance of diplomatic relations is an act of self-defense. It is a step taken to prevent the encroachment by the agents of foreign governments upon our territory in their attempt to infiltrate our institutions. Every democratic government has a right to resist such measures, by banning the use of its own territory for the the conduct of operations hostile to itself.

What we say, in effect, is this: "We are not interfering with your internal affairs, but we are resenting the use of your power externally to the injury of the United States."

Sooner or later the Western World must recognize that the policies of Soviet Russia are actually hostile to them, as is proved by the many processes of subversion and internal infiltration that have characterized the so-called cold war.

By severing diplomatic relations we also take the necessary steps toward the shutting off of all trade relationships with the United States. We can stop the flow of money to the many Soviet consulates and agencies in various countries, which are the centers of espionage. Unquestionably the Latin-American governments would eventually follow our lead, and a very important opportunity that the Soviets now have to upset Latin-American governments would be eliminated. That would be consistent with our Monroe Doctrine and the recent pronouncements of the Organization of American States.

It is obvious that the subversive movements throughout the world, conducted by the Soviet Union, could not be financed except with Russian rubies cabled to its agents in embassies everywhere, who bribe officials, newspapers, and other media of communication, especially in Latin-American countries, to help them do their work of subversion.

We know that on the continent of Africa, and in various parts of Asia, the Communist agents are busily engaged in moves to upset existing regimes, and to capitalize on existing controversies. But the money for such exploits would not be forthcoming if diplomatic relations and trade relations were cut off.

What we are advocating here is a policy of nonintercourse with the Soviet regime, which when fully explained to the people of the Soviet Empire must inevitably result in some internal change. This is the hope of the world, and we must contribute toward that end by shaping our policies in self-defense against those who have made war upon us.

For the severance of diplomatic relations is merely a logical sequel to the acts of offense which have been committed by the Soviet regime upon the territories of free peoples. To condone these evils is to compound them and to deprive free peoples of their only means of protection against an enemy in the modern world which disregards all rules of sovereignty, all rules of international law, all obligations and agreements solemnly entered into and signed in formal agreements, and all assurances and guaranties given to respect the rights of others.

By interrupting diplomatic relations with the Soviet Union we would be telling the entire world that the United States of America, which has always stood in the past on moral principle, is continuing vigorously to pursue the course of morality, and that it will not resume diplomatic relations with any government which has violated its pledges to the United States Government, and which gives no practical evidence of any change in its attitude.

No evidence of good faith

We have called in the last few years for "deeds and not just words" from Soviet Russia. President Eisenhower has spoken publicly of the importance of concrete evidence on the part of the Soviet Union that it will act in good faith, but no such evidence has come forth. Under those circumstances we have no choice but to develop a policy of nonintercourse, with the definite assurance given by us that this policy will be gradually modified and relations with a new Government established in Soviet Russia as soon as the Russian people express their will freely and put into office a government that will respect international obligations.

There are, of course, only two ways by which the present government in the Kremlin can be altered—that is either by external military action or internal force.

External force is out of the question bean opportunity to consolidate their position inside the country and light the fires of patriotism and nationalism.

Internal force is the logical instrument. Revolution or peaceful change is the only means by which a despotic government can be removed without bringing on an external

Again and again in recent history we find that revolutions are short-lived or that the impact of pressure from the people will without bloodshed cause the resignation of unpopular rulers.

When a great nation like the United States lays the case before the world and tells the people of Soviet Russia what its Government has done to impair the peace of the world, the people there must inevitably learn the truth about the danger that they face. the real danger is that the Kremlin will involve them in a war which will require great sacrifices from the very people who only re-cently suffered so heavily on the battlefield.

Kremlin creates war fear

The fear of war grips everybody in the world, and the people of Soviet Russia are no exception. It is a hazard that the present rulers in the Kremlin have created which is dangerous to the future of all peoples. That is why we must never enhance the prestige of the present rulers of the Kremlin. We must not engage in high level conferences which can be played up in the Soviet press as examples of how the western nations are bowing to the great rulers in the Politburo. We must not treat the leaders in the Kremlin as if they were our equals in the world and respectable representatives of a great nation. On the contrary, we must do as Secretary of State Charles Evans Hughes advised in 1923 when he said:

'Nothing should be done to place the seal of approval on the tyrannical measures that have been adopted in Russia, or to take any action which might retard the gradual reassertion of the Russian people of their right

to life in freedom." Only by a severance of diplomatic relations can we give convincing evidence to the people behind the Iron Curtain of the dangerous course which the evil men in power in Mos-

cow have chosen to pursue.

When diplomatic relations have been severed and the debate begins throughout the world, the moral force of all the oppressed people will be strengthened and stimulated so that they will in their own way bring into being in Moscow a free government which will have the respect of the rest of mankind. Such a free government will have earned not only recognition, but a rightful place in the

family of nations, and, of course, in the United Nations itself.

Address of Gen. Matthew B. Ridgway Before the West Point Society of New York

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. McCORMACK. Mr. Speaker, the views of Gen. Matthew B. Ridgway, Chief of Staff, United States Army, whenever expressed, are always worthy of profound consideration and study.

I include in my extension an address made by General Ridgway on December

14, 1954, in the Waldorf-Astoria Hotel, New York City, before the West Point Society of New York, Every part of his address is significant

and particularly when he said:

It is only through possession of adequate military strength that the efforts of the splendid leaders of American diplomacy can realize their fullest success.

I have stated in and out of the House that "the strength and power of our military force is the main avenue by and through which our national objectives in the field of foreign affairs is attained."

There are many Americans, of which I am one, who are very much concerned with the reduction in our Army in recent months, and particularly with the sharp reduction proposed during the next 18 months. I have a feeling of confidence that General Ridgway is also one of those Americans.

It is a pleasure and a privilege for me to be here today with you who share the deep love of country and the ideal of service which West Point engenders and exemplifies. The words "duty," "honor," "country" express "country" tersely the soldier's ideals of purposeful service, ennobled by high standards of personal integrity and personal dedication. times when ideals or spiritual values of the highest type are called for, if our Nation is to endure, and its precious heritage of free-dom is to be preserved unimpaired. Our Nation's spiritual resources, more than its material resources, will be the ultimate determinant of our place in history.

Our Nation today is faced with a military threat unique in its history. It is a threat, though, which menaces, not our Nation alone, but every nation outside the Communist bloc. The military strength of the Communist world is such that if it were thrown against us, an adequate defense could only be through the combined efforts of those free nations who see the peril for what it is and who have therefore allied themselves, with their combined strength, in unswerving opposition to it.

The alliances that add strength to the free world were formed in the face of this common danger. If they are to endure, they must be nourished by mutual trust and confidence arising from mutual understanding and common interest.

These alliances, and their military significance to us, form my topic today.

The military man is deeply concerned with the strength of our alliances because he appreciates full well the contributions to our Nation's security which such allies can make. Our national goals of deterring war by all honorable means, and of achieving victory should war be thrust upon us, are best attainable within a framework of effective

Were we as a nation to rely solely upon our own industrial and manpower resources to defend ourselves against the full military strength of militant and aggressive communism, our Nation might find the task desperately difficult. The threat against us is total in its maleficence, and in the various areas in which its influence is being exertedin the psychological, economic, sociological, diplomatic, and cultural fields—as well as in the purely military.

Perceiving the comprehensive nature of the defenses we must erect in all these areas of human activity, and fully realizing their interdependence—I should like to discuss with you some of the military implications of our alliances, and the extent to which the security of our Nation is bound up with the security of our allies—how much they contribute to our military strength, as we contribute to theirs.

In any approach to a military problem, a logical starting point is the military capability of the potential adversary as revealed by his forces in being in reserve, and in

capability to employ those forces against us.
The catalogue of Soviet military strength in being is an impressive list. Briefly stated, the Soviets have 175 divisions, and there are a million men in the armies of European captive states under varying degrees of Soviet control. In addition, the Red Chinese Army boasts 2½ million men. This Soviet-controlled ground strength, then, represents a military force far exceeding purely defensive needs. Its existence, in the light of the clearly demonstrated aggressive policies of the men of the Kremlin constitute a grave threat to world peace. And not only in ground strength, but at sea and in the air the Soviets continue to increase the effectiveness of their armed forces. The Soviet Navy is now estimated to be the second largest in the world with much of its strength concentrated in submarines. In the air the Soviets are estimated to have a total of 20,000 active planes, with an everincreasing effort devoted to the production of jet fighters and long-range bombers, and a continuing buildup in the air strength of their satellites.

These formidable military forces respond to the orders of a small clique of powerful and ruthless men whose avowed alm is world domination and who, on the record, respect only force as the ultimate arbiter in the affairs of men. Their basic philosophy, abhorrent to us, stands revealed in historical record by their willingness to expend human lives on whatever scale the achievement of their aggressive aims demands.

Now the Soviet and satellite governments have certain military advantages which derive from the physical resources they control. The have an advantage in freedom of action which dictators always enjoy over democratic nations responsive to public support, and to the conscience of God-fearing peoples.

The Soviet bloc controls more than onefourth of the earth's land surface. Applied to military considerations, this is an extremely significant fact.

Wars are fought, not for control of the seas or control of the air. These are but intermediate steps toward attainment of the final objective. That final objective is control of land and of the people living on it. Control of essential land areas is vitally necessary to the effective exercise of sea and air power, since seapower is dependent upon the continued use of land bases, and air forces upon the continued availability of landing fields. I scarcely need point out, however, the essential role of sea and air power in modern war, particularly in our case, with a continent to defend and worldwide allies to support. Yet, I do wish to put in clear and proper perspective the vital role of land power and the decisive instruments of land power-ground forces or armies-in the sum total of armed strength.

The more land an aggressive force controls. the more sea, air, and land power it can sustain. With the land comes the food for the armed force, the steel and coal to forge its weapons, the oil to power its engines of war, the industrial capacity to enlarge its warmaking potential, the manpower to labor for its aggrandizement. Moreover, with conquered land comes space to add depth to the defense of an aggressor's homeland from retaliation.

It is not only that more land, with all the resources of that land, becomes available to strengthen the aggressor, the conquered land, and the people on it, are unable to join with those powers which would normally be its allies. Thus, to the extent an aggressor can establish and maintain his control, the conquest of more land strengthens and enlarges his capabilities for further aggression, while simultaneously weakening the capabilities of every other power successfully to resist him.

At present, Kremlin-led Communist control is exercised over some 800 million human beings—roughly, one-third of the earth's population, inhabiting one-quarter of its land surface. Beyond the periphery, this force continues to infiltrate and attempt to subvert the governments of free countries. It seeks to exploit every weakness. Those who direct it have only too often stated their hasic aim of world domination, and the pattern of their deeds continues clearly to support their words. They would, if able, destroy the institutions and ideals which have enabled man, with God's guidance, to achieve new heights of dignity. These men would, if they could, extinguish the light of freedom itself, for in their basic attitude toward life there is no place for freedom, no purpose of man, except to serve them and the state they represent.

It is, therefore, with due regard for the broad nature of the Communist threat and the urgency of that threat, that our Nation must build and maintain its defenses. It is enlightened self-interest for us to recognize that our safety is joined with the safety of other free peoples, that our strength is augmented by theirs and theirs by ours.

Only a part of the free world's important production centers and important sources of vital raw materials are located in the United States, or even in the Western Hemisphere. Other continents are rich in the materials on which our security and the continued progress of civilization depend. Africa holds much of the uranium required for our de-fense effort. Southeast Asia is a primary source of natural rubber and a rich source of tin. More than half of the world's known oil reserves are located in the Middle East. Japan, while short of many raw materials, possesses an industrial capacity of increasing importance. And in Western Europe there are rich deposits of coal and iron, as well as a population of 300 million, closely akin to us, with a high proportion of skilled workers and technicians.

All other considerations apart, the Importance of such resources and capabilities to the strength of the free world makes it urgent that they remain on our side. If a Kremlin-launched war should succeed in seizing and controlling the vast productive capacity of Western Europe, the balance of military power would swiftly shift to our grave disadvantage. Then, even if many industrial centers behind the Iron Curtain were to be destroyed by allied retaliatory efforts, the scizure of Western Europe by the Soviets would have compensated, perhaps much more than compensated them, for what they had lost.

Besides the resources which we and our allies can contribute collectively to mutual defense, there are other distinct military advantages which accrue from our united efforts.

In a world in which time and space continue to shrink, our regional defense groupings would give more timely warning of aerial attack, more precious time to alert our collective defenses, both here and overseas. Bases on allied soil would enable the United States to employ its striking power against aggressors in any part of the globe. Land, sea, and air bases in the European and Mediterranean area and in the Far East make a vital contribution to the security of these coalitions, and no less so to the security of the United States. These numerous dispersed bases offer added insurance against the possibility of successful multiple surprise attacks, by which an enemy might seek to deliver a knockout punch, before the free world's men and planes and ships could retailate.

Another advantage of mutual benefit is the increased effectiveness of combined intelligence efforts, so essential to the conduct of successful military operations. Further, our forces overseas are daily gaining familiarity with the language and characteristics of the nations with which we are working, and of the characteristics of the terrain over which we may be called upon to fight. Such knowledge is of scarcely less importance in peaceful pursuits than in time of war.

Obviously, one of the great contributions of our allies is in the military forces which they contribute to the common cause and which, combined with ours, constitute a deterrent to Soviet armed attack and, if launched, an obstacle to its advance.

In proportion as the menace of Kremlin-inspired aggression has become more apparent and the power of Kremlin-controlled military strength a more ominous and obvious threat to world peace, the free nations of the world have increasingly recognized their common danger and the necessity for combining their military strenth. Unfortunately, the converse has likewise been generally true. The more the Kremlin has disguised its designs and preached of peace, the more the Western World has tended to relax its efforts and drop its guard. Nothing could better serve the Kremlin's cause, or more injure our own.

The military contributions of Western Germany would add still further strength to Western Europe's defenses, and it is for this reason, among others, that so much significance attaches to the continuing efforts to bring Western, and ultimately all of, Germany into NATO, efforts which have come closer to realization through signature of the recent London and Paris agreements.

The military arrangements I have mentioned are dependent for their motivating power on much more than a mere pooling of our military and other material resources. There must likewise be some pooling of spir-Itual forces in support of the principles we all profess, some meeting of the minds in a great moral purpose-a purpose sufficiently idealistic to lift it above the purely material, yet sufficiently practical to promise true progress if fulfilled. In the moral factor lies that vital spark of vision and strength and determination which alone can bring our efforts to flower into a finer civilization. destruction of our moral and spiritual standards therefore remains the final deadly aim of the Kremlin-controlled communism.

It well recognizes the importance and significance of cooperation—spiritual as well as military—among the nations of the free world. Wherever it operates, it strives to turn our allies against us, and to destroy the strength of the alliances that its own aggressive policies have forced into being. One theme is consistent through all the devious twists and turns of the Kremlin line, the "Hate America" theme. Simultaneously, the attempt is made to lull the peoples of the free world into complacency by constant repetition of hypocritical offers of world peace.

By propaganda, psychological warfare, subversion, and all methods short of open war, the struggle to isolate the United States continues. Its success would vastly increase our difficulties and our peril.

It is well, therefore, for the citizens of our Nation to appreciate the contributions of our allies and their importance to our national security. We should realize that alliances require both "give" and "take." We must likewise realize the necessity for patience and understanding, and bear in mind that the issues which unite free nations are far greater than those which divide them. Any alliance—and, of course, I am here

Any alliance—and, of course, I am here dealing with military alliances—must be of mutual benefit to the parties concerned.

Trying to get something for nothing is no more praiseworthy or practicable in international than in personal affairs. Efforts to do so are rightly regarded as unethical. That our alliances meet the test of practicality is indicated by the fact that they were voluntarily entered into by free governments with the support of their respective peoples.

I have had occasion to serve with our allies in both Europe and Asia. I have served both here in the United States as well as in the Caribbean, with the military representatives of our Latin American allies. The degree of unity and cooperation which I have observed in all those regions among the military men of the nations concerned, is a highly encouraging sign of the mutuality of interest that prevails and of a strong aspiration to achieve a common objective of strength through unity. It is an asset of intangible yet incalculable value.

Since military commitments are a necessary part of military alliances, international military arrangements by the United States must be carefully scrutinized to ensure that our commitments do not exceed our capabilities and that the benefits expected to accrue are worth the commitments. Obviously, perspective is required. The capabilities of our Nation, while enormous, are not unlimited, and selfishness still rides high in this practical world.

Yet, we can take pride in the leading and enlightened role our statesmen have played helping to forge a structure of international, or collective defense the better to safeguard our own national security.

American military men have played a prominent part, advisory in the formulation and executive in the implementation, of these arrangements. They have added greatly to the prestige and high reputation that our Nation's military forces enjoy in the world. Because our military capability is an important element of our diplomatic effectiveness, the significance of a potential enemy's respect for the capabilities of our military forces should be obvious. It is only through our possession of adequate military strength that the efforts of the splendid leaders of American diplomacy can realize their fullest success.

American officers of all our armed services are working with allied officers in all parts of the free world as partners in an international effort to preserve principles and to defend ideals, which basically have a great deal in common. In 39 countries of the world, officers of the United States Army, though relatively few in number, are helping to train and supply the fighting forces of our allies. These officers are securing excellent results in assisting allied military establishments to contribute more effectively to their own defense and so to ours, and perhaps of even more importance, in interpreting our way of life by precept and example. Our two United States field armies overseas—the Seventh in Europe and the Eighth in the Far East, together with their associated fleets and air forces-are conclusive evidence of our Nation's determination to help our allies to resist aggression, and to participate as a full partner in the common defense.

The great efforts we are exerting to secure world peace in partnership with the free nations of the world—efforts in which the United States Army is proud to have a major share—have for their goal the preservation of the freedom we have inherited from our forebears, the freedom we are determined to preserve for our children and our children's children, the freedom we continue to seek to extend by peaceful means for all men to enjoy everywhere.

For the sake of all of this, we must not isolate ourselves. He who advocates such a course is, I think, a dangerous counselor.

Eighty-fourth Congress of the United States

EXTENSION OF REMARKS

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1955

Mr. LONG. Mr. Speaker, all of us who are honored to serve our great people in their Federal Congress, are of course, and properly so, the recipients of large amounts of mail from them. Indeed, it is traditional in our land for the citizen to write to his Congressman or his Senator on the least provocation.

Now, Mr. Speaker, too many of us upon whom rests the responsibility for our legislative affairs are inclined to ignore the importance of these letters. Nothing could be more foolish. These letters are, in a very real sense, instructions from our employer; and, if we want to be good and faithful servants, it behooves us to take heed of the counsel with those who employ the people of the United States. Indeed, Mr. Speaker, one of these letters, which I am sure has been received by all of my distinguished colleagues, is the inspiration for this address. The gentleman who wrote it, Mr. Bluford H. J. Balter, is an outstanding citizen of my own State, although not of my district. He is no personal friend of mine, although I wish that he were. I do know, however, that this patriotic man has spent a fortune in his efforts to aid in the survival of his country. Is it any wonder, then, that his letter has inspired this address? Mr. Speaker, the letter of which I speak is worthy of a permanent place in our national archives, and I make it a part of this address.

All experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed.

The little-noticed words quoted above were inserted in our Declaration of Independence before the meeting of the First Congress of the United States of America. They gave clear and ringing notice to the world that Americans, though disposed to be long suffering in the face of governmental oppression, did have within them a point beyond which no king nor potentate might proceed in interfering with their inalienable rights.

When His Britannic Majesty, George III, disregarded this warning from his American subjects they proceeded to turn from long-suffering subjects of a European nation, to violent and aggressive citizens of their own free and independent nation, determined to preserve their freedoms with their lives, and responsible only to their God for their actions. Now, 179 years later, that same grave and portent warning is in order. Our Nation again stands in grave peril; whether or not it survives may well depend upon the strength and integrity of the men and women who make up the 84th Congress of these United States.

Our valorous Founding Fathers rose up and "abolished the forms to which they are accustomed" because they valued the freedom and honor of themselves and their descendants more than they feared the horrors and sufferings of war. That freedom might not perish from the earth, they did not hesitate to face death as traitors if they failed in their high endeavor. They did not fail

their high endeavor. They did not fail. Having won their fight for human freedom and human liberty, our great forefathers on this continent then proceeded to draft, adopt, and promulgate the Constitution of the United States. one of the greatest documents ever devised by the mind of man. That Constitution and its first 10 amendments guaranteed to all Americans for all time that "life, liberty, and the pursuit of happiness" that was promised in the Declaration of Independence. Today, after some 164 years of the existence of our Constitution, we have life but precariously, dependent upon the whim of the brutal rulers of those governments who have embraced atheistic communism: if we have liberty at all, it is at the whim of some government functionaire, intent upon taking of our sustenance in order that the habitants of foreign shores may live better than we, and who fails to exercise the absolute power that government has wangled and decadent judges have affirmed, to take all of our property and all of our earnings to satisfy the needs of an ever-expanding worldwide giveaway program, designed to enrich and strengthen our enemies while pauperizing us; and if we may pursue liberty at all, we are pursuing only an unobtainable myth, made unobtainable by unreasonable, unconstitutional, and confiscatory taxes that are driving our people to desperation, and which will inevitably destroy our Nation just as they have already destroyed the individual initiative that has made our country great.

Where along the way did we lose the freedom and independence for ourselves in the present and the hope for our descendants in the future, so carefully created and nurtured by our valiant fore-fathers on this continent? We have more than once demonstrated our valiance in war and our magnanimity in victory.

During the years 1941-45 our country, rightly or wrongly, was at war, and our people labored long and hard, and without thought of themselves, to carry the immense financial burden imposed upon them by the necessities of their native land. They did so gladly and cheerfully. With victory in Europe and Japan, our people continued giving of their sustenance without complaint in order that the enemies they had just made prostrate might have food and drink and continue to live. But now some 14 years have elapsed, during which the people of the United States of America have carried the financial burdens of most of the world, and with what results? In 1940, before we began our wasteful giving, we had friends all over the world. Today we have hardly a friend outside our own hemisphere.

But even with this dismal background our thoughtless leaders in our National Capital now propose to tax our people even more grievously and to assume now the additional burden of the support of the uncounted masses of the great land mass of Asia. What fools we are. If our generosity made only enemies among the Christian peoples of Europe, by what logic may we expect friends as a result of foolish give-aways in hostile, non-Christian lands?

Our great Constitution guarantees us the right to life, liberty, and the pursuit of happiness. All of these guaranties become meaningless in the face of illegal and confiscatory taxes. We could serve the cause of communism no better by sending them vast shiploads of armaments than we do by senseless spending ourselves into chaos and national bankruptcy.

Too long have we played the fool. Our national survival depends upon a sane reappraisal of the policies of folly that have made our continued existence a serious question at this tense moment of history.

And now, Mr. Speaker, I tender the letter from my fellow citizen of our wonderful State of Louisiana, Mr. Bluford H. J. Balter, the letter which was the inspiration for this address, and I ask that it be made a part of this address and take its place in the historical archives of our great Nation as witness to the fact that in our great land of the United States of North America the humble citizen as well as the statesman is aggressively determined that our free land shall survive and that our descendants shall enjoy, under our Lord and Saviour Jesus Christ, that freedom and liberty to which we ourselves were born and which we are obligated to hand on to them undefiled.

New Orleans, U. S. A., January 1, 1955. Hon. George S. Long,

United States Representative from the Eighth Louisiana Congressional District, House Office Building, Washington, D. C.

DEAR CONGRESSMAN: Exercising that inalienable right of free men to petition their government for redress of wrongs, as guaranteed by your illustrious predecessors gathered in constituent assembly to frame the Constitution of the United States, I now address you and implore you to save the very existence of our beloved Nation.

The Declaration of Independence, that great document by means of which our ancestors cast the die for freedom rather than tyranny, promises to us, as inalienable rights, "life, liberty, and the pursuit of happiness."

After the bitter struggle for independence was won, that promise was made reality in the Bill of Rights comprising the first 10 amendments to the Constitution, and especially the due-process requirement of the fifth amendment.

Living under the Bill of Rights from 1789 to 1913, the United States of North America attained the highest standard of wealth, of living, and of culture that the world of man has ever known.

Then an iniquitous blight was impressed upon our constitutional system, the 16th amendment, declaring, in effect, that all the earnings of the citizen belonged not to him, but to the Government. Whatever amount of his earnings he was allowed to keep was by the grace of his all-powerful Government and not by reason of his natural and inallenable rights.

The 16th amendment had within itself the seeds that have now turned a proud Nation of free men into a Nation of ignominious slaves and regimented robots. The graft and

corruption in high places, the mink coats and the freezers, yes, even the alleged action of Alger Hiss, Harry White, William Remington, and the Rosenbergs, as documented by the House Un-American Activities Committee, all are byproducts of a Nation of slaves, a people devoid of all hope of ever living in the blessed light of freedom and exercising the dignity inherently possessed and rightly expressed by all men who live not under tyranny.

For 14 years our people have supported from their earnings most of the rest of the World. During the great war that ended in 1945, they did so gladly; at the end of the decade that has since elapsed, they find the burden intolerable and the proposal to spend untold billions upon the teeming masses of

Asia unthinkable.

History will hold to stern account the 84th Congress of these United States. It is to you that we look for the restoration of freedom and sanity in our beloved Nation. If you continue giving of our wealth and earnings to ungrateful and indifferent Europeans who give us only hate and ridicule in return and if you saddle us with the burden of supporting hordes of atheistic Asians, then truly we shall die as a free nation. If you take the first step toward returning us to sanity and Americanism, then shall you see a miracle among us. If you will but restore to us the right to use the fruits of our labor and our undertakings as we choose, limiting the arbitrary power of government to confiscate our wealth to some reasonable and predetermined amount, then shall you see American initiative and ingenuity come to the fore again and raise our living standards and our national prosperity to such un-dreamed-of heights that the rest of the world will live better than it ever has on the mere byproducts of American civilization. Members of the 84th Congress:

If you fail us we die. If we die you and the hopes of mankind everywhere die with

Respectfully submitted.

BLUFORD H. J. BALTER.

Production of Wheat for Feed

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 6, 1955

Mr. REED of New York. Mr. Speaker, I have introduced today a bill which will permit the farmers of the Nation to produce wheat for feed, without penalty, if all of the wheat produced is fed where grown and no price support is desired.

Under the present law, when marketing quotas have been voted for wheat, farmers who harvest wheat in excess of their allotment are subject to penalty. Farmers who produce wheat only for feed and who do not want price support on their wheat or any other crop are forced to curtail their operations and are in violation of the law and subject to penalty if they fail to do so. This is true even though the farmer uses his entire production of wheat solely to feed his own cattle or poultry. This situa-tion is an intolerable and unnecessary interference with the operation of our country's farms and has been the source of widespread dissatisfaction among our farmers.

The ridiculousness and downright injustice of the situation are obvious. Many small farmers who raise wheat solely to feed their own cattle or poultry are forced to put that wheat into storage and then buy the wheat they need for feed purposes. This is an indefensible example of Government regulation run

Wheat used for feed on the farm where produced does not enter any marketing channels. Its production does not affect the operation of price supports and, therefore, should be exempted from marketing quotas. My bill will accomplish that purpose. I shall press for its early consideration by the Congress.

How We Served as Partners in a Purge

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. SHEEHAN. Mr. Speaker, since the end of World War II there have been many stories to the effect that the American Government went beyond the terms of the Yalta agreement when returning displaced Russian nationals to the Russian Government, due to the zealousness of some of its officials. It has been charged that this phase of the repatriation program returned these people to their deaths.

A very interesting article on this subject, written by Julius Epstein, was published in the December 1954 issue of the American Legion magazine. The article is entitled "How We Served as Partners in a Purge," and is as follows:

How We Served as Partners in a Purge (By Julius Epstein)

During the night before they were packed into army trucks and carted off to Stalin's slaughterhouses, the 4,000 prisoners of war slept peacefully. They had again been reassured officially that there was no intention to deliver them against their will to a red

The reassurance was a cruel trick. Before dawn that Sunday morning their camp was surrounded by armed troops under command of grim-faced officers. Though the war had ended more than 9 months before, all was in readiness for one of its bloodier-and morally most shocking-operations.

At about 6 the prisoners, awakened by searchlights suddenly flooding the entire camp, were hustled out of their barracks. They were frisked for weapons-not weapons of assault but of suicide. Those who resisted were beaten up; skulls were cracked, and ribs smashed. Despite careful planning of the macabre business, many of the victims succeeded in slashing their wrists and throats with concealed razor blades and jagged glass. Quickly the air was filled with cursing. wailing, and the agonized moans of the wounded.

In batches the men were driven onto the waiting trucks, each guarded by soldiers flaunting rubber clubs and machine pistols. Hour after hour, the trucks hauled away their freight of betrayed prisoners, some of them bleeding and dying, to the Communist fate they dreaded far more than death.

Even in this age of mass violence, this scene has a nightmarish quality. Who were the unfortunate prisoners? What was their crimes? Who were their captors, so intent upon providing targets for Stalin's firing squads?

For Americans with a conscience the answers to such questions are deeply distressing. Yet they must be faced. Whether crime or blunder or both, we can cleanse the national record on this score only by acknowledging the unpleasant facts.

The scene I have described took place on Feburay 24, 1946, in an American camp for Soviet war prisoners at Plattling, Germany. The bloody job of forced repatriation was carried out by United States troops. The victims were veterans of Gen. Andrei Vlasov's Russian Army of Liberation, which had fought under German auspices in the desperate hope of overthrowing the Red despotism in their homeland. Knowing that tor-ture and death awaited them in the Soviet Union, they had surrendered to the American victors, in the naive belief that they would be accorded political asylum.

Plattling was a typical episode in what one American writer has called the hush-hush bargain at Yalta under which Allied bayonets and machineguns were enlisted in the noble task of driving Soviet citizens back into their prison land. No less gory dramas of violence were being played out at dozens of detention points for displaced Soviet citizens in Germany, Austria, Italy, France, England, and even the United States.

Nor was the brutality unleashed only against those who, like the Vlasov men, had donned German uniforms. It was directed also against the vast number of Red Army war prisoners liberated from Germans camps; against millions of civilians, including women and children; in short, against all Soviet nationals who at the war's end, though they loved their native land, refused to return to the Kremlin yoke.

One must pause to savor these extraor-inay facts. The democratic governments in dinay facts. their hour of victory used force-ranging from deceitful persuasion and threats to raw violence—to return men and women against their will to Stalin's mercies.

The British and the French, too, shared in this ugly enterprise, but the main job, alas, was done by the Americans. In all, according to the best estimates, about 2 million who wanted to remain on the freedom side of what would soon be called the Iron Curtain were forcibly repatriated.

In his book, Our Secret Allies, Eugene Lyons calls it a moral obscenity. Another book, Soviet Opposition to Stalin, by George Fischer, calls it an indelible blot on the West's tradition of ready asylum for political exiles. In the minds of anti-Communist Russians, whether inside or outside the Soviet Union, it is an inexpungeable memory of betrayal by the free world.

How did the enormity come to be? Who was responsible, and why? Even at this late date the affair remains shrouded in secrecy and embarrassed silences. By dint of long research I have uncovered some of the pertinent documents. But much must still be exposed and explained. It is primarily in the hope of stimulating a congressional inquiry of the whole subject that I have written this article.

Some years after it had carried out forced repatriation on a huge scale, the United States was destined to take a gallant, principled stand against that vicious practice. Again the occasion was an effort by Communists to get their claws on men who had chosen freedom. This time our Government, backed by all the 15 nations taking part in the Korean war, stood firm. It rejected the Communist demand, which had become the stumbling-block in the Korean truce negotiations. Our officials, press, radio, and pulpit were unanimous in denouncing the Moscow-Peiping insistence on the coerced surrender of war prisoners as illegal, immoral, barbarous.

We held unswervingly to the view that to repatriate a single prisoner against his will would be a crime against humanity. On October 24, 1952, Secretary of State Dean Acheson defended this view before a committee of the United Nations Assembly, with Comrade Vishinsky in the audience, and drew the applause of the whole civilized world.

"It was quite unthinkable to the United Nations Command," he declared, "that it should use force to drive into the hands of the Communists, people who would be resisting that effort by force." In this address he marshaled arguments in ethics and in international law. Analyzing the Geneva Convention of 1949, Mr. Acheson showed that it contained nothing "which would lead one to believe that a prisoner of war must be forced at the end of a bayonet, fighting, perhaps dying, to go back where he does not want to go." Forty years of international practice, he demonstrated, left no margin for doubt on the basic principle, namely:

"If a prisoner believed that it was dangerous for him, that he might die if he were sent home, and if he claimed asylum, and if the detaining state thought that it was an honest, bona fide claim, the detaining state

could grant asylum."

The bitter irony of the speech, though few noted it, was that its every argument, its every appeal to the law of God and the law of man, applied also to the forcible repatriation of Soviet nationals after World War II. That, too, had been a crime against humanity by our own definition and standards. It had been, in Mr. Acheson's words, "wrong, improper, illegal, and unnecessary to return prisoners by force." The impropriety and illegality, indeed, had been compounded by the fact that the victims included hordes of civilian fugitives, among them women and children.

The courageous American position with respect to anti-Communist prisoners in Korea is an implicit admission of our guilt from 1945 forward. If the crime is to be atoned, if the political blunder is to be repaired, the admission must be made explicit. The evil was too great, the political consequences have been too harmful, to justify continued silence on the issue.

Forced repatriation, it has been generally assumed, was agreed upon at Yalta by Roosevelt and Churchill under the spell of the willy Stalin. The truth is even more damaging.

Perhaps there was an off-record verbal understanding that the democracies would, if need be, drive his reluctant subjects back into Stalin's prison-house with bayonets and rubber truncheons. But so far as the written commitments go, including the secret portions, we played the cruel game with far more zeal than was called for even by the Yalta agreement on the subject.

That agreement, made public 13 months later, provided for repatriation of "prisoners of war and civilians" of any of the Allies liberated by another ally. It glossed over the real problem; what to do about prisoners and civilians who refused to go home. It contained no reference, open or implied, to the employment of force. That, for reasons beyond normal understanding, was an extra, a bonus tossed in by American officials strangely eager to help herd Russians into Soviet torture chambers and concentration camps.

The secret Yalta Agreement on repatriation was signed on February 11, 1945, by Maj. Gen. John R. Deane for the United States of America, Maj. Gen. A. A. Gryzlov for the U. S. S. R. Article 1 simply stipulated that each of these nations would gather liberated nationals of the other "in camps or points of concentration until they have been handed over to the Soviet or United States authorities."

Article 2 provided that Soviet and United States repatriation officers "will have the right of immediate access into the camps and points of concentration where their citizens are located," as well as "the right to appoint the internal administration and set up the internal discipline and management in accordance with the military procedure and laws of their country."

The Soviets immediately violated these terms. As recorded in his book on The Yalta Conference by Edward R. Stettinius, Jr., "The Soviet Union after Yalta would not allow a United States mission to function behind the Soviet lines." Soviet missions, by contrast, not only enjoyed free entry to American camps holding their citizens but were allowed to propagandize and often to terrorize the inmates into accepting repatriation.

On March 8, 1946, in releasing the agreement to the press, the State Department also issued a statement on the implementation of that document. It declared that the United States "is facilitating the repatriation to the Soviet Union of only those persons who were citizens of and actually domiciled within the Soviet Union on September 1, 1939," which is to say at the start of the war. It went on to specify that "repatriation of Soviet citizens is not facilitated unless they so desire," except in the cases of members of Soviet armed forces and those who had voluntarily collaborated with the enemy.

That implementation thus went far beyond the letter of the agreement. In effect it undertook to send back vast categories of men and women even if they did not "so desire." In practice, moreover, our military authorities, and also UNRRA, violated the State Department's own rules.

For instance, citizens of the three Baltic republics certainly had not been "domiciled within the Soviet Union on September 1, 1939." Yet we turned over hundreds of thousands of Estonians, Latvians, Lithuanians—and even Poles—to the Soviets.

The record shows that the principle of forced repatriation was accepted and acted upon by the Supreme Headquarters Allied Expeditionary Forces (SHAEF) as early as April 1945, weeks before the war's end. This and other disturbing information on the subject is spelled out in an official, heretofore unpublished 156-page document entitled: "The Recovery and Repatriation of Liberated Prisoners of War, Occupation Forces in Europe, 1945-46." It was compiled under authority of the Army chief historian, Col. Harold E. Potter, by the chief archivist, Gillet Griswold, Frankfurt-am-Main.

This document proves to the hilt that not only SHAEF but the Joint Chiefs of Staff in Washington deliberately chose to use force to drive Soviet nationals to their doom; not because they had to but because they wanted to. On page 64 we read:

"The principle of forcible repatriation of Soviet citizens was recognized in supreme headquarters in April 1945. Although the Yalta agreement did not contain any categorical statement that Soviet citizens should be repatriated regardless of their personal wishes, it was so interpreted by the Joint Chiefs of Staff. On instructions from the latter, theater headquarters ordered repatriation regardless of the individual's desire with only two exceptions, namely, Soviet citizens captured while serving with the German armed forces and unwilling to resign their status as prisoners of war, and Soviet citizens known or suspected to be war criminals."

This statement bristles with puzzles that only Congress can solve. Fortunately two members of the Joint Chiefs of Staff, General Marshall and Admiral King, are still alive to testify, along with scores of lesser officers involved in making and executing the amazing decision.

If Soviet soldiers who had served with the German forces but were unwilling to resign their status as prisoners of war should not have been forcibly repatriated, how come that nearly all of them, including hundreds of thousands of Vlasov men, were surrendered to Stalin? Surely not one of them in his right mind would have given up his prisoner-of-war status. The greater puzzle, clamoring for an answer, is why SHAEF and the Joint Chiefs decided to invoke force against Soviet soldiers and civilians despite the fact that the Yalta agreement did not make this obligatory. Who was so anxious to rid the world of anti-Communist Russians, and why? What we have learned in recent years about the infiltration of our Government agencies and the White House itself by Soviet agents makes a clear solution of the mystery urgent and inescapable.

The same document reveals another telltale detail. On August 25, 1945, the Seventh Army, under General Patch, requested from theater headquarters specific instructions on the use of troops to turn over unwilling repatriates to the Soviets, Despite its decision in favor of force in April, SHAEF referred the inquiry to Washington. Meanwhile General Patch, presumably because, like most field commanders, he hated the brutal chore, suspended the use of force.

Washington took 4 months to answer. In their reply on December 20, 1945, the Joint Chiefs of Staff set forth the policy of unstinting force in repatriation that was to remain effect deep into 1947. It was a policy in nowise dictated by the Yalta agreement (which the Soviet authorities were violating right and left in any case) and even more outrageous in its cruelty than the State Department's statement on implementation. The order was signed: "By command of General McNarney: L. S. Ostrander, brigadier general, United States Army Adjutant General." But the authority derived from the Chiefs of Staff. And it is unlikely that a decision involving the lives of millions was made without consulting the Commander in Chief.

Another highly revealing document—still classified—is now in the custody of the Historical Record Section of the Army in Alexandria, Va. It bears the file No. 384.7—14.1 and is entitled: "Forcible Repatriation of Displaced Soviet Citizens—Operation Keelhaul."

This document, issued on September 1, 1948, probably holds the clues to the ghastly secret which took a toll of hundreds of thousands of Russian lives—the secret which has muddled and bloodied our relations with the peoples, as distinct from their hated Communist masters, behind the Iron Curtain. Along with all other classified materials on repatriation resting in Alexandria, Kansas City, Mo., and other military repositories, it should be opened to the daylight of public knowledge.

As a vital aspect of the cold war, we are

As a vital aspect of the cold war, we are today addressing the Kremlin's subjects through the Voice of America, Radio Free Europe, Radio Liberation, and various unpublicized channels. How can we expect them to believe in our friendship, our assurances that we consider them potentially our allies, until we purge ourselves of the guilt of forced repatriation?

Perhaps it was anxiety to butter up the Politburo which led our top-shelf officials to commit that atrocity. Perhaps the policy was folsted on them by the machinations of Alger Hisses and Harry Dexter Whites at control points in the Government. Whatever the motivations, it is a story compounded of moral callousness made worse by sheer confusion and ineptitude.

What, for example, went on in the addled heads of officials who in April 1945 decided to drop leaflets urging Soviet nationals to surrender to Americans for "speedy return to their Russian fatherland." Speedy return, as any tyro in the business should have known, meant speedy liquidation by firing squads. Meanwhile other leaflets and broadcasts addressed to Russian enemies of the Kremlin promised that they would never be sent back; many of those who believed that promise would soon pay for it with their freedom or their lives.

Our Psychological Warfare Division, headed by Gen. Robert A. McClure, with C. D. Jackson as his deputy, cannot slough off its share of responsibility for confusions and deceits of this character. The pattern, however, was set at much higher levels. Its was a pattern such as Moscow itself might have prescribed. For its effects were (1) to turn the Soviet peoples, in particular the enemies of the regime, against the democracies; (2) to convince the Kremlin's internal foes that it was futile to count on the understanding and help of the West; and (3) to strengthen Stalin's hand as against the population in his difficult postwar period of readjustment.

It was a pattern ethically unclean and politically obtuse. Those who carried out the policy in the face of the fugitives' protests, desperation and self-destruction can claim that they were merely obeying the orders of superiors—except that this allbi was ruled out at the war-criminals trials in

Nuremberg and Japan.

The forced repatriation undertaken after V-E Day continued for more than 2 years. It was extended also against the thousands of Red soldiers and officers in the Soviet occupation zones who deserted and sought asylum on our side; these were summarily handed back to the Red commands for execution.

I do not have the space here for a detailed inventory of the piled-up horrors. A few

samplings must suffice.

Once, more than a thousand whom we were transporting to Linz, a Soviet detention center, jumped out of the windows of the train as it passed over a bridge near the Austrian frontier. They perished. As the train approached Linz, hundreds more of the doomed prisoners jumped into the Drava River.

This story repeated itself at other concentration points, such as Dachau, Passau, Kempten, Plattling, Bad Eibling, St. Veit, Marburg. Operation Keelhaul became Operation Suicide. When Soviet officials came to take them over from American custody, prisoners in some cases locked themselves in churches or their barracks, to which they then set fire. Our GI's stood guard while Stalin's agents dragged out their "liberated" nationals, clubbed them without mercy and carted them off to the Red limbo. We shall never know how many cheated the Soviet executioners by taking their own lives, or how many died in transit before they reached the Soviet borders.

The British role, though secondary, was no sweeter. Thousands of Soviet prisoners taken to Britain were then forced to board British vessels to be sent to Odessa. Suicides abounded. Many jumped overboard and drowned. In one case it took 3 days in Odessa for Soviet police to drag the pris-

oners ashore.

A small part of the tragedy unfolded even on American soil. Many liberated Soviet soldiers were brought to the United States, chiefly to camps in Idaho. Virtually without exception, after the war, they begged for political asylum. But they were forced to board Soviet ships in Seattle and Portland. Over a hundred who resisted successfully were brought to a New Jersey camp. In the end these, too, were surrendered to Stalin, though we had to use tear gas to dislodge them from the barracks.

Hundreds of thousands of Soviet fugitives who evaded repatriation by our military monitors ended up in DP camps under UNRRA control. Again force was used—not outright violence now but propaganda, threats, lies, pressures—to make them go home Eugene Lyon writes:

"The role of UNRRA in riding herd on Stalin's enemies, both under HERBERT LEH-MAN and Fiorello LaGuardia, was hardly one to make Americans proud of their statesmen. LaGuardia in particular showed himself insensitive to the fears and grievances of the Kremlin's runaway subjects. Since UNRRA was widely infiltrated by Communists and fellow travelers in any case, the plight of would-be nonreturners was far from enviable."

Senator Lehman in a letter to me shows that, as first Director General of UNRRA, he did not know what his subordinates were doing. At meetings of the UNRRA Council in Montreal in 1944 and in London in August 1945, he writes, "Russia tried to insist on the forced repatriation of Soviet citizens," but the non-Communist members voted against such a policy.

Nevertheless hordes of DP's in American hands were cajoled and frightened into going behind the Iron Curtain. Under Lehman's successor, LaGuardia, came the notorious secret Order No. 199. This, to quote Lyons again, "not only instructed DP camp officials to effect speedy return of Soviet nationals to their home land in accordance with the Yalta agreement but outlined pressures and hinted at punishments toward that end."

Between 1945 and 1947 the American press from time to time published reports on gory episodes of forced repatriation. A dispatch in the New York Times of January 20, 1946, for example, described a riot in Dachau precipitated by impending repatriation. It told how Russians in a frenzy of terror committed suicide—10 died, 21 were hospitalized, and "many suffered cracked heads from the nightsticks wielded by 500 American and Polish guards." The dispatch added: "Even though threatened with rifles and carbines, they refused to leave the shelter, begging GI guards to shoot them rather than carry out the extradition order."

But no official voices were raised in protest against the staggering indecency. Worse; the military and UNRRA personnel in the field, like the public, were allowed to believe that in applying moral and physical force without stint we were carrying out a Yalta agreement. To reveal that the responsibility lay less in Yalta than in the inhuman and pro-Soviet interpretations of the agreement arbitrarily made by Washington would have given the nightmare an additional dimension of horror.

To this day officialdom on all levels has maintained a stubborn silence. Probably only Congress can break through it. The evil and the stupidity cannot, of course, be undone. But it can be faced, apologized for; its lessons can be learned.

A respected German journalist, Jurgen Thorwald, has written a book indicting his own country for its failure to make allies of the peoples in the Soviet Union against the Soviet regime. He relates a conversation between General von Koestring, as a prisoner, and an American colonel who was interrogating him. Von Koestring had opposed Hitler's mistreatment of the Soviet population. Now in defeat he tried to warn America. He said:

"We Germans surely have—through stupidity, inefficiency, and ignorance—destroyed the greatest capital which has ever existed in the world in the fight against bolshevism. * * You will not understand me now, when I tell you that you have destroyed this capital for a second time. * * It may well be that you will desperately call in the very near future for what you have now destroyed."

The capital he had in mind was the friend-ship and help of the Russian people in the struggle against communism. We were squandering it by surrendering Russian patriots to the Soviets. Today, as von Koestring foresaw, we are seeking to regain the good will we then sacrificed. An indispensable first step is to purge ourselves of what we have ourselves identified, in the Korean context, as a crime against humanity. Only then will the road be open to an understanding with our secret allies behind the Iron Curtain.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 còpies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORB, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized book dealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by book dealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

Appendix

Future of American Foreign Policy

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, January 11, 1955

Mr. WILEY. Mr. President, last night it was my privilege to deliver an address in Philadelphia on the subject of the Future of American Foreign Policy.

I ask unanimous consent that the text of my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BASIC PRINCIPLES FOR AMERICAN FOREIGN POLICY

It is a great privilege to speak to you in this distinguished forum.

It is a particular pleasure to share the with my able colleague from the State of Washington, a man young in years but broad in experience, one who has al-ready contributed significantly to the effective functioning of the United States, the Honorable Henry Jackson.

It is most appropriate to consider with my colleague and with you, tonight, the future of American foreign policy as the new

84th Congress gets underway

Here, in Philadelphia, hallowed birth-place of American liberty, we will contemplate how best we may preserve our own liberty and others' liberty throughout the world.

With the new Congress but 5 days old, we are entering into a new chapter of American history, a continuing chapter in unfolding American foreign policy.

NEED FOR BIPARTISAN TEAMWORK

The presence of my colleague here to-night, emphasizes perhaps the most important single point which I or anyone else, can make tonight. It is simply this: The success of foreign policy-now more than ever before-depends upon genuine teamworknot lip-service teamwork between the two major political parties. I am certain that we are going to have genuine, effective teamwork.

I am certain that under the leadership of our great President, Dwight D. Eisenhower, and our able Secretary of State, John Foster Dulles, that friendly constructive liaison will be maintained so that there is real consultation on the major issues involved in the future conduct of our foreign affairs.

No one here tonight need probably be told that never before has it been more important that we, as a people, be truly united at the

water's edge.

In this atomic-hydrogen age, this age of jet propulsion and soon, possibly, this age of an intercontinental ballistic missile, we cannot have a "Republican foreign policy"; we cannot have a "Democratic foreign policy"; we must have an American foreign

That is precisely what we are going to have.

TRIBUTE TO SENATOR GEORGE, CONGRESSMAN RICHARDS

We are fortunate indeed in having two statesmen on whom much of the legislative burden will fall in foreign affairs in the new Congress. I refer to the Honorable WALTER F. George, of Georgia, President pro tempore of the Senate, chairman of the Senate Foreign Relations Committee, and the Honor-James Richards, of South Carolina, chairman of the House Foreign Affairs Committee. They are men of the highest caliber. They are legislative leaders in the finest sense of the word, deeply aware of their re-sponsibilities to their Nation.

I know, too, the other members of both the Foreign Relations and Foreign Affairs Committees, and I can assure you that they, too, are deeply sensitive to their obligations to carry out a constructive foreign policy.

That is especially the case with our distinguished committee Member, our Senate minority leader, William Knowland, and it is the case with the Senate's Majority Leader Senator Lyndon Johnson, who has already contributed much particularly inter-American relations.

CURRENT CHALLENGES AND PERILS

Against this background, let me say that in my judgment the outlook for our future foreign relations is bright.

To be sure, it is full of immediate chal-lenges, full of critical dangers.

You are all aware of these perils. You are aware of the continued crisis in southeast Asia, notably in southern Vietnam.

You are aware of the nationalist ferment which is sweeping North Africa-site of several of our strategic bases-as well as the tension in many other underdeveloped areas of the world.

You are perhaps aware of recent Soviet diplomatic-economic developments with regard to Afghanistan and Finland, to cite two widely separate points, which give us cause for concern.

You are aware of the problem raised by the position of the new Japanese Government. It is a position which, I feel, in all frankness and friendship, is not sufficiently realistic about the danger of Communist aggression, the danger involved in the fake Soviet trade offensive—an offensive which is being used as a crude disguise for Soviet penetration of underarmed Japan.

DANGER OF SOVIET VERSION OF PEACEFUL COEXISTENCE

You are aware of how significantly the Soviet Union is emphasizing the worldwide propaganda theme—the supposedly soothing lullaby-of "peaceful coexistence."

Now, by our United States definition that concept-those two words-can be sound. But, the Soviet definition of "peaceful coexistence" implies a great deal more than the ordinary definition, a great deal which is absolutely unsound for the free world.

It implies compulsory neutralism to keep in the good graces of the Kremlin; it implies breaking up the western alliance; it implies ignoring the fact that international communism is still bent upon ruthless conquest.

No realistic power can, therefore, accept the misleading Soviet definition of peaceful coexistence with all its dangerous implica-

But, every realistic person believes we must do everything within our power to prevent a nuclear Armageddon-a terrible world war

War can be prevented. It will, I believe, be prevented, provided—I emphasize, provided—we are strong, provided we are prepared, provided we are united. Peaceful coexistence-yes, but only through free world strength, free world unity, free world realism.

Peaceful coexistence through actual, ironclad Soviet demonstration, for the very first time, that she means what she says and says what she means, that is what the West must

Glib Soviet promises, meaningless Soviet gestures, more Soviet soft-soap, of these we have had our fill. We are not going to heed more of the same.

We insist on hard and fast and irrevocable Soviet actions truly aimed at peace. In other words, let's see the Soviet Union agree to the sound Austrian state treaty. Let's see the Soviet Union agree to absolutely free and uncontrolled elections in East Germany and in North Korea and to an enforceable system of gradual world disarmament.

Let's see if the Soviet Union will do these or any of the other constructive deeds which she has so consistently refused.

PEACE PROGRESS EXPECTED

These, then, my friends, are some of the problems before us.

And, yet, as we review them, I am convinced that in spite of them, in the next 12 months, we are going to make further tremendous progress in helping to assure peace and prosperity. The Senate is going to ratify overwhelmingly the very helpful Southeast Asia Treaty Organization Pact. Moreover, at the meeting in Thailand late in February, I am convinced that SEATO is going to be strengthened. It must be strengthened.

We are going to ratify our mutual defense arrangement with the Republic of China.

We are going to witness final ratification of the Western European Union. Thus far, only 3 of the 14 NATO powers have ratified West Germany's admission. But, I am convinced that in spite of all the pitfalls ahead for WEU, in spite of all the roadblocks and traps which we are certain the Soviet Union will try to set in order to sabotage the setting up of the new West German Army-I am convinced that we are definitely on the high road toward the bringing into being of the Western European Union with West German membership.

I am conviced, too, that there is forthcoming new vitality in cooperation in our own Western Hemisphere and in particular in the Organization of American States. We are going to see a greater emphasis on sound inter-American relations—political, cultural, economic, defensive.

I believe, and so stated at the recent Inter-American Conference at Rio, that there is going to be far more abundant private American investment in Latin American lands. Thrilling new frontiers for the world, and particularly for these countries them-selves exist in the lands below the Rio Grande. There are magnificent opportunities for growth, development, and exchange. Standards of living within the next few years

are going to be tremendously raised there. What is needed is, of course, a favorable climate for greatly expanded American and other foreign investment, and I believe that it will be forthcoming in many of these Latin countries.

GREAT PROMISE IN ATOMS-FOR-PEACE

And there is other progress that is going to be made. Few avenues offer brighter promise than the famous atoms-for-peace plan offered by President Dwight D. Eisen-

This is one of the most dramatic, one of the most inspiring, one of the most fruitful channels of international cooperation now lying before us. It will be fruitful in the of medicine, fruitful in the field of industrial power, fruitful in the field of overall scientific advancement, fruitful in helping to ease East-West tensions.

All this lies before us, and it is capable of

So, we are moving ahead. We are doing so in spite of the pessimists, in spite of the "spreaders of gloom," in spite of some morbid people who almost seem to prefer precrisis rather than making realistic predictions of good things to come.

I, for one, have never believed in overoptimism, but I do believe in faith: Faith in ourselves, faith in our allies, faith in our chances for peace, faith in our Creator. And that is why I believe that we are going to continue to have a successful bipartisan

foreign policy in time to come.

Let me say, too, that we are going to expand our program of technical assistance particularly in free Asia. This program, with modest expenditures, has already done incalculable good in helping to reduce illiteracy, disease, malnutrition, in helping to improve housing, sanitation, agriculture in a great many countries. I believe that this program should be expanded, not only through our own efforts, but, through the medium of the United Nations because it pays off in a thousand and one constructive ways for the good of mankind.

And, speaking of the U. N., I believe that the United States Senate will submit important suggestions for strengthening of the

U. N. Charter.

I do not believe that they can or will be very radical proposed changes, but they may affect such vital matters as helping to broaden membership in the U. N., more effective Pacific settlement of disputes, and other phases which definitely do lend themselves to improvement, in spite of the possibility of Soviet veto.

This, then, is the partial shape of some of the things to come, as I see it. I am not a prophet or the son of a prophet, but I believe that all that I have mentioned thus

far is feasible.

Tomorrow will bring changes. The scenes on the world stage are constantly in flux. Great political personalities rise and fall, party coalitions change, circumstances un-fold, new facts come to light, but these goals I have mentioned are all attainable.

In anticipating our future foreign policy goals, I should like to stress several princi ples which I think can be a sound guide

to our action.

AMERICAN ACTIONS OBSERVED BY WORLD

The first principle which we must follow is that our own domestic actions here at home will, to a great extent, determine our success or failure abroad and that we have got to watch our step.

The eyes of the world are on America. The eyes of friends and neutrals and foes. may, in George Washington's words, "raise a standard to which the wise and the honest may repair," or we may drag down our cause by folly and error and by being untrue to our own principles of fair play.

I must frankly state to you that the bung-ling initial decisions in the so-called Ladejinsky case did us no good in the eyes of the free world.

I say that any man who can win the confidence of Gen. Douglas MacArthur or that of one of my own leading colleagues like Congress Walter Judo, any man with almost two decades of unblemished service is entitled to a fairer "shake" than this Government employee apparently got in the initial arbitrary handling of his case. I say to you further that certain of our immigration policies have done us little good in the eyes of the free world.

I am not of course reflecting on a blanket basis on our security program, either with respect to our own Government servants or with respect to screening would-be immigrants to our land.

On the contrary, no sensible patriotic person would want us to ignore the obvious serious security problems which we face, and which for too long, was given little consideration.

But neither would a sensible person want a security system to be distorted or mismanaged to such an extent that it harms our

own country at home and abroad.

I recently released a report summarizing the candid reactions of members of our Foreign Service. That report reflected the deep concern which these patriotic men and women feel over the administration of our present security system. That does not mean that they want a single genuine security risk to tarnish the Foreign Service. But neither does it mean that they want this system to impair the effective functioning of their own Foreign Service to which they are dedicating their lives. These officials in our diplomatic corps are entitled to our respect and faith, as are the uniformed men in our armed services. Both groups are in the front lines of our worldwide defense. They are entitled to fair dealing, and I am sure that our outstanding Secretary of State, a man who has labored so long and so well for the success of our foreign policy will do everything he can to help relieve the conin the minds of our Foreign Service workers.

PATIENCE AND JUDGMENT

2. The second principle is that we must be patient in our foreign policy dealings.

There is too much of a tendency among some Americans to want to seek a quick decision always. There is too much of a tendency in some unofficial quarters toward hasty, ill-considered impulsive action.

And let me say, there is too much of an "either/or" philosophy. "Either the Soviets do this or else. * * " "Either an allied or neutral power does this or else. * * ""

There is too much of a tendency to ignore the fact that diplomacy is an art of patient. detailed, often necessarily negotiation. It consumes a great deal of time, particularly with an adversary like the Soviet Union and its satellites, as we learned at the lengthy Korean peace discussion at Panmunjom. So, we have got to get out of the immature habit of toying with "ultimatums" and arbitrary deadlines. We have got to realize that we cannot solve all our problems overnight.

In stressing this point, I am not arguing for delay or inaction or "donothingism" or weakness. On the contrary, there are issues which definitely require speed, decision, and strength and vigor of expression and action.

But, we must not assume that every single policy question lends itself to those characteristics. Our problems have been a long time in the making. They will be a long time in solving.

ALLIED TEAMWORK ESSENTIAL

3. The principle that we must bear in mind is that our strength is a team strength.

A teammate does not try to order the rest of the team, even if he is a captain. works with his men as their equal. He is respected because of the rightness of his position, the intelligence of his decision.

We of the United States have never sought, do not now seek, a master-servant relationship with our allies. They are our sovereign equals. They are entitled to and will receive

our respect and consideration.

There is too much of a tendency among some Americans to want to go off "half cocked" every time the United Nations, or the Organization of American States, or NATO, or our partners in any of the other multilateral or bilateral groupings may not want to do something precisely as we suggest.

But, let's now act like team players and

let's continue to urge our allies to do like-

WATCH POSSIBLE CHAIN REACTIONS

4. The fourth principle that we must follow is that we must think through our actions and ponder where our actions may lead.

There is too much of a tendency for some people to suggest some reckless action without giving the slightest thought to where that action might plunge us. The fact of the matter is that not even in nuclear physics are there more dangerous chain reactions than in the field of diplomacy. diplomatic decision on our part may cause reverberations throughout the world—so vast as to be almost uncontrollable.

To cite an illustration, take the instance of those who loosely suggest that todayright now-we break relations with the So-

viet Union and the satellites.

Now, we keenly recognize why there is so much clamor for severance—the fact that the Soviet and satellites embassies are invariably beehives of esplonage and sub-version. We fully recognize the extreme difficulties which our own embassies are placed under inside the Iron Curtain and we recognize many other disadvantages of the status quo. But, the fact of the matter is that the whole world hungers for peace and diplomatic contacts for peace and symbols of the possibility of peace. There are few free powers on earth which do not want us to explore reasonable bases with the Soviet Union to try to work out an equilibrium of peace.

For us rashly and independently to sever relations would be tending almost to confirm some of the worst lies in Soviet propaganda. It would be like our saying, don't want to explore, we don't want to negotiate." It would tend to give unjustified credence to false Soviet propaganda to the effect that all we allegedly want to do is "to rattle atomic bombs."

Nothing could be further from the truth. No one wants peace more than we do. No one wants more than we to achieve peaceful use of the miracles of nuclear energy.

And so we should maintain our contacts. our listening posts, while protecting our own security here at home from espionage.

We must not drive the neutral powers toward the Soviet orbit by our own ill-considered action. We must impress upon the neutrals the truth that it is the Soviet Union which has consistently sabotaged all genuine diplomatic negotiations for peace, particu-harly by its hollow demands for phony new conferences which get nowhere.

In the spring, 30 Asian-African nations will meet in Indonesia. It is up to us to strengthen our record so that all will see that it is we, contrary to the Soviets, who are leaving no stone unturned in our efforts for peace and prosperity and security and freedom.

EVENTS COMPLEX AND INTERRELATED

The fifth principle that I want to mention is that we must realize the complexity and the interrelation of foreign events.

There is too much of a tendency to give snap reactions to particular problems on the foreign scene, as if these problems existed in isolation. A great many people who have hardly given the slightest study to certain key questions, are always offering "packaged" solutions.

Let me just mention a few key problems. Any man who thinks that any one of these problems is simple or can be solved all by itself had better go back and do some home-

Here they are: The Cyprus question, the New Guinea question, the Morocco-Tunisia-Algeria question, the Kashmir prolem, world disarmament, and the general agreement on tariffs and trade.

I could cite 20 or 30 more key problems.

But I think that you can appreciate the fact that the State Department, in seeking the solution of these problems and of the big overall problem of East-West tensions, has a tremendous job on its hands. It is a difficult, complex, detailed, challenging job.

We should first seek to understand that job, to understand these interrelated problems before we offer snap criticisms or snap

solutions.

T.PARN PAST LESSONS

6. The sixth and final principle that I want to mention tonight is that we have got to learn from the past, to learn from our successes, and yes, from our failures. But we must also learn that we cannot try identically to duplicate successes under greatly dissimilar conditions.

Now, what illustrations do I have in mind? Well, we should have learned from the lessons of Indochina that there is no country in this world which can be defended today unless a native government has the respect and eager support of its own population. No amount of foreign armies or foreign aid can hold any underdeveloped or other country unless the domestic population is eagerly committed to its own defense.

The loss of northern Vietnam was a serious loss, but what now about our successes? Well, the Marshall plan, which contributed so magnificently to the revival of western

Europe, was a great success.

But for us to attempt to duplicate the Marshall plan, with its outpouring of billions of dollars in an area like southeast Asia, would be utter folly. The countries there are obviously in a different state of development than the highly industrialized countries of what was then war-ravaged western Europe. The capacity of native governments efficiently to administer aid programs is far more limited in southeast Asia. What southeast Asia needs particu-larly is technical assistance, greatly ex-panded, for improved health, improved housing sanitation, education, administration,

Of course, they need firepower, too, defensive firepower, against the internal and external foe, and we have got to help them get it. But guns are of little use unless there is the will to shoulder them on behalf of a cause in which one truly believes.

KEEP OUT PARTISAN POLITICS

Thus, I have referred to six basic principles.

Obviously, by no means are they the only basic principles in the conduct of our foreign policy, but, at least, they may help serve as a guide to some of our future

I should like to conclude with the thought that the greatest obligation upon all of us in public life is this: To think of the next generation rather than the next election.

Both parties obviously are squaring off for the 1956 Presidential election. There is nothing wrong about the two major parties laying plans so as to put their best foot forward in November 1956.

But I submit to my own party and to the Democratic Party that to put their best foot forward they must put America to the fore. The American people will continue to insist that we keep partisan politics out of foreign policy.

NEITHER PARTY IS FOR TREASON OR WAR

We can't do so if irresponsible, unfair criticism is made by one party of another party; if in ill-tempered, ill-justified zeal, one party is falsely tagged a "party of treason" or another party "a war party."

I say that both parties are patriotic; both parties are for peace. Of course, there are substantial differences within and between parties, but that is no excuse for misrepre-senting the others' stand.

Let's stick to the issues. Let's get away from personalities and from false tags on people or parties. Let the facts speak for themselves. Let's fight our political campaigns far more fairly than has been occurring in some places heretofore.

The American people won't tolerate low blows. We believe in sportsmanship-in playing hard but clean-in playing to win, but not in using any foul means to do so.

And may I submit, too, that the American people will ask that all of us stand behind the great man who occupies the White House and his Secretary of State. That does not mean that there should not be intelligent scrutiny of the administration's foreign policy actions and proposals. Obviously this Congress, or any other Congress, must fulfill its constitutional obligations, including careful review of appropriation requests and evaluating how past appropriations have been spent.

But, we have seen in certain foreign countries, notably in our long-time ally France, how the executive branch, time after time, has been paralyzed by irresponsibility and pettiness and partisan chaos in the legislative branch.

I do not want to see that recur among our French friends or, particularly, to see it happen in this country. And for the reasons which I stated earlier in this address, I definitely do not believe that it will happen

I do not want the legislative branch to usurp the prerogatives of the executive branch, nor the executive branch to usurp those of the legislative branch. I believe to the depth of my being in a government of checks and balances, of three separate coequal and independent branches of Government.

I do not believe that any member of the legislative branch can or should set himself up as an omniscient alternate Secretary of State. I do not believe that any member of the legislative branch should attempt to interfere with the constitutional obligation of the Chief Executive of our land to spearhead the conduct of foreign relations.

The Founding Fathers of this Nation knew what they were doing in allocating the division of powers.

Let us oppose any move from any quarter in any party which would impair the vitality of that division of power.

In so doing, we will adequate to the challenge of our times. We will advance the welof the next generation, and each of us will have made a record which will command the respect and admiration of the American electorate and most important, of our own conscience.

Thank you.

Tariffs on Textiles

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on behalf of the New England Governors and the New England Textile Committee before the United States Tariff Commission and the Committee for Reciprocity Information by Seymour E. Harris:

TARIFFS ON TEXTILES

I. INTRODUCTORY

1. The occasion of this brief: Brief of Seymour E. Harris on behalf of the Conference of New England Governors and the New England Textile Committee appointed by the New England Governors in re the United States Tariff Commission investigation No. 2 and public information hearings under section 3 of Trade Agreements Extension Act of 1951, as amended, and section 332 of the Tariff Act of 1930, in connection with proposed trage-agreement negotiations with Japan and other countries. This brief is also submitted for hearings of the Committee for Reciprocity Information in relation to the hearings on anticipated negotiations under GATT

2. Credentials: The occasion for my being here is suggested by the following letter from the Conference of New England Governors:

NOVEMBER 22, 1954.

Prof. SEYMOUR HARRIS. Harvard University.

Cambridge, Mass.

DEAR MR. HARRIS: As you are no doubt aware, the trade and tariff policies of the United States are a matter of deep concern to New England.

We understand that these matters will be considered both from a legislative point of view before congressional committees and in hearings before the Tariff Commission and the Committee for Reciprocity Information in connection with the negotiations with Japan and other nations scheduled to begin in February at Geneva.
Your familiarity with our New England

economy, and particularly its textile industry, as well as your knowledge of international trade problems, make your peculiarly well qualified to represent us at these hearings and to work with our textile committee, which is vitally concerned with these

The Governors, at their conference on November 18, voted to ask you to represent us and the textile committee before the congressional and other committees referred to above in order that the interests of New England and her textile industry shall be properly protected from destructive low-wage foreign competition.

Your acceptance of this task will be greatly appreciated by each of the Governors.

Very truly yours,

JOHN LODGE,

Chairman, New England Governors' Conference.

May I add that I have written this brief and am appearing before the Tariff Commission and the Committee for Reciprocity Information without compensation as a public service on behalf of the New England region. I am a professor of economics and a member of the graduate school of public administra-tion faculty at Harvard, though, of course, I do not speak for the university. At Harvard, I have taught for more than 30 years, have taught international economics for about 20 years. I have also written many books in international economics. I was also chairman of the New England Textile Committee appointed by the Conference of New England Governors, which wrote the Report on the New England Textile Industry (1952).

3. Main outlines of the argument: In this brief and supplementary remarks, I shall try to prove that further reductions on tariffs on textiles would be injurious to New England and would be contrary to the national interest. I shall support this position by showing (1) that national policies in the last generation have already greatly injured the New England economic position, and that tariff policy is to be considered as one facet of national policy; (2) that New England, and especially her textile industry, is suffering from serious transitional difficulties and for that reason any costs or concessions made through tariff policy should be put upon the more thriving regions and industries, not upon New England and textiles; (3) that the Government can clearly seek solutions of the disequilibrium in international markets to a greater extent in policies other than tariff reductions; (4) that the Japanese problem is much more than a United States tariff problem, and that many other approaches to the Japanese problem should be considered.

II. NATIONAL POLICY, THE NEW ENGLAND REGION, AND THE NEW ENGLAND TEXTILE INDUSTRY

4. Tariffs, one kind of interference with the free market: For a generation now, New England has suffered from Federal policies tended to advantage which have regions at the expense of New England. This point is relevant because interference with the free market has been involved, and the argument against the tariff is always that a tariff results in uneconomic allocations of factors of production and hence higher costs. But in a world of all kinds of interferences with the pricing system and the free market tariffs cannot be condemned merely because they involve interference with the pricing system.

5. Government agricultural and related policies and New England: The fact is that through agricultural policies, the Government has increased the price of the food New England consumes and the raw materials she processes. (This region devotes only a few percent of its employment to agriculture, fishing, and mining and therefore as a region can survive only insofar as she sell manufactured products primarily and services secondarily for food and raw materials.) Not only has the Government increased these prices for New England consumers and producers, but even in 1954, the Farm Act included a provision for raising domestic output of wool by one-third, thus increasing the price of a product indispensable for our woolen industry, which is now in the midst of a fight for survival against man-made fibers; and in a recent ruling the President provided an artificial market for nonferrous metals thus contributing to higher prices of these raw materials which New England processes.

6. Other policies of the Government adverse to New England: But it is not merely the higher prices of food and raw materials that the Government is responsible for. Even as it raises these prices, it acts to depress those of manufactured goods through removal of tariff restrictions. Moreover, the operations of the Treasury tend to take money out of this region to build up its competitors. In 1 year as much as \$1 billion was taken out of New England net, or about 7 percent of its income. Under the accelerated amortization tax relief, the main competitors of New England profited at the expense of New England. I can document this

position more fully and shall be glad to do this in the hearings. (I shall say nothing here of the tendency of the Government to subsidize competing regions nor of the abuse of tax exemption privileges by some Southern States, a practice which is used to attract northern management and capital). Tariff Commission and the Reciprocity Committee may find much additional testimony on this issue in the reports of (1) the Committee on New England Report to the President and (2) the New England Textile Committee, two committees on which the writer served, and his book on the Economics of New England.

III. ECONOMIC TRENDS IN NEW ENGLAND AND IN NEW ENGLAND TEXTILES

7. Explanation of trends in New England: For many reasons, New England grows less rapidly than other regions. Among the more important explanations are its early industrialization, its great dependence on textiles and shoes, the two slowest growing of all census industries in the last 50 years, its location in the northeast corner of the Nation and therefore its inability to attract industries which require bulky raw materials and produce products expensive to transport, and finally certain institutional factors and notably those related to politics,

Federal policy, etc.
8. Trends: Here are some figures which show the trends in New England:

(a) Percentage rise of nonagricultural employment, 1939-53: United States equals 63.3; New England equals 37.4 (lowest of all 10 regions).

(b) Percentage change in nonagricultural employment, 1939-53:

	United States	North-	West North Central	South Atlan- tic	Pacif-
Construction Manufacturing	124 71	79 35	102 98	119	210 140
Government	68	39	32	94	139
Trade	60 59	32 49	51 48	89 65	75 84
Transportation and public	49	51	61	104	79
utilities Mining	1.4	26 -79	- 52 29	53	70

Again New England's gains are less than those of all other regions with few exceptions, other than in finance. But it is espe cially in the last 10 years that New England's relative losses have been large. Her nonagricultural employment rose only by 4.9 percent as compared with 20.7 percent for the country.1

9. Trends in New England textiles: In textiles the trends are more serious as they are, though not to an equal degree, in leather and shoes. In 1919 New England accounted for 440,000 textile jobs; in 1947, 283,000. There was little change from 1947 to 1951 (net) but by 1954 the total seems to have fallen by about 100,000 additional. Hence the net decline since 1919 is considerably more than 200,000 jobs, or more than one-half of the textile jobs available in 1919. Earlier in the century New England had accounted for about 80 percent of the cotton spindles; her proportion of spindle activity now seems to be less than 10 percent. Total United States employment in textiles seems to have been relatively stable from 1919 to 1951. Again, in the last few years, New England has experienced serious losses in woolens, an industry in which she maintained her relative position almost unchanged from 1919 to 1947. Even in recent years textile employment accounted for about 10 percent of the employment in New England, and of course in terms of the secondary effects of losses of a textile job perhaps 20 percent of all jobs are involved."

10. Trends, New England textiles, 1951-54: Since 1951, the textile industry has suffered substantial losses in the country, though especially in New England. Note in this same period all industrial production rose by about 10 percent and real gross national product by about 12 percent. The table below reveals a significant downward trend from 1951 to 1954. In fact, total textile jobs declined by 268,000, or 20 percent; in New England by 107,000, or 38 percent; and in the South by 41,000, or 7 percent. Generally New England's relative losses are several times those of the South but in fine goods New England's output fell by 31.5 percent in 81/4 years, while the South gained 10.6 percent.

11. Concentration in textiles: These heavy losses in textiles are serious, and especially because they are so heavily concentrated. A substantial part of the livelihood of such textile towns as Lawrence, Lowell, New Bed-ford, and Fall River in Massachusetts, Woonsocket, R. I., Nashua and Manchester, N. H., and Lewiston, Maine, are dependent upon textiles. In 1950, 20 percent of all jobs in Rhode Island were in textiles and in Lawrence no less than 55 percent.3

Footnotes at end of speech.

12. The problem of mobility and adjustment: Time and again it has been pointed out that labor mobility in the textile industries is low. The theory of free trade or of the harmlessness of tariff cutting rests on the assumption that those who lose their jobs then obtain jobs in the growing industries, either as they migrate or as new industries move in. But both New England and British experience show that the movement is slow, and the loss of textiles brings serious problems. Unsatisfactory demand in textiles in itself is a depressing influence.

Any Government policies tending to open up the markets of the United States further to textile products would further depress the industry. It has been shown time and again that unemployed textile workers do not move easily, in part because women are a large part of that labor market, and in part because, when there is a concentration of racial stocks, movement is slow. Failure to move would not be serious if new industries moved in to take the place of the departed ones. But the new industries tend to avoid textile towns, with their depressingly empty mills, high tax rates, with labor relations aggravated by declining markets. When the new industries do move in, they are frequently low-paying industries, paying much lower wages than in textiles. The textile towns tend to attract the low-paying apparel industries and electronics and rubber, employments paying wages in New England way below the national average in these industries.

13. Some facts on adjustments of displaced textile workers: In the most careful study yet made of the mobility of textile works, Dr. Miernyk, in tracing the subsequent history of employees of 6 mills that shut down in 6 textile towns in New England, found that 45 percent were presently employed, 43 percent were unemployed, and 12 percent had abandoned the labor market. He also found that about one-third of those who obtained jobs moved on to other textile jobs, suggesting that in view of the declining employment in the textile industry they merely squeezed other textile workers The employees of closed mills generally found their new job less satisfying than their textile employment, and suffered a deterioration of skills used and a reduction

in pay.*

14. Limited openings for displaced workers: Transfers of workers are a troublesome problem even in our highly prosperous economy since 1940. In times of depression the situation of course becomes much more serious. But the long continued problems of such textile towns as Lawrence, Fall River, and Manchester, show that these problems are not solved overnight. When employment in the declining industry is large, the problem is aggravated. A relevant factor is that there are distinct limitations on the alternative employments that may be offered to the displaced textile worker. This is particularly true since growth is largely in other regions or at best in other parts of the tex-tile State. In a paper that I read before the American Economic Association in 1953, I tried to point out some of these difficulties. Allow me to reproduce several paragraphs from this paper, the main point made being that employments are largely localized and hence to a considerable extent do not offer openings to those who have lost jobs in declining industries. That really means we must wait for growth; but unfortunately New England is a slowly growing region and the growth is generally not in the depressed

"Obviously, most sales are at home. In fact, a large part of all sales are within the region or even city of production. This is perhaps even more true of services than of movable goods. A large part of our services are almost exclusively free of interregional competition—medical, local, and State government, public utilities, domestic service, local transport, public education, etc. Here competition outside the city or region is distinctly limited. This point is of importance because it underlines the limited area within which adjustments in response to losses in interregional competitive position must be made.
"It is well to remember that manufac-

"It is well to remember that manufacturing income in 1952 accounted for but 31 percent of all income. The major adjustments in the competitive position of a region have to be concentrated to a considerable extent on this part of the economy. Hence, large losses in interregional competition, say in textiles and shoes, if they are to be made goods in substitute exports, must largely be made goods in improvements in manufacturing export industries.

Contract construction, 5 percent; whole sale and retail trade, 17 percent; services, 9 percent; finance, insurance, and real estate, 9 percent; transportation, 5 percent; communication and public utilities, 3 percent; government and government enterprises, 12 percent-these all have elements of regional competition, but, to a considerable extent, are necessarily localized. An estimate of the approximately 40 items included in the employments listed in this paragraph and accounting for 60 percent of all income suggests that only about 10 percent of all income and corresponding employments included here are largely subject to interregional competition. Thus for retail trade. public utilities, transportation, telephone services, most other services (education, religion, cinema, private households), local and State government, and a large part of Federal Government, the location of activities for the most part are determined by the present distribution of population and income. Only as population and income are redistributed will the services be redistributed. They are determinates, not determinants. Substantial parts of wholesale trade and of insurance are examples of services subject to interregional competition.

"If a manufacturing region loses heavily in exports, its losses must be recouped largely in manufactures, with some help from services. Yet even in manufactures there are segments where adjustments are not easily made. For example, in 1951, the distribution of manufacturing employment was as follows:

.

"I. Seven industries with location predominantly determined by access to raw materials (and to some extent to proximity to markets) accounted for 35 percent of the value added in 1951.

"2. The location of 7 industries accounting for 46 percent of the value added was determined to a substantial degree by the need of being near the raw materials.

"3. The other five industries (textiles, apparel and related, printing and publishing, leather and leather products, instruments and related products) accounting for 19 percent of value added were industries which might be located largely independently of the proximity to the sources of the raw materials.

"The last group would especially be subject to pressures for any adjustments that have to be made."

15. Declining and growing industries: Part of New England's difficulties stems from the fact that expansion in the growing industries is not adequate to offset the declines in the weak industries. Note, for example, that from 1899 to 1951 the share of jobs in textiles, apparels, and shoes dropped from 23.5 percent to 19.4 percent.

"From 1919 to 1947, New England added 162,000 jobs in the 10 manufacturing industries growing most rapidly, or about 4 percent of the additional jobs in these industries in the Nation, a proportion much below the region's 9-10 percent of all manufacturing The figures point to difficulties in adjusting. In this same period, the region had lost 200,000 jobs in textiles and shoes. From 1947 to 1952, New England lost no less than 61,000, or 22 percent, of its textile jobs. But the region gained 25,000, or 2 percent, in all jobs in industry. The major gains were in transportation equipment (28,000) and electrical machinery (26,000)." •

16. In short: In short, textiles are a declining industry, even in prosperous times. But on top of that the severe competition with the South, which pays much lower wages and enforces standards of public services and social services much below the national standard (though the South also has some real advantages), results in large losses for New England textiles. No sovereign government would have stood by while its people lost jobs at the rate of New England textile losses since 1919. Is it fair to impose additional losses on New England textiles and on New England in the light of these adjustment problems, which are made much more serious by unusual interregional competition, slow growth in New England, and various Federal policies? Would any Federal agency be wise to recommend increased foreign competition for an industry which, if it continued to lose as many jobs as from 1951 to 1954, would be out of business in the Nation in 15 years and in New England in 8 years?

IV. TARIFF REDUCTION AND OTHER APPROACHES TO INTERNATIONAL EQUILIBRIUM

17. The pressure to cut tariffs: Undoubtedly the current pressure to cut tariffs springs in part from the disequilibrium in the dollar market. The original pupose of the trade agreements legislation was to expand the total amount of trade—both exports and imports. Obviously, this kind of agreement would do little good in solving the dollar problem. Insofar as it has contributed toward narrowing the dollar gap, the explanation is that American negotiators have been outsmarted by foreign negotiators. If the objective of our reciprocal trade agreements is to increase imports and not exports, then this should be clearly stated.

18. Restrictions on trade in the United States and abroad: It certainly must be clear to all that the United States is the free trade country among the larger nations. tariffs have been cut by about two-thirds (even granting all the points raised against this kind of comparison, the declines have been large). The dollar is the only major currency that is convertible, and hence the dollar can be freely used to buy anywhere. Though we have a few quotas, our dependence on quantitative restrictions is small; on exchange control and on multiple exchange rates we rely not at all. In the last 15 years, the average depreciation (weighted by trade) of all currencies vis-a-vis the dollar has been about 90 percent. Each devaluation of course improves the competitive position of other countries. Indeed, often this is an offset against a relatively large price rise abroad. But there have been many in-stances in which a trade agreement has been followed abroad by a devaluation, an export subsidy, an introduction of exchange control, or quantitative restrictions which has nullified the concessions made to this country. Obviously, if GATT now has jurisdiction only to reduce tariff rates and the United States relies almost exclusively on tariff rates for restricting trade, and her trading partners rely largely on other types of restrictions, the trade agreements made are of limited significance, and United States negotiations are at a great disadvan-

19. Tariff policy; the dollar shortage: Indeed, there has been a serious dollar shortage and both on political and economic grounds it is necessary to solve this problem. For this reason, the case for tariff reduction is greater than it otherwise would be. But it should be noted that though the dollar problem is probably not solved for all time, nevertheless there has been a great improvement in the last few years. For example, the gold holdings outside of the United States and Canada increased by close to \$2 billion from December 1952 to the middle of 1954; and gold and foreign exchange hold-

ings by about \$2.3 billion. Moreover, the recent relaxation of trade barriers against dollar goods by the nondollar world is also evidence of a less stringent dollar market. Hence the case for tariff cuts as a means of solving dollar shortage is much weaker than it was a few years ago.

20. Alternative solutions of the problem of dollar shortage: There is general agreement that the dollar problem may be solved by reduced restrictions on trade, by a reduction of United States exports and by United States foreign loans and assistance. I do not here consider a factor of greater importance than tariffs in determining imports, namely, the high level of activity in the United States. From prewar to 1953, United States imports had risen by 60 percent in volume, from \$2.6 billion in prewar to \$5 and \$11 billion in 1946 and 1953 respectively, and from 9 to 15 percent of world imports. us consider these alternatives in turn.

21. (a) Reduced restrictions on trade: The use of this approach tends to put the burden of the adjustment upon the industries that compete with foreign products. The dollar problem is one that concerns the entire economy, since it is tied to fundamental economic and political considerations. Hence it is unfair to put an excessive burden on any one group. Thus why should textiles with 1,300,000 out of 65 million workers assume a large part of the adjustment required to provide Japan with necessary dollars? Furthermore, insofar as the adjustments are made through removal of restrictions on trade, the division of the burden should be related to other policies and conditions affecting particular regions and industries. On that score, it is clear that textiles and New England should not contribute through further tariff cuts on textiles. The burden should be put on growing industries and growing regions. It would be the greatest folly to introduce artificially new competition for an industry (the New England textile industry) which at (the New England textile industry) which at the rate of liquidation of the last 3 years would largely disappear in 8 years. Could anything be more cruel? Even the national industry in the last 3 years lost ground at a rate, if sustained, which would destroy the industry in 15 years. If tariffs have to be reduced, a greater relative burden should be put on such industries as chemicals, netroleum and rubber, where amployment petroleum, and rubber, where employment relative to 1899 has risen 150 percent above that in textiles, apparels, and shoes, or on 5 major metal and metal fabrication industries, where relatively to these weak industries employment from 1939 to 1951 had risen by 47 percent.7

Protectionism is not expressed merely in uriffs. Conditions set for competition in Government procurement, export subsidies, shipping subsidies, etc., are also relevant. Thus, why not allow the British to compete an equal terms on Government procurement with the great electrical equipment corporations which have been so vocal on the issue of tariff reduction in order to expand exports and yet protest vehemently when a foreign bidder greatly undercuts the American producer and gets the contract?

22. (b) Reduction of exports: Perhaps the most fruitful attack on our dollar problem would be through a cut in our exports. This is a rensible way out in part because over the last 40 years considerably more than \$100 billion of excess of exports over imports (and about \$5 billion annually in the postwar) have been subsidized through Government loans and assistance and through private loans (not repaid) and gold imports. result is that exports are at a highly inflated level. These are the industries which generally can afford a reduction in markets with a minimum of losses. What is also important is the point that the major export mar-

kets of Western Europe and Japan lie not in the United States but elsewhere. Western Europe sells only 10 percent of its good in the United States and even Japan sells less than 20 percent of its exports in this market. Moreover, in response to economic deterioration abroad and large loans and assistance by the United States, United States exports as a percentage of world exports rose from 15 percent in prewar to 21 percent in 1953, or 40 percent.

23. (c) Foreign loans and assistance: Since 1945 the major adjustments in the dollar market have come (aside from increased imports associated with our growing economy) through a rise of exports of the nondollar world to nondollar countries, and foreign loans and assistance by the United States. This does not mean that United States imports have not risen greatly. They have. In 1953 imports in volume were onethird above the 1945 level; and in value, by about 160 percent. But the striking fact concerning the rise of imports is its association with income movements in this coun-The case for recourse to loans and assistance rests on the fact that the burden is more widely distributed as compared with relaxation of tariffs. It is possible to work out a long-range assistance and lending program which would put a relatively small burden on the taxpayer and yet greatly lengthen the period during which this economy has to adjust to a rise of imports vis-a-vis exports. Even assistance to Asia, Latin America, and Africa would greatly strengthen the economic position of Western Europe. The their underdeveloped nations would use additional dollars and higher income in part to purchase more goods from Western Europe (and also Japan).

24. In summary: Tariff reduction was not proposed as a weapon for solving the dollar problem. Contrary to the spirit of the Trade Agreements Act, reciprocal trade agreements may have been used for this purpose. A

major point made in this section is that tariff cuts are only one approach to lifting of trade restrictions, and since this is our mafor weapon we are at a disadvantage with countries using all kinds of restrictions on trade. We do not adhere to the view that an additional burden should be put on textiles nor that a major part of the adjustment in the dollar market should be concentrated on the weak or on a small minority of all wage earners. Hence the proposal to deal with the problem in other ways.

V. THE JAPANESE PROBLEM

25. Need for helping Japan: It is obvious to all that the Japanese are having great difficulties in balancing their international accounts; and it is equally obvious that it is to the advantage of the United States that a solution to this problem should be found. A failure to do so would greatly weaken the defenses of the free world in Asia.

26. The Japanese balance of payments: From the table below, it is evident that the Japanese trade balance has tended to deteriorate in the last few years. The explanation of a deterioration in current accounts after credit balances of \$104, \$217, and \$257 million in 1950, 1951, and 1952, and a debit balance of \$221 million in 1953 lies primarily in the large expansion of imports of \$1,227 million from 1950 to 1953 as against an expansion of exports of but \$473 million. The deficit on current account is found despite the fact that Government outlays provided \$623, \$786, and \$780 million in 1951.

1952, and 1953, as compared with \$153 million in 1950. (These apparently include largely procurement by United Nations forces.) But it should be noted that United States grants, which amounted to \$534, \$361, and \$15 million in 1949, 1950, and 1951, were not available at all in 1953. To meet the deficit in 1953, Japan imported shortterm capital primarily, inclusive of drawing on sterling balances (\$125 million) and borrowed from various sources. In the years 1949-52 Japan had built large credits on short-term account.

Footnotes at end of speech.

27. Prewar and postwar trade of Japan: As compared to prewar, the United States proportion of Japanese imports has increased, whereas there has been a large de-cline of Japanese imports from other sterling countries (exclusive of United Kingdom and dominions). The explanation of this trend is undoubtedly the large part played by

United States aid and military operations. But the Japanese market in the United States has declined, and there has been some improvement in relative sales to other countries. This, of course, points up again the great importance of dollar-weak countries finding markets elsewhere.

Table 3 .- Japanese trade, prewar and postwar: Proportions (percent) to groups of countries

	1937		1951-3		1954—1st quarter

 Exclusive of above and exclusive of Latin America, United Kingdom, EPU countries, and EPU dependencies.

Source: IMF, International Financial Statistics.

Country by country, the large relative gains of Japan's imports were from the United States, Canada, Australia, Mexico, Philippines, and Thailand; the large declines, China (from 21 to almost 0 percent), Indonesia, Germany (7 to 1). The major change in Japan's exports was registered by China: a decline from 43 to almost zero percent. The largest relative increases were in a sense fictitious: Hong Kong (1/2 to 4+ percent), Formosa (0 to 5 percent), Pakistan (0 to 9 percent). India and Pakistan together (7 to 13 percent), Korea (0 to 4 percent), and Ryukyu Islands (0 to 4 percent). Note that in large part the gains are explained to some extent by including as international trade what was formerly regional trade."

28. Textile production and trade: Japan's output of textiles is much below prewar:

It con metric tons!

	Cot- ton yarn	Woren cotton fabrics	Wool yarns	Rayon staple	Rayon fila- ment yarn
1937	60. 0	336	5. 59	6. 6	12.7
1.38	46. 2	230	4. 48	12. 4	8.09
1948	10. 4	64	. 92	1. 3	1.35
1952	29. 4	156	5. 71	9. 9	5.37
1953	34. 5	196	7. 06	13. 5	6.17
1054 (6 months)	40. 0	223	6. 68	16. 5	6.76

Source: U. N., Monthly Bulletin of Statistics, November 1954, pp. 41-44.

It will be observed that, though output is below prewar, it has been steadily rising and especially since 1948. By the first half of 1954, output was about four-fifths as great in cotton yarn as In 1937-38 (average), threequarters in woven cotton fabrics, four-thirds as much in wool yarns, five-thirds as high in rayon staples, and three-fifths for rayon filament. Japan's output is lower than in the prewar, both absolutely and relatively. According to Mrs. Lovasy, Japanese production, in 1951, of cotton textiles averaged 2,216 million square yards as compared with 4,794 and 3,297 million square yards in 1937 and 1938. The export percentages were 55 and 66 percent in 1937 and 1938 and 49 percent in 1951.10 According to another study, Japanese exports of textiles amounted to \$361 million in 1952, or 29 percent of total export trade.11 Since the prewar there have been large changes in relative production and exports of textiles.

29. Japan's trade trends in textiles: Total trade in textiles (quantity) declined by 1.2 billion yards from 1937 to 1951, or 18 percent. The major changes in relative export trade in textiles are suggested below:

TABLE 4 .- Percentage of export trade in textiles, 1937 and 1951 [Percent]

30. Other aspects of the Japanese economy: In a table below, I have summarized for the years 1949 to 1954 several relevant variables. They show above all that the Japanese have been experiencing a large inflation. This is evident, for example, in a rise in wholesale prices of 70 percent, of

Pootnotes at end of speech.

monthly wages of 74 percent (as compared with an increase in the cost of living of but 28 percent). This rise of prices is associated more with monetary expansion than with government deficits. With exchange rates at 360-361 yen per dollar from 1949 to the summer of 1954 and with wholesale prices rising but 12 percent in the same period in the United States (only 17 percent as much as in Japan), it would be expected that Japan would be confronted with serious deficits in the balance of payments. Obviously, trends

in prices and exchange rates since 1949 suggest that the Japanese competitive position has deteriorated. In view of relative price and exchange movements, Japanese goods had become much more expensive and foreign goods much cheaper. It is well to re-call also that most sterling countries ex-perienced a depreciation of 30 percent in 1949 and many other countries experienced a decline in the exchange rates in 1949; and most other competitors experienced a reduction in the foreign value of their currency.

31. Japan's international position and textiles: Japan's imbalance in her international accounts is serious. There are many explanations of this imbalance: Monetary and wage inflation; failure to adjust ex-change rate to the inflation; the damage done by war to capital plant and sources of food supplies, with unfavorable effects on exports and increased need for imports; much uneconomic investment; loss of shipping and fishing income associated with the war; the loss of markets as the result of the war, losses not easily recouped; and, finally, the termination of United States aid and the ending of the Korean war. Obviously reductions in United States tariffs on textiles or generally will not solve the international problems of Japan. It will be necessary to use many cures. First, there is much need for assistance. Japan will not solve her problems until she is able to increase her savings greatly and import much more capital. Then she may be able to cut down her imports and increase her exports. Second, Japan will have to reduce inflationary pressures which weaken her competitive position. Additional savings, a more moderate wage policy, and foreign loans and assistance will reduce these pressures. Third, Japan will have to turn more to Asia and even the Iron Curtain countries for trade. With improved East-West relations this will be possible; and even without them Japan could increase her trade in nonstrategic items with China without damaging the position of the West. Certainly, increased imports by the United States of Japanese products will not offset Japan's losses in Asiatic and some European and even Latin American markets. Fourth. Western European countries will have to accept part of the responsibility for providing markets for Japan. So far several of them have been most reluctant to accept even limited Japanese competition. Fifth, higher incomes both in Western Europe and the United States should contribute toward higher imports from Japan. Sixth, with increased productivity and higher output in Japan, her exports should increase.

32. Reduced tariffs on textiles not the solution: The concessions in tarlffs, if made, should be concentrated not in textiles but on other products where increased imports would not raise serious problems of adjustments. In 1952, textiles were less than 30 percent of Japanese exports. machinery and transport accounted for about 35 percent of Japan's exports. When one considers that United States imports of cotton cloth from Japan in the years 1935, 1937, and 1939 averaged 68 percent of all imports of cotton cloth in quantity but only percent in value and but three to four million dollars yearly, it can be seen that the major adjustments in the Japanese trade balance will have to be found elsewhere.13 Surely textile imports, even though Japan alone of foreign countries seems to be on a competitive basis pricewise with this country in textiles, will not close a significant part of a gap on current account of \$221 million (1953). Should we exclude mili-tary operations and the like, then the deficit would be close to \$1 billion.

VI. CONCLUSION AND SUMMARIES

1. The major conclusion in this brief is that a reduction in tariffs on textiles would be unjustifiable. No administrative agency could defend tariff relaxation for an industry which, if it continued to lose the average number of jobs of the last 3 years, would be gone in 15 years; and which on the same basis would disappear from New England within 8 years. (This position holds even if the decline since 1951 were not held entirely indicative of trends.) It is to be hoped that this rate of decline will be stopped or at least slowed down; but it should be noted that New England is now entering a phase in woolens which is reminiscent of the interwar period in cottons.

2. A second major conclusion is that tariff policy is but one facet of national policy; that interference with the free market by the Government has greatly injured New England's competitive position—for example,

Pootnotes at end of speech.

Beginning Jan. 16.
 Beginning Jan. 12.

through Federal agricultural and tax pol-It would be the height of folly for the Government now to revert to free-market principles through tariff cuts with into New England when interference with the free market has hurt New England. The Government should look at overall policies.

3. A special case can be made for textiles and New England in that this industry and the region face serious adjustment policies which would become more evident once military outlays are cut. Unfortunately, major growth is outside of New England and outside of the depressed textile and shoe towns, and hence the mobility of capital and labor upon which the theory of tariff reduction rests is not to be found.

4. Dollar shortage, which has become one of the strongest motives for tariff cuts, does not justify the contemplated tariff cuts. First, because the shortage is less serious than it was a few years ago. Second, because the major markets of the dollar-short countries lie not in the United States but elsewhere; and hence the case for adjustment through a reduction of United States exports which have been inflated to the extent much more than \$100 billion over 40 years through various kinds of subsidies. Dependence on this way out puts the burden on the strong, not the weak. Third, because since dollar shortage is a problem of great importance for our economic and political security, its solution should be the responsibility of the entire Nation, not of a few vulnerable industries. Surely the weak textile industry responsible for 1.3 million out of 65 million jobs should not be asked to effect a significant part of the adjustment. Hence there is some case for putting a greater part of the burden on the taxpayer or on lenders generally. A proper assumption of respon-sibility by the Nation in this way would contribute much more to dollar equilibrium than tariff cuts. Besides, such policies ex-tend the period during which adjustments have to be made. It is a happy omen that the Eisenhower administration seems to be moving in this direction. Fourth, there are many ways of making dollars available to our friends abroad through a more sensible commercial policy than tariff cuts-for example, competition for United States procurement, reduced shipping, and even reduced agricultural subsidies. Fifth, the solution the dollar problem lies much more in rising income here, as our rise from 9 to 15 percent of world imports since 1938 suggests, than in tariff cuts.

5. Some questions can be raised concerning the whole reciprocal trade agreements program, which in many ways has become an anachronism, however justifiable it was in 1934. It either canont be used to solve the dollar problem, because in theory under this program more imports must be balanced by more exports; or it has been used to solve the dollar problem, which is contrary to the spirit of the legislation. (And in my view it has been so used.) Furthermore, the it has been so used.) Furthermore, the United States depends almost exclusively on tariff rates as the weapon of commercial policy; but since the rest of the world is much more protectionist and relies on exchange controls, export subsidies, exchange depreciation, multiple exchange rates, quotas, etc., more than on tariffs, the United States is at a great disadvantage in bar-gaining to cut tariffs. In many instances, concessions granted to the United States in reduced tariffs have been obviated by the introduction of a nontariff type of restric-tion (e. g., depreciation of the foreign ex-changes, which acts like a tariff and cuts export prices of the depreciating country).

6. Finally, all will admit that the Japanese situation is serious; and for our security, her problem of the balance of payments should be solved. But her allments are many and deep, not the least of which are the loss of the Chinese market formerly accounting for about one-half her exports, the destruction of capital plant in the war, unwise investment policies, the large money and wage infiation not offset by a corresponding depreciation of the exchanges, the abandonment of United States aid, the loss of territory with corresponding losses of export potential and increased need of food imports. the continued rise of population accom-panied by increased need of imports of food and raw materials, the loss of dollar income associated with reduced shipping and fishing income, and the unwillingness of Western Europe to open their markets to Japan. In the light of these fundamental changes, is not likely that tariff concessions at the expense of one of the United States major weak industries is going to contribute in any important way toward the solution of Japan's dollar problem.

Tribute to a Mason: Dr. Abraham Shaoni. Grand Master of Masons of the State of

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, January 11, 1955

Mr. HUMPHREY. Mr. President, Dr. Abraham Shaoni, grand master of Masons of the State of Israel, and a distinguished citizen of that country, is now visiting in the United States. On Wednesday next he is to be honored at a reception tendered to him by Benjamin Franklin Lodge, No. 50, F. A. A. M., of the District of Columbia.

On this occasion there will be present the grand master of Masons of the District of Columbia, Gregor Macpherson, who is also one of the Official Reporters of Debates of the Senate, and many other Masonic dignitaries from this and other jurisdictions.

It is a pleasure to me to join in a tribute to this distinguished visitor to our shores.

Dr. Shaoni has traveled throughout Europe and the United States, gaining friends and recognition for himself and his grand lodge. His visit to the United States is in pursuance of that objective.

I ask unanimous consent to have printed in the RECORD a brief description of some of the highlights in the career of this distinguished man.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Dr. Abraham Shaoni is an attorney of scholarship and distinction who has the degree of doctor of jurisprudence. He was one of those pioneering and energetic lovers of freedom who helped found the new State of Israel. His dedication to the principles of liberty led him to an active Masonic career beginning on April 18, 1935, when he was initiated into Moriah Lodge. On February 9, 1942, he ascended to the throne of King Solomon as the 10th master of Moriah Lodge. On April 24, 1944, he was elected as grand junior deacon and as member of Grand Lodge of Israel. On March 18, 1946, he was elected grand senior warden. On May 13, 1953, he was elected to the greatest prize that the Masonic order can bestow upon its brethren, the office of grand master.

Sixth Anniversary of the Arrest of Josef Cardinal Mindszenty

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following speech which I made in New York on December 26, 1954, on the occasion of the sixth anniversary of the arrest of Josef Cardinal Mindszenty: SPEECH OF HON. ALVIN M. BENTLEY, OF MICHI-

GAN, IN CONNECTION WITH SIXTH ANNIVER-SARY OF ARREST OF CARDINAL MINDSZENTY

I feel greatly privileged and honored to have been invited as guest speaker at the ceremonies commemorating the sixth anniversary of the arrest and imprisonment of Josef Cardinal Mindszenty which took place on December 26, 1948. I am also happy to have this occasion to deliver some of my thoughts regarding the present problem which besets the Hungarian nation and all the rest of the 800 million people who today find themselves living under Communist slavery.

We have all of us seen in the papers the past few days rumors and reports emanating from Austria to the effect that the cardinal has recently been released from prison. I have been informed by official sources of our Government that there has been no confirmation or substantiation of such reports. Naturally all of us would rejoice if these rumors were found to have some basis in fact. But lacking this, we must assume that Josef Mindszenty is still languishing in a Communist prison, in the power of the same ruthless force which seized upon his person 6 years ago today.

I well recall the events which took place

in Hungary at that time so far as they were

known to the general public. Most of you know that I was then in Budapest, attached to the American Legation there. Although we heard of the arrest almost as soon as it had occurred, not a word appeared in the government-controlled press until 2 days later, December 28. The brief communique from the Ministry of the Interior merely said: "Josef Mindszenty, Archbishop of Ecztergom, has been arrested by police authorities under charges of low (petit) treason, conspiracy to overthrow the republic, and currency violation." The announcement must have been somewhat unexpected as only one paper, Szabad Esti Szo, com-mented editorially on the announcement that day. It took at least 24 hours for the rest of the Communist press to get into the act.

Many will have noted and remarked on the fact that the arrest took place on the day after Christmas, incidentally, also on a Sunday just as it is today. The explanation is, of course, due to the fact that the Communists feared to touch him before the holiday, knowing that demonstrations in his favor might have occurred on Christmas Day when millions of Hungarian Christians would be attending the church of their faith. News of the arrest, of course, did not reach the people until well after they had returned

home from Sunday worship.

The story of the arrest, imprisonment, interrogation, trial, and subsequent confinement has been told and retold, and I will not further develop it here. It was my privilege to address the United States House of Representatives last February on the fifth anniversary of Mindszenty's sentencing, at which time I reviewed the facts regarding these developments as they have become known to the world outside. I think it appropriate, however, to comment briefly upon one of the cardinal's most oft-quoted remarks, an answer he so often gave to those who tried to persuade him to take refuge in the free world.

All of you have heard of this statement many times. It is very brief: "Now men are needed here."

There are with us today many persons, formerly prominent in their own occupations in Hungarian life, who have escaped from the country of their birth and have sought shelter in these United States, the traditional home of refugees and exiles even long before the time of Louis Kossuth. There is no criticism intended in my remarks for such persons, either from Hungary or from any other Iron Curtain country. They are performing a vital function here in America by their tireless efforts to keep the memory of the enslavement of their people constantly before the American public. They have also many other useful tasks to perform which they are doing ably and well. Not only their own homelands but the entire free world owes them a debt of gratitude for their work, a debt which I hope will one day be repaid in full. Such individuals are needed, and will continue to be needed.

But the human memory is of such frailty that it is not enough to need exiles and refugees. To keep the awareness of these terrible events alive in the conscience of the free world and of the slave world, we also need martyrs. Their task is immeasurably harder for in many cases they die or vanish almost unknown and unsung. But, fortu-nately, there are those, such as Mindszenty, whose bravery and courage is known everywhere and who will never be forgotten. We need such martyrs as examples to all of us, no matter on which side of the Curtain we

Cardinal Mindszenty knew he was a man in a peculiar position. He knew that at any time he could have become an exile or a refugee and continued his fight against communism from abroad. But he also knew that that was not enough, that his country and the cause of freedom everywhere needed men to remain at home, men who were willing to face the terrors of communism, men who were willing to suffer martyrdom, even of the degrading kind which he underwent. And he knew that, because of his peculiar position that his martyrdom would leave such an indelible impression on the conscience of the world that the cause of communism would be the loser thereby even though his mind would be perverted by drugs into self-confession and denial of the principles he had formerly championed. He knew that the complete contrast between Mindszenty the cardinal and Mindszenty the prisoner in the dock would be so revealing of Communist barbarities that the conscience of the free world would be aroused as perhaps nothing else could arouse it. And knowing this, he deliberately chose martyrdom, knowing that his cause, the cause of freedom, would be the stronger thereby. In such a belief, he was eminently correct.

I wish now to speak briefly to the captive peoples, not only of Hungary, but everywhere behind the Iron Curtain. Recently there has been much talk in the press of peaceful coexistence between this country and the Soviet Union. Some have interpreted such talk as an indication that we have abandoned the captive peoples to their fate, that we are willing to sit down with the Soviet ruler and divide the world into so-called spheres of influence, that we are prepared to permit the Communists to have Hungary, let us say, if they will agree to abandon their infiltrative efforts in perhaps Guatemala or Chile or Brazil. I want to answer such interpretations this afternoon.

I say to all those who hear my voice that the policy of this Government toward the captive peoples behind the Iron Curtain has not changed one lota nor will it change under our present administration. Under date of December 16, merely 10 days ago, I have the following assurances from the State Department, from which I quote: "This Government is not reconciled to the present fate of those peoples; it will not be a party to any arrangement or treaty confirming or prolonging their subjection to Soviet despotism, and it seeks by peaceful means conditions permitting these enslaved national groups to recover genuine freedom and independence."

You may have heard or read of the recent speech which Secretary of States Dulles made in Chicago in which he stated, and I quote: "The scope of conferences with the Soviet Government is necessarily limited by our attitude toward the captive peoples, for the Soviets know that we will not make any deal which would condone and perpetuate the captivity of men and nations. And the State Department has personally assured me that our objective remains unchanged which is to work in all peaceful ways for the creation of a Europe in which the captive peoples will again enjoy governments as well as social and economic institutions of their own free

I hope that these official statements of policy on the part of our Government will act as a reassurance to the captive peoples that they are not and will not be forgotten and that no so-called deal will be made with the Soviets that would in any sense of the word be an acceptance on our part of their conditions of bondage. Moreover, I will say that I am convinced that the great majority of the American people are desirous and hopeful that the eventual day of liberation will come and that it will come soon.

I wish to make one thing clear about which there has been much misunderstanding. There will be no so-called war of liberation in its literal sense. The American people are not prepared and do not intend to fight a war solely and simply for the liberation of the captive peoples. The horrors of an atomic and thermonuclear war are to great for us ever to seek war of our own choosing. But if, in spite of all our efforts for peace, war should be thrust upon us we will not shrink from its horrors, however catastrophic they

All the peoples of the world ardently desire peace. No one wished for peace more than Cardinal Mindszenty himself. But on the other hand we will not pay any price. however unworthy, to buy peace. And I am convinced that if war with the Soviets should come, albeit not of our choosing, we would not hesitate but would wage it until the power of international communism, everywhere, was beaten and trampled into the

So, I tell you that, while there may be talk of peaceful coexistence, a concept which I personally believe can never be realized, the policy of liberation is still as much a part of our national objective as it ever was. And there are peaceful means and ways in which we can work for this liberation and I want to discuss some of them briefly.

In working for peaceful liberation, I believe we would be, in effect, working toward a victory over the Soviet Union in the only way which would avoid either shameful surrender to the Soviets or an all-out atomic war in which there would be neither victor nor vanquished. Therefore, you can see that the achievement of liberation by peaceful means would be very much in the interest of our own national security, and therefore, must of necessity be and remain a part of our Government's international policy toward the Soviets.

Before we can deal effectively with the Communists abroad, we must first settle with them here at home. There can be, and should be, no room in the United States for anyone who has sworn prime allegiance the Soviet Union and who acts as a traitor and fifth columnist within our midst. Many effective steps have recently been taken against the American Communist Party and its members. I hope that these steps will be continued and increased to a point where communism, as an internal threat and menace, no longer exists in our midst. Outlawing of the Communist Party, expatriation and deportation of its members, Government seizure of its assets, the most ruthless steps to root out and eradicate its influence from every part of our economy and our way of life, these are some of the steps which I would suggest in the interest of our own national self-preservation. Once we have dealt effectively with the Communist menace here at home, then, and then only, can we logically turn our attention abroad.

In this connection I would hope that we use all our influence, political and economic especially, to urge our friends and allies to take similar steps against the Communist organizations in their own countries. The great worth of friendship with this country, to say nothing of military and economic assistance which may have been received from us, would not make this too unreasonable a demand on our part. But we should defi-nitely take the leadership in this respect. We cannot, in good conscience, ask any free country to take action with regard to their own problem of domestic communism which we have been unwilling or unable to take in regard to ours.

The weapon of trade can be an important one in our hands. I have been greatly distressed recently to read that current restrictions are being loosened to permit the exportation of more and more articles behind the Iron Curtain. Excuses have been made that these are merely articles for domestic consumer consumption. But it is important to bear two theses in mind. In the first place, whatever is done to raise the standard of living of the captive people, even assuming that the average person is able to buy such consumer goods, thereby merely entrenches the Communist regime in power. In the second place, to the extent that the Soviets can import consumer goods from abroad, to that extent can they divert their industrial production from consumer to industrial and armaments production. We have had clearcut evidence that trade embargoes have in the past seriously embarrassed and hampered the Soviet economy. I do not believe that our efforts in that direction should now be relaxed. There is no such thing in my language as a distinction between strategic and nonstrategic goods; even foodstuffs are strategic when used to the ultimate benefit of your enemy.

Legislation has been introduced into the Congress in the past and will be reintroduced in the future to provide some means of assistance and encouragement to Communist escapees, defectors, etc. Difficult as it is today, ways can still be found to cross the Iron Curtain. I am sure that the fear of insecurity and uncertainty in the free world acts as a great a deterrent to the would-be refugee as do all the mines, barbed wire fences, and other physical impediments. Every encouragement should be given to those persons who defect from Soviet communism not only to benefit the acquisition of valuable information on our part but also to increase the feeling of mutual distrust that the Reds hold toward one another. Every assistance should be given to those refugees who successfully pierce the Iron Curtain with assurances of resettlement and the chance to earn a decent livelihood. As I have said before, some must remain but those who do emerge from slavery into freedom should be considered and treated as welcome immigrants, not as fugitive criminals.

In this connection, I should make particular mention of the military units which are authorized to be formed in Western Europe from among those escapees of military age. Although large sums have been appropriated for such a purpose, progress has so far been disappointingly slow. I believe the presence of so-called legions of freedom from each of the satellite countries, as well as the Soviet Union itself, in Western Europe would act as powerful magnets to draw more and more of the Communist military manpower from behind the curtain. The existence of such groups under their own national, patriotic standards could serve as rallying points for freedom-loving exiles everywhere. It should also be worthy of note that they could contribute immeasurably to the defense of free Europe itself and would thereby enable us to relieve ourselves of some of our own weighty commitments in that continent.

The shameful treaties of Teheran, Yalta, and Potsdam which delivered so many of the captive peoples into Soviet slavery should be carefully reviewed by our Government. It is my belief that the Soviets should be presented with an ultimatum to honor immediately the broken provisions of these treaties, especially with regard to Germany, Austria, and Poland. Should this ultimatum be rejected, I believe our Government would be completely justified in denouncing these treaties and declaring to the world that they no longer exist as far as the United States of America is concerned. It would be my sincere hope that our British allies would feel able to join us in such a course of action.

Much has been said about the possibility of a top-level conference with the Soviet leaders in the near future. I can conceive of only one excuse for our attending such a conference and that would be to present further proof to some of our wavering allies as to the complete and utter futility of ever reaching any agreement with the present Soviet rulers. We have had too many sad experiences in the past to hope that some benefit might be derived from a new meeting. Even if a satisfactory solution to many existing problems could be reached with the

Communists, what guarantee, based on the lessons of history, would we have that an agreement could or would be honored on the part of the Reds? In my opinion it is next to useless to negotiate with a government whose standards of international morality are so completely at variance with our own. The only language the present Soviet rulers appear to understand and respect is that of forceful pressure and no international meetings are needed to make use of that application.

I now come to a question which has been much debated in public circles recently and is certain to be revived again and againthe matter of severing diplomatic relations with the Soviet and satellite governments. I have recently had occasion to make some study of the reasons for which this Government refased to recognize the Soviet Union in the decade following World War I. Chief among these, of course, was the manner in which the Bolshevik minority seized power in that country and established a tyrannical government so obviously unrepresentative of the majority of te Russian people. The unmistakably amoral standards of the Soviet leaders in the conduct of international relations also played a large part. The lack of good faith, the failure to recognize normal international obligations and the noncooperativeness in regard to all forms of intercourse were also weighty considerations. But re-luctant as this Government was to indicate its approval of the tyranny which had settled over the people of Russia, that in itself was not the principal reason for our failure to extend diplomatic recognition. It was rather the fact that the Soviets openly supported and directed movements of international communism everywhere which were nothing more than flagrant interferences into the internal and domestic affairs of every free country in the world, not excepting this one. It was felt that no possible indication of approval could be given such unprincipled conduct on the part of an alleged member of the family of nations.

Even after such misgivings had been overcome and diplomatic relations between the two countries had been established in November 1933, the Soviet Government merely increased its activities in this regard. Soviet leaders themselves openly boasted of the inevitability of world revolution through the Communist fifth columns throughout the world. When they were reminded of their solemn promises in this respect and their pledges to refrain from any such activities which had been undertaken at the time of recognition, they repudiated, for all intents and purposes, such pledges by declaring that they could undertake no obligations with respect to the Communist International. Such barefaced violations of solemn international commitments very nearly caused the rupture of relations as early as 1934. Had it not been for the emergence of the Nazi menace which threatened both countries equally and forced a form of modus vivendi, it is probable that American-Soviet relations would have been strained to the breaking point.

Much has been made of the value of socalled listening posts provided by the American embassies and legations behind the Iron Curtain. Having served myself at one these posts for more than 2 years, I state it as my personal opinion that such value is of extremely limited content. Much, if not all, of the information thus acquired is readily available through other sources and can hardly compensate for the intense propaganda and espionage activities carried on in this country by Soviet diplomatic officers. Further, as I have reason to know from personal experience, it is official Soviet policy to place every conceivable handicap and hindrance in the way of the operations of our Government representatives in Communist-controlled countries. The indignities

and hardships, many of a personal nature, which our people are forced to undergo there are not only degrading to them as individuals but are even more degrading to the prestige and influence of this country. It must be extremely difficult for the captive peoples to retain any degree of respect or admiration for the United States when they see its servants treated with the scorn and contempt which has been the custom ever since we have been officially represented behind the Curtain.

It is my firm and sincere conviction, therefore, that a complete severance of diplomatic relations with the Soviet and satellite regimes would be one of the best steps which this Government could take to reassert its position of moral leadership of the world. Regardless of whether or not all of our allies joined us in such action immediately, we would have asserted, not only to the free peoples but also to the captive peoples, our determination that a course of ruthless and deliberate violations of international agreements will not be endorsed by continued diplomatic recognition. Much as we dislike and disapprove of the manner in which the internal affairs of the Soviet Union, are conducted, it would not be for this reason that we would take the step of breaking relations. It would rather be due to the systematic course of interference in our own domestic affairs which the Soviet Union has pursued ever since its inception.

If we are determined, as we are, to do all possible to avoid an open clash with the Soviet Union, the weapons of international morality are among the strongest which remain in our arsenal. The fullest exertion of moral force is perhaps the only way in which a change can be achieved in the present policies of international communism. No one realized this better than the man in whose honor we are gathered here this afternoon.

By his willing martyrdom, Josef Cardinal Mindszenty succeeded in rallying the moral Indignation of the free world against Communist barbarity and tyranny as perhaps no other single individual has been able to do. When he was arrested and imprisoned 6 years ago today, he knew of the possibility of death, of the likelihood of degradation, Whatever his fate was to be, he faced it as bravely and courageously as the martyrs of imperial Roman times faced the lions in the amphitheater of the Colosseum. And the fate which befell him has done more to advance the cause of freedom which he so passionately and earnestly championed than any other single action on his part could possibly have accomplished.

Only the Communists know whether or not Mindszenty will ever emerge alive from his prison. Regardless of this we can only hope that somehow some word may have reached him that his dauntless sacrifice was not in vain. But it will only continue to be of avail if the example of moral leadership and moral courage which he left us will continue to be remembered long after he is gone.

I earnestly hope that my words today will be heard in captive Hungary. To those who may receive them I urge you to carry on the spirit of moral resistance to the Communist domination which Mindszenty so splendidly typified. Your country has suffered foreign domination before, many times in its long and glorious history. But the spirit of men such as King Bela IV, John Hunyadi, Louis Kossuth, and many others always kept the flame of freedom and independence alive and Hungary always eventually threw off her foreign shackles and emerged triumphant. Josef Mindszenty now takes his place among the heroes of Hungarian history as one whose deeds and words will inspire those who survive to carry on the fight and insure Hungary will not forever remain crushed and downtrodden. Remember the spirit of your ancestors. Remember the example of Cardinal Mindszenty. Get off your knees and hold up your heads again. Talpra Magyar.

And for those of us who carry on the fight in the world outside, be we Americans or Hungarians or of any other oppressed people, let us also never give up the fight against the forces of godless, totalitarian commu-nism. Let us be firm in our faith that right and justice will one day triumph everywhere. us continually keep before the eyes of free peoples the plight of the captive nations and let us insure that the great examples of moral strength and courage displayed by such men as Mindszenty are never forgotten. For such an undertaking, no effort on our part is too great. We should be eternally grateful that we have men like Mindszenty who are willing to contribute so much and we should on our part be grateful that we have the opportunity to contribute our little, our bit, to bringing freedom again to the slave half of the world, to seeing that justice will again triumph and to insuring that peace will return to reign over us. May the good Lord bless and strengthen us in this, our crusade.

Statement of Counterpart Funds Charged to Committees of the House of Representatives

EXTENSION OF REMARKS

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. LECOMPTE. Mr. Speaker, on January 27, 1954, I inserted in the Con-GRESSIONAL RECORD a statement with reference to the history and use of counterpart funds by Members of the House of Representatives who had traveled abroad on official committee business. I also inserted in the RECORD at that time a preliminary report received from the Secretary of State listing the names of the countries in which counterpart funds were available, together with a series of tables showing the amount of counterpart funds expended by members of committees of the House of Representatives for the fiscal year 1954 insofar as information was available at that time.

On January 3, 1955, as chairman of the Committee on House Administration, I received from Assistant Secretary of State Thruston B. Morton a statement based on reports to the Department of State by United States disbursing officers abroad, giving the total net amounts of counterpart funds drawn by committees of the House of Representatives from July 1, 1953, through June 30, 1954, expressed in United States dollar equivalents. While it is believed that most of the obligations incurred by committees which traveled during the fiscal year 1954 were liquidated during fiscal year 1954, and are reflected in this statement, it is possible that additional payments have been or will be made on behalf of these groups during the current fiscal year 1955, and have not as yet been reported to the State Department. Any such payments will be included in the fiscal year 1955 reports and designated as payments against 1954 travel. The statement furnished by the Department of State follows:

Statement of counterpart fund charges to committees of the House of Representatives, July 1, 1953, through June 30, 1954 [Expressed in United States dollar equivalent values!

Total net charges: House Appropriations Committee____ __ \$48, 914, 29 House Armed Services Committee___ 14, 713, 28 House Committee on Foreign 19, 965, 34 Affairs___ House Committee on Interstate and Foreign Commerce_ 20, 265, 70 House Committee on Interior and Insular Affairs. 1,020.18 House Committee on the Judi-

Grand total of net charges_ 157, 466, 40

52, 587, 61

Public Law 665, 83d Congress, provides that any committee of the House of Representatives which uses counterpart funds shall make a full report thereof to the Committee on House Administration, showing the total amount of such currency so used in each country and the purposes for which it was expended.

What the Farm Vote Showed

EXTENSION OF REMARKS

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enclose for the Appendix of the Congressional Record an editorial entitled "What the Farm Vote Showed," from the November 5. 1954, issue of the Indianapolis Star:

WHAT THE FARM VOTE SHOWED

In one of his major farm addresses President Eisenhower told his audience he had been warned that his program of flexible farm price supports was not good politics at a time of widespread concern over falling prices of agricultural commodities. To this Ike replied that if his program was good for the country it was good politics. This courageous judgment turned out to be the smartest thing politically that the administration did in the entire campaign, as the results showed.

The highly touted farm revolt, fanned so exuberantly by Democrats like Senator KERR, of Oklahoma, in telecasts paid for by the CIO, simply fell flat on its face. In Iowa, Senator Gillette, a perennial winner for the Democrats, made the mistake of challenging the Eisenhower-Benson program, and there-by lost to Republican Marin, a strong Benson supporter. In Kansas, Senator Schoep-PEL, a strong foe of rigid price supports, easily won reelection. In Indiana, the rural vote held back the big off-year shift to the outs that the Democrats were banking on.

Ike won on the farm front because he staked his political prestige plainly on the outcome. He made the fight over flexible supports his own fight, backing up his battling Secretary of Agriculture to the hilt. Considering how narrow the Democratic margin of victory turned out to be, it is hard to avoid the conclusion that Ike could have had his Republican Congress if he had fought just as hard on nonfarm issues.

New England Textile Committee Report on the Subject of Tariffs

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following New England Textile Committee Report on the Subject of Tariffs, December 14, 1954:

The importance of tariff rates to the New England textile industry and the current activity of the Federal Government relative to same have prompted the New England Textile Committee to conduct hearings for the purpose of discussing and studying this issue. This statement of the position of the New England Textile Committee on the tariff issue, for presentation to our New England governors, Congressmen, and to the general public, is the product of this careful

This report consists of a definition of the textile industry in New England, discussion of characteristics of the industry, the need for tariff protection, present tariff legislation, and recommendations of the New Eng-

land Textile Committee.

NEW ENGLAND TEXTILE INDUSTRY

The textile industry is one of the most important industries in New England. New England mills constitute about 20 percent of the cotton, silk, and synthetic textile industry, about 60 percent of the woolen and worsted textile industry, and a sizable percentage of other textile industries including manufacturers of lace goods, felt goods, coated fabrics, cotton cordage and twine, hats, carpets and rugs, knit goods, thread and yarn. The New England Textile Committee represents all of the textile-mill products industries.

Over 16 percent of the people employed in New England manufacturing industries are directly employed in textiles, approxi-

mately 220,000 people in 1953. Another 220,000 people are indirectly dependent on the textile industry, as the loss of a textile job in a community may mean the loss of one additional job when the worker and his dependents cut their purchases from the grocer, the druggist, the department store, and the professions. Thus, 1 in every 6 jobs in New England is directly or indirectly dependent on the welfare of the textile industry.

The New England textile industry represents capital investment in excess of \$1 1/2 billion, value added by manufacture in 1952 of \$1,154,000,000,4 and would require investments of about \$3 billion to substitute new manufacturing jobs for textile jobs."

The textile industry is not only essential to New England but is of great importance to the national economy. The total industry employs aproximately 1.25 million workers, has an annual gross product value of \$12 billion, pays taxes of \$1.25 billion annually, and has an investment at the end of 1952 of \$51/2 billion with total assets of about \$9 billion.

CHARACTERISTICS OF THE INDUSTRY

The characteristics of large employment, small size of units, geographical dispersion, high percentage of labor costs to other costs, free price competition, and military value make it mandatory that present tariff rates

Footnotes at end of speech.

on textile-mill products be maintained or 14½ hours a week." This shows how quickly increased in the interest of national welfare. foreign competition affects the textile in-

LARGE EMPLOYMENT

In addition to being one of the largest employers of labor, the industry is charac-terized by the fact that mills employ a relatively high proportion of the workers in the labor-market area where they are located. Many mills are situated in small towns where provide either the sole or principal source of outside income to the community. Other mills are located in textile centers such as Rockville and Danielson, Conn.; Sanford, Biddeford, and Lewiston, Maine; Fall River, New Bedford, Lawrence, and Lowell, Mass.; Manchester and Keene, N. H.; Woonsocket and Providence, R. I.; and Winooski, Vt., where they represent a large proportion of the total manufacturing employment in the area.

SIZE OF UNITS

The textile industry typifies small business which the Federal Government is currently trying to assist on the one hand through the Small Business Administration and is permitting to be injured on the other through reductions in textile tariffs.

The average number of employees in textile mills is very low in New England as well as in milis is very low in New England as well as in all regions of the United States and in all branches of the industry. In the United States, 43 percent of the textile milis employ less than 20 persons and 73 percent employ under 100 workers. The total industry is composed of over 9,000 milis, of which over 1,500 are in New England.

GEOGRAPHICAL DISPERSION

Only a relatively small number of textile mills are located in large metropolitan areas where there is a diversity of manufacturing and employment. Most of the mills are small, widely distributed, and located in small towns where a change or shift in demand for their output causes particular hardship on textile workers.

LABOR-ORIENTED INDUSTRY

The entire industry is noted for its relatively high percentage of labor costs to other costs. In 1953, salaries and wages of the wool textile industry represented 63 percent of the total value added by manufacture." In the case of the cotton and rayon broadwoven fabrics field, salaries and wages represented 67 percent of the total value added by manufacture in 1952.10 This labor cost is particularly important when one considers that raw-material costs are just as low or to other producers throughout the world. Government price-support policies tend to raise the cost of raw materials to American producers above the prevailing prices in the world market.

Uncontrolled competition from low-wage foreign producers can seriously damage the New England textile industry, the New England economy, and the national textile industry. In competition with foreign producers, the wage differential varies between 200 and 1,400 percent, and this in a labororiented industry.11 As a result, during 1953 textile products were entering the United States, duty paid, at prices substantially below those of domestic producers.13

The Government considers an area with 6 percent or more unemployment a surplus labor area. As an example of what can happen in a short period of time in textiles, let us consider the case of the lace manufacturers, predominantly located in the Blackstone and Pawtuxet Valley areas of Rhode Island. In the 2 years following the reciprocal trade-agreements program with France, in conjunction with the devaluation of the French franc, which in substance meant still further tariff reduction, the lace industry in Rhode Island found itself with 66 percent of its workers unemployed and the re-maining 34 percent working on an average of

dustry.

PRICE COMPETITION

The outstanding characteristic of the textile industry is its highly competitive nature with the resulting low free market price of textiles to the consumer. In recent years textile profits as a percent of sales have been running below the average earnings of manufacturing industries generally. The textile industry is not making profits at the expense of the consumer under the protection of the present tariff.

MILITARY VALUE

Maintenance of a domestic textile industry Is vital to our national security. During the 4 years, 1942-45, 51.4 percent of the production of cotton broad-woven goods in the United States went to the armed services.14 In the woolen industry, during the peak production years of 1942-43, 51.5 percent and 48.8 percent, respectively, of domestic production went to the armed services.15 injury to the New England textile industry through tariff reductions could jeopardize national security

TARIFF PROTECTION

In the interest of New England, our national security, and the national economy, present tariff rates on textile products must be maintained to protect the textile industry and its various segments from injury and unemployment caused by low wage foreign competition. When foreign imports cause or threaten to cause unemployment in any branch of the textile industry, tariff rates on the goods imported should be raised to prevent further injury and unemployment.

Textile workers laid off as a result of mill closings find it difficult to find jobs. Older textile workers are experiencing considerable difficulty in finding new jobs and if total textile employment declines it will be increasingly difficult for them to find any sort of employment according to a recent survey conducted by Northeastern University.¹⁶
Any reduction in tariff rates will only serve to aggravate the already serious problem of unemployment in some New England textile

The textile industry is one of the first industries to develop in new industrial areas and in rehabilitated countries. Since World War II United States textile machinery manwar if officed states textire inactinary many foreign mills. As a consequence, many foreign producers have machinery which is more modern and more efficient than the older machinery in many mills in the United States. With low wages, modern machinery and techniques, foreign producers can and will capture our domestic markets. Any advantage we enjoyed in the past in greater productivity and efficiency have been equalized by sharing our knowledge with our foreign neighbors. Fine-combed cotton goods from Western Europe and Japan, Italian and Japanese velveteens, English typewriter cloth, English tweeds, and other foreign textiles are coming into this country in increasing numbers.

Since the inception of the textile industry, the Government has provided protection against foreign producers through the medium of the tariff. Under these condi-tions the industry has grown and developed a scale of wages commensurate with the American standard of living. Through reciprocal trade agreements during the last 20 years there have been large reductions in tariff rates on textiles. Any further reduc-tion would be injurious to the industry and New England. The New England Textile Committee favors protection for workers, stockholders, and the public from the lowwage competition of foreign countries.

TARIFF LEGISLATION

Under present tariff rates, textile products are being imported in increasing quantities while domestic industry suffers from unemployment. The woolen and worsted industry is the prime example of this sitnation

The Commission on Foreign Economic Policy, popularly known as the Randall Commission, has recommended further tariff reductions to the President. The New Eng-land Textile Committee is opposed to any further tariff reductions on textile products.

RECOMMENDATIONS

The New England Textile Committee recommends:

1. That there should be no further reductions in tariff rates on any of the different classes of textiles.

2. That tariff rates should be raised on textile products where foreign imports cause or threaten to cause unemployment in any segment of the industry.

The President's Message on the State of the Union

EXTENSION OF REMARKS - OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enclose for inclusion in the Appendix of the Congres-SIONAL RECORD a statement as given to the Indiana press following the state of the Union message of January 6:

I join President Eisenhower in his estimate and evaluation of the 83d Congress as expressed in his state of the Union message. I am glad to have been a Member of that body that did so much for everybody and that helped to produce the greatest prosperity that this country ever has seen, with peace at the same time.

I believe that the President will be very realistic in the matter of tariffs and the extension of reciprocal trade agreements. The industries of the United States do not ask for selfish protection but for equalization of tariff rates. It is realized that reciprocal trade agreements must work two ways and that we should be entitled to the same consideration from all other nations that we, in turn, extend to them.

In regard to the spending for defense, I certainly join with President Eisenhower instead of Speaker RAYBURN. The present ad-ministration has proven that more defense can be secured for less money. Apparently, the proposal of the Democratic Party, as stated by Speaker RAYBURN at the time of his installation as Speaker, will be to spend for the sake of spending with no mention about the waste which everybody knows must be watched.

I also raise the question whether or not foreign aggression might be invited by excessive saber rattling on the part of our country or on the part of any other country. President Eisenhower has had a lifetime of experience and prefers peace pru-dently secured instead of aggression by provocation.

The President's concern about Communist infiltration and subversives should be shared by all. Both major political parties will do well to clean their house immediately of any

extremist groups.

Revision of the McCarran Immigration Law

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. ANFUSO. Mr. Speaker, I am introducing today an immigration and naturalization bill to revise our present immigration laws. The title of my bill is "Immigration and Citizenship Act of 1955," and it is intended to replace the McCarran-Walter Immigration Act.

Let me state at the very outset that the chief objection to the McCarran-Walter Act is that is based on the nationalsupremacy doctrine which maintains that the people of some nations were superior to others. According to the McCarran-Walter Act, this idea is reflected in our present immigration policy. Needless to say, it is a fallacious theory because there is no such thing as a superior race or a superior people. A law reflecting such outmoded ideas has no place on our statute books and should be removed as soon as possible. We need an immigration law that will conform with American concepts of justice, fair play, and basic traditions.

Mr. Speaker, I represent a cosmopolitan district in the city of New York. The people of our great city are for the most part of immigrant stock. They are either immigrants themselves or children

and grandchildren of immigrants. Their roots are solidly planted in this country. They are intensely loyal and patriotic citizens of the United States. It is because they have known the adversities of life abroad at firsthand that they can best appreciate the American way of life.

They and many millions of others throughout our country are intensely interested in the problem of immigration and are anxious for the United States to follow a liberal policy in the matter. recall that during my service in the 82d Congress I had been approached by numerous people to help them in their immigration matters. Some of these were very tragic cases: Parents who wanted to be united with their children; broken families because the husband or the wife could not come here; deportation of the husband which left an entire family without support, and similar other cases. I did my utmost to help these people in every possible way.

Unfortunately, our immigration laws in recent years have been rather harsh, discriminatory, and often inhumane. The McCarran-Walter Act was intended to be a codification of all previous immigration and naturalization laws, but actually turned out to be a codification of all the discriminations and the prejudices against immigrants thought up during the past few decades. I am referring particularly to the quota system. the method of selecting immigrants who seek entry to this country, which dates back to the early 1920's when it was first enacted in an atmosphere of isolationism and hatred of all foreigners.

Under the quota system a total of 154,000 immigrants may be admitted annually to the United States. The original law enacted in 1921 set up the quotas on the basis of the 1910 census. It also contained the obnoxious implication that the people of southern and eastern Europe are inferior to those of northern and western Europe. In 1924, the law was amended and made even more discriminating against those of southern and eastern European origin. Quotas were reduced from 3 to 2 percent, and the census basis was moved back from 1910 to 1890, the reason being that immigration from southern and eastern Europe had hardly begun by 1890. Naturally, the quotas for those countries were drastically reduced. Thus, Italy's quota was cut from 42,000 under the 1921 law to less than 6,000 under the 1924 amendments; Poland's quota was reduced from 31,000 to 6,500, and the same was true for other countries.

Mr. Speaker, when a codification of our immigration laws was undertaken several years ago, million of our citizens had hoped that the biased and intolerant laws would be eliminated and a new approach toward the selection of immigrants would be established, but those who drew up the McCarran-Walter bill included the worst and most obnoxious features which had accumulated on our statute books over the past 30 years. The restrictive quota system was retained, large quotas were again assigned to countries unable to use them up, and the unused portions of the quotas were wasted instead of permitting low-quota countries to use them.

So much for the quota system. Now, let us examine briefly another set of regulations in the McCarran-Walter Act which constitute an insult to all Americans who believe in the concept of equality. I mean the provisions which deal with naturalized citizens. Under the McCarran-Walter Act it is easier to deprive such people of their citizenship and deport them from the United States. In the past it was necessary to provide proof of fraud at the time of naturalization, but now it merely needs to be shown that a person failed to mention some minor incident in his past and he stands to lose his citizenship. It is a threat which hangs over his head for the rest of his life. This, in effect, sets up two classes of citizenship, since no naturalized citizen can ever feel secure of his citizenship status any more; it is something which we have never before had since this Republic has been founded.

There are many other injustices in that act, perhaps too numerous to mention. Suffice it to mention the findings of a Presidential commission, named by President Truman in 1952 to study the act. In January 1953 this commission reported its findings of the McCarran-Walter Act as follows:

First. It discriminates against human beings on account of their national origin, their religious belief, and their color.

Second. It is based on hatred and distrust of all aliens.

Third. It ignores the needs of the United States in domestic affairs and foreign policy.

Fourth. It contains unnecessary and unreasonable restrictions and penalties against individuals.

Fifth. It is badly drafted, confusing, and in some respects unworkable.

In the 2 years since the Eisenhower administration is in power and in the 83d Congress nothing was done to wipe out the inequities of the McCarran-Walter Act and to restore sanity and dignity to our immigration system. The President has made no effort to keep his 1952 campaign pledge to support legislation to revise the McCarran-Walter Act. The 83d Congress, likewise, made no attempt to amend the act, but adopted the Refugee Relief Act of 1953 to admit 214,000 European refugees over a 3-year period. By now, many of us are aware that this act turned out to be a hoax, since its many restrictions make it so unworkable that only about 10,000 persons have been admitted under this law which went into effect on August 7, 1953. This is a separate issue to which I hope to return in the very near future with some constructive suggestions.

Many of my colleagues, I am sure, will recall that I was strenuously opposed to the McCarran-Walter measure when it came before the House in 1952, and then when President Truman vetoed it I voted to uphold the President's veto. Since then I have followed all developments in connection with this act; I have sought means and ways of revising it, and I have given the matter much thought and study.

Here are some of the major changes recommended in my bill:

First. The so-called national origins quota system is abolished as a basis for admission and in its place is proposed a unified quota system to be comprised of three groups of eligible immigrants:

A. Those coming under the family unification preference, but not more than one-third of the quota numbers are to be allocated for this purpose;

B. Those coming under occupational preference, which is to be limited to 10

percent;

C. The remainder shall be allotted to newcomers, including those seeking religious or political asylum, and those needed here in the national interest.

Second. There is to be no discrimination against any person seeking to enter this country as an immigrant, because of national origin, religion, race, or color.

Third. The number of annual quota visas is to be established on the basis of one-sixth of 1 percent of the United States population according to the 1940 census, the last prewar decennial census. On this basis a total of 220,000 immigrants may be admitted annually, which is about 75,000 more than under the present quota system. Furthermore, the allocation of quotas for all countries would be more equitable because the 1940 census is more representative of our population now than is the census of 1890.

Fourth. The allocation of visas to the above three groups and the quotas assigned to each nation shall be determined by an Immigration and Naturalization Commission, proposed in the bill, and with the approval of the President. The Commission is to operate as an independent agency, thus avoiding much of the confusion now existing.

Fifth. Unused quotas are to be pooled and distributed among those countries whose quota allotments had been used up. It will be of interest to note that since 1924 only about 40 percent of the quota numbers have been used, namely, 1,500,000 entered the United States under the quota system while 2,500,000 visa numbers remained unfilled and unused.

Sixth. Aliens shall not be deported if they were admitted before their 14th birthday, or have lived in the United States for 20 years or more. The bill also provides that no alien can be deported by reason of conduct which occurred more than 10 years prior to the institution of the deportation proceedings.

Seventh. Several provisions are contained in the bill which would permit an alien who is under a final order of deportation to seek judicial review under the Administrative Procedure Act or the Declaratory Judgment Act. In this way it is hoped to eliminate the contradictory standards of justice applied to alien residents in this country and the severe penalties meted out for minor errors and infractions of the law.

Eighth. All distinctions and discriminations between native-born and naturalized American citizens are eliminated and equality of all citizens under the law is established. In a democracy

such as ours there is no room for secondclass citizenship nor is discrimination against the naturalized citizens to be tolerated. The grounds for deprivation of citizenship, whether acquired by b...th or naturalization, are remedied.

There are numerous other changes and remedies suggested in the bill to improve our immigration laws, which I trust will be adopted at an early date so that the United States will be able to maintain its tradition as the haven of the oppressed and the asylum for the persecuted. Continuation of the McCarran-Walter Immigration Act on our statute books is a blot on the good name of our country. If we permit this discriminatory measure to remain unaltered and unrevised, then much which is precious to American ideals and traditions is destroyed.

Mr. Speaker, I maintain that the Mc-Carran Act is not a true reflection of the thinking and the spirit in this country, or that it represents American opinion concerning the immigrant. The Mc-Carran Act is not the proper law for a nation which has been settled and developed by immigrants throughout its history, and which has been built to its present greatness and world leadership with the help of immigrants.

For the sake of America's greatness, its international prestige, and its position of moral leadership among the nations of the world, I urge this Congress to take swift action to undo the wrongs of the McCarran-Walter Act and to adopt my proposed revision of it.

Let Us Cling to the Pattern of Life That Has Brought Us Where We Are That We May Continue To Go Ever Forward

EXTENSION OF REMARKS

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. REES of Kansas. Mr. Speaker, under unanimous consent, approved by the House, I am including in the Record an interesting address by a great American, James A. Farley, former Postmaster General of the United States. Mr. Farley is now chairman of the board of one of the big, expanding industries of the United States. The address was delivered in Wichita, Kans., on October 18, 1954, in commemoration of the 50th anniversary of the establishment of the industry which he heads.

Incidentally, General Farley attributes his success in the business world to opportunity afforded under a Government that encourages thrift and individual initiative.

The address follows:

I have been privileged to visit Wichita on many occasions and have always enjoyed it. I am told that the early Plains Indians who were your first settlers, called this territory Kansas—or "People of the South Wind." To me that has always seemed a most appropriate designation for your fine State—for it suggests the warmth and refreshing recep-

tion I have always received here. But I am particularly happy to be here tonight because it affords me an opportunity to participate in an event which can happen only once in a lifetime of a man or a business—the marking of a 50th anniversary.

of a 50th anniversary.

In my own lifetime, I have come away from many celebrations, such as this, impressed not so much with the great economic and historic factors which were discussed but with the people whose ingenuity and fortitude gave root and flower to the real meaning of why we are here.

In Wichita the Coca-Cola saga has been written boldly in the record pages of a growing city, as it has been etched into the progress of great communities across the Nation and throughout the world. You, my friends, are the authors, the builders, the men of vision and integrity who have created here a lasting monument—a thriving, respected, and revered business—from something so humble and simple as a pleasant-tasting, wholesome, nickel soft drink.

Now what does it take? What magic power must you have to attain this splendid achievement? Perhaps the answer may be found in this basic concept. It may be that aside from your abiding faith, your business acumen, and your merchandising resourcefulness, the formula for your success is contained in the one word "character." In the words of the old saying: "Sow an act and you reap a habit, sow a habit and you reap a character, sow a character and you reap a destiny."

I prefer to believe that you are not exceptional geniuses, but rather you are plain, straightforward, kindhearted, law-abiding citizens—men with healthy consciences, hearty appetites, and I hope good digestion, with cheerful but dogged determination to do your part in the sphere of life to which God has called you. It is a truism that no man who continues over the years to add something to the material, intellectual, and moral well-being of the place in which he lives is left long without proper reward. In bringing this business from nothing to its present impressive stature, through the trials and vicissitudes of more than seven times the normal life span of the average American corporation, you are deserving of recognition, not only by your associates but by your fellow builders of Wichita as well.

It is appropriate at this time also, for me to remind you that deep in the fabric of Coca-Cola's mantle of success is the name of Browne. To the Coca-Cola organization, Browne is synonymous with builder. The Browne vision and integrity helped cement bricks of acceptance in the solid foundation of public confidence laid down by the parent company. Because there are men among you in the Browne mold, the trademark Coca-Cola and the product and institution which it identifies, will continue to hold its position in world favor and renown.

Just as here in Wichita, so in any American city or town the Coca-Cola man is to his neighbor the personification of the institution itself. Through his efforts and through his dedication to the principles of what has been called the Coca-Cola pattern of business, this product benefits and sustains and develops each and all of the communities in which it is bottled and distributed. In the store and in the village, in the city and the Nation, Coca-Cola is a builder.

In fact, to call it a builder may be something of an understatement. Few products have had such a dynamic effect on the whole economy of the country. Because its growth and development have been so nearly concurrent with your own, let me refresh your recollection of some of its highlights.

It took 51 years to sell the first half billion gallons of Coca-Cola sirup, but only 7 years to sell the second half billion. And 1953 passed the second billion gallon mark.

When the Coca-Cola Bottling Co., of Wichita, came into being 50 years ago, total daily sales of sirup everywhere were only 2,400 gallons a day. Today and every day, more than one-third of a million gallons are moved out from our sirup plants. Fifty years ago, total sales everywhere were slightly more than 300,000 drinks a day. Now they have reached 50 million drinks a day.

Those are dramatic figures, but their real significance lies not merely in their size but in what they mean in terms of people employed and in the wages, salaries, and

dividends they provide.

It is good to remember also that the division of what the consumer pays for this drink—among all those who participate in making delivery to him-is such that every one, from the manufacturer of the original sirup to the ultimate retailer of the finished beverage, derives a fair return and legitimate profit from doing so. This product has en-riched many; it has impoverished none. Every retailer of Coca-Cola has the comforting consciousness that it gives him a faster turnover, draws more people to his door, and creates more secondary sales in his store than anything else on his shelves. As for the manufacturer and bottler, the published values of the operations and facilities of each bear eloquent testimony to a common and basic interest which united themunites us-in a common bond. I know of no other industry in which the manufacturer and the processor, the wholesaler and the retailer have found so broad an area of mutuality in their economic interests. The throughout the country have been singularly fortunate in their people. You may remember the banner displayed not so long ago at a convention of Coca-Cola bottlers that read: "The answer is men." There is no question in my mind that it has been men, and these men have been a dedicated lot. They have not looked upon their enterprise primarily as a means of making a fast dollar on a quick turn. They resisted the temptation to skim the cream of swift profits. They have been long-term operators, building for their communities and for their grandchildren. They have had an institutional attachment and a product loyalty that is legendary.

As another outstanding factor making Coca-Cola what it is, let us not overlook the exceptional system of distribution that carries sirup through 1,800 jobbers to 140,000 fountain outlets and through one-half dozen parent bottlers to more than 1,000 bottlers and from them to more than 1,500,000 bottling outlets all over the United States. Geographically, that system covers the Nation almost as completely as the Post Office Department. But the truly significant thing about it is that, at both the wholesale and retail levels, it is short through with economic independence. One hundred percent of the retailers are independent; 100 percent of the jobbers are independent; over 95 percent of the bottling plants are under ownership independent of the sirup-manufacturing company. There is no better example of the free-enterprise system than the mutually interested by individually independent businesses and organizations which produce and distribute Coco-Cola.

What developed in this country over the past 50 years is now repeating itself the world around. The qualities that have brought local and national acceptance to Coca-Cola here are carrying on toward global popularity. We now have Coca-Cola in 86 countries of the globe.

It may surprise you to know that Coca-Cola sales in Manila are greater than those in Chicago; that sales in Buenos Aires are the same as those in St. Louis and that sales in Brussels equal those of Birmingham.

It might be supposed that a product such as ours would not lend itself to the use of foreign trade. But just the opposite is true. Exports of finished products, of course, have a utility to the foreign country receiving them. But a greater value and a greater benefit is realized by that country when the article of international commerce is the kind that generates a series of secondary local activities. It is in this respect that Coca-Cola differs from many others. For it stimulates in the foreign country a great variety of local enterprises all calling for local management, local personnel, and local material.

A great virtue of this product to an overseas country is that a minimum of important material galvanized new and supplementary domestic developments on a widespread front. For example, crowns for Coca-Cola bottles are manufactured in 15 countries now; the bottle itself in 18 countries. one colonial territory the erection of a botling plant costing 60 million francs was made possible by the importation of equipment costing only \$150. In another area, a new bottling plant entailed the building, also, of an ice plant, a sugar mill, and factories to produce carbon dioxide, caustic soda, soda ash, paperboard, ice coolers, and bodies for electric coolers. When a public official welcomed Coca-Cola to Cape Town, South Africa, he emphasized that with a single exception, everything used in the manufacture of Coca-Cola is of South Afri-

Yes, wherever it goes, at home or abroad, Coca-Cola "belongs." It belongs to the man on the street, a native product and a creator

of other native products.

So much for the highlights of Coca-Cola. Now let us return to the purpose of this

gathering tonight.

While traveling out here from New York, I thought about how cities are built, how businesses are built and how completely entwined is the simultaneous growth of each and how each is interdependent-one upon the other. A city starts with a plot of ground, sometimes by accident, as when two trails cross and a small store is built to accommodate the weary traveler. Sometimes it starts because of some material foundation or blessing of nature such as a lake, navigable river, or good harbor. In the beginning there is nothing but the ground, and then a man comes. He may build a home or a store and then other men come and get others, and there are added to the ground, houses for the people and the people produce the demand for business and the two grow hand-in-hand from a village to a town, to a

There may be those in this room tonight who can go back to Wichita 50 years ago. Then, it was a young city-of only 34 sum-Yet for more than 300 years it had been recognized as a likely spot to make a community. History tells us that Coronado and his Spanish explorers paused here on his return from Pecos Pueblo in 1541. And even then he found the Plains Indians lived in villages of round straw houses and growing maize and beans and melons. Thesetold-were the home-loving Wichitas from whom your city took its name.

Then later, on, when the white man came from the East he too found this spotwhere the Little Arkansas meets Arkansas-a pleasing place to live and grow

and even to build a city.

When Wichita was chartered in 1871 the founding fathers may not have envisioned fully the great stature it would some day attain. But they could be sure it had great possibilities, for all the signs pointed to growth in greatness. It furnished a market for the products, a supply base for the area, and a banking, jobbing, manufacturing, and distribution center for Kansas and parts of Oklahoma. A spirit and an atmosphere pervaded that set Wichita apart to itself as a great thriving section of the country. And it did grow and it flourished. For its people

had faith; they had energy and endeavor and they applied them. They had convictions; and, through good times and bad, they stood firm for the verities of life.

And so, also, did this business. It started in a very small and insignificant way. But being an integral part of the community it partook of the community spirit. It was warmed by that spirit and it caught step with the strides of the community. It kept pace and developed and grew as the com-munity grew. So, tonight, in this celebration we must also pay high tribute to Wichita, to the citizens of Wichita, and to this State, for a climate in which a business of quality and character could flourish and for their patronage and support of this business. On behalf of the Coca-Cola Co., and I am sure I also speak for the Wichita Coca-Cola Bottling Co., I wish to express to Wichita and its people our great thanks and deep gratitude.

In the growth of this city, in the growth of this business, and in the growth of the men and women of this city, we have the miracle that is America, multiplied by innumerable communities throughout land—the miracle that has made this Nation the greatest nation on the face of the earth. It is the obligation of those here, and of those to follow, to cling to this pattern of life that has brought us where we are that we may continue to go ever forward.

We stand to night upon the dividing line between the first and second halves of a We reverently return thanks to Almighty God for the past and with hopeful promise walk forth upon sure ground toward the future. And 50 years from today, some other man will be here to pay tribute to this organization and to this city. he will remind you, as I do tonight, that the past is prologue. And in the words of the philosopher, he may say again to you: "Build out of the past, live in the present, work for the future."

An Explanation of Health Bills Introduced in the 84th Congress by Congressman Wolverton, Republican, of New Jersey

> EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. WOLVERTON. Mr. Speaker, as previously stated I introduced on the opening day of this 84th Congress, January 5, 1955, several bills, the underlying purpose of which is to provide improved facilities and ways and means to promote the health of our people. I believe each of these bills, or bills similar thereto, and, embodying the fundamental principles thereof, would have a very beneficial effect in meeting the present tremendously high cost of hospitalization and medical attention.

In order that these bills may have the fullest possible understanding and thereby create sufficient interest to bring about enactment, I am making an explanation of each of them, as follows:

H. R. 397, A BILL TO AMEND THE PUBLIC HEALTH SERVICE ACT TO PROVIDE MORTGAGE-LOAN IN-SURANCE FOR HOSPITALS AND MEDICAL FACILI-

The principal purposes of the bill, H. R. 397, are:

First, to stimulate lending institutions, through Government insurance of mortgages, to loan funds for the construction of privately owned medical centers, hospitals, clinics, and other health facilities operated on a self-sustaining basis; and

Second, to encourage the extension of voluntary prepayment health plans providing comprehensive medical and hospital care of high quality to the people at reasonable costs within their means.

In order to accomplish these purposes, the bill would create a Health Facilities Mortgage Insurance Fund. The amount of contingent insurance liability would be limited to \$200 million, except that with the approval of the President, such amount may be increased by additional amounts aggregating \$150 million. Mortgages on qualified health facilities would be insured (subject to 10-percent co-insurance) up to 80 percent of the value of such facility. Interest would be fixed at 5 percent with a maximum of 6 percent if the Secretary finds the higher interest rate necessary.

Title II of the bill would set aside for a period of 2 years after the date of the enactment of the bill not less than \$40 million of the total insurance liability authorized by the bill for the insurance of mortgages covering health facilities used primarily in connection with the operation of group prepayment health service plans. This reservation is designed to make certain that a sufficient share of the fund will be available to encourage the extension of group practice prepayment health plans.

The principal objective of the bill, H. R. 397, is to encourage the flow of private capital into the construction and equipment of hospitals and medical facilities. This bill would supplement the Hospital Construction Act, as broadened by the 83d Congress, Public Law 482, which makes available Federal funds for the construction of hospitals and medical facilities.

The bill is based on the extensive experience which the Federal Government has had with the insurance of mortgages on residential housing, including single-family residences and apartments, and contains all of the legislative safeguards provided for in the Housing Act of 1954. enacted by the 83d Congress—Public Law 560—designed to prevent certain abuses which were discovered in connection with the housing program.

H. R. 398, A BILL TO AMEND THE PUBLIC HEALTH BERVICE ACT TO PROVIDE MORTGAGE LOAN IN-BURANCE FOR HOSPITALS AND MEDICAL FACILI-TIES USED IN CONNECTION WITH VOLUNTARY PREPAYMENT HEALTH PLANS

H. R. 398 is a reintroduction, in substance, of the bill H. R. 7700, introduced by me on February 3, 1954, during the 83d Congress. The purpose of the bill is to stimulate private lending institutions, through Government insurance of mortgages, to loan funds by which medical centers, hospitals, clinics, and other medical facilities operated in conjunction with voluntary prepayment health plans, can be constructed and operated on a self-sustaining basis.

The further purpose of the bill is to increase the opportunities and facilities by which doctors may associate themselves together in groups, partnerships,

and other private initiative arrangements of their own choosing, in order to broaden the distribution of high quality medical care through general practitioners and specialists working together, making the most efficient use of medical schools, facilities, and equipment and emphasizing preventive medicine, detection of diseases, and early diagnosis.

The bill, H. R. 398, is based on the extensive experience of prepayment plans offering comprehensive services in many parts of the country today, as for example, the Kaiser Foundation in California, the Health Insurance Plan of Greater New York, and Group Health Association, Inc., of Washington, D. C.

The bill would create a medical facilities mortgage insurance fund. The amount of contingent insurance liability at any one time may not exceed \$300 million, except that with the approval of the President, such aggregate amount may be increased at any time by additional amounts aggregating not more than \$150 million. Mortgages on qualified health facilities would be fully insured up to 90 percent of the value of such facility. Interest would be fixed at 5 percent with a maximum of 6 percent if the Secretary finds the higher interest rate necessary.

The bill is based on the extensive experience which the Federal Government has had with mortgage loan insurance in the field of residential housing, including both single family residences and apartments.

H. R. 399, A BILL TO ASSIST VOLUNTARY NON-PROFIT ASSOCIATIONS OFFERING PREPAID HEALTH SERVICE PROGRAMS TO SECURE NECES-SARY FACILITIES AND EQUIPMENT THROUGH LONG-TERM, INTEREST-BEARING LOANS

H. R. 399 is similar to H. R. 6950, 83d Congress which was introduced by me on January 6, 1954. The purpose of the bill is to stimulate the organization of additional, and assist in the expansion of existing, voluntary nonprofit prepayment health associations by making available long-term Government loans. The bill would authorize the appropriation of \$5 million each for the current and following fiscal years and \$10 million for each of the next 3 succeeding fiscal years.

The bill H. R. 399 is designed to supplement other bills introduced by me which are intended to stimulate the flow of private capital into the construction of health facilities used by voluntary health associations.

The bill would be administered by the Surgeon General acting with the advice of the Health Services Facilities Council. The Council would consist of representatives of the Department of Agriculture, Department of Labor, and 12 members to be appointed by the Surgeon General with the approval of the Secretary of Health, Education, and Welfare who are recognized as leaders in the field of medical economics, medical administration, or public affairs.

H. R. 400, A BILL TO IMPROVE THE PUBLIC HEALTH BY ENCOURAGING MORE EXTENSIVE USE OF THE VOLUNTARY PREPAYMENT METHOD IN THE PROVISION OF PERSONAL HEALTH SERVICES

This bill is similar to H. R. 8356, 83d Congress, in the form in which that bill was reported favorably on July 9, 1954, by the Interstate and Foreign Commerce Committee—House Report 2106. H. R. 8356 was introduced in the House by me on March 11, 1954, to implement President Eisenhower's recommendations contained in his health message submitted to the 83d Congress on January 18, 1954.

The present bill, H. R. 400, provides for the establishment of a health reinsurance program in the Department of Health, Education, and Welfare. It creates a reinsurance fund and authorizes an appropriation of not to exceed \$25 million to provide advances of working capital for the fund. The fund would be built up over a period of time from reinsurance premiums and from earnings of the fund. Reinsurance would be available on a voluntary basis and upon payment of a reinsurance premium, to private insurance companies, voluntary nonprofit health associations, such as Blue Cross and other organizations offering prepayment health insurance plans. The proposal is designed to encourage private insurance organizations to experiment in providing broader voluntary health insurance to more people.

The bill also provides for technical and advisory information services to health service prepayment plans.

The bill H. R. 400 incorporates certain provisions, which were adopted by the Interstate and Foreign Commerce Committee in reporting favorably H. R. 8356, 83d Congress, to meet questions raised by various witnesses in the course of the committee hearings held during the 83d Congress. The most important of such questions was based on the fear that the bill could be interpreted to permit some degree of Federal regulation of the health-insurance industry. This bill seeks to remove any and all fear in that respect.

The central philosophy of the bill is one of building on our existing system of voluntary insurance and of providing supporting services and a financial backstop for private effort toward the expansion of prepayment protection. The bill, if enacted, would not of itself directly provide insurance coverage for individuals. Its goal is the removal of obstacles to the extension of coverage for broader ranges of benefits and to additional groups of people.

H. R. 401, A BILL TO FACILITATE THE BROADER DISTRIBUTION OF HEALTH SERVICES, AND FOR OTHER PURPOSES

The bill, H. R. 401, is similar to H. R. 6949, 83d Congress, introduced by me on January 6, 1954. A similar bill was first introduced by me at the close of the 81st Congress—H. R. 8746.

Like H. R. 400, it is designed to expand health services through the medium of Government reinsurance. However, the bill makes eligible for reinsurance only nonprofit associations which render or secure medical and hospital services and does not extend to commercial health insurance companies.

The bill H. R. 401 differs from H. R. 400 in other important respects. H. R. 401 sets forth detailed standards which must be met by a voluntary health association in order to be eligible for reinsurance. Subscription fees charged by the asso-

ciation must be fixed as a percentage of health category and five separate disease income. The association must accept any nongroup applicant subject to certain limitations with regard to subscribers residing outside the geographical area which the association serves. Additional hospital and physician's charges to subscribers must not exceed 25 percent of benefits. Subscribers must pay \$1 per day, or 5 percent, whichever is less, of any hospital bill incurred by the subscriber. The association must provide for payment of 75 percent of the cost of 12 doctor visits during any year, excluding however the first visit. association must pay 95 percent of the cost of all medical services rendered to subscribers in hospitals.

Eligible associations would pay as reinsurance premium 2 percent of their premium income. They would be reimbursed out of the reinsurance fund to the extent of two-thirds of any claim in excess of \$1,000 submitted by a subscriber to an association. The reinsurance fund would be administered by a Government corporation to be known as the Federal Health Reinsurance Corporation.

H. R. 402, A BILL TO AMEND SECTION 213 OF THE INTERNAL REVENUE CODE OF 1954 TO PERMIT THE DEDUCTION OF CERTAIN PAYMENTS FOR HEALTH INSURANCE WITHOUT REGARD TO THE 3 PERCENT LIMITATION CONTAINED THERE-

The bill. H. R. 402, is similar in principle to the bill H. R. 6952, 83d Congress, introduced by me on January 6, 1954. The bill is designed to provide an inducement to individuals to prepay their medical expenses by participating in health insurance plans. H. R. 402 would amend section 213 of the Internal Revenue Code of 1954 to permit deduction from adjusted gross income of up to \$100 for amounts paid for health insurance and, similarly, up to \$100 for health insurance paid for each of the taxpayer's dependents. This deduction would be without regard to the 3 percent limitation now contained in section 213 of the Internal Revenue Code of 1954.

H. R. 403, A BILL TO AMEND THE PUBLIC HEALTH SERVICE ACT TO PROMOTE AND ASSIST IN THE EXTENSION AND IMPROVEMENT OF PUBLIC HEALTH SERVICES, TO PROVIDE FOR A MORE EFFECTIVE USE OF AVAILABLE FEDERAL FUNDS, AND FOR OTHER PULPOSES

The bill, H. R. 403, is similar to H. R. 7397, 83d Congress, in the form in which that bill passed the House of Representatives on April 27, 1954.

The bill, H. R. 403, is designed to provide a simplified formula for the distribution of Federal funds among the several States for public health programs and to permit the States to use greater initiative and to take more responsibility in the administration of these programs.

Under existing law, six separate grantin-aid programs to assist the States in developing and operating public health services are administered by the Public Health Service. One of these is a grant program for general public health services. The other programs are each for a separate disease category: venereal disease, tuberculosis, heart diseases, mental health, and cancer.

The bill, H. R. 403, would consolidate and simplify the public health grant-inaid system. In lieu of the general public categories, the bill would establish three new types of grants:

First. Support grants to assist the States in maintaining basic public health

Second Extension and improvement grants to assist the States in meeting the cost of adding to and improving their public health services; and

Third. Special project grants to assist States or political subdivisions in meeting emergency public health problems in specific geographical areas, or public health problems common to several States, or public health problems for which the Federal Government has a special responsibility.

Support grants would be distributed in accordance with the present Hill-Burton

Extension and improvement grants would be made on the following basis: During the first 2 years of a project, the Federal share would be 75 percent; during the second 2 years 50 percent; and during the final 2 years 25 percent.

No allotment formula is prescribed in the bill for special project grants. Instead, such awards are made by the Surgeon General on the basis of the comparative importance and immediacy of the various projects.

Eastern Orthodox Faith Preference Designation Asked for Servicemen of That

> EXTENSION OF REMARKS OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. SADLAK. Mr. Speaker, on the opening day of this Congress, I introduced H. R. 581, a bill to allow certain members of the Armed Forces to designate the Eastern Orthodox faith as a religious preference on their identification tags. The bill has been referred to the Committee on Armed Services.

I was genuinely pleased to introduce this measure, the purposes of which were first brought to my attention at a banquet at Bridgeport, Conn., on Sunday, December 19, 1954. The affair was sponsored by eight Eastern Orthodox churches in the community, comprising the Carpatho-Russian, Russian, Ukrainian, Rumanian, Greek, Syrian, and Albanian nationalities. In attendance was His Eminence Archbishop Antony Bashir, Metropolitan of the Syrian Antiochian-Orthodox Church in America, who officiated at morning services signifying the founding of the new St. Nicholas Syrian Orthodox Parish, which also became affiliated with the Council of Eastern Orthodox Churches of Greater Bridgeport. The banquet also celebrated the feats of St. Nicholas, archbishop of Myra and Wonderworker.

During the program, speeches were made by the pastors of the participating

churches and Mayor Jasper McLevy. Following this, there was the presentation of a resolution which was unanimously approved by the large number of persons in attendance. I then commented upon the procedures that had to be followed in order to bring about the passage of a bill to accomplish the ob-

Incidentally, Rev. John Kivko, pastor of the Holy Ghost Russian Orthodox Church, informed me that he was the first chaplain of the Eastern Orthodox faith in the armed services during World War II.

Under leave to extend my remarks, I include the resolution as adopted. Senator Saltonstall, of Massachusetts, introduced S. 106, a companion measure. Together, we shall request earliest possible consideration of this meritorious request.

Whereas Senator Leverett Saltonstall will introduce in the Senate and Congressman ANTONI N. SADLAK will introduce in the House of Representatives, in the 84th Congress, a bill to allow certain members of the Armed Forces to designate the Eastern Orthodox faith-one of the major Christian faiths in the world—as a religious preference on their identification tags:

Resolved, That the Council of Eastern Orthodox Churches of Greater Bridgeport, representing approximately 25,000 Eastern Orthodox Christians of the Albanian, Carpatho-Russian, Greek, Rumanian, Russian, Syrian, and Ukrainian nationalities:

1. Highly approves of such bill, which the council firmly believes will beneficially contribute to the spiritual welfare and morale of the many Eastern Orthodox servicemen in the Armed Forces of the United States; and

2. Strongly recommends to the Senate and House of Representatives of the United States of America in Congress that such bill be enacted into law; and

3. That the council undertake whatever measures it may deem necessary or appro-priate to lend its fullest support to the passage of such bill.

Unanimously approved by the Council of Eastern Orthodox Churches of Great Bridgeport this 19th day of December 1954:

> Rev. JOE G. SIMKO, Chairman. SERGEI M. GUDEN, Vice Chairman. JEANETTE SKIRKANISH, Secretary.

Why This Gloomy Note on Economic Outlook?

EXTENSION OF REMARKS OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the Congressional Record an editorial from the Mobile (Ala.) Press-Register dated January 9, 1955.

It is time for these prophets of gloom to join with those who look at the bright side. Then they will be telling the truth and adding to the well-being of everybody-including themselves:

WHY THIS GLOOMY NOTE ON ECONOMIC OUTLOOK?

President Elsenhower reported in his state of the Union message that the Nation's economic outlook is good.

nomic outlook is good.

On the heels of this statement by the President, a Government report on employment, issued jointly by the Commerce and Labor Departments, showed:

Employment in the United States declined by more than a million jobs in December. Nearly four-fifths of this was accounted for by winter curtailment of farming operations.

In spite of this decline, the December total was larger than that of December 1953. Also, December was the only month in 1954 in which employment figures equaled the level of the corresponding month of the preceding

Emil Rieve, chairman of the CIO economic policy committee, took a look at the employment report for December and commented that "the figures tell a story of economic stagnation so far as jobs are concerned."

As viewed by Mr. Rieve, the figures "show that the economic outlook isn't so good." He is quite within the bounds of his privi-

lege in reaching that conclusion.

We remind him, however, that when he uses this report alone as ground for a pessimistic estimate of the economic future, he disregards a number of other facts which in our opinion should be considered in appraising the outlook.

We also remind him that his conclusion is in sharp contrast to a long list of other opinions expressed in recent weeks about the economic picture.

President Eisenhower has plenty of company in the optimism he expressed in his state of the Union message to the new Congress.

Moreover, this widely expressed optimism is supported by a much wider base than Mr. Rieve, of the CIO, uses for his pessimism.

Their joint report on employment was not the only report issued jointly by the Commerce and Labor Departments the past week. It so happened that these two departments

It so happened that these two departments issued a joint report showing that construction operations in the United States reached a new high last year, expenditures for construction being larger in each of the 12 months than in the corresponding months of the year before.

"The total was 5 percent above the 1953 figure and made 1954 the eighth straight year in which construction activity set a new record," the United Press relates.

Does this indicate to Mr. Rieve as chairman of the CIO economic policy committee that "the economic outlook isn't so good"?

We invite Mr. Rieve's attention to these excerpts from a New York Times article of January 2:

"Lock a jury of retailers in a room and the chances are that they will quickly return with an optimistic verdict about 1955's business. A survey * * * of some of the Nation's leading retailers found them unanimous in expecting higher sales in 1955 than in 1954."

One more example of economic optimism: In that same issue the Times reported that "a billion-dollar program of new construction and expansion is planned for 1955 by the Nation's gas utilities and pipeline companies."

The fact is that examples of optimism over the economic outlook are almost endless until, of course, we find Mr. Rieve isolating himself in a glum corner and surrounding himself with gloom.

Everybody to his own opinion.

For our part we prefer to go along with the vast procession looking at the bright side.

And while we are at it we can't help wondering whether Mr. Rieve, of the CIO, would be equally depressed over the economic outlook if the so-called Fair Dealers hadn't been voted out of the White House a little more than 2 years ago.

In other words, is it possible that Mr. Rieve's unhappiness in the last analysis stems more from the presence of the Republicans in the White House than from the Government report on employment for the Dast December?

Meanwhile, if Emil Rieve or anybody else in the CIO is on the eve of breaking down and shedding economic tears for Britain, things are looking up there, too. Unemployment in Britain the past December was at the lowest level of any December since the end of World War II.

The Anniston (Ala.) Star's Man of the Year

EXTENSION OF REMARKS

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. ROBERTS. Mr. Speaker, recently the Anniston Star, a leading newspaper in the State of Alabama, nominated Col. George O'Connell as its "man of the year." The selection of Colonel O'Connell is a well-deserved recognition of one of Alabama's most outstanding citizens, and I wish to take this opportunity to congratulate the staff of this fine newspaper for its wisdom. His devotion to the people of Calhoun County and the surrounding counties can never be forgotten.

After a long and brilliant medical career which began in 1916 as acting chief surgeon of the Alabama National Guard, he organized and took command of the First Alabama Field Hospital, No. 122. He served overseas with the AEF and upon his return from France he became regimental surgeon of the Fifth Cavalry of El Paso, Tex.

After service in several important posts of duty, he was retired, January 31, 1947, at Camp Gordon, Ga. However, retirement did not mean the end of unselfish service for this outstanding citizen. Colonel O'Connell became head of the county health office which serves Calhoun and Cleburne Counties.

A man of boundless energy and ability, he has been active in a multitude of civic endeavors. He has interested himself in veterans, in youth activities, and in practically every cause for the betterment of his community, State, and Nation. The accounts of his activities are set forth in the following newspaper article and editorial from the Anniston Star of January 2, 1955:

COLONEL O'CONNELL NAMED STAR'S MAN OF THE YEAR—REPORTER SKETCHES CAREER OF NOTED LOCAL CITIZEN

(By Sam Jones)

Having come in close contact with him during the years when I reported the proceedings of the county health office here, I was pleased to concur in the Star's decision to name Col. George Albert O'Connell the man of the year for 1954.

All other members of the Anniston Star staff join heartly in this first designation of honor for one of Anniston's most worthwhile and unselfish citizens. Colonel O'Connell has since his retirement from the United States Army Medical Corps in January 1947, after 34 years of distinguished service—served Calhoun and Cleburne Counties as district health officer.

But his competent work in this capacity has been overshadowed by his constant and unstinting service in scores of civil undertakings.

His energies and influence have been felt in every segment of our society, not alone during 1954, but in all the 8 years he has lived among us.

HIS ACTIVITIES MANIFOLD

He is chairman of health and safety for the Choccolocco Council, Boy Scouts of America, and has given unusual service for several years.

The colonel is physical examiner for Boy Scout campers at Camp Zinn each summer and for Girl Scouts at Camp Cottaquilla and campers for the Salvation Army.

in 1951 he served as March of Dimes chairman for Anniston. The following year he was county chairman of that annual campaign.

Active in Post 26, American Legion, and Voiture 1201, 40 & 8, Colonel O'Conneil has always interested himself in affairs of veterans and servicemen.

He has taken leading parts in the local chapter of the American Red Cross and the county civil defense organization.

In 1954 he was made adviser for the March of Dimes in eight northeast Alabama countles (Calhoun, Cleburne, St. Clair, Talladega, Etowah, Jackson, DeKalb, and Cherokee).

HELPS OUT AT M'CLELLAN

He has been vitally interested in the activities of the Fort McClellan Post Hospital, which he directed in its tremendous growth during his Army years as its commanding officer.

In addition to his strenuous work in various endeavors, Colonel O'Connell has inspired the youth and fellow citizens of Calhoun and Cleburne Counties by delivering numerous addresses,

He spoke to Anniston High School students on Armistice Day 1953 on "What My Flag Means to Me."

This stirring testimonial was placed in the Congressional Record in March 1954 by Senator Lister Hill.

During the past year he also addressed many civic and PTA groups, the Baptist Brotherhood, and the Lions Club at Hefiin, and gave a graphic talk on The Plague of Death on Our Highways to the Anniston Exchange Club and other groups.

Colonel O'Connell has always been ready when called on for any civic task, and hundreds know him as friend and confidant.

WAS BORN IN MONTGOMERY

George Albert O'Connell was born and reared in Montgomery, the third son of John C. and Lucy Merritt O'Connell. Dr. L. L. Hill of that city was Colonel

Dr. L. L. Hill of that city was Colonel O'Connell's preceptor before he entered medical college in 1902. He received his doctor of medicine degree from Tulane University in 1906.

After internship at St. Vincent's Hospital, he did postgraduate work in Philadelphia and New York, specializing in diseases of the eye, ear, nose, and throat.

the eye, ear, nose, and throat.

He began the practice of his specialty in Mobile in 1907, moving to Birmingham in 1909. He was a member of the medical corps of the Alabama National Guard before entering the United States Army.

Ordered into active duty in 1916, he was then acting chief surgeon of the Alabama National Guard. Before the guard became part of the 31st (Dixie) Division, he organized and took command of the First Alabama Field Hospital No. 122.

SERVED 9 MONTHS OVERSEAS

He served 9 months in the American Expeditionary Force as commanding officer field

hospital, director of the field hospital, 106 Sanitary Train. He later commanded Camp Hospital 110 at La Suze, France.

On his return from France, Colonel O'Connell became regimental surgeon of the Fifth Cavairy at El Paso, Tex. A year later he went to Fort Sill, Okla., as chief of the eye, ear, nose, and throat department of the station hospital.

After 4 years there, he was transferred to Tripler General Hospital, Fort Shafter, T. H., as chief of the EENT department for 3 years.

as chief of the EENT department for 3 years.

His subsequent service is summarized briefly as follows:

Four years as chief of his specialty at Fort Leavenworth, Kans.

One year as commanding officer, general dispensary, United States Army Base, Boston, Mass.

Six and a half years' duty followed at sta-

tion hospital, Fort Bragg, N. C.

In 1938 he moved to Fort McClellan, where he remained for 5½ years. During this period he was surgeon and commanding officer of the station hospital and witnessed the base's growth from a battalion post to one of about 45,000 troops.

In 1943 he went to Thayer General Hospital. Nashville, Tenn. Transfers followed to Fort Barrancas, Fla.; Mississippi Ordnance Plant; Camp McCain, Miss.; Camp Sibert and Camp Rucker, Ala.; and to his last duty station, Camp Gordon, Ga., where he was retired January 31, 1947.

Except at Nashville, he was post surgeon and commanding officer of the station hospitals.

MARRIED IN BIRMINGHAM

Colonel O'Conneil was married to Lollie Gilreath, daughter of Mr. and Mrs. Belton Gilreath of Birminghom.

They had 6 children, 3 sons and 3 daughters. All but one daughter are living. There are six grandchildren.

The eldest son, Col. Belton O'Connell, is on temporary retirement at Gulf Shores because of ill health.

Navy Capt. George O'Connell is serving in an important United States Navy position in Paris, France.

Maj. Courtney O'Connell is stationed at

Fort Sill, Okla.

Daughter Elizabeth is the wife of Col. Samuel W. Horner, on an Army assignment in Naples, Italy. Miss Margaret O'Connell is librarian at

Miss Margaret O'Connell is librarian at

Fort McPherson, Ga.

The honored citizen recalls that he is the sole survivor of those present when Dr. L. L. Hill (father of Senator Hill) performed successfully the first operation on the human heart.

PORTRAIT TO BE HUNG

Colonel O'Connell's portrait will be placed at Fort McClellan and Camp Gordon, Ga., in recognition of his outstanding service as commanding officer of the hospitals at those installations.

The colonel is a member of the Calhoun County Medical Society, Alabama Medical Society, American Medical Association, a fellow of the American College of Surgeons and a charter member of the Alabama and North Carolina Academies of Opthalmology, Aural, Rhino-laryngeal Societies,

THE ANNISTON STAR'S MAN OF THE YEAR

Androcles, the Roman slave who befriended a lion and later thereby saved his life, as well as furnishing the idea for a famous play by George Bernard Shaw, once said that "gratitude is the sign of noble souls"; and it is about a noble soul that we are pleased to write today, one to whom we all owe a debt of gratitude that we never fully can repay.

We have reference to Dr.-Col. George O'Connell, if we may borrow the German use of a double title. He is currently serving as public health officer for Calhoun and Cleburne Counties, for which he gets a relatively small annuity; but it is his service beyond the call of duty that has endeared him to people here at home and far away, and by reason of which he has been designated as Man of Year by the Anniston Star.

This paper many times has expressed a word of appreciation to the men and women of the armed services who for many years have tabernacled here in Calhoun County and become, to all intents and purposes, local citizens. But it is to those officers and men and their families who have chosen this city as their place of retirement and permanent home to whom we owe a special debt of appreciation.

Gen. Robert E. Noble, the noblest Roman of them all, has made it one of his avocations in life to encourage more of the men of the services to cast their lot with us, and none of them who has made that decision has been a better citizen than the man whom we honor today—one whose retirement is but nominal, as he continues to serve both the civilian and the armed services personnel.

If it had not been for George O'Connell, it is doubtful if the people of Anniston and Calhoun County would have been able today to enjoy the facilities of Memorial Hospital, for which he helped draw the plans and obtain the necessary funds for construction. Moreover, but for his activity in maintaining public health, we might not now have Fort McClellan and the Anniston Ordnance Depot.

This paper had heard of George O'Connell long before he came to Fort McClellan. For even while he was serving as an apprentice, as it were, to the great Dr. Luther Leonidas Hill, of Montgomery, and as medical officer with the Alabama National Guard, it became evident that he was a man of destiny as a physician and surgeon. And so it was that we heard of his skill from across the Pacific Ocean.

One of our great American physicians stated publicly in a recent address that any practitioner who is not a disciple of the Great Physician and addicted to prayer is robbing himself of his greatest source of power. George O'Connell evidently has believed this to be true for many years, as he once told us of a surgical patient that apparently was saved by prayer after he and attending specialists had given up hope of his surgical.

Elsewhere in the Anniston Star today, there is to be found a relation of some of the high spots in the career of this great man whom we are honoring because he has honored us with his presence as a citizen and has served us so effectively in so many ways down through the years.

It is because of his humility, his sense of dedication, his unfailing good humor, his indefatigable energy; because of the catholicity of his interests, the efficiency of his manifold services, or in a word, the magnanimity of his personality, that we nominate George Albert O'Connell—physician, surgeon, and humanitarian—man of the year for Anniston, Ala., anno Domini 1954. May his tribe increase.

Social Security Benefits at Age 60

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. RODINO. Mr. Speaker, today in this wonderfully productive country of ours, some 6 million people between

the ages of 60 and 65 are being denied the right to social-security benefits on the arbitrary grounds that they cannot receive such benefits until their 65th birthday. Last year we made a number of revisions and improvements in the social-security system. But for some reason, which I fail to understand, no change was made in the eligibility age of 65 years which was adopted away back in 1935. Very simply, this restriction says to millions of Americans over age 60 who are physically unable to work-or who are unable to persuade any employer to hire them-that they must starve until they reach their 65th birthday.

I have long been concerned with this gross inequity in a system which is designed to provide at least a minimum of security for our senior citizens, and have introduced several bills which would right this inequity. Because I believe a lower eligibility age is the logical next step in improving our social-security system, I have introduced a bill, H. R. 703, which will pay benefits at age 60 instead of the present age 65.

Surely it is clear that no one can predict the precise day or year in which he will be completely disabled by a devastating illness. Neither can anyone predict that he or she will be able to continue in his job at least to a 65th birthday. Can there be any doubt in our minds that the need for retirement benefits varies greatly with individual circumstances? Some of us are able to work far beyond our 65th birthday. Others, through no fault of their own, are forced to retire from their job at much earlier ages. There is certainly no reality, then. to this idea that the need for retirement benefits begins only at age 65, and not before. Can we then, in equity, continue to perpetuate this antiquated idea that the 65th birthday is the proper criterion as to eligibility for old-age benefits?

I have asked this question repeatedly—and the only answer I get is that such a liberalization of the system would cost money. For example, when an amendment which would have lowered the eligibility age to 60 years was introduced on the floor of the Senate during the last Congress we were told that the purpose of the amendment was laudable; that everyone hoped the retirement age could be reduced to age 60—but that it must be rejected because it would cost money.

Mr. Speaker, let us ask ourselves in all seriousness—what is the basic purpose of the social-security system? Is the major purpose of this program to provide a minimum of security for those of us who can no longer work because we are too old by the standards of our industrialized economy? Or is its major purpose to save money?

Now I recognize that no organized social-security system can be without some limitations. But I say to you that the crucial test with regard to such limitations should be chiefly concerned with the needs of our senior citizens as they change with the times. Let us be clear about the reasons why it is appropriate at this time to lower the eligibility age, because of changes in our economy. All

studies show that a phenomena of America's industrial expansion is the fact that the average worklife has been shortened. For example, in 1890, about two-thirds of all men aged 65 and over were in the labor force. By 1950 this proportion had dropped to less than two-fifths. Even under the pressure of a wartime labor market in the 1940's, many employers were reluctant to take on older workers until supplies of younger men were exhausted.

The changes in the national economy which have added so remarkably to the total wealth of the country and to the improvements in our standard of living have also, then, had the net effect of restricting employment opportunities of older workers. The shift from a rural to a highly industrial economy is reflected in the long-term decline in farm employment and in the expansion of such occupations as semiskilled operators and clerical and sales workers. And these two expanding occupational fields use the lowest proportion of workers who are over age 45.

The problem of older workers in finding and holding jobs has been thoroughly documented in hundreds of careful studies and dozens of symposiums. Recently Ewan Clague, Commissioner of the Bureau of Labor Statistics, summed up the situation in the following significant sentences:

Industrial change is proceeding at a rate faster than ever before in history-

The new process of automation (which substitutes machines and energy for manpower) is sure to bring about the decline and disappearance of many jobs and occupations.

• • • Industries will naturally prefer younger people whom they can train and develop. Furthermore, the average business concern will have enough older people on its rolls already, so that they will hesitate to hire

Now, I agree with those people who are working to increase the job opportunities for older workers as one means of counteracting this trend. But let us not delude ourselves by believing that jobs for our senior citizens can ever provide any kind of a total solution. If we are realistic about it, I think we will all have to agree that it is only a piecemeal solution which will gradually benefit only those fortunate older people who are able to work, and are fortunate enough to find an employer who is willing to hire them.

For the majority of older people, who have been retired from their jobs because they are unable to work, increased job opportunities for the elderly are, of course, no solution at all. I am, then, here concerned with the elderly carpenter or machine-tool operator who is forced to retire from a lifelong job because he had a heart attack, or other ailment which makes it impossible for him to continue to work. I am concerned with women widowed at age 60. after a lifetime of making a home, who must, under our present system, wait 5 years until they are eligible for socialsecurity benefits. I believe, further, that we must lower the eligibility age in order that we may increase job opportunities for younger workers.

I urge your support of my bill, H. R. 703 on the ground that it is a necessary revision of our social-security system to bring it in line with the dynamic economic conditions of today. I am convinced we must adjust that system to the changes in the average work life which I have described. But most of all, I believe we must lower the eligibility age by at least 5 years because, in so doing, we will be increasing the protection offered to those of our aged people who need it most-and that, as I understand it, is the major purpose of our social-security system.

The Small Business Administration

EXTENSION OF REMARKS

OF HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. HILL, Mr. Speaker, Members of the House, recognizing the importance of keeping the doors to opportunity for small businesses open, are grateful for the wholehearted support for this policy given by President Eisenhower in his message on the state of the Union this January 6. It will be recalled that in his message to the joint session of the Senate and House, the President said:

The prosperity of our small business enterprises is an indispensable element in the maintenance of our economic strength. Creation of the Small Business Administration and tax laws facilitating small-business expansion are but two of the many steps Government has taken to encourage smaller enterprises. I recommend that Congress extend the Small Business Act of 1953 now due to expire next June.

Since I had the honor of introducing into the House of Representatives the bill which finally resulted in the legislation that established the Small Business Administration, my interest in the President's message is apparent. Last week I introduced a bill, H. R. 521, to continue the SBA, which I hope this body soon will be considering, and in view of this we will want to examine the record of this Agency to consider how its services may be broadened and strengthened.

The Small Business Administration in a large measure is pioneering in a field of Government service, specializing in assistance to owners of small businesses. Obviously some time was required to staff the agency and to develop policies and programs. An examination of the record, I believe, will satisfy anyone that encouraging progress has been made. Wendell B. Barnes, the Administrator, and his coworkers have given excellent public service.

In a New Year message to all employees of the Small Business Administration, Administrator Barnes summarized results in the major programs. With the thought that Members of this body would be interested in seeing this letter from the Administrator to his coworkers as contained in Small Business Action, the agency's intraoffice information bulletin, the full text is presented to vou:

ADMINISTRATOR'S NEW YEAR LETTER TO ALL EMPLOYEES

DEAR SBA COWORKER: At the opening of a new year, I would like to write you directly to thank you for your loyal and energetic work during the past year. You and your associates in the Small Business Administration have responded so promptly and energetically each time one of the Deputy Administrators or myself have called upon you for extra effort on our programs that the Agency has been able to compile a noteworthy record.

Work has been accomplished in spite of the fact that you were at times handicapped by a heavy workload and a large backlog, lack of sufficient coworkers and the fact many people could only be given temporary employment status. The extra hours that you worked and the interest you took in our programs are deeply appreciated by me and by the Deputy Administrators, office heads, and regional directors.

I know that you were pleased to hear President Eisenhower say in his message to Congress:

"The prosperity of our small-business enterprises is an indispensable element in the maintenance of our economic strength. Creation of the Small Business Administration and recently enacted tax laws facilitating small business expansion are but two of many important steps we have taken to encourage our smaller enterprises. I recommend that the Congress extend the Small Business Act of 1953 which is due to expire next June."

I am confident that the quality of your work will also be recognized by the Congress when its committees during this session, review the accomplishments of our agency.

The compiling of a good record is not the result of the work of any one office. All have contributed. An organization can operate effectively only if the mail clerks, administrative services employees, the filing and stenographic clerks as well as the financial specialists, production specialists, and executives all do their part. That has been the situation during the past year, and the record must be considered the result of the work of each employee in the agency.

It is not possible to review in detail each of the activities, but I would like to point out to you a few of the things in which you can have a feeling of pride for having contributed your part.

CERTIFICATES OF COMPETENCY IMPORTANT

The certificate of competency program of the Small Business Administration is one of the most important functions in the Agency. Through it small companies obtain prime contracts with the Department of Defense which they otherwise would be denied, due to disqualification by a procuring office regarding capacity or credit, or both,

Requests for certificates of competency are initiated by a small-business concern when its low bid on a specific procurement has been rejected by a contracting officer. The small company submits an application for certification to the Small Business Administration regional office. A careful and thorough plant survey and financial analysis are then conducted by the field engineering and financial staff. The regional report is then sent to the national office for review and evaluation. The Administrator's committee makes a final determination and recommendation as to whether the certificate of competency is to be issued.

This part of the program, namely, the processing of applications, is probably the most important single item in determining whether the certificates of competency program is to be a real help to small firms. plications must be scrutinized with the greatest care in order to insure that only

those companies that can actually produce are awarded certificates.

GOVERNMENT SAVED \$425,235,23

As of December 31, 1954, the Small Business Administration received 113 applications totaling \$25,930,957. Of this number, 53 certificates were granted, which had a value of \$6,745,610. Of these 53 cases, 15 contracts have been completed, including 8 which were completed ahead of schedule. The cumulative savings to the Government resulting from these certified contracts as of December 31, 1954, amount to \$425,235,23. These certificates all were awarded after the most careful analysis of application data, and each contractor's progress is followed closely for any situation arising where the Small Business Administration production specialists can offer technical assistance which would be helpful in completing a contract.

The majority of the cases to date have been from the Department of the Air Force, followed closely by the Department of the Army. Some of the types of military defense items procured under these certified contracts include rocket launcher assemblies, smoke generators, aircraft platform assemblies, grenade launchers, bomb slings, bomb racks, bomb trailers, boats and tents.

The certificate of competency program of the Small Business Administration has been in operation since the start of the agency in August 1953. In addition the Small Business Administration assumed the responsibility at that time for 91 active certificates of competency from its predecessor agency, the Small Defense Plants Administration. Of those 91 certificates, 21 are still in active status as of December 31, 1954. Of the 21 cases, 16 are behind schedule in their production. They are behind schedule, in spite of the fact that we have worked with the companies holding these certificates originating with SDPA just as hard as we work for those which hold our own certificates.

I do not mean to make invidious comparisons of our work with that of the Small Defense Plants Administration or the Reconstruction Finance Corporation, but the figures we have are the only ones available by which we can measure the work of our agency.

agency.

What do we find regarding the 53 certificates of competency issued by the Small Business Administration in the past 18 months?

SBA RECORD GOOD

Fifteen of these have been completed, including eight ahead of schedule. Twenty-seven of the contracts are active at the present time and, of these, 23 are ahead of or right on, schedule and only four contracts are behind schedule. Contrast that with the 16 behind schedule in the inherited cases.

These figures should give assurance to the Department of Defense procurement officers that they may rely on action taken by the Small Business Administration and we, of course, should continue to regard our power to issue certificates as a serious responsibility to be exercised only when we are informed and certain of all the facts in each particular case.

Negotiations have recently been concluded with the Department of Defense making it mandatory for contracting officers to indicate those situations where a certificate of competency application would be in order.

JOINT DETERMINATION PROGRAM

Under our joint determination program with the Department of Defense more than \$360 million in Government contracts have been reserved for exclusive award to small firms. More than 2,300 individual contracts, totaling \$160 million already have been awarded to small firms as a result of representations made by employees of the Small Business Administration to the Department of Defense. The tremendous total of more than 150,000 notifications to small contract

firms of Government bidding opportunities has been made by offices of our agency.

In addition each month our field offices have made approximately 1,000 referrals to small firms of opportunities for subcontracts. It is difficult to measure what this means in increased employment and greater business volume, but we can be certain that this work has kept many small firms active and in a healthy condition and has brought pay checks to many thousands of American workers.

PRODUCTS ASSISTANCE

Through our products assistance program, we have been able to assist several hundred firms which are turning from defense work to the production of civilian products and in many cases this provides as much opportunity for a small firm as does a defense contract.

PRINTED AIDS

The Small Business Administration management publications are reaching a wider circle of small businessmen each month.

By the close of 1954, 262,832 copies of the 16 titles in the small business management series, were sold by the Government Printing Office. During the past 6 months, 112,608 copies were sold. Most popular titles were "Cost Accounting," "Cutting Office Costs," and "Human Relations."

Over 1,193,000 copies of management-aid leaflets have been distributed to date, more than 900,000 of them free of cost. Of the number, 314,000 were requested during the last 6 months of 1954. The most popular of the 57 titles are: "Loan Sources in the Federal Government," "How to Set Up Sales Territories," and "How Small Plants Can Sell to the Federal Government."

Distribution of technical aids on shop problems total 448,000 to date: 93,000 over the past 6 months. The most popular titles are "Sharpening of Drills, Lathes, Tools, and Milling Cutters," "Proper Alinement of Machine Tools," and "Precision Measurement of Work Pleces." The number of aids distributed does not tell the whole story, since many of them have been republished by trade associations, many of which regard this as one of the most helpful of our programs. Of the other publications which are sold at a small cost we have learned that more than 260,000 have been sold by the Government of Commerce offices. The proceeds of these sales have returned \$80,000 to the Treasury which has paid in full the cost of printing these publications.

MANAGEMENT COURSES

Following two successful experimental administrative management courses, held last spring at Richmond, Va., and University of Wisconsin at Milwaukee, Wis., 35 similar courses, cosponsored by the Small Business Administration are being offered this school year by 30 educational institutions ranging from Boston to Los Angeles and Chicago to Norman, Okla.

FINANCIAL ASSISTANCE

A year ago we had 36 financial specialists and in 3 months had approved 26 business loans and 37 disaster loans for a total of 63. We had taken action on 89 cases. Twelve months later at the close of December 1954, we had staffed our offices with 180 financial specialists and during the calendar year had taken action on 4.104 cases.

We are now administering 5,341 loans amounting to \$80,125,405. We have approved 2,091 loans, which included 1,122 business loans for a total of \$59,400,433, of which more than two-thirds are in participation with banks.

We have also approved 969 disaster loans for a total of \$5,553,834. Of the total, the remaining 3,252 are disaster loans transferred to the Small Business Administration for collection.

SOUND LOANS

One of the most significant figures indicating the quality of the loans made during the past year is the record of delinquent loans. If a loan installment is not received within 3 days of the date the installment is due, we list it as delinquent. As of December 31, 1954, only a single borrower was more than 30 days delinquent in meeting his loan installment payments.

Of course, our experience in the collection field is still brief but when one realizes that every office in the country had to cooperate to compile this fine record of loan administration, one can feel a sense of pride in the work being done by all of the other offices.

BACKLOG REDUCED

You were asked to make every effort to get the loans in from the field by December 20 in order that we could clear up the backlog during the calendar year and end with the best possible record. You will be interested to know that after the loans came in from the field, the loan examiners in Washington and the review committee worked long and hard, even during the holiday season, to complete the job.

The result is shown in the figures given

above for the year 1954.

This record should be compared not with the last year of operation of the Reconstruc-

the last year of operation of the Reconstruction Finance Corporation, during which many more employees were available than we have had, but with the first calendar year in which the Reconstruction Finance Corporation was authorized to make business loans.

In 1935 the Reconstruction Finance Corporation had 2,392 applications for business loans. In that year they approved 1,171 loan applications, of which direct loans were \$70,930.288 and the participation loans amounted to \$12,146,351.

Of course, there was no fixed limitation on the amount of loans, but it is apparent that approximately one-sixth were participation loans as compared with the two-thirds figure for the Small Business Administration loan program.

STILL ROOM FOR IMPROVEMENT

In reciting some of the matters about which we can take pride, I do not mean to imply that there is not still room for improvement. We are working on improvements in each of our programs and should resolve to do an even more effective job during the coming year. I ask each of you to join with me in resolving that we will find improvement and ways to increase efficiency each in his own position during the ensuing year.

In closing, I once again want to thank

In closing. I once again want to thank you and each of your coworkers for the contribution you made to the accomplishments of our agency during the year 1954.

Sincerely.

WENDELL B. BARNES, Administrator.

Interlocking Subversion in Government Departments

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. HOSMER. Mr. Speaker, during the 83d Congress eight Republican and Democrat members of the Judiciary Subcommittee of the other body issued a unanimous report entitled "Interlocking Subversion in Government Departments." The document lifted the lid on over 20 years of Communist conspiracy inside our Government.

Inasmuch as there has been considerable wailing and weeping from certain quarters during the past few weeks relating to the conduct of the 1954 election campaign, I feel impelled to set before my colleagues a summary of the factual record as it was disclosed officially and unanimously by these Democrat and Republican Members of the other body.

This report reveals that previous administrations were guilty of laxity, evasion, and obstinacy in dealing with the issue of communism in government. When read in light of recent political exaggerations expressed by Democratic Party leaders of GOP campaign language, it most positively dispels their complaint that the Democratic Party was charged with disloyalty.

Contrarily, it fully substantiates the laxity, evasion, and obstinacy allegations that were the sum and substance of GOP charges.

The report begins by describing the activities of the Soviet conspirators in the following language:

When the principal concern of the Government was economic recovery, they were in the AAA, the NRA, and new sections of old departments. During the war they joined such wartime agencies as the Board of Economic Warfare, the Foreign Economic Administration, the OSS, and the like. Toward the end of the war and in the postwar period, they were operating in the foreign policy field. At the end of the war they gravitated toward the international agencies.

Speaking of Government employees involved in the conspiracy, the report says:

They colonized key committees of Congress, helped write the laws, conducted congressional hearings, and wrote congressional reports.

They advised Cabinet members, wrote epeeches for them, and represented them in Government conferences, staffed interdepartmental committees which prepared basic American and world policy.

They traveled to every continent as emissaries of the American people; attended virtually every international conference where statesmen met to shape the future, influenced the State Department with disastrous results.

There was an interlacing combination of these people in almost every agency which had to do with labor.

The Senators investigated how subversives got key Government posts and reported:

They used each other's names for references, hired each other, promoted each other, raised each other's salaries, transferred each other from bureau to bureau, department to department, assigned each other to international missions, vouched for each other's loyalty, protected each other when exposures were threatened.

The committee heard a former courier for the conspirators say:

We didn't have too much trouble (in moving agents). Two of our best (avenues for placing people in positions) were Harry Dexter White and Lauchlin Currie. Once we got one person in, he got others, and the whole process continued like that.

On the extent of this penetration into the United States Government, part of the report reads:

According to the evidence in our records, those involved in the secret Communist underground included an Executive Assistant the President of the United States (Lauchlin Currie), an Assistant Secretary of the Treasury (Harry Dexter White), a United States Treasury attaché in China (Solomon Adler), the Director of the Office of Special Political Affairs for the State Department (Alger Hiss), the Secretary of the Interna-tional Monetary Fund (Frank Coe), a member of the National Labor Relations Board (Edwin S. Smith), Secretary of the NLRB (Nathan Witt), chief counsel, Senate Subcommittee on Civil Liberties (John J. Abt), Treasury Department representative and adviser in Financial Control Division of North African Economic Board, in UNRRA and at meeting of the Council of Foreign Ministers in Moscow (Harold Glasser), Director, National Research Project of the Works Progress Administration (David Wein-

On the question of when the plot started, the Senators found:

The first organized subversion encountered was that accomplished by the Harold Ware underground cell of the Communist Party in the early 1930's. The subcommittee took testimony from two members of this cell. They were Whittaker Chambers and Na-thaniel Weyl. In setting forth the members of the Ware cell we are listing how they testified when they were subpensed: Nathan Witt (invoked constitutional privilege that he could not be compelled to bear witness against himself), Lee Pressman (admitted Communist membership before House Un-American Activities Committee), John J. Abt (invoked privilege), Charles Kramer (invoked privilege), Henry H. Collins, Jr. (invoked privilege), Victor Perlo (invoked privilege), Harold Ware (deceased), Alger Hiss (denied Communist Party membership before House Un-American Activities Com-

The report publishes for the first time part of a secret memo dated November 25, 1945, prepared by an intelligence agency of the Government, identifying other and later espionage groups. It reads in part:

The head of (one group) was N. Gregory Silvermaster, now connected with the United States Treasury. Another member is William L. Ullman, a major of the Air Force stationed at the Pentagon, who has been obtaining and photographing classified information regarding United States Government war plans and also reports of the FBI which had been furnished to G-2 of the Army. Other members of this group included A. George Silverman, a civilian employee of the War Department; Harry Dexter White, Assistant Secretary of the Treasury; Lauchlin Currie, Administrative Assistant to the President, and lesser figures.

The head of the next group of Soviet espionage agents was Victor Perlo, of the War Production Board. Members of this group were introduced to (Elizabeth) Bentley at the apartment of John Abt in New York City. The individuals in this group include Charles Kramer, an investigator for Senator Kilcore's committee; Henry Magdoff, of the War Production Board; Donald Wheeler, of the Office of Strategic Services. There were various other minor Government employees in this group, including employees of the UNRRA.

On the distribution of the above 1945 secret memo, page 1 of the report says:

(It) was circulated among several key Government agencies and made available to the President of the United States.

Assessing the damage done to our country by the operation of these conspiracies, the Senators wrote:

How many priceless American secrets have been conveyed to Moscow through the tunnels of the American Communist underground will never be known.

The report uses testimony of ex-Communists to show how American policy could be influenced from a key position. Example:

Question. What you say is that (the Morgenthau plan) was a Communist plan to destroy Germany, weaken her to where she could not help us?

Answer, That is correct. She could no longer be a barrier that would protect the West * * *

Question. You say that Harry Dexter White worked on that?

Answer. And on our instructions he pushed hard.

Question. And that Mr. Morgenthau, who was Secretary of the Treasury, was used by the Communist agents to promote that plot? Answer. I am afraid so; yes.

Question. He was unsuspectingly used? Answer. Of course, the way the whole principle works is like dropping a pebble into a pond and the ripples spread out, and that is the way we work.

Commenting on the activities of the FBI, the report carried these lines:

(The conspirators) stayed in their jobs, received promotion, and influenced policy for several years after impressive information had been marshaled.

The FBI cannot expose and cannot force action once it has reported the results of its investigation.

There is ample evidence that the FBI and other agencies learned the underlying facts of the Communist conspiracy and time and time again performed their duty and notified the proper administrative agencies.

The Senators sought to determine precisely what aspect of the loyalty machinery failed during these former years and concluded:

Primarily, the breakdown came in the failure on the part of the responsible executive agencies to act on the information which was available.

Describing its experience with witnesses, the committee had this to report:

In public session 36 persons about whom it had substantial evidence of membership in the Communist underground in Government [were examined]. All of them invoked the fifth amendment and refused to answer questions. Many refused even to acknowledge their own signatures on official Government documents in which they had sworn to nonmembership [in the Communist Party] in the past.

All who invoked the fifth amendment

All who invoked the fifth amendment were unyielding, uncooperative, and even abusive. All assumed a cloak of innocence that was inconsistent with the record and with their recusals to testify.

with their refusals to testify.

The record is replete with instances of identified Communists appearing who have sworn on Government applications they have never been members of the Communist Party. In many of the cases it was apparent there was false swearing when the oath was taken, but the statute of limitations provided that no action could be initiated after 3 years from that offense.

In conclusion, Mr. Speaker, let me admonish those guilty of misstatements about the 1954 campaign carefully to reread the foregoing and carefully to reread what was charged during the 1954 campaign by Vice President Nixon and others. Let them also contemplate the monstrous losses of life and substance America has suffered by reason of these recorded derelictions in dealing with the issue of communism in government.

The Tributes to Max Abelman on His Retirement From the Brooklyn Jewish Hospital

> EXTENSION OF REMARKS OF

HON. FRANCES P. BOLTON

or ohio

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, Mr. Max Abelman, a man I have long known and admired for his selfless devotion to the field of health and welfare, recently retired as secretary to the president of the Jewish Hospital of Brooklyn and as its director of public relations. For the past half century his creed, "Do something kind for somebody every day," has led him into farflung activities which have bettered the lot of people without regard to creed, color, race, or national origin. Several years ago I addressed the graduating class of the nursing school of Brooklyn Jewish Hospital, and will always remember the surge of hospitality reaching out to me from the large community audience gathered there.

Although Mr. Abelman has relinquished his formal ties with the hospital, he is still considered "Brooklyn's

ambassador of good will."

Under leave to extend my remarks, I am inserting newspaper accounts of the dinner given on the occasion of his retirement and some of the messages of greeting he received:

[From the Brooklyn Eagle of October 9, 1954] A TRIBUTE TO MAX ABELMAN

A well-merited tribute was paid by the medical board of Jewish Hospital to Max Abelman, who has retired after many years as secretary to the president of the hospital

and as director of public relations for that fine institution.

It took the form of a dinner at the Unity Club and was attended by many prominent Brooklynites as well as officials of the hospital and the members of its staff. Halled as Brooklyn's ambassador of good will, Mr. Abelman was highly praised by many who know of the unselfish work he had done for the hospital through the years. Outstanding, however, were the letters of praise that were received and read to the gathering. Among others, those who wrote were Governor Dewey, Lord Halifax, Archbishop Molloy, Senator Lehman, Eleanor Roosevelt, Ralph J. Bunche, former Vice President Wallace and General Bradley. It was a most unusual occasion.

[From the Brooklyn Eagle of October 1, 1954] BOROUGH LEADERS PAY TRIEUTE TO ABELMAN

Some 150 of Brooklyn's leading citizens from all walks of life last night paid tribute to Max Abelman in recognition of his 50 years of humanitarian community service.

Sponsored by the medical board of Brooklyn Jewish Hospital, the dinner was held at the Unity Club, 101 Eighth Avenue.

Mr. Abelman, who has been called Brooklyn's ambassador of good will by Borough President Cashmore, recently resigned as public relations director of the hospital. He had been associated with the hospital since 1909, and had been named secretary to the president of the hospital in 1931.

Mr. Abelman was lauded as a nonpolitical, nonsectarian fund raiser who, through 14

years as executive director of the Brooklyn Federation of Jewish Charities, did much to establish the principle of federation in collecting money for charities. He has been credited with voluntary fund raising of more than \$100 million in Brooklyn during the past 40 years.

Mention was also made that Mr. Abelman organized a dinner in 1941 at the Waldorf-Astoria for the Most Reverend Thomas E. Molloy, on this 20th anniversary as a Roman Catholic bishop of the diocese of Brooklyn.

Dr. Louis J. Morse, president of the medical board, presented Mr. Abelman with a scroll in recognition of his contributions to the growth of the Brooklyn institution, and said:

"Max, you have been an inspiration to all of us. You have never hesitated to help those of high or low estate. You have really lived your creed of 'Wherever there is a human being, there is an opportunity for human kindness'."

Mr. Abelman, in acknowledging the honors heaped upon him, paid tribute to Catholic, Protestant and Jewish religious leaders who, he said, had been an inspiration to him.

"I don't believe in talking tolerance, but in living it," he said, "and this I have tried my best to do."

Among the speakers were Council President Abe Stark, City Court Justice A. David Benjamin, Dr. Irving M. Pallin, secretarytreasurer of the medical board and dinner chairman; Dr. Lewis H. Baretz, vice president of the board and toastmaster; Dr. Adolph P. Raab, president of the Junior Staff Society of Jewish Hospital.

Also, Dr. John J. Masterson, former president of the Kings County and New State Medical Societies; Supreme Court Justice Maximilian Moss, Appellate Division Justice John MacCrate, Supreme Court Justice George A. Arkwright; Frank D. Schroth, Sr., publisher of the Brooklyn Eagle, and Victor F. Ridder, newspaper publisher; James G. McDonald, first United States Ambassador to Israel, and Dr. Frank Kingdon, radio and news columnist.

Also, former City Court Justice Jacob J. Schwartzwald, former Supreme Court Justice Emil N. Barr, a former president of the hospital; Isidore Leviton, president of the hospital; County Judge Hyman Barshay,

Congratulatory letters were received from Governor Dewey, Senator Herbert H. LEHMAN, Mrs. Eleanor Roosevelt, Ralph Bunche, Gen. Omar Bradley, Carlos P. Romulo, Philippine Ambassador to the United States; Archbishop Molloy, Lord Halifax, Matthew Wohl, vice president of the AFL, and James A.

The following are some of the letters of greeting he received:

STATE OF NEW YORK, Albany, September 30, 1954.

DEAR MAX: I am delighted to add my voice to those of your associates and your many friends assembled on September 30 in your honor on the occasion of your retirement from the board of the Jewish Hospital of Brooklyn.

I know of no person who more thoroughly deserves such a public expression of appreciation than yourself. For nearly 50 years you have devoted your energies, your time, and your efforts unstintingly for the good of your fellow men, regardless of race or creed.

Your activities for the benefit of the Jewish Hospital of Brooklyn are beyond praise. It is most appropriate that the medical alumni of the hospital should name you as the first honorary member. You unquestionably have earned the title "Doctor of Humanity."

With warm regards and best wishes, Sincerely,

THOMAS E. DEWEY, Governor. CONGRESS OF THE UNITED STATES, HOUSE OF REPRESENTATIVES,

Washington, D. C., September 24, 1954. MY DEAR MR. ABELMAN: Word comes to me that the medical board of Jewish Hospital of Brooklyn will give a dinner in your honor September 30 on the occasion of your retirement as director of public relations.

Half a century of faithful service. memories this must bring, and what joy in the knowledge of the good things that have come about through your efforts—not just to the hospital there in Brooklyn, but to the community as a whole. How far-reaching the blessings of the many Jewish philanthropies which have felt the touch of your tireless devotion.

I recall so vividly the delightful dinner we had together 2 years ago—you, the trustees and friends of Jewish Hospital—when I addressed the graduating class of young nurses. Hardly a department of that great institution which has not benefited from your energies as public relations director. I can un-derstand the reluctance of the hospital to part with your services, but know that it will always have your devotion as a friend of humanity.

May the years ahead be rich in blessings for you and yours.

Always with kindest regards.

Sincerely yours,
FRANCES P. BOLTON.

Los Angeles, Calif., September 25, 1954. DEAR MR. ABELMAN: As I am now living in California and have just returned from a long trip, I am unable to attend the dinner being given in your honor. This is a fit tribute to your long service to your fellow men. All best wishes.

Sincerely,

OMAR BRADLEY.

WASHINGTON, D. C., September 26, 1954.

DEAR MAX: I regret that I cannot attend the dinner to be given in your honor by the Jewish Hospital medical board on September 30

You have rendered your country a great service. You have really been an ambassador of good will of Brooklyn. You have extended your help and hospitality to many of my countrymen and I want you to know how grateful I am to you for your kindness.

With my best wishes for your continued good health, I am

Sincerely yours,

CARLOS P. ROMULO.

PEDERAL TRADE COMMISSION, Washington, September 24, 1954.

DEAR Max: I am going to be away from Washington the end of this month and therefore unable to attend your dinner. I can think of nothing which would please me more than to be on hand and to express in person the high regard I have held for you throughout the long years of our acquaintance.

The testimonial dinner is a fitting expression of the sentiment in the hearts of those who will gather together in your honor, and I want to add my congratulations and my continued good wishes.

Sincerely.

JAS. M. MEAD.

UNITED NATIONS, New York, September 23, 1954.

DEAR DR. ABELMAN: I deeply regret that a prior official commitment does not permit me to join with your many friends in paying well-deserved tribute to you on September 30.

May I take this occasion to express to you my admiration for you because of the generosity of your heart; your tireless efforts for more than a half century which have benefited countless thousands, irrespective of race, color, or national origin; the spirit of unfailing good will with which you have served your community.

In all that you have undertaken you have fed the steady flame of democracy and

brotherhood among your fellow men.

May the years ahead return to you in good measure the health and happiness which you have earned.

Sincerely yours,

RALPH J. BUNCHE. Director, Department of Trustecship.

BROOKLYN, N. Y., September 22, 1954. MY DEAR MR. ABELMAN: Permit me to assure you that I was delighted to learn regarding the coming fulfillment of a program of honorable recognition of your very worthy life and beneficent services in our midst particularly during the past 50 years.

Your most generous disposition to offer unselfishly and unstintingly your time, talent, and energies for the fulfillment of countless works of beneficence richly merits the impressive tribute of public acknowledgment and grateful appreciation.

You have given indeed a most impressive and edifying manifestation of your genuine love of your fellow human beings regardless

of race, color, or creed. I desire to offer to you an expression of well-merited commendation at this particularly happy and eventful period of your blessedly useful life and, at the same time, to express the hope that God will continue to grant you His most precious gifts for the welfare of yourself, your family, and the fortunate beneficiaries of your kindly interest and generous good will.

With cordial good wishes, I am Faithfully yours,

THOMAS MOLLOY. Bishop of Brooklyn.

THE SURGEON GENERAL OF THE NAVY, Washington, September 21, 1954.

DEAR MAX: I am reminded by my secretary of my tentative acceptance of an invitation to a party which is being tendered for you at the Waldorf on the night of September 30. In my response to your invita-tion, some doubt was voiced as to my ability to join you upon the occasion in point because the date falls within a period during which we had contemplated being on leave It so happens that the leave idea has gone by the board. However, I am obliged to remain in Washington on the night of the 30th because of the fact the season's Guest Lecture Series opens at Bethesda upon that night at which time a doctor from Stock-holm, Sweden, will speak and my presence there is strongly desired and I suppose distinctly indicated.

Anyway, Max, I will be with you in thought but will regret my inability to be there in person. It is not exactly clear to me from your letter what constitutes the occasion for the party in your honor, but regardless of whether it is to punctuate a birthday or just any day, I am highly in favor of it. If it measures up in quality, as I am sure it will, to the guy for whom it is being given, it should be a swell affair.

I think I could sum up my sentiments no better than by simply saying I kope your cup of pleasure will be filled to overflowing and that you will remain between those two eternities, "yesterday" and "tomorrow" for a long, long time during the entire dura-tion of which you may have what you like. Sincerely yours,

LAMONT PUGH.

GARROWEY, YORK, Scriember 21, 1954.

DEAR MR. ABELMAN: I am greatly obliged to you for your letter of September 14 and am very glad to learn that the medical board

of the Jewish Hospital is giving a dinner in your honor.

Your many friends will be happy to feel that your long and notable service, rendered over so wide a field, is thus recognized.

With all good wishes, and kindest regards,

Yours sincerely.

HALIFAX.

NEW YORK, N. Y., September 21, 1954. DEAR MR. ABELMAN: I wish I could attend the dinner in your honor on September 30 but I deeply regret I will be out West lecturing for the American Association for the U. N.

I would like to take this opportunity to send you my congratulations and respect for all you have done, and my warm good wishes for the future.

Very sincerely yours,

ELEANOR ROOSEVELT.

SEPTEMBER 15, 1954.

DEAR MAX: There has come to me the announcement from the medical board of our Jewish Hospital of the dinner that is being tendered in your honor on the night of September 30.

You, in the light of our long years of friendship are entitled to an explanation for what I know will be my enforced absence

from the dinner.

Quite some time ago I accepted the invitation of the Benjamin N. Cardozo Lodge of B'nai B'rith to be their guest speaker at their meeting on the night of September at the Plaza Hotel when they will honor Mr. Irving Engel, the president of the American Jewish Committee. Had it not been for this, Max, you may be assured that I would have been present at the dinner. You well deserve the tribute that the doctors purpose to pay to you in recognition of your many years of selfsacrificing labors for the Jewish Hospital of Brooklyn.

Sadie and I join in the hope that you will have many years of health and happiness before you.

Cordially yours,

MEIER STEINBRINK.

SOUTH SALEM, N. Y., September 24, 1954.

DEAR Max: It was most thoughtful of the board of the Jewish Hospital of Brooklyn to ask me to the dinner given in your honor on Thursday, September 30. You are richly deserving of this honor and I know of no one serving in a capacity similar to yours who has made more friends among people of all faiths and all walks of life. The ca-pacity to make and hold friends, which is yours to an amazing degree, has greatly served the community which you have so deeply loved and helped build.

I do wish I could be with you and your dear friends at the Unity Club Thursday night but unexpected family events foreclose that possibility. If there should be any change I shall phone you at once.

With the very warmest personal regards, I am

Sincerely yours,

H. A. WALLACE.

DEPARTMENT OF THE ARMY. OFFICE OF THE SURGEON GENERAL. Washington, September 22, 1954.

DEAR MAX: Thank you very much for your invitation to be present at the dinner to be given by your friends in your honor on September 30, 1954, at the Unity Club of Brooklyn. I am sorry that a previous commitment of long standing precludes my attending.

Though I cannot be there in person, I should like to send my best wishes to be added to those of your associates on that occasion.

With warm wishes for a long and happy retirement, I am

Sincerely,

GEORGE E. ARMSTRONG. Major General. The Surgeon General.

McGILL UNIVERSITY.

Montreal, June 9, 1954. DEAR MAX ABELMAN: Thank you very much for your letter of May 31 and for the advance news of the dinner which will be given to you by all your colleagues at the Hospital on September 30 at the Waldorf-Astoria. Naturally, I am very happy, in-deed, at this additional honor which is to be shown you for your splendid work at the hospital by all your friends, and wish I could be there in person to add my felicitations.

Unfortunately, however, September 30 is the day that Dr. Radhakrishnan, the Vice President of India, arrives to be my guest and I could not possibly be absent from my desk at all during the 2 weeks of his visit. I am sorry.

With renewed good wishes to you as always, I remain

I remain Cordially yours, F. CYRIL JAMES, Principal and Vice Chancellor.

Truth Greatest Weapon Against Communism

EXTENSION OF REMARKS OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. MADDEN. Mr. Speaker, when the Special Congressional Committee Investigating Communist Aggression held hearings in Europe last June, millions throughout the free countries and also behind the Iron Curtain received firsthand information from sworn testimony as to the real truth regarding Communist duplicity, deception, infiltration, tortures, mass murders, slave labor camps, and other barbarous methods used by the tyrants in the Kremlin to dominate the world. The final report of this committee will be off the press in a few days and should be read by every Member of Congress.

The following letter from Theodore C. Streibert, Director of the United States Information Agency, reveals the importance of the committee's report:

UNITED STATES INFORMATION AGENCY. Washington, January 10, 1955. Hon. RAY J. MADDEN,

House of Representatives.

DEAR MR. MADDEN: I have read with deep interest the summary report of the Select Committee on Communist Aggression, and I should like to commend the members of the committee for the comprehensive and clear analysis that has been made of the motives, methods, and consequences of Communist domination of subject peoples. The report reflects the thorough, careful investigative work of the committee, and it is a document which could well be studied and restudied by peoples throughout the world.

The Agency is glad to have been able to render assistance to the committee and we appreciate the committee's acknowledgment of our work. As the report clearly indicates, the material compiled by the committee has been put to important use in our Voice of America broadcasts as well as in our library and press programs. We are planning a worldwide distribution of the report to our United States Information Service posts.

The Agency is particularly gratified at the committee's recognition of the effectiveness of the overseas information program and its recommendations for increased support of our operations. I wish to thank you as a member of the committee for the valuable contribution that has been made to promoting the objectives and mission of the United States Information Agency.

Sincerely yours,

THEODORE C. STREIBERT,
Director.

Not for Partisan Politics

EXTENSION OF REMARKS

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 11, 1955

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Ulm (Minn.) Daily Journal of November 22, 1954, entitled "Not for Partisan Politics":

The Minnesota Farm Union right now is making a lot of noise about the farm program, especially that portion of it that deals with supports. As there are people who hold with the union, so there are people who oppose what the union demands.

The American Farm Bureau Federation has been less vocal on the subject, apparently willing to sit back and see what Secretary Ezra Taft Benson's program will do for them, if permitted to continue to its conclusion.

Meanwhile, the farm program has been a political football between the Republicans and Democrats. During this time, there is one class of citizens—which includes Republicans, Democrats, DFLers and Independents—which has been largely overlooked. Perhaps it would be more appropriate to say they have overlooked themselves. They are the farmers.

Adoption and implementation of a workable farm program is not—at any rate should not—be a partisan affair. It should represent the best thought, the most sound and sensible program that can be devised by the combined presently contending forces.

One has but to drive through the Corn Belt for a few miles to be staggered at the sight of even more steel bins going up. Hundreds of millions of bushels are stored in Government bins today, where once it was held on the individual farms or at a few grain terminals. This is what is known as the "ever normal granary."

Since the ever normal granary program was inaugurated, new types of corn have been originated and developed. Production per acre has doubled and almost trebled, in face of the fact that demand has not trebled, nor even doubled. And still the contending political forces trying to woo the farm vote, seek more and more guarantees; the Government keeps on building more and more bins. Somewhere along the line the onward surge must come to a halt, and no one has a greater stake in the eventual outcome than does the farmer.

First problem to be solved, it would seem, is one concerning disposition of the present tremendous surpluses and to set up an effective control to prevent further increase in surplus. That, most certainly, will involve opening up the export field. It should be just as good business on the part of the Department of Agriculture to finance the purchase of corn and other farm products for export as it is for the United States to send billions of dollars to foreign governments which, in turn, send the money back here for munitions and armament.

The farm union, the farm bureau, Republicans and Democrats will never get anywhere pulling 40 separate ways from Sunday. The sensible thing, it would seem, would be for them to set up a joint committee, representing the best talent they can find, lock them in a conference room and hold the keys until they came out with a workable solution.

American agriculture is too important to continue as a political football. There is too much at stake. Farm prosperity is essential to the welfare of our Nation, quite as much as it is to the farmer.

Advancing Activities Which Will Make Our Civilization Endure and Flourish

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, many millions of dollars and much talent and shrewd organizing brains are going into the Russian propaganda drive to picture the citizens of our great country as gum-chewing, insensitive, materialistic barbarians, without souls.

It was pointed out in the report on the 14 cultural bills considered by the 83d Congress that—

One of the major ways in which we might turn reluctant and uneasy military alliesand the 800 million of uncommitted peopleinto friends would be to earn their respect for our own culture. It is obvious, however, that if we have no respect for and are officially indifferent to our own best cultural efforts, if we show no concern as a people and as a nation with our own contemporary culture and our living artists, then the peoples of other countries are hardly to be blamed if they ignore and underrate the cultural contributions which we have to give the peoples of the world. We have only our-selves to blame, for they take their cues from our own Federal Government. In this situation the Communist parties in the various countries and the Russians find it extremely easy to spread their lies that we are gumchewing, insensitive, materialistic

One place to begin righting things is in the Federal City which is singularly underprivileged regarding cultural matters as compared with other capital cities of the world and even as compared with most of the leading cities of the United States. We find W. M. Kiplinger reporting in his book, Washington Is Like That, published in 1942, for instance:

Despite the wealth of national tradition attached to Washington, there is very little

native culture. The city has never been a notable breeding place for art, or music, or literature. Unlike other great capitals of world thought, such as prewar London and Vienna and Paris, where the native-born leaders of the cities shaped the intellectual patterns which influenced the nation. Washington as a city has no homegrown culture. Its influence in cultural matters is not by Washington, but rather via Washington. Whatever culture there is here was started elsewhere and brought in and pasted on.

Some 10 Representatives and 6 Senators joined Congressman Charles R. Howell in presenting bills in the 83d Congress for a national cultural program including a cultural center in the Nation's Capital. Hearings were held on them, but they were rejected by the majority in a report that will surely go down in history as a classic example of disinterest in the cultural heritage of the West.

In a speech to the National Symphony Orchestra Association in September 1952, when he was given a testimonial scroll calling him the most musical President in the history of our country. former President Harry S. Truman said Washington should be developed into the greatest musical center in the history of the world. In urging an auditorium and opera house, Mr. Truman recalled that as a Senator he had twice helped to push through the Senate legislation providing such a building. But he said the bills had been murdered in the House by the efforts of lobbyists acting for cities around Washington. "They did not appreciate the fact that Washington was to be the capital of the world," he said.

Mr. Truman pointed out that he had seen show places in Mexico City, Paris, Rio de Janiero, and he remarked:

There isn't a reason in the world why Washington shouldn't have a place where the greatest symphony in the world can play for the public.

The gentleman from New York, EMAN-UEL CELLER; the gentleman from Montana, LEE METCALF; and the gentleman from Louisiana, James H. Morrison have joined me in introducing in the Congress H. R. 21, H. R. 630, H. R. 1822, and H. R. 1825, respectively—legislation "creating a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an inaugural hall of Presidents and a music, fine arts, and mass communica-tions center." Very broad support has been expressed for this legislation in principle by leaders in business, labor, education, recreation, city planning, libraries, and the fine arts generally. I cordially invite other Members of Congress, from both sides of the aisle, who may be interested in advancing the cultural status of our country, and our Nation's Capital as well, to join in sponsoring this legislation.

The bill would authorize an appropriation of \$25,000 for the commission whose members would serve without pay in considering a suitable site, procuring plans and designs, and formulating a method of financing the civic cultural center on a self-liquidating basis. The people of the District of Columbia pay more than \$170 million in Federal taxes and Con-

gress, in its role as the City Council of Washington, should sympathetically consider the city's need for a civic and cultural center. In this connection I would like to call to your attention the following splendid editorial which appeared in the Washington Post and Times Herald of January 11, 1955:

ENCOURAGING THE ARTS

In the long view of history, a society is likely to be judged most definitively by its cultivation of the arts. American culture has frequently been criticized abroad-to a large extent unjustly and as a consequence shrewd Soviet propaganda-as materialistic; but increasingly American artists have been making significant contributions in music, literature, drama, painting, and sculpture. What is perhaps lacking in the United States is a diffusion of the arts to the people. And it was no doubt to remedy this lack as well as to counter some of the current misconceptions about American culture that President Eisenhower promised in his state of the Union message to "recommend the establishment of a Federal Advisory Commission of the Arts within the Department of Health, Education, and Welfare, to advise the Federal Government on ways to encourage artistic and cultural endeavor and appreciation."

Art is never likely to flourish under governmental direction. Nothing could be further from the American tradition, or from the thought in President Eisenhower's mind, we are sure, than the kind of Commissariat of Culture which operates in the Soviet Union to make art an instrumentality of the state. Artists cannot be mobilized. But they can be encouraged by recognition and appreciation of their work; they can be stimulated by increased public understanding of the arts and by expanded opportunities for the public to see and hear their work. In the promotion of popular interest in the arts, the Government can play a most helpful role.

We hope that the President will give consideration, in this connection, to the admirable proposal put forward sometime ago in a House bill by former Representative Charles Howell for the construction of an auditorium and art center in the Nation's Capital. There could scarcely be a more appropriate beginning for a Federal program to foster interest in the arts. Creation of the means through which music, drama, and pictorial art can be brought to the people is one important contribution which can be made by government. But the sine qua non, of course, is the propagation of an atmosphere in which innovation, experimentation, and unorthodoxy can find free expression.

A Great Big Hand

EXTENSION OF REMARKS

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Rome Daily American dated January 1, 1955:

A GREAT BIG HAND

"How's Clare Boothe Luce doing?"
That's the first question usually asked by
a visiting American, and any summing up
of 1954 would be incomplete without an
answer to the question.

What do you expect from an Ambassador? Personality? The very fact that visiting Americans inquire with the familiar use of her name rather than her rank of Ambassador is a tribute to her personality, not a lack of respect to her position.

Diplomatic skill? In London recently a

Diplomatic skill? In London recently a veteran American newspaperman baited us with, "Don't tell me you think Mrs. Luce settled the Trieste problem?" Our answer was that so far as we know Mrs. Luce has never claimed credit for the settlement—but she certainly was on the team that solved that knotty problem, and was still on the scene when Italy voted smashing approval of the Paris accords.

Courage? During the tense pre-Trieste settlement days, a hostile crowd gathered in front of the American Embassy to shout its protests on the delay in carrying out the Anglo-American decision to turn back zone A to Italy. Some Embassy personnel avoided the main entrance to the Embassy that morning to minimize the possibility of ugly incidents. Mrs. Luce arrived, stepped from her car and walked calmly through the hushed crowd to the front gate.

Insight? She has consistently avoided the many traps set for her by the Communists. She has never worn her religion on her sleeve.

Inspiration? She has won the admiration and loyalty of her own staff, which is also a mark of leadership. She has gotten out of a sick bed to attend both American and Italian functions which demanded her presence, and she has set an example for her Foreign Service family by devoting endless hours of hard work to her job. She has been a good listener as well as a good talker, and has always shown willingness to heed the advice of experienced career diplomats.

Kindness? A generous portion of her own personal fortune has been quietly, never ostentatiously, distributed to various Italian charities and institutions. She has taken time from a filled calendar to greet the children of old friends passing through Rome. And her private parties have included Americans from all walks of life in Rome—not merely the bankers and the businessmen.

Pressed for an answer to the visitors' question we shall reply:

The lady is doing quite well, thank you.

Statehood Is the Answer

EXTENSION OF REMARKS

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. BARTLETT. Mr. Speaker, the case for Alaska statehood as the one way to solve the complex problems referred to in the state of the Union message could not be better or more concisely stated than in the editorial written for the Scripps-Howard newspapers which appeared in the Washington Daily News yesterday:

CHICKEN AND EGG

"As the complex problems of Alaska are resolved, that Territory should be expected to achieve statchood," said President Eisenhower in his state of the Union message.

That is somewhat like telling Alaskans that when they learn to swim they will be permitted to go into the water.

It ignores the overwhelming evidence that Alaska's "complex problems" are complex precisely because of the Federal Government's long neglect of the Territory and

refusal to give it control over its resources. In that respect the present administration's record is no better than that of its predecessors.

Alaskans have been hearing vague promises like this for many decades. It is high time they were offered the concrete action they deserve. And statehood is the only logical answer.

Why I Want a College Education

EXTENSION OF REMARKS

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. HARRIS. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following essay written by John H. Henry, of El Dorado, Ark. John's essay on Why I Want a College Education was chosen as the best of hundreds entered in a contest zone embracing Arkansas and a portion of Texas. He was presented a \$1,000 Lion Oil college scholarship, after winning first place in a Lion Oil scholarship fund essay contest. John is now a senior in the El Dorado, Ark., High School.

Under leave granted to extend my remarks, I include the essay:

WHY I WANT A COLLEGE EDUCATION (By John H. Henry)

The old master worked continually and tirelessly on a rare but beautiful old vase. His strokes were firm but kind, for to him is was something of great value. Passers-by often inquired why he spent hours working only on that vase, hours of engraving and seemingly useless hours of shining it. The old man always replied that it takes years to perfect a masterpiece, to bring out its beauty, and to give it a dark and lustrous pollsh. What could deserve the painstaking polishing and delicate engraving more than life itself? Is it not a thing of great value?

A college education offers ample opportunity to polish, to engrave, and to bring out the abilities and beauties of nature that give meaning to life. The desired design and true tone of life can best be attained in a university that provides a broad and firm foundation on which to build. This is best provided by liberal arts courses. Such courses as languages, literature, history, philosophy, fine arts, mathematics, natural sciences, economics, government, and sociology give one a clearer view of the present by providing generous information of the trends of the past.

What is common to these subjects that makes it proper to group them together? They have a common alm. In contrast to the technical subjects, which are the acquisition of some specific skills, the liberal courses present an understanding of human nature and of the environment in which man lives. Their aim is to throw light upon the greater problems that confront mankind today. In our age the world demands young men and young women, who possess something of that understanding of man's world. It calls for young people who have been in contact with these liberalizing subjects, and which it is the business of the college to teach. I, therefore, choose a college education in favor of a technical school.

A college education is also essential in that it will help me to prepare for a career and to seek certain characteristics of life that I shall always endeavor to possess. First of all,

the ability to earn a living is important to the individual and to society. Thus, I must learn to fill some position with credit. The world today needs skilled and trained workers, and I want to be one of them. The second of the desired characteristics of life is that nothing is so significant as a clear conscious view of my own opinions and judgments. Third, education will help me to influence people, to come to an understanding with them, and to bear with them. I feel that these characteristics will give depths of tone and polish to my life.

It will take years of preparation, hard work, and painstaking thought to develop the intellect in order to prepare for an education for life. I shall always strive to live up to the old master's theory that it takes years to perfect a masterpiece, to bring out its beauty, and to engrave upon it the most desirable principles and ideals, that masterpiece being life itself.

How To Lose Friends and Customers for American Business

EXTENSION OF REMARKS

HON, FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include 2 articles, 1 from the Christian Science Monitor for December 29, and another from Barron's Financial Weekly, for November 1, reflecting disturbing reports from a country which has long been one of America's good customers. It is still not too late to remedy the harmful results of administration action in this field:

[From the Christian Science Monitor of December 29, 1954]

TARIFF AND ANTITRUST ACTION—SWISS SEE UNITED STATES IN ATTACK ON TRADE

(By Olwen Williams)

GENEVA.—The Swiss people and Government are still deeply disturbed by what they consider a United States attack on the Swiss watch industry.

When the United States, last July, increased its watch tariff by 50 percent, it was a hard blow for a people dependent for its economic existence on export. But, it was argued, the tariff weapon is one that must be faced in international trade.

The recent action of the United States Department of Justice, however, indicting a number of Swiss watch firms and several United States importers of Swiss watches and watch parts for violation of the antitrust law, has aroused a storm of protest from every section of the population. The indictment has been looked upon, with almost complete unanimity, as an attack on the commercial honor of Switzerland, and even possibly an attempt at interfering with Swiss sovereignty.

To understand this strong reaction, one must remember that the Swiss are proud of their watch industry. More than all other branches of industry, it is felt to typify the genius and efficiency of a people without natural resources or any other advantages than those derived from the character and diligence of its people.

HARD TIMES RECALLED

The Swiss watch industry has had its hard times before, especially between wars. Its postwar comeback owes much to the United

States market. Today, the industry is strong and more consolidated than ever before. But, the Swiss do not forget the hard times and are determined to protect their best export business as far as possible against any future large-scale slumps.

The Swiss, therefore, look upon it as natural that their government and the representatives of the industry should have worked out measures for protecting the quality of the Swiss product, and for safeguarding the accepted watch producers from undercutting by irresponsible firms. The restrictions on new firms, agreements on costs, etc., in this highly organized, rationalized industry are thus within Swiss law, and are welcomed by all concerned.

Attacks in the United States press on the Switch watch industry for alleged underpaying of workers, exploitation and so on, are usually dismissed as an expression of hostility from certain sections, since the watch industry is among the best paid in this country.

PRESS INDIGNANT

It is unusual in a country that prides itself on its restraint and impartial comment to find the press almost unanimous in its indignant comment on the action of the United States Department of Justice.

An economic correspondent in the Gazette de Lausanne writes, for example: "The United States authorities, doubtless maneuvered by groups of interests, are going all out against the Swiss watch industry, which has the serious defect in their eyes of working at lower prices, but for equal quality, with the national product. After having had recourse of a few weeks ago to the customs weapon, they now seize the judicial weapon. In both cases, the arguments advanced seem very artificial, to say the least."

Statements have been issued not only from the Association of Watch Producers, and the Federal Government, but also from the Federation of Workers in Metals and Watches. There is a remarkable unanimity of views in all the statements.

STRANGE DISCOVERY

Maurice Vaucher, the president of the Association of Watch Manufacturers, representing some 550 independent firms, whose activities are strictly limited by Swiss law, asked the following question: "How can the United States continue to preach free enterprise, lowering tariffs, and so on, when it attacks the industry of a small democracy's vital industry? If the sovereign law of the United States is in conflict with that of Switzerland, it is strange that this is only now being discovered, since for the past 18 years Swiss practice has not varied, nor has it been challenged since 1936, the date of the last trade agreement with the United States."

M. Vaucher also made the point that legal action could have been avoided in the anti-trust issue by negotiation out of court, in which the Swiss watch industry would have cooperated. This view is strengthened by the fact that the affair will, in any case be terminated by negotiations, and the signing of a "consent decree," embodying the new conditions for future trade exchanges,

OFFICIAL COMMENTS

Usually, the Swiss Government leaves all comment on disputed issues to its legation on the spot. This time, however, the issue was considered so important that the head of the Federal Foreign Affairs Department, Max Petitpierre, felt it called for a Government declaration.

For the moment, while Swiss legal experts are still studying the questions involved, he restricted himself to an interim statement, and mentioned the Government's strong views on the matter to the United States Minister in Berne, Miss Frances Wilson. The Federal Government also reserved the right to lodge a formal protest later.

[On December 22, Swiss President Rubattel told Parliament that the United States Justice Department's antitrust action against the watch industry was a violation of Swiss sovereignty and an interference in Switzerland's internal affairs, the Associated Press said.]

M. Petitplerre especially emphasized the bad effects of the latest United States move on the whole of United States-Swiss relations and hinted at the possibility of an appeal to international law.

AGREEMENTS HELD LEGAL

The central committee of the Federation of Swiss Workers in Metal and Watches also reacted strongly to the United States move. They summarized their views as follows:

1. The agreements criticized by the United

1. The agreements criticized by the United States Department of Justice are quite legal in Switzerland. They have not harmed either the United States manufacturer or the consumer. On the contrary, these agreements have laid down the conditions of loyal competition, so that the quality of the product is not lowered.

2. The agreements made by common consent between Swiss manufacturers and United States importers have not resulted in high prices for the United States consumer. The proof of this is found in the fact that President Eisenhower found Swiss watch prices too low, compared with the home produced article—hence the 50 percent tariff increase.

From Government officials down to workers committees, the conclusion has been reached that whatever United States delegates may say at international trade conferences, the real attitude of the United States Government is shifting toward increased trade barriers.

[From Barron's Financial Weekly of November 1, 1954]

ECONOMIC WAR?—THE SWISS PREPARE TO FIGHT BACK AT UNITED STATES WATCH POLICY

(By John Crider)

Washington.—No enemy nation could do more to convince Uncle Sam's friends abroad that the United States does not practice what it preaches than did the White House and the Justice Department when they ganged up on the Swiss watch industry. Now the peaceful Swiss, who have fought no military wars in the century and a half since Napoleon trampled their soil, are pondering the pros and cons of economic warfare against the United States. Meanwhile, they are hoping the White House palace guard will finally awake to the global implications of the watch dispute.

Acting entirely from military considerations, the President first slightly raised the tariff on Swiss watch imports. Then, only a few months later, the Justice Department last week filed antitrust suits against the biggest importers and assemblers of Swiss watch movements. Altogether, 24 United States and Swiss concerns were sued for price fixing and restriction of markets. purpose of the double-barreled action was solely to preserve the watchmaking skills of this country's three jeweled-watch manufacuring concerns, even though the State Department itself in past years had argued that this type of skill was amply present in the new aircraft precision instrument industries. Since that argument was made, however, the Eisenhower administration has given the three watch companies vital defense work to do. So the old argument now faces a fait accompli.

Nevertheless, the 2 United States actions, coming so closely together, left no doubt among the Swiss that the 3 United States watch companies had enlarged their influence over our Government and were intent upon crushing the Swiss watch industry which, for many years, has led the world in the manufacture and development of fine

watches. Consequently, Swiss consumers have recently been boycotting United States products, and American manufacturers have been complaining to the Swiss Legation here.

Although the Swiss Government denies having anything to do with the boycotting, there is no mistaking the fact that the American actions have created a major political, as well as economic, problem for the Swiss. This follows from the fact that 58,000 Swiss workers, I out of 10 in the little country's labor force, are employed in the more than 400 small factories scattered throughout the Jura Mountain district, where the watches are made. Moreover, about a third of all Swiss watch exports come to this country.

Among the many aspects of the current situation which perplex the Swiss, a practical-minded people, is the apparent failure of the United States Government to appreciate the profit derived by America from the Swiss watch trade. About two-thirds of all Swiss watch imports are in the form of movements which are assembled into watches by United States workmen. So much is added here in terms of value, moreover, that only about 15 cents out of every dollar spent for so-called Swiss watches in the United States gets back to Switzerland. Some 35,000 United States jewelers sell Swiss watches, and hundreds of our merchants are engaged in their importation and distribution.

Even more baffling to the Swiss is that Americans should expect every other government to have trade laws and habits like The reason for the organization their own. of Swiss watchmakers under their national laws happens to have been just the opposite to the reasoning behind United States antitrust laws. While the latter were addressed to the problem of undue industrial concentration, Swiss law undertook to deal undue dispersion of industry. watch factories were many and scattered, so that to capitalize upon this national skill there had to be an organization. And, for selfish commercial reasons, there had to be rules for foreign operations which would assure Swiss watches as much foreign-market domination as possible. It is, indeed, an industry almost wholly dependent on international trade, since about 95 percent of the output is exported.

All of this was undoubtedly known to the Eisenhower administration when it decreed that Swiss imports should be limited to around 75 percent of our market. But in so ruling for military reasons, it made our foreign friends (who seem also to have had some military value) look at United States in such terms as the following:

1. The competitive philosophy of the Sherman antitrust law has been preached by United States missions all over the world, but just let a better product at a lower price reach United States shores and the benevolent Uncle lets out a scream.

2. The United States has loaned and given billions of dollars to underdeveloped countries in the hope that they would become self-sufficient like Switzerland. But if we treat the economically exemplary and self-sufficient Swiss the way we do, what profit, these countries must be asking, is there in following the Swiss example?

3. The mere matter of relative size holds universal interest. To many foreign head-line writers it must have been a temptation to write "North American Colossus Sits on Little Swiss for Competing." After all, they had been led to believe there was nothing Americans respected more than "the little guy who manages to get along."

4. The Americans apparently can't do business with countries whose industrial organi-

zation or trust laws are different from their own, but what about the United States oil companies and Iranian oil? About the time the Justice Department was winking at the domestic oil companies' joint venture with foreign interests in the Middle East, Attorney General Brownell said:

"For example, high on the priority list of problems demanding prompt solution is the entire problem of the extraterritorial application of the antitrust laws. This is a provocative subject, particularly in view of the oil case. * * As has been well pointed out, if the rule be that American courts have jurisdiction over every action in the world that affects us, why does not every other nation have jurisdiction over our actions which affect them?"

Confused GOP Playing Dangerous Game in Decision To Cut Military Manpower

EXTENSION OF REMARKS

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 11, 1955

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the January 8 edition of the Charleston (W. Va.) Gazette. This editorial reflects the questions that are being raised in the minds of people throughout the country in the wake of the proposed cut in military manpower. The proposal not only leaves this Nation wondering, but it also has elicited the raising of an eyebrow among our allies. The New York Times on January 9 stated the feeling of the British in these words:

The planned cut-down in American ground strength now and the reliance on baby atomic bombs to smash any Communist rush, if it starts, has the British worried.

It is interesting to note what Korean leaders are thinking about the announced step, and this is clearly brought out by the same edition of the Times. The excerpt is herewith included:

Authoritative sources reported that the Korean leaders were deeply concerned about the apparent tendency of the United States to reduce the number of ground troops while placing greater reliance on the Air Force and atomic power. They are said to fear that this trend of thought is about to reach Korea despite the continuous Communist buildup in the North.

The semioficial Government newspaper Korean Republic today editorially criticized the United States policy of massive retaliation and the newly announced cutbacks in the United States Army's strength.

"This sharp reduction in divisional strength may leave the United States without the power to follow up any advantages it may gain through employment of less conventional weapons," the paper said.

Mr. Speaker, this is a matter of importance. History having taught the tragedy of meeting an enemy with too little and too late, let us hope that in the days before us we shall refuse to be stampeded into weakness, and that we shall never put dollars and cents or

political expediency above national security and safety. Let us ever be prompted by the question, "Where is duty at this moment?"

The Gazette editorial follows:

CONFUSED GOP PLAYING DANGEROUS GAME IN DECISION TO CUT MILITARY MANPOWER

The announced cut in military manpower cannot but leave the Nation wondering just what is going on in the Government's program of defense.

First, comes the question of why the decision. Secretary of State Dulles, our expert on diplomacy, says that it is made possible by the improved weapons possessed by the military while the Secretary of Defense Mr. Wilson, our expert in defense, reports that it is made possible by the receding threat of war. Thus, the diplomat credits it to defense, while defense credits it to diplomacy. Could it be that neither one of them is very proud of this large scale cut in our defense potential at the present time and that both hope to disown it if it doesn't work out?

Is the administration thinking of returning to the policy of massive retaliation that seemed to have gone down the drain along with Dien Bien Phu, Hanoi, and the rest of northern Indochina in that memorable flasco in the Orient? Surely that has been tried too often and falled too often for the administration to attempt a return to it now. Or is this a desperate and reckless attempt to balance the budget?

Obviously Gen. Matthew Ridgway has falled to convince the powers that be that war cannot be an "immaculate war" but must be a war fought out by men in the mud. General Ridgway tried hard and may have convinced some folks, but not those who do the top planning about this Nation's defense.

Result, the Army is to be sacrificed. It doesn't seem possible that to obtain this a reduction will be made in our overseas forces because if it is done, there it would spell appeasement to both friend and foe. It must be that the cut is to be made in the continental United States and carried out among the half strength divisions, the paper divisions, and the divisions whose units are scattered from Alaska to Puerto Rico and which constitute our only reserve or pretense of a reserve.

It is to be hoped that General Ridgway made an impression on the gentlemen in Congress and that when this new proposal to reduce the defenses of the country come before them they will take a long look at it before deciding to risk this country's safety on some new concept of defense. They must remember the Nation can and will pay for the defense it needs.

Federal Regulation of Production and Gathering of Natural Gas

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I wish to comment concerning the fine address presented yesterday in the House by my colleague from Texas IMr. IKARD], who speaks with authority and accuracy in outlining the danger we are facing today in gas production. I join him in deep concern and recognize the need for legislation correcting the present interpretation of the Natural Gas Act. I wish to commend him for his presentation of the facts and his making clear the need for legislative action. I hope to join my colleague from Texas, as well as others, in this effort.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, I at his office, and 1 at the Capitol.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

[Mr. Ikard], who speaks with authority LAWS AND RULES FOR PUBLICATION OF

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof, (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record.—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 71/2-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.
- 5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.—addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional. Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

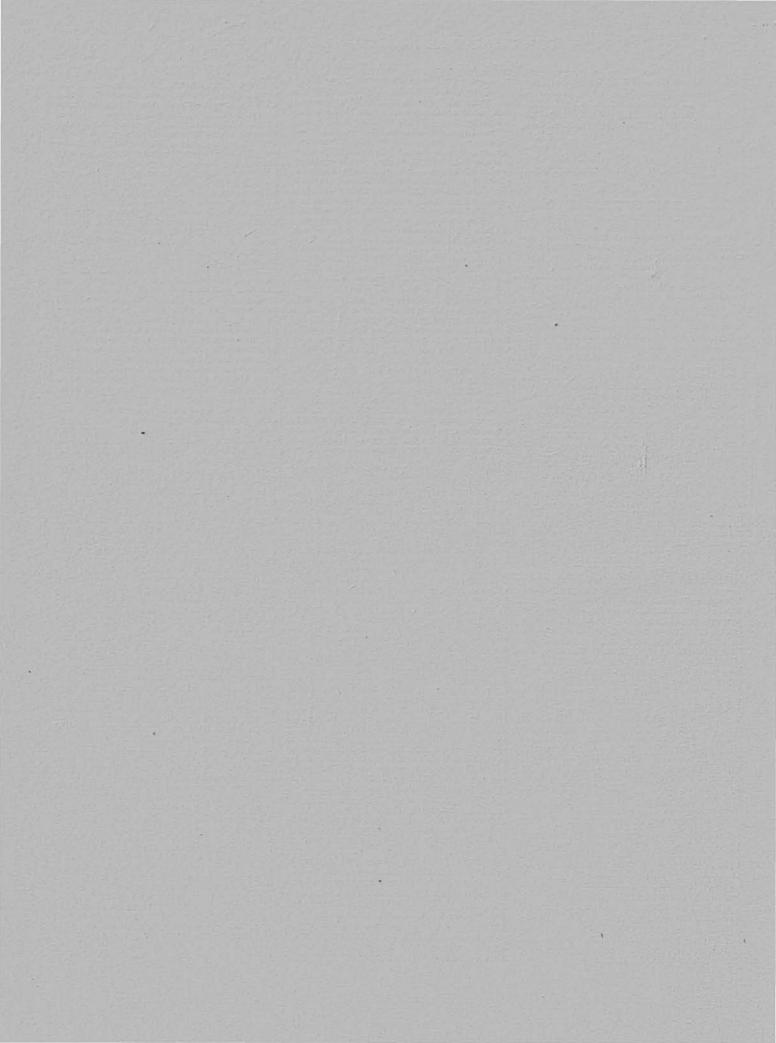

9. The Public Printer shall not publish in the Congressional Record Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. Official reporters.—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. Estimate of cost.-No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.

12. Illustrations.—Pursuant to section 182b, title 44. United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. Corrections.—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

Proposed Trade Agreement Negotiations With Japan and Other Countries

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the Record. I include the following statement of the National Association of Cotton Manufacturers:

STATEMENT OF THE NATIONAL ASSOCIATION OF COTTON MANUFACTURERS BEFORE THE UNITED STATES TARIFF COMMISSION IN THE MATTER OF INVESTIGATION NO. 2 AND PUBLIC HEARING IN CONNECTION WITH PROPOSED TRADE AGREEMENT NEGOTIATIONS WITH JAPAN AND OTHER COUNTRIES

This statement is filed pursuant to the United States Tariff Commission's public notice, issued November 13, 1954, of investigation No. 2 and public hearing under section 3 of the Trade Agreements Extension Act of 1951, as amended, and section 332 of the Tariff Act of 1930, in connection with proposed trade agreement negotiations with Japan and other countries.

Included in the President's list of articles imported into the United States proposed for consideration in trade agreement negotiations with Japan and other countries there are:

Schedule 9: 1 Cotton manufactures.

Schedule 11: 1 Wool and manufactures of. Schedule 12: 1 Silk manufactures.

Schedule 13: 1 Manufactures of rayon or other synthetic textiles.

Because of the complexity of the textile industry and the competitive interrelationship among various fibers and fabrics, the position taken by the National Association of Cotton Manufacturers is applicable to all textile items included under the schedules listed above.

The National Association of Cotton Manufacturers, founded in 1854, represents northern cotton and manmade fiber textile mills, located predominantly in New England. Cotton mills in this group generally manufacture fine combed cotton fabrics others produce carded goods, manmade fiber textiles, and silk textiles. New England mills also produce velveteens, blankets, bedspreads, towels, sheets, and pillow cases, yarn for gloves, and cloth for wearing apparel as well as miscellaneous other uses.

POSITION

The New England mills are opposed to any reduction in the present tariff rates on the items of textile manufactures specified on page 1 of this statement. The association also endorses the request of the domestic velveteen manufacturers for an increase in the dutles on velveteens. Our mills are opposed to the invasion of the American market by Japanese or other imported cotton textiles. Present duties may not be high

enough to prevent such an occurrence, but a further lowering of duties to permit entry of more textiles from Japan and other nations would result in the displacement of American fabrics, unemployment, and heavy losses to investors and to those dependent upon the industry as a source of income.

TRENDS OF DOMESTIC PRODUCTION AND SALES

1. Present conditions

The American market for cotton textiles is and has been in a depressed condition. Examination of the industry's economic indicators shows only too well the difficult conditions which have been experienced by the entire United States textile industry and which have been even more marked in New England.

Cotton consumption has shown the following declines:

	United States	New England	South		
	Average per working day in actual number of bales				
1951—January 1953—September 1954—September	42, 746 36, 022 33, 278	3, 341 2, 180 1, 709	38, 705 33, 523 31, 336		
	Pe	reent chang	res		
September 1954 from— 1951—January 1953—September	-22.2 -7.6	-48.9 -21.6	-19.0 -6.5		

Source: Bureau of the Census, U. S. Department of Commerce, Facts for Industry,

Spindle activity of mills consuming 100 percent cotton fiber has dropped as follows:

	United States	New Eng- land	South
	A verage l	hours per wo in millions	rking day
1951—January 1953—September 1954—September	508, 5 463, 7 426, 7	71. 9 51. 0 37. 9	430. 8 410. 9 387. 7
	P	ercent chang	(68
September 1954 from— 1951—January 1953—September	-16.1 -8.0	-47.3 -25.7	-10.0 -5.6

Source: Bureau of the Census, U. S. Department of Commerce, Facts for Industry.

Production of both cotton and manmade fiberbroad woven goods has declined significantly during the first half of this year as shown below:

	Cetton broad woven goods (all, except tire fabrics)	Fine cotton goods	Synthetic fabrics
	Millions	yards	
1951—1st quarter 1953—ist quarter 2d quarter 3d quarter 4th quarter 1954—1st quarter 2d quarter	2, 835 2, 611 2, 606 2, 414 2, 540 2, 480 2, 451	350 331 325 311 333 221 311	70.5 620 629 585 566 537 626

	Cotton broad woven goods (all, except tire fabrics)	Fine cotton goods	Synthetic fabrics	
	Percent changes			
2d quarter 1954 from— 1951—1st quarter 1953—2d quarter 1954—1st quarter	-13, 6 -6, 0 -1, 0	-11.2 -4.3 -3.1	-25.4 -16.4 -2.0	

Source: Bureau of the Census, U. S. Department of Commicree, "Facts For Industry."

Manufacturers' sales of broad woven fabrics (cotton, manmade fiber and wool) have dropped considerably as shown in the following table:

All United States

	Sales	Inventories
		ly adjusted in s of dollars
1951—January 1953—August 1964—January February March April May June July August	503 508 531 576 516	1, 706 1, 491 1, 385 1, 389 1, 396 1, 376 1, 374 1, 306 1, 354
	Percei	nt changes
August 1954 from— 1951—January 1953—August	-30.5 -4.4	-20, 6 -9, 1

Source: Office of Business Economics, U. S. Department of Commerce, "Industry Survey, Manufacturers' Sales and Inventories."

Mill margins, the difference between cloth prices and prices for the average qualities of cotton used in the manufacture of the cloth, have been declining steadily for the past 2 years, and are now 9 percent below a year ago and 46 percent below January 1951. The following table shows that the drop in mill margins was caused by the combination of a decline in cloth prices and an increase in the cost of raw cotton to the manufacturer.

Indexes of cloth prices, cotton prices, and mill margins, 1953 and 1954

[January 1951 equals 100]

		Cloth prices					Mill margins	
	1953	1954	1953	1954	1953	1954		
January February March April May June July August September	72.5 72.5 71.4 70.6 70.8 71.7 71.7 71.7	67, 2 66, 6 66, 3 66, 0 65, 8 65, 8 66, 1 66, 1 66, 2	76.8 77.9 78.8 78.1 78.8 79.4 78.5 77.6	78, 7 80, 7 80, 8 80, 3 80, 9 80, 4 81, 1 81, 1 82, 4	69. 2 68. 3 65. 5 64. 4 64. 4 65. 1 65. 6 66. 4 65. 9	57. 5 54. 7 54. 0 53. 8 52. 9 58. 4 58. 2		

Footnotes at end of table.

As shown in Tariff Act of 1930, title I, dutiable list.

Indexes of cloth prices, cotton prices, and Cotton and synthetic textile mills (broad mill margins, 1953 and 1954—Continued

[January	1951	equal	s	100

	Cloth prices				Mill margins	
	1963	1954	1953	1954	1953	1954
November	67.8 67.2	66. 2	77.8 77.6	80. 5	59. 6 58. 6	54.0

Note.—Indexes based on following prices: Average cloth price of 17 constructions, and average price for the average qualities of cotton used in the 17 constructions as reported by the U. S. Department of Agriculture.

Of additional importance in evaluating the conditions of the industry is the decline which has taken place in the per capita consumption of textiles in the United States since 1950, as shown below:

Per capita consumption

[In pounds]

Year	Total	Man- made	Wool	Cotton
1950	40. 3 32. 0	9.1 7.5	4.4 2.6	26. 8 21. 9
Percent decline.	20.6	17.6	40.9	18.3

Source: Textile Organon, vol. XXV, No. 9, Septe mber 1954.

2. Measures of injury

In order to measure the extent of the damage which has already been done to the cotton and manmade fiber textile industry as the result of depressed conditions and as an indication of the even more serious damage which would result from a lowering of textile tariffs, it is necessary to examine the losses to employees, communities, and investors. One of the chief characteristics of the industry is the fact that it is composed of thousands of small- and medium-sized establishments with heavy employment concentrations in local areas. This characteristic magnifies the severity of losses to this industry.

The textile industry's present condition has resulted in a decline in employment of 268,000 jobs and in the cotton and manmade fiber textile industry of over 60,000 jobs since January 1951. In New England alone employment has fallen by 48 percent since 1951, and by 26.7 percent since September a year ago, in the cotton and manmade fiber textile mills.

The textile industry is currently capable of not only supplying the full domestic demand and maintaining exports, but of increasing its output within a few months by an additional 15 percent as it did under the stimulus of the Korean war in 1950.

Unlike a growing industry which might be able to share its growth with others, the cotton and synthetic textile industry of the United States has no growing market to partition. It would be forced to give up a market which is not big enough for its present capacity. This condition is due in large measure to the expansion of capacity and output which took place to meet war and immediate postwar needs.

(a) Unemployment: A substitution of foreign for American cloth would increase current unemployment to an extent which no agency of the Government should recomor sanction. The decline in employment in New England cotton and synthetic textile mills since January 1951, over onehalf of which has occurred since September 1953, has left a serious unemployment prob-In addition, many mills are operating and have been operating on a short-time basis of 3 or 4 days a week with temporary shutdowns of a week or more at a time.

The impact and extent of unemployment in textiles is severe because the industry is composed of a large number of small- and medium-sized establishments employing over 350,000 workers with heavy employment con-centrations in local areas. The average number of employees in textile mills in the United States is low in all regions and all branches of the industry.

Source: Report of the committee appointed by the New England Governors, 1952.

The textile industry, in addition to being one of the largest employers of American labor, is characterized by the fact that mills employ a relatively high proportion of the workers in the labor-market areas where they are located. Hundreds of mills are situated in small towns where they provide either the sole or principal source of income to their community. Other mills are located in textile centers such as Fall River and Lowell, Mass., where they represent a large proportion of the total manufacturing employment in the area.

In New England 1 out of 6 manufacturing jobs is in textiles; in Massachusetts, 1 out of 7; and in Rhode Island 30 percent of all manufacturing employees are employed in textile manufacturing. (See tables I and II attached, for the relative importance of the textile industry in our national and regional economy.)

The following table shows the concentration of cotton and synthetic-textile employment in typical New England textile commu-

Predominantly cotton and synthetic textiles.

As the industry is made up of many independent units and is the principal source of employment in communities, unemployment causes unusual hardships. Textile workers displaced by foreign or domestic competition either remain unemployed or are forced to take lower paying jobs. Experience has proven that so-called growth industries do not absorb such workers. A study of 1,705 displaced New England textile workers recently completed by the Bureau of Business and Economic Research of Northeastern University shows that less than half the workers were reemployed, and of this number two-thirds were earning less pay. Other textile mills provided the chief source of reemployment, a situation which makes the problem more acute if textile closings were to become widespread. The study concludes that "workers displaced * * * are not being absorbed in large numbers by the industries which have been expanding in this area."

(b) Loss to communities and areas: An area or community stranded by the loss of one of its principal industries does not attract other industries. In New England the textile-mill industry is still the largest manufacturing employer with 173,000 jobs. In each of the States in the area it is an important factor. The cotton and synthetic mills in the area annually provide a payroll in excess of \$200 million a year, produce goods valued at \$590 million, pay taxes of many millions, purchase supplies in the amount of \$24.4 million per year in their own com-munities and \$48.9 million in New England. In addition, New England cotton and rayon mills spent \$185 million in modernizing plant and equipment between 1946 and 1953.

The impact of increased unemployment in this region would be increased sixfold in other areas of the country where the industry is larger and even more concentrated. It is no exaggeration to say that one textile job lost and not replaced means a loss to the community of twice the textile wages cut off." (Report of the committee appointed by the Conference of New England Governors.)

Many other New England industries, such as trucking, railroads, textile machinery, utilities, and the innumerable suppliers of goods and services, are dependent upon the well-being of the New England cotton and man-made textile industry for their health. Each year the New England mills support the region's railroads to the extent of nearly \$2 million, and buy over one-half million bales of cotton.

(c) Loss to investors: Investment of over \$8.2 billion in textile mills would be jeopardized by a lowering of textile tariffs. Investment in New England is estimated at \$1.5 billion and replacement at \$2.7 billion. opening of our home market for textiles to the competition of low-cost Japanese mills would subject this investment to serious losses because textile-mill properties and equipment could not be profitably liquidated under such circumstances.

Cotton-textile concerns cannot long operate at a loss. Low-priced foreign goods even though not imported initially in large quantitles nevertheless so curtail sales and depress prices that operations soon become unprofitable. In such a situation textilemill managements have little choice but to cease operations altogether. This situation aggravates the losses out of proportion to the actual volume of imports and in turn creates a situation favorable to more imports.

(d) Unemployment losses will progress rapidly: Because of the nature of the industry overall and of the fine-combed goods industry in particular (50 percent of which is located in New England), the substitution of imported fabrics for our own will accelerate at a rapid pace. The industry is noted for the severity of its price competition. It is estimated that over 90 percent of American production of cloth is in staple items. Industries of other countries can and do produce these staple goods and will compete on a price basis with United States fabrics. Differences in cost of production and resulting level of prices which a producer can offer control the volume of his sales.

COMPETITIVE STRENGTH OF JAPANESE COTTON TEXTILES AND IMPORTS BY THE UNITED BTATES

1. Competitive strength

The competitive characteristics of the cotton textile industry are basically the same throughout the world. Japan has access to the same raw materials, machinery, and techniques which are available to the American industry and has had years of textile experience.

According to the Mitsubishi Economic Research Institute of Tokyo, in its Survey of Economic Conditions in Japan, September 1954, "The Japanese cotton industry . . . is again competitive in overseas markets through the modernization of equipment and the process of rationalization. The reduction in costs through the use of raw cotton imported with low-interest American credit is also noteworthy." In the fine goods field, which uses Egyptian cotton, American manufacturers have to contend with a quota and duty on imported Egyptian cotton.

It is estimated that over 90 percent of American production of cloth is in staple items. The Japanese cotton textile industry can and does produce these staple goods and compete on a price basis with United States fabrics. Differences in cost of production and resulting level of prices which a producer can offer control the volume of his

The cotton textile industry is a labor oriented industry in that it has a relatively high percentage of labor costs to other costs. This is particularly true of the fine combed cotton industry in which New England mills specialize.

(a) Wages: Wages and other forms of compensation are the most important factor in measuring the cost of producing fine combed cotton goods. In such goods, it is estimated that labor equals 43 percent, raw materials equals 40 percent, all others equals 17 percent.

A comparison of our wages with those of other major textile producing countries emphasizes the rapidity with which the American industry would be undermined by these enormous differentials.

(b) Productivity and capacity: Productivity in Japan has been increasing steadily since the end of World War II and the index prepared by the Mitsubishi Economic Research Institute of Tokyo in its survey of economic conditions in Japan shows the following:

April 1950 equals 100. June 1954 equals 224.5.

This index shows that productivity in Japan has increased by almost 125 percent since early in 1950.

Further affirmation of marked gains in productivity is found in the quantity of new machinery installed in Japanese mills and by the fact that the present rate of production in Japan is almost equal to prewar production, but with only two-thirds of the number of spindles in operation prior to the

The testimony, statement, and exhibits presented by Mr. N. M. Mitchell and Mr. Gilbert Van Blarcom, expert textile engineers, demonstrate the relatively high level of Japanese machine efficiencies and work assignments and further show that the large wage differentials between United States and Japanese mills far outweigh differences in productivity.

Since the bulk of Japan's old textile equipment and machinery was destroyed during World War II, relatively all of the current machinery is new and modern.

2 For 1938.
3 Cotton spinners only, data from Independent Weav-ers not available.
4 Estimated on basis of rate of production during January-June, 1954.

Sources: (1) Quarterly Review of Japanese Cotton Textile Industry (August 1952 and May 1954), Statistics of Japanese Cotton Textile Industry (September 1954) published by All Japan Cotton Spinners' Association, Osaka, Japan; (2) Industrial and Financial Statistics (June 1954) published by the Industrial Bank of Japan, Ltd.

The rate of increase in production during the past few years has been tremendously rapid, as shown in the preceding table. By 1952 production had increased 42 percent over 1950, and was equal to 65 percent of prewar production; by 1954, production reached 110 percent above that of 1950, and about equals prewar production. There is no indication that Japan's rapid expansion is going to halt.

2. Imports of Japanese cotton textiles

The experience of the American cotton textile industry with Japanese imports during the years 1934 through 1937 indicates quite clearly the ability of the Japanese textile industry to flood our country with imports as a result of the lowering of tariffs on such goods. The quantity of imports jumped from 1.1 million in 1933 to 77 mil-lion yards in 1936, and reached a high of 106 million yards in 1937.

Source: Textile Division, U. S. Tariff Commission.

Even under our present tariff rates, the quantity of imports of cotton textiles from Japan has been increasing with alarming rapidity during 1954. Imports of certain cotton fabrics during a 16-week period from the week ending September 1 through December 15, 1954, of approximately 28.7 million square yards exceeded total imports dur-ing the first 8 months of 1954 by 33 percent. and were only 1.9 million yards or 6 percent lower than total imports during the entire year of 1953.

Many of the items which have been imported from Japan during the 16-week period cited above are combed goods of high quality which are being brought into this country at prices lower, duty paid, than those of American mills. Broadcloth, ginghams, and lenos are among such fabrics now being sold in New York. Between the week ending September 1 and December 15 of this year, a portion of the 28.7 million yards of cloth imported from Japan was made up of the following items which are directly competitive with the products of New England mills.

Imports from Japan (Thousands of square yards 1)

Gray broadcloth	5, 487
Gray shirting	3,538
Gray poplin	1,917
Handkerchief cloth	304
Gingham	994

(For recent imports of additional fabrics,

see table III attached.)

New England mills, which produce the higher grade cloths, are even more vulnerable to further reduction of duties because "On fine cotton cloths made of combed yarns, particularly those cloths made of imported long-staple cotton, the degree of protection is much less" than on other fabrics. (U. S. Tariff Commission Summaries of Tariff Information, vol. 9, p. 41.) Duties on higher grade cloths were reduced in 1939 with Great Britain, and confirmed and reduced further at Geneva and Annecy. These new rates are now being subjected to the test of competition for the first time, and the rate at which Japanese goods have been entering this country during the past few months tends to indicate that the rates are too low to offset the low-wage costs of Japan.

Although we have so far been unable to secure accurate information on the extent of Japanese production and capacity in combed and higher count goods, it is certain that she is now producing such goods, that her spindles spinning Egyptian cotton have increased 54 percent between January 1953 and January 1954 (United States declined 17 percent), and that at the beginning of this year Japan had almost one-half million spindles spinning Egyptian cotton. The Kureha Textile Review, published in Tokyo stated in 1953 that "We must endeavor to manufacture cotton goods of higher process as well as cotton of finer qualities together with devicing to make novel cotton textiles blended with other manmade fibers domestically produced."

CONCLUSION

It is our belief that a reduction of tariffs would stimulate an ever-increasing acceleration of Japanese imports. Our reasons for this are based not only on the character of the industry and the depressed conditions in the United States but also on the experience of the New England mills with the shift of the industry from that region to the Southeast.

"The major explanation of the New England decline in textiles is the large differential between wage costs" in that area and other parts of the United States. "In highly competitive markets an addition of a few cents a yard in the cost of producing cloth in any one area eventually means loss of sales and brings on operating deficits and resultant loss of employment." "Industries in which labor costs are an important part of total costs will gravitate where wages are low and labor productivity high. Labor costs are the most important costs in the textile industry other than raw-materials costs, the latter relatively not subject to revision, and the differentials in the cost of labor more than any other factor account for the threat to the New England textile industry."

The significance of the enormous wage differentials between our American cotton textile industry and that of Japan and other textile exporting countries is emphasized by the fact that our own industry shifted in response to wage differentials of much smaller amounts. Compare wage and compensation differentials within the country, which have varied from 20 to 30 percent, with foreign differentials of 200 to 1,200 percent. This loss happened to the largest employer in an industrially mature and competent region (New England) simply because wages were significantly higher than those in an area which was predominantly agricultural.

With differentials of 20 to 30 percent, the loss of New England textiles has been so great as to cause chronic unemployment in the area and a continued legacy of hardship to workers, communities, and stockholders. A flow of Japanese or other foreign textiles into this country would bring about an even more rapid liquidation of the American cotton textile industry than that which has occurred in New England.

A policy of encouraging Japanese imports would be a policy of encouraging production in low-wage areas. Government encourage-ment of low wages will retard improvement in technology and productivity and will foster low standards of living. A worldwide competitive struggle based on lower wages and lower standards of living in textile industries will only damage the United States and the free world.

The New England Governors have stated: "In view of the concentration of the industry in this country, in view of the overcapacity and frequent depression periods in the industry, and in view of the peculiar problems of New England, we urge the Government to concentrate tariff concessions on other products and, above all, to withhold concessions in this industry when unemployment prevails."

Respectfully submitted.

Luzerne County, Pa.

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following article which appeared in Business Week of January 8, 1955:

Luzerne County, Pa., is typical only of a very small section of the United States. Other areas with which it may be compared are likely to be, as Luzerne is, richly endowed with coal deposits. Yet even so, because Luzerne's hills are seamed with anthracite, its hardships are extreme. . The depression that has afflicted the coal industry generally since 1948 has had a longer history and taken a sharper bite in anthracite.

Thus the anthracite towns have had bitter and protracted experience with unemployment. Its impact on the communitiessocial, economic, and political—has been profound. And just as important, though less well known, has been its impact on traditional folkways and patterns of family life. What has happened in a Luzerne County town such as Plymouth, scene of these pictures, suggests what might occur in places elsewhere that have to adjust to large-scale male unemployment as the long-term prevailing norm.

One of the most striking developments in Plymouth has been the reversal of male and female roles. Many wives of unemployed miners have found jobs in the needle shops that have migrated from New York.

Like many another miner's wife and mother, Marian Narcum is now her family's

only breadwinner. Her husband, Walter, has had to take over her home responsibilities. The pictures on these and the following pages tell their story. (Pictures are omitted.)

The pictures on these pages show what can happen to a man, his family, and his community when the industry in which they have built their lives gets into trouble.

Coal ran into trouble after World War II-trouble largely in the form of competition from oil and gas. Today, coal towns in Pennsylvania, West Virginia, Ohio, Illinois, and Kentucky are struggling with unemployment. Hit hardest is the anthracite area in northeast Pennsylvania, centering around Scranton and Wilkes-Barre. Higher production costs of anthracite have made the bite even deeper in this area than in the bituminous regions.

Hard-coal mines have been shutting down steadily since the end of World War II. Anthracite production has slipped from a high of 62.1 million tons in 1944 to 43 million tons in 1950, 29.7 million tons in 1953. Estimated production for 1954 is between 20 million and 22 million tons.

And the bottom has not yet been reached. Francis O. Case, president of Glen Alden Coal Co., estimates the industry will stabilize at between 15 million and 17 million tons.

COURTING INDUSTRY

There is hope in sight, however. Efforts are being made to soften the economic impact on the hard-coal counties of Lackawanna, Luzerne, Schuylkill, Carbon, and Northumberland. These counties all have heavy unemployment—running to 15 percent of the total labor force.

The problem is that these counties have little industry to sop up the surplus male labor. The lack of industrial opportunity for men in the area is laid at the door of the coal companies—many of which, until recent years, opposed bringing in industries that would compete for manpower.

Now, industry is being courted. So far, however, that hasn't provided jobs for the 16,800 unemployed men in, for instance, Luzerne County.

THE WIVES

Job opportunities for women in the area have softened the unemployment blow and can be credited with preventing a repeat of 1939, when the relief load in the county was \$1 million a week. Today the relief load in Luzerne is running at a rate of \$458,-000 a month. One big difference is that when the husband loses his job in the mines, his wife is often able to find work in an apparel or textile plant. Such is the case with Walter Narcum and his wife.

This is possible because of the fact that while industry using male workers was being discouraged, plants using primarily female labor were attracted into the area, Lackawanna County has 136 apparel plants, employing 9,750-roughly 90 percent women. In Luzerne, 14,100 women work in over 100 apparel plants, 3,200 in textiles.

ROLES

With the wife the breadwinner, what happens to the unemployed husband?

In countless instances he has had to take over the woman's role in the home, as Walter Narcum has.

It's a role the man-heavy on Old World traits and used to being the boss-doesn't particularly like. But there is little he can do about it.

If he has worked in the mines for as long as 20 years, his chances of getting satisfactory employment are almost nil. The available industrial work goes to younger men.

If the unemployed man has silicosis (miner's asthma) -and most miners do have it in varying stages-he is a marked man, and no other industry will touch him. But

he can't collect disability unless he is flat on his back. So few miners—even with third-degree silicosis—collect disability while they are alive.

LIFE

What's left for the unemployed miner?

He keeps paying his union dues into the United Mine Workers-\$1 a month if unemployed-in hopes of collecting pension benefits at age 60. But the hard-coal miners are getting disillusioned about their pensionsoriginally \$100 a month, but now cut to \$50.

He registers at his local United States Employment Service office for work. Barre last month had 17,826 people hunting jobs. He can collect unemployment compensation for roughly 6 months. Then his only hope for income is odd jobs. So the miner with a wife or daughter who can get a dress-factory job at forty-odd dollars a week considers himself lucky.

TENSIONS

What's the sociological impact of this reversal of roles?

Raymond Bartow, director of the Luzerne County public assistance program, says it magnifies discord, creates tensions, and is breeding a second generation of public reliefers.

Mrs. Min Matheson, manager of the two International Ladies Garment Workers Union locals in Luzerne, says it is too early to measure the long-term consequences. But one consequence is already apparent, she says: "It's demoralizing to the man, leads to more drinking."

It's rough on the children, too, They are confused by the reversed roles of their parents, begin to wonder who is the "daddy" of the family. The reversal breeds delinquency; the father often doesn't keep the children in line so well as the mother. And

it puts a brake on family growth.

The woman has become more and more independent. She is becoming the dominant force in the home. And she is playing a bigger role in community affairs. But it is an independence she doesn't relish.

"It's one thing to have an independent income if your husband is working," said an ILGWU chairlady (equivalent of a shop steward), but it is no fun being the breadwinner."

REMEDIES

Many coal communities are doing their best to reverse this trend. One town, Wilkes-Barre, has launched what it calls operation jobs. It is spearheaded by a civicminded committee of 100, which concerns itself with trying to attract industry to the

Its biggest lure is Crestwood Industrial Park, a 1,500-acre site located 8 miles from the heart of Wilkes-Barre.

Two companies have located in Crestwood since 1952: Foster Wheeler Corp., employing 350 men; and King Fifth Wheel Co., construction for which began last spring, and which will employ 150. Some 1,200 acres of industrial sites are left.

A half dozen more nationally known firms have moved into other locations in the Wilkes-Barre area since 1952, bringing new jobs to around 4,000.

In Scranton, U. S. Hoffman Machinery Corp. began making shell cases for the military in September. It employs 800 now, hopes to reach 1,500 eventually. Also new in the Scranton area: Daystrom Instrument Co., specializing in gunfire control equipment for the Navy, employing 1,000; W. L. Maxson Corp., making calibrating machinery for the military, employing 1,000.

KING

But even with diversified industry, coal still is king in the area. It provides 40 per-cent of payroll in Luzerne County. There can be no real comeback until anthracite gets up off the floor.

Mining Usage of Public Lands

EXTENSION OF REMARKS

HON, HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to insert therein two editorials from the Bakersfield Californian, a newspaper published in my district and possessed of a very learned editorial writer. These writings deal very competently with the subject of mining usage of public lands and the confusion existing in the present law with respect thereto.

I also wish to insert an article appearing in the same paper which was written by the kindly lady who is the president of the company which publishes the Californian. This article deals with the subject, I Am An American in a most inspirational manner.

The matters follow:

[From the Bakersfield Californian of December 27, 1954]

More on MINING LAND PROBLEM

Conflict of interests on public lands is not new, but there is a greater awareness in the Nation concerning the need for more equitable laws or revision of the present laws to govern the proper use of the land, and to enable those who are charged by statute with the administration of these lands to accomplish their mission with more enlightened guidance and authority.

ened guidance and authority.

In Kern County, this problem is being encountered with greater frequency now that the rush for uranium has opened the way for the filing of thousands of mining claims that have sequestered a large amount of the land that had formerly been used for grazing and recreation and other purposes.

At a recent meeting, Forest Service officials reminded sportsmen and others who had raised some question regarding the claims and the possibility of interference with other users that the mining laws, while antiquated, are still in force and, until they are changed, the multiple use of the forests will continue to be hampered by unscrupulous employment of these laws in many cases to obtain land.

Throughout the country this situation has attracted considerable attention and one or two bills introduced in Congress to correct it, but so far this legislation has not made any progress, although the corrections are designed to protect the public interest and the legitimate miners.

The Forest Service has repeatedly pointed out that it can investigate only a fraction of the claims filed, and take action only on a few, since it does not have the manpower or the money available to do this. Therefore, choice homesites, cabin and retaurant and service station and other locations are established under the guise of mining claims, and the public loses. The multiple use theory of forest management is rendered impotent in the face of this condition.

An example of this trouble was cited recently by the San Francisco Chronicle, involving 40 acres of national forest land close to Lake Tahoe, which was claimed as a sand and gravel mine.

The Wildlife Management Institute comments on the case as follows:

"In successfully contesting this patent application, the United States Forest Service asserted that the land is far more valuable

as a public recreation area than it would be as a mine. Despite the claimholder's statement that the mine was a paying proposition, a construction agent who leases a portion said that he "would go broke" if he had to depend on the operation for his sole income. Forest Service experts testified also that the sand obtained from the mine was substandard for construction and was of slight commercial value.

"Once a claim is staked, and after the claimant performs a minimal amount of development and proving work, application can be made to bring the land to patent. Once a claim is patented, the land surface and its products as well as the mineral beneath it are owned outright. The timber can be cut and sold and the land used for homesites or any other purpose.

"Had this patent application been approved, the claimants, for an outlay of \$110, would have gained title to land worth from \$8,000 to \$9,000 bearing \$3,500 worth of timber and Christmas trees."

These and other instances should compel attention to the need for corrective legislation in the Nation's mining statutes. The forthcoming session of Congress should prove to be an excellent opportunity to accomplish something in this direction.

[From the Bakersfield Californian of December 20, 1954]

PROTESTS MAY BECOME LOUDER

At a meeting conducted at Isabella recently, Federal officials heard complaints registered by hunters and fishermen and others that the great influx of persons interested in mining has created a problem due to the disappearance of land available for recreational purposes. This complaint is likely to become fairly common in the months to come, when the sportsmen who use the Kern Mountains for hunting and fishing and camping really begin to realize the extent to which the uranium boom has reduced the recreation areas.

There has been and undoubtedly will be more posting of land against hunting and trespassing in the Kern Mountains, because thousands of acres that formerly were open to hunters and campers and hikers have been taken over by prospectors and others seeking uranium riches, and under the mining laws of the country, the rights on these claims are closely akin to the property rights on land everywhere else.

The sportsmen will also find, when they

The sportsmen will also find, when they conduct their searches for fish and game, that with the large area taken over in mining claims, the prospect for recreational projects will be greatly limited, and this will have a definite effect on the future of Kerns Mountain areas as a tourist and sports attraction.

The reservation, by mining claims, of so large an acreage in the mountains will also have some effect on the cattle business in the county, because just as the claim owner may post his area against hikers and hunters, he can fence it against cattle, and according to location notices on file, much of the best rangeland in the Kern Mountains has been covered by mining claims in the current uranium rush.

It is possible, also, that some timber operations may be affected by the transfer of land into mining purposes, because the law as it now stands fails to separate surface and subsurface rights. This may prove somewhat of a headaches later as more intensive efforts are made to develop the timber resources of this area.

Apparently, in the Kernville-Isabella district, the clash of interests has begun to be noticeable, and the meeting to air the differences brought little satisfaction from the authorities, according to reports from the session. The laws are not subject to the sort of interpretation that would benefit the

sportsmen, and this fact is becoming painfully apparent as the amount of land available for recreational purposes diminishes.

The subject of mining claims being used as subterfuges for the establishment of installations having little or nothing to do with mining has been discussed often, and the United States Forest Service has pointed out many times the need for a change in the mining laws to prevent this. Legitimate mining men are in favor of this change also. Yet the present laws have permitted the possession of thousands of acres to pass to individuals who have no intention to develop mineral workings on these acres in spite of the fact that they were acquired as mining claims.

From the report of the meeting at Isabella, this matter has come into the area of discussion in the Kern County mountains, and those interested in the subject were given good advice by Supervisor Eldon Ball of the Sequoia National Forest, who recommended a thorough study of the mining laws as they exist today. When these laws are examined, and the abuses permissible under them appreciated, there will be a more concerted movement for reform in these laws, so that corrective action may be taken.

It is probable that the meeting at Isabella is the first of many to be conducted on the subject of the proper apportioning of land uses in the mountain areas, a situation thrown into considerable confusion by the sudden and extensive rush to stake out mining claims in the region that has also such heavy use by cattle for grazing, sportsmen and campers and fishermen for recreation and is beginning to contribute to the timber wealth of the county.

wealth of the county.

Perhaps a greater understanding of the laws governing the lands and the uses thereof, together with a better appreciation of the proper priority to be assigned, will help solve what seems now to be a grave problem.

WHAT DO YOU THINK?—I AM AN AMERICAN (By Bernice Harrell Chipman)

When the foreign-born within our boundaries become citizens by naturalization they do it surrounded by some ceremony. The importance of the occasion is made clear to them, they have successfully passed a certain amount of instruction, they are congratulated and wished well, and their new status is emphasized as one of dignity and importance.

It seems to me that we who are born into our citizenship should at times give some thought to our enviable position, bestowed on us as a free gift of fortune, that of being members of the most wonderful country in the world. And what day better than New Year's Day to consider these circumstances, and to make the first of our New Year's resolutions that of serving our country as our place in life makes possible, and to give solemn consideration to some of those things which make the United States preeminent as a nation.

That this is a land of freedom should be our first reason for self-congratulation, no purges after elections, no coups d'etat, no military government, no imprisonment without trial, and no suppression of free speech. Let us keep it that way and with all of our powers fight any efforts to change this happy way of life and to regiment us into one mold.

That this is the land of opportunity is shown by more instances than one can cite. I know the children of an ignorant immigrant woman, five of them, all supported by her by cleaning by the day, who are in one generation all attractive, educated persons, all in prosperous businesses, with homes of their own, and each with a fine, hearty brood of young Americans coming along. I know a foreign couple who, coming to this country with nothing, and ignorant of the lan-

guage are now able to retire to a place in the country, living on the income they have accumulated. These examples are repeated all over this broad land in thousands upon thousands of cases.

A few days before Christmas I heard carols sung by a vested choir of young boys—all clean and shining in their white robes—all singing "Noel, Noel," in those wonderful boy soprano voices, and at least 10 of these happy youngsters were black, their eager eyes shining as the holy words came from their tuneful throats, and several were Chinese and 1 or 2 Filipinos. What a fine sight—and what a fine sound—just before that season which proclaims all men are brothers.

When we hear complaints by carpers that we have racial prejudice, let us look at the gains that have been made and hold firmly that we are a tolerant country bent and determined on solving the problem of minority groups. And let us give a thought to some of the individuals of these minorities who stand out as examples of the best of their group, and let us consider that they are honored and respected as here all men are honored who have won respect through character and achievement.

And if any of these same carpers should say the opportunities in America are in the past and there is now no such chance to get on in the world as there was for our forebears, I will give you a young man who but a brief few years ago, starting with a modest capital of \$7,000 has, through industry and vision, worked up a business bringing in \$20 million a year—and he is still a young man.

We live in a country where such things happen so often that they are hardly noticeable, a country where these successes are possible to those with will and intelligenceand industry. We have the greatest material prosperity in the world. But we do not live by bread alone. Let us not forget that we have, as well, a great reservoir of mutual helpfulness. Let anyone be in poverty or sickness or distress, and, if it be known, people everywhere will raily round with money and glits and aid. Everyday deeds of helpfulness and charity are done for the less fortunate and there are scores of agencies that exist solely to do good to others.

And we may be proud that it is the policy of our Government that none shall suffer an old age deprived of the necessities of life, and that needy children are the responsibility of the State, and that the unemployed shall not become destitute. All these things, and so many more are the things to think of on New Year's Day. Let us resolve to let none decry our country. Let none say we are crass, ignorant, uncultured, material, without our taking our stand strongly that we are a part of the best the world knows. Let us also resolve to do our mite to correct what is not good, so that in 1955 we can be increasingly proud of our heritage.

Happy New Year. May it be for all of us an "I am an American day."

The Late Dwight F. Rogers

SPEECH

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 5, 1955

Mr. McMILLAN. Mr. Speaker, the State of Florida and the Nation have suffered a great loss in the passing of our colleague, Dwight F. Rogers. I shall personally miss Congressman Rogers every time I attend a session of Congress as he was always present at practically every session of Congress since he was first elected to represent the great State of Florida in the National House of Representatives.

I certainly join with the Members of his fine family in mourning his untimely passing.

Congressman Rocers was always interested in every piece of legislation pending before the House that had for its purpose the preservation of our Constitution and the betterment of the people of this country in general.

Again let me state that this Nation can ill afford to lose men of Congressman Rogers' character and ability during these critical times.

Timepieces and Tariffs

EXTENSION OF REMARKS

OF

HON, HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I include the following article from the Christian Science Monitor of Wednesday, December 15, 1954, entitled "Timepieces and Tariffs," by Mary Hornaday:

SAGE FROM NEW YORK (By Mary Hornaday)

NEW YORK.—When the alarm on President Eisenhower's wristwatch went off during a press conference the other day, it was a happy moment for the peace-loving Swiss people, many of whom believe the United States has recently declared economic war on them.

Inadvertently, the President advertised the fact that, though he recently adopted a recommendation of the Federal Tariff Commission for a 50-percent increase in duties on Swiss watches and watch movements, and his administration launched an antitrust suit against Americans cooperating with the Swiss watch Industry, he still wears a watch that only the skill of the Swiss has achieved thus far.

Newspaper reports from Switzerland since the administration action have been full of reports of watchworkers' mass meetings and proposed boycotts of American products.

This uneasiness has spread to other parts of Europe, too. On a recent Edward R. Murrow TV program, when Senator Margarer Chase Smith, Republican, of Maine, asked a German industrialist whether he was trading with the East, he retorted: "Yes. Look what you have done to Switzerland. How can I feel sure about putting all my eggs in the West's basket?"

At the annual American Swiss Friendship dinner held in New York, the recently created economic tension between the two nations was uppermost in speakers' minds, with former Ambassador to Switzerland, Richard C. Patterson, urging patience and Swiss Ambassador to Washington, Charles Bruggmann, picturing the United States as a big Nation of unlimited and diverse possibilities bearing down mercilessly on a have-not country where large sections of the population and whole towns such as

Bienne and Solothurn are dependent on this one industry.

It is evident from today's friction between Switzerland and the United States that these two "most private enterprise countries in the world" need to understand more about each other's watch industries and their significance in the divided world of today. Involved in the differences are not only national traditions toward jobs but attitudes toward war and peace.

Compared with Switzerland's 600 watch manufacturers, the United States today has dwindled down to 4, located 1 each in Pennsylvania, Illinois, Massachusetts, and New York. For 160 million Americans, their domestic industry turns out 1,700,000 watches a year at the present time, while for 4,500,000 Swiss, the Swiss watchmakers turn out 25 million a year which means most of the output must be exported—chiefly to Americans who have the wherewithal to buy them.

But the United States, at this point, is particularly interested in building up the precision know-how for western defense. Into this picture enters the whole Swiss tradition of neutrality and also the question whether its impressive Alpine redoubts can withstand the nuclear weapons of today.

The antitrust suit brought by the United States Department of Justice against 20 importers of Swiss watch parts is ironic in the fact that the very practices it complains of are ones the Swiss Government has built up over the years to keep its watch industry strong and healthy. Briefly, they are comparable to the help given industry in the United States to help it expand at the outset of World War II.

What can be done now to prevent such international jolts between two old friends in the future? That is what businessmen and international friendship groups are asking here. Citizen education can play a part. One importer answered: "We would like to

One importer answered: "We would like to know if, when the American manufacturers reach the 2-million-watch-output-per-year 'defense potential' figure, the preferential tariff will be removed and free enterprise come into play again."

The Swiss, too, are doing some national soul-searching on the problem. They think perhaps that in their political neutrality they have been too aloof from other nations economically. They have a feeling that membership in GATT, for instance, might have made United States action against them more difficult.

Today the first flurries of angry reaction are over; certain American political figures with watchmaking constituents have been reelected, and the time seems ripe to begin to rebuild Swiss-American friendship fences.

Russia Rearms Germany Plus Its Former Axis Allies

EXTENSION OF REMARKS

HON, JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks in the Record, I include an article written by C. L. Sulzberger, appearing in the New York Times of January 12, 1955, giving important information in relation to the increase of the military forces and power of the Soviet Union and its satellites. This information is only a part of the

tremendous military machine of the Soviet Union and its satellites:

FOREIGN AFFAIRS—RUSSIA REARMS GERMANY
PLUS ITS FORMER AXIS ALLIES

(By C. L. Sulzberger)

VIENNA, January 11.—While complaining about West Germany's rearmament Moscow is unilaterally violating four international agreements restricting military forces. The Soviet Union has already created an East German army of 7 divisions, 3 of them mechanized. Thus it has long ignored quadripartite bans on German remilitarization. Likewise it encouraged Hungary, Rumania, and Bulgaria to create armies vastly in excess of peace treaty limitations. These three satellites were members of the defeated Axis alliance.

Hungary's army is now considerably more than twice the maximum specified in treaties signed 8 years ago. Bulgaria's forces are nearly three times the permitted size. Rumania's are roughly 75 percent above the figure agreed to by Moscow as well as Washington, London, and Paris. But the most blatantly cynical comparison between the U.S. S. R.'s peaceful declarations and belligerent activities remains in Germany itself.

Soviet propaganda argues that giving guns to Germans is both illegal and a threat to world peace. The Adenauer government patiently awaits ratification of the Paris accords before even allotting funds for training cadres. Yet, across the Iron Curtain in the Soviet Zone, 100,000 German soldiers formed into regular army units already parade under the not very convincing camouflage of garrison police.

This so-called K. V. P. was first formed in 1951. Supposedly a volunteer force, probably only at most 15 percent are genuine volunteers. The rest were blackmailed into enlisting by Communist authorities. As a result morale is bad. About 1 percent of total effectives succeed in escaping to the West each year. Many others try. If Moscow counters West German rearmament by East German conscription the defection rate will be enormous.

SOVIET STRENGTH IN EUROPE

It is clear why the West resolved to rearm Bonn when one analyzes the Soviet military establishment in Europe. This includes 30 Russian divisions: 22 in Germany and 2 each in Austria, Hungary, Poland, and Rumania. It also includes approximately 82 satellite divisions, of which 18 are armored. The equipment of satellite units is Soviet—not the most modern but efficient. The puppets' forces are being increasingly motorized. The process has been virtually completed in Hungary and is well underway in Bulgaria, Czechoslovakia and East Germany.

The best satellite army is Bulgaria's. This is extremely well trained. Morale is excellent. Five years ago Sofia began to call up reservists twice or thrice yearly for maneuvers on a war footing. Mobilization plans are well prepared and many classes are available to add to the existing 12 infantry and 2 armored divisions. Exercises have been held on divisional, corps, and army levels. Hungary and Czechoslovakia probably have the next best armies in terms of training. Poland's force is still rather mediocre. There the Russians have placed Soviet officers in all high command positions, in the War Ministry and general headquarters. Elsewhere in the satellite world Moscow's military missions supervise but don't hold active commands.

These armies, backed up by the powerful Russian force already west of the Soviet border, menace the free world. The Bulgarians and Hungarians are already capable—in terms of training, morale, and equipment—of offensive operations. The rest could beemployed defensively or sandwiched into Soviet corps. Only the Rumanian and Albanian divisions are still largely useless.

EFFECT OF AN EASTERN NATO

By now the satellite officers corps is limited to men loyal to Moscow. Many commanders are former partisans or veterans of Spain's international brigades. They are being constantly trained in Soviet military schools. The satellites have a combined tactical air force totaling 2.500 planes, mostly Russian MIG 15's. Czechoslovakia now manufactures these jet fighters. About 100 first-class airfields with long concrete runways have been constructed in East Europe.

This force has been developed by Soviet officers while Soviet diplomats have been screaming against Western rearmament. If Moscow decides to devise its own treaty organization as a counterpoise to NATO, the move will have little more than propaganda value. The armies already exist; they are politically and militarily coordinated with Russia; their weapons and plans have been standardized. An Eastern NATO might afford an excuse to announce conscription in East Germany—risky because of morale. It could serve Moscow as a pretext for establishing Soviet garrisons in Czechoslovakia and Bulgaria, where there now are none. But obviously the Kremlin doesn't require any such permission.

The elaborate Communist military establishment has been developing for a long time. It is no diplomatic secret that Soviet Germany started rearming 4 years ago and that Hungary, Rumania, and Bulgaria are unabashedly violating their peace treaties at Moscow's behest. The only extraordinary thing is that Allied propaganda has remained so much on the defensive when discussing Bonn's remilitarization. The world should be referred to the facts that made this necessary.

Veterans' Benefits

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mrs. KEE. Mr. Speaker, on January 3, 1955, the President announced the issuance of a proclamation setting January 31, 1955, as the end of the period of eligibility for certain veterans' benefits of the Korean conflict administered by the Veterans' Administration and other Federal agencies.

However, on my own part, so long as the Government faces the necessity for drafting our young men for service in this country or overseas, I will favor full veterans' benefits for these men and their dependents, regardless of whether or not this country is actively engaged in war.

The issue is a moral one. So long as the Government asserts the right to draft young men for military service, I feel that it assumes, at the same time, sizable responsibilities for their future welfare. No one can tell what effect will be had upon the life of a young man, often less than 21 years of age, who has his normal life disrupted, and his own personal wishes and plans completely changed.

With many other Members of Congress, I am sure a majority, I deeply regret the necessity for drafting these young men, but in view of the present world situation, I do not see any workable alternative.

With this in mind, I shall do what I can to see that all veterans' benefits are continued on the present basis so long as men continue to be drafted.

Fight for Worker Over 45

EXTENSION OF REMARKS

HON, FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. OSMERS. Mr. Speaker, on January 5, the opening day of the 84th Congress, I introduced House Resolution 54, which has as its purpose the creation of a select committee to investigate discrimination based on age by employers against those citizens who are between the ages of 40 and 65 years.

To me, Mr. Speaker, there is no more important employment discrimination problem in the Nation today and it is my hope that the Rules Committee will promptly and favorably report House Resolution 54. Under leave to extend my remarks, I include in the Record an article from the Newark (N. J.) Evening News of Tuesday, January 11, 1955, on this subject:

FIGHT FOR WORKER OVER 45—STATISTICS SHOW MANY FALSE—OFFICIALS ATTACK OLD PREJ-UDICES

(EDITOR'S NOTE.—The Department of Labor and State labor departments, in areas where unemployment is serious, are giving special attention to the man past 45 who cannot land a job because he is "too old." The following article describes how "age prejudice" afflicts our senior citizens.)

New York.—"First to be fired, last to be hired."

So goes the bitter refrain of the middleaged and older worker in a world that places a premium on youth.

His lament is only partly true. Through union activity and industry's recognition of seniority rights, a man getting along in years has less reason today to fear he will be among the first to be laid off if his company tightens its belt during a recession.

"Job engineering," the shifting of an aging

"Job engineering," the shifting of an aging worker to a job of slower pace, also is helping keep older workers employed.

But the deck is still stacked against the man past 45, and the woman over 35, who walk into an employment office looking for a job.

As many as 80 percent of the jobs listed in employment bureaus carry a specific age maximum. The United States Department of Labor says 1 out of 7 placements involves this age group.

AGE PREJUDICE

Except in a tight labor market, when employers are grubbing for help, the older worker may indeed find himself last to be hired.

Employment service officials believe age prejudice is responsible for much of the reluctance to put older men and women to work. Employers rattle off stock arguments to justify their policies. But placement officials argue right back. Examples:

"Older people are more likely to get hurt on the job."

The Bureau of Labor Statistics surveyed 18,000 workers in 109 plants and found that disabling accidents involved as many men in the 25-35-age bracket as in the 45-plus bracket. The highest rate was among men between 35 and 45.

'Absenteeism is greater among older work-

The same Federal survey showed absenteeism is lowest among workers 55 to 65, highest in the under-30 group.

If a man is unemployed at 45 he is probably a job-hopper and wouldn't work for us

long anyhow.

Labor surveys show job-hopping is more prevalent among younger workers, who have less family responsibility and are more restless and ambitious.

As a man gets older he produces less.

Statistics aren't available to prove or disprove this, but such a generalization is defied every day in factories where haired men keep up with assembly lines as easily as their sons.

MEAL VERSUS WISDOM

"We want young men with zeal and energy."

Energetic young men often do not have the sober judgment, wisdom, and experience that comes with age.

Another argument, not based on prejudice, involves pensions. Some companies say they cannot afford to put a new employee over 40 on the payroll without upsetting their pension program. He would be eligible for retirement too soon.

In some quarters it is suggested that compulsory retirement be done away with. Medical science has Increased the life span to the point where 60 to 65 is no longer a realis-

tic age to force a man to retire.

The problem of the older worker is being pressed home to industry and labor leaders—and political leaders—by the fact that increased longevity means the forty-five-plus group will make up half of America's adult population by 1975.

Reserve Program

EXTENSION OF REMARKS OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. HALEY. Mr. Speaker, I wish to place in the RECORD a copy of an address made by Lt. Col. Bolton S. Pierce, United States Army, before the 10th anniversary of the national convention of AMVETS in convention at Miami, Fla.

In light of recent events and the obvious decisions to be made in the 84th Congress on our national defense effort, I think this address is very pertinent, and, under permission heretofore granted. I include it here so that my colleagues may have the benefit of Colonel Pierce's views on this important subject.

His address follows:

THE COMMUNITY AND NATIONAL DEFENSE

Ladies and gentlemen, knowing of the prominent speakers who have been addressing this convention and those who are yet come, I feel highly privileged to be able to spend this time to bring you a message I think is of utmost importance to our country at this moment. I would like to call it the Community and National Defense.

Having a representative-type government, a democracy, I think that we are inclined at times to feel that all functions of government are to be carried on by our elected representatives. We sometimes fail to realize that there are certain functions of government which we can only perform ourselves, as individuals. You are all acquainted, am sure, with the old saying that has come down through the ages and as long as we have had a civilization, that the only positive thing about life is death and taxes. with our type of government the two things that are required of the citizens, as an individual participation, is the payment of his taxes and serving when needed in the defense of his country.

You are all acquainted with the incidents of past years in which history has thrust this country into a position of world leadership, and you all know that at present we are faced with worldwide Communist aggression. I think that General Ridgway, Army Chief of Staff, has well pinpointed what we face when he said, "The real issue is whether the rule of men who shoot their prisoners. enslave their citizens, and deride the dignity of man shall displace the rule of those to whom the individual and his individual rights are sacred; whether we are to survive with God's hand to guide us and lead us, or to perish in the dead existence of a godless world."

We have been fortunate, as compared to many other nations of the world, in that we have never, during this era of total war, had the mainland of our country under devastating attack, nor have we suffered too heavily in casualties in the wars in which we have been engaged throughout our history. not necessary to add that war with its at-tendant misery is studiously avoided by all thinking people. It is also possible that we might have avoided some of the wars in which we have been engaged if we had followed more closely the advice of our first President, George Washington, who cautioned, "that to be prepared for war is one of the most effectual means of preserving peace.'

Today we are heeding that advice, and to the limits of our economy, we are maintaining large, well-trained, well-equipped defense forces. However, our economy cannot stand the size forces, on full-time basis, that would be indicated by the size of the forces arrayed against us. To draw the parallel, it is estimated that Russia and her satellites have equipped and under arms approximately 4 million men in their ground forces alone. At the present time it is estimated that we have in our Army approximately I might also add that the 1.200,000 men. number of men needed to support one frontline combat soldier is appreciably less in the forces of the Communists.

Our economy cannot only not afford the expense of the added manpower, but our industry could not stand the withdrawal of manpower from that field. The solution to this problem is the maintenance of a strong. well-trained Reserve.

Is is here that I would like to go back to my previous statement that national de fense is one of the individual acts required of the citizen and, as such, it is a munity problem that affects us all. We cannot dismiss this responsibility nor can we push it on to our elected representatives, except that they shall provide the organization and implementation.

We have to build up a new patriotic awareness among our people, particularly among our young people. We are a healthy, wellfed, well-educated nation, and as such any statement that we are becoming soft as a nation is ridiculous. However, it is possible that some of our thinking may be soft in that we feel that upon any aggression we can all spring to arms and win a resounding victory. Ladies and gentlemen, it takes 3,000 hours of training to prepare an infantry division for combat; this is approximately 1 year. Manpower is precious to this country,

not only in individual lives but also as a commodity for defense. We are approxi-mately 160 million strong today, and the population of the countries arrayed against us totals over 1 billion. Coupled with their disregard for human lives it is more for-

The education of our people I believe is a project in all communities that you are a part. The part-time soldier in the various State National Guards, the units of United States Army Reserve, and our institutional military units of the Reserve Officers Training Corps in our high schools and colleges, are a necessity to our survival. I know that you may point out that the annual amount of training received by these men does not even approximate that amount of time that it is required to place a fighting force in the field; but military training is one thing, one type of education that a little is better than nothing. Rifle marksmanship, unit and in-dividual tactical training, working as a team; for even a short period of time pays off when these men are needed. Encouragement and support of these activities also build better citizens, and instills and maintains that patriotic awareness that this country must have toward their national defense. are acquainted with our present selective service system, by which after 2 years of training in the Regular Army our young men are released to their homes and kept for an additional 6 years in a reserve status. These men are vitally needed not only to maintain their trained status through participation in our Reserve programs, but they are also needed to train the younger men who can be encouraged to join these units. Since this selective service system has been in effect we have had released from service approximately 1 million men, of this number only a little better than 4 percent have performed their service obligation by joining a Reserve unit. Of course there are certain discomfitures in connection with military life, but life in any phase has its discomfitures. young people of military age have not fully realized that at the time they are called for service, and it is for you more mature veterans to assist in an early development of this wisdom that comes with years.

I recently had the pleasure of making an inspection tour of a number of our highschool ROTC units in the southeastern United States. As you know, these highschool students receive approximately hours of military training per week. That amount of time neither adequately trains a man, nor is it of an amount that we have to worry about developing what has been termed as a "military mind." It was revealing to find that in exposing these young people, starting at 14 years of age, to military training, that they were enthusiastic about it. To those not previously exposed, the college group are less enthusiastic, and again. the group at the 191/2- and 20-year-old level, who are inducted under selective service are the least enthusiastic. It is this attitude toward service for our country that has to be combated in the community. can draft our young men for service during peacetime, as we are doing. It is indicated that we may have to take action to make compulsory some type of reserve service so that we may have that strong reserve which is mandatory, but we cannot make them like it. This citizen duty should be considered privilege, instead of a chore. Although funds are not available at this time for the expansion of the ROTC program with fulltime Army personnel as instructors, there is a type of ROTC which is supervised by the Army known as the 55C program, named after that paragraph in the National Defense Act, wherein equipment and training aids and texts are furnished by the services, and uniforms and instructors are furnished by the schools. I urge you all to investigate this program for your own communities. Those of you who have high-school ROTO programs in your communities, I urge you to become acquainted with what they are doing; community recognition of this training will go far toward developing a proper attitude of citizenship among our young

As General of the Army Omar Bradley observed in 1949, "We have neglected to tell our young people that democracy is a twoway street-that with its benefits comes the

necessity for also giving service."

Many of our country's leaders in the past have indicated the things that we should do in order to preserve the democracy that we all enjoy; they are as pertinent today as they were the time they were made. I would like to leave you with a quotation from the Star Spangled Banner, written by Francis Scott Key in 1814; and found in the first lines of the fourth and last stanza of our national anthem:

"Oh! Thus be it ever, when free men shall stand

Between their loved homes and war's desolation!"

Thank you.

Greenwood Men in Hall of Fame

EXTENSION OF REMARKS - OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. DAVIS of Georgia. Mr. Speaker. at an interesting meeting of the Greenwood (S. C.) Chamber of Commerce held on January 4, citations to two new Members of the Hall of Fame for the Living were presented to Messrs. Dewey H. Johnson and F. E. Grier.

A report of the annual meeting of the chamber and of the presentation of the two citations were carried in the January 5 issue of the Anderson (S. C.) Independent. Under unanimous consent previously granted, I insert this news-

paper story herewith:

GREENWOOD MEN IN HALL OF FAME (By Jim Blessing)

GREENWOOD, January 4.—Deserved honors showered tonight on two eminent leaders of Greenwood-citizens whose careers since days of youth have been marked by hard work, the will to succeed, and an unselfish spirit of cooperation with and faith in their fellowman.

Named to the South's "Hall of Fame for the Living" and presented plaques during the annual Chamber of Commerce banquet were: F. E. Grier, 55, Carolinas and Mississippi textile executive, and Dewey H. Johnson, banking and business wizard of the Carolinas and Georgia.

Hubert F. Lee, of Atlanta, editor and founder of the Dixle Business magazine which sponsors the awards, presented the handsome plaques to J. C. Self, Sr., of Green-wood, a member of the "Hall" and 1952 man of the South, who in turn presented them to Johnson and Grier.

Wives of the recipients were among the capacity gathering attending the program at Oregon Hotel, which also featured an address by Dr. R. S. C. Young, widely known educator of Atlanta.

Grier, a native of Due West, is president and treasurer of Abney Mills chain and chairman of the board of Erwin Mills, in North Carolina. The industrialist holds numerous positions of leadership in industry and community life. A native of Due West, in Abbeville County, he has resided in Greenwood since 1930. Former president of the Bank of Greenwood, he has been president of Abney Mills since 1942. He is treasurer of Erskine College, his alma mater, and a trustee of Lander Foundation.

Johnson, a native of Aiken County, entered the banking field as a messenger runner after graduating from high school in 1917. After 24 years with Citizens and Southern Bank in Alken, climbing to the vice presidency, he went with Auto Finance Co., and in 1943 acquired interest in the Bank of Greenwood, serving as its president since. Under his leadership the bank has established branches in Aiken, Ninety Six, Ware Shoals, New Ellenton, and Harris and Mathews communities here. He serves as an officer or director of several successful insurance companies in the Southeast, and is a member of the South Carolina Education. Finance Commission, which approves all new school buildings. He has long promoted the livestock industry in South Carolina and Georgia.

The chamber of commerce body heaped commendation on retiring President S. Whit-field Perry, who has led the trade body through a fruitful 1954 for the entire community. Gifts were presented to him and to Mrs. Perry by Nat Watson, retiring first vice president of the chamber.

R. B. Curry, Jr., was introduced by Perry, who served as master of ceremonies, as 1955 chamber president. Other new officers and directors introduced included J. W. Bradford, Jr., first vice president; G. E. Moore, second vice president; John B. Sloan, treasurer; and E. A. Baumel, general manager.

Directors include Julian Bolton, Howard Burns, R. B. Curry, Jr., D. Wellsman Johnson, G. E. Moore, Charles R. Walters, W. D. Wilkinson, Alex Woodle, C. B. Barksdale, J. Bradford, Jr., George H. Davis, F. E. Grier, Dewey H. Johnson, Ernest R. Rosenberg, J. C. Self, Jr., John S. Sloan, and S. W. Perry.

Dr. Young, director of admissions at the University of Georgia's Atlanta D spoke on "Why I Am an American." of Georgia's Atlanta Division, tive of Scotland who came to this country as a young man after World War I, reminded the 250 attending the meeting of their rich heritage and deep obligation for the privileges and opportunities of their country.

We are in danger of losing these wonderful things-our freedom, our opportunities, our national character-unless we teach our children to appreciate, respect and revere them," he said, pointing out that adults have a tendency to enjoy these marvelous advantages while taking them for granted and doing little to promote or preserve them.

"America was built," Dr. Young told the group of industrialists, businessmen and civic leaders, "by men and women who asked for nothing but elbow room—men and women who weren't afraid to work hard."

"Today," he lamented, "too many people are asking for 'pensions' instead of opportunities to work." He criticized sharply the educators and others who tell young dents that "they're entitled to something." Such a philosophy, breaking down the time-honored pattern of work and its rewards, can wreck the American way of life, he con-tended. "The curse of our age," he contended. "The curse of our age," he con-tinued "is the easy money given to people who don't work for it."

One of the most striking characteristics of Americans, Dr. Young said he discovered when he came to this country, is the consistent willingness of persons to help others.

Other highlights of the program, which climaxed a year of unusual achievement for the chamber, included invocation by the Reverend J. A. Bowers, pastor of Greenwood First Baptist Church and dinner music by

Mrs. Carolyn Rhodes with a vocal solo by Miss Evelyn Martin.

Distinguished guests introduced by retiring President Perry early in the program included A. D. Asbury of Greenville, president of the South Carolina State Chamber of Commerce; Dr. and Mrs. R. C. Grier of Greenville; Mr. and Mrs. Wilton E. Hall, of Anderson; Mr. and Mrs. J. C. Self, Sr.; Greenwood Mayor and Mrs. R. E. McCaslan, United States Representative and Mrs. Bryan Dorn, State Senator G. P. Calliso.

Basque Shepherds Prosper on United States Ranches

EXTENSION OF REMARKS OF

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 6, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article written by Lawrence E. Davies, which appeared in the January 9 issue of the New York Sunday Times. This article contains implicit praise for the California Range Association and for John Bidegaray and Robert Franklin, of Fresno, Calif., both of whom are friends of mine. The discourse should be interesting to all Members of this body because it lays to rest many of the fears expressed by some Members of this body with respect to the admission of Basque sheepherders to this country. It is apparent from this factual article that such immigrants are well treated and make a major contribution to the economic life of this country.

The article follows:

LONELY BASQUE SHEPHERDS PROSPER ON BIG UNITED STATES RANCHES-MEN LIVE FOR MONTHS IN SOLITUDE CARING FOR GREAT FLOCKS-RIGHT TO BRING MORE HERDERS FROM SPAIN SOUGHT IN WEST

(By Lawrence E. Davies)

FRESNO, CALIF., January 1.-Pedro Azcarate, as he herded a few sheep in the Pyrenees near his home in the Spanish Province of Navarre,

dreamed of coming to the United States.

He dreamed about it "because I know I could earn money here and live the right way." The dream persisted while he served his hitch in the Spanish Army.

Back at his sheepherding occupation last September, at the age of 26, the friendly, black-haired young Basque got a call from an airline representative. Three weeks later he reported at Bilbao and was questioned by the American consul about his experience and skills. A Spanish doctor gave him a physical examination.

Pedro went home to await developments, On October 27, he left Paris by plane and 3 days later was herding a band of 1,000 sheep in California's San Joaquin Valley.

His case is illustrative of those of hundreds of young Basques who are being brought into this country under special legislation designed to give the American wool industry help by furnishing skilled labor to increase production.

M'CARRAN SPONSORED BILLS

The late Senator Pat McCarran, Democrat. of Nevada, sponsored a series of special lawsaside from the McCarran-Walker Immigration and Nationality Act itself-under which

the importation of a total of 1,135 skilled sheepherders has been authorized since 1950.

The wool industry is hopeful of getting an adjustment in legislation at the forthcoming session of Congress so that out of Spain's annual quota of 250 immigrants, about 100 would be skilled sheepherders. Under the immigration law the first 50 percent of the quota of any country is available for first preference to persons whose skills are needed.

That would enable up to 125 sheepherders to be brought in from Spain every year. But under the special legislation of 1950 and 1952, half of the 750 sheepherders authorized to be imported in those years were borrowed against Spain's quota in future years.

As the statutes now stand, this debt cannot be wiped out until the late 1950's. The industry, however, would like to have the loan canceled by the 84th Congress.

Sheepmen blame the lack of skilled herders for a substantial part of the production slump since the early part of World War II.

The number of stock sheep on western ranges and farms was down this year to about 27 million head from 53 million in 1942.

Basque herders are especially prized because they are contented for long periods with only a band of sheep for company, and because of their intelligent and sympathetic regard for the welfare of their sheep.

The wages paid the Basque sheepherders are the prevailing wages collected by Americans or others doing the same jobs. Sheepmen say they have had cordial relationships with labor union officials because sheepherding is not attractive to American union members.

The average American assertedly does not care to live the lonely simple life of a sheep-herder, with responsibility for perhaps 1,000 sheep on a 24-hours-a-day, 7-days-a-week (including holidays) basis.

Sheep herding is considered a demanding occupation, calling for skills usually attributed only to veterinarians. There are predatory animals ready to devour sheep. The herder must be on the alert for noxious grasses and weeds. Many lambs and ewes are lost with improper handling of ewes by un-

skilled sheepherders at lambing time.
When the 1950 legislation, authorizing the importation of 250 sheepherders, was passed each grower in the west had to bring in his own herders, through travel agents, attorneys, and other media. Soon the industry sought a better method.

In December 1951, the California Range Association, which was formed the year before to meet the labor needs of sheep growers in this State, was designated to do the job nationally.

nationally.

Its president, John Bidegaray, himself a Basque, has two Basque partners, Ray and Mike Segardia, both of whom formerly were sheepherders. They have one of the large operations in the San Joaquin Valley, with 25 herders on the payroll and with present holdings of about 12,000 ewes and 15,000 lambs.

Mr. Bidegaray flys over to Spain as the association's unpaid president with the association's secretary, Robert Franklin, whenever it is necessary to iron out problems.

There are no recruitment drives and no contracts, as in the case of Mexican nationals who are brought into the country to harvest crops. The program works like this:

RANCHER PICKS HERDER

A sheep rancher who wishes to become a member of the association—there are now about 350, representing an estimated 70 to 75 percent of the lamb and wool production—pays annual dues of \$25. When he needs one or more sheepherders and cannot find competent help through State employment services, he notifies Mr. Franklin and designates, by name, the herder he wants.

Almost invariably this herder has a brother, an uncle, or a friend already herding sheep in America, and he himself has been aching to get over here. The association asks State wool grower associations to look into the asserted need of the grower for additional sheepherders.

Once satisfied, Mr. Franklin applies to the Immigration and Naturalization Service for permission to bring in the specific herder requested or a skilled substitute. When clearance is granted, one of the two airlines, Pan American and Trans-World, with which the association contracts to fly the herders by coach plane over the Atlantic, is notified. Its agents in Spain contact the herder and look after the clearance details there.

Meanwhile, the sponsor has deposited with the association a total of \$711.10 for each herder. Of this, \$561.10 covers the cost of transportation and \$150 takes care of expenses of the procurement, taxes, and so on.

The herder is to pay back to his employer this total sum out of his earnings, which range from \$185 a month in California up to \$225 in the more rugged Idaho terrain. He also gets his "found," that is, his food and lodging, and, except on his annual vacation, if he takes one, he has no places to spend his money.

"One of my herders, who has been here 7 years, has more than \$12,000 in the bank," Mr. Bidegaray said.

"His uncle, an old retired sheepherder, asked that the boy be brought over. The uncle himself still lives in a cookshack, though he is well to do. Many of these herders hope to have their own bands of sheep some day. Usually they send some of their money back to their families."

The average San Joaquin Valley sheep-herder's trailer, not dissimilar from those elsewhere in the West, is 8 by 18 feet, has a cot, a two-burner gasoline stove, cupboards, and radio. The invariable goatskin filled with wine hangs by his table. The herder has a dog or two, usually "Basque-speaking" Australian shepherds in this area.

Those who are admitted for the sheepherding jobs come on a permanent basis. So far, according to Mr. Franklin, about enough have come in on the present program to herd 1 million sheep.

A cooperative investigation by the association and the Immigration and Naturalization Service indicates, it was estimated, that not more than 5 percent leave the herding jobs for other occupations. Yet the wool industry, it was contended, will need at least 100 or so additional herders every year for an indefinite period to keep going.

The association is trying to figure out a way for the new sheepherders, out on their lonely vigils, to learn English and study for citizenship.

A United States Academy of Foreign Service

EXTENSION OF REMARKS

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. YOUNGER. Mr. Speaker, I am today introducing a bill calling for a school for the training of the diplomatic corps of the Nation.

The purpose of the bill will be "to promote peace, greater understanding, and good will throughout the world, and to provide for a trained force for the Foreign Service of the United States."

We have schools for training our future Army, Navy, and Air Force leaders, but we leave to chance the training of our diplomatic corps personnel who must skillfully deal with representatives of all other nations of the world.

The United States Academy of Foreign Service, title of the proposed school, would be located in the Washington area, and entrance would be by competitive examination, with students chosen according to a system of State allocation.

In addition to intensive instruction in Government, the curriculum would include select liberal arts offerings, studies in comparative culture, and military and naval observation. Graduates would be required to spend a year of in-service training in a foreign country,

A Question of Good Faith

EXTENSION OF REMARKS

HON, BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I urge upon every Member of this body to read the following editorial in the Chicago Daily News of January 10, 1955, and to join in mobilizing the full strength of decency to the end that faith shall be kept by the Congress and the Government with the men and women in the armed services:

A QUESTION OF GOOD FAITH—UNITED STATES SHOULD NOT CUT OFF GI RIGHTS OF MEN SERVING NOW

In the announcement at Washington of a Presidential proclamation a week ago, there was a big bungle. It spread confusion in Veterans' Administration offices, recruiting offices, and among young men of military age pondering whether to enlist or to wait and be drafted later.

This proclamation terminated on January 31, the period of eligibility for certain veterans' benefits under the Korean war GI bill.

The Government spokesman said that those who enlisted or were inducted before February 1 would get all the customary rights under the GI bill.

The confusion arose with regard to education benefits. The announcement was widely interpreted to mean that those entering the armed services up to January 31 would be able to get up to 36 months of college training at Government expense after leaving the service.

Within the 36-month limit, the training time has been accumulated on the basis of 1½ days of education for each day of service. To be eligible at all, the veteran would have to have at least 90 days of active service.

Believing the plan would be in full effect for those entering by January 31, a good many youngsters rushed to enlist in one of the services or another. They thought they were safeguarding an educational benefit worth thousands of dollars. It was not until Friday that the Veterans'

It was not until Friday that the Veterans' Administration office here and the several recruiting offices received an authoritative interpretation of the proclamation.

It then turned out that those who had rushed in to hold down the educational bonanza had been deceived. The period for accumulating days useful in calculating educational benefits ends January 31, under the President's proclamation.

What could be accumulated in the remainder of the month would, actually, be of negligible effect, certainly not enough, by itself, to give much incentive for hastening induction.

Not only were last week's enlisters deceived, but so (in varying measure) was anybody who enlisted in recent months.

There is no way of telling how many of them had been led by recruiting officers to believe that they would have the privilege of accumulating educational benefits up to the maximum throughout their whole service. Whether they got that idea spontaneously, or were persuaded by Government agents, most of them certainly had it.

The same idea assuredly prevailed among men who were drafted, too, though they had waived their option to pick the time of

entry.

Recent inductees will share in the disappointment, notwithstanding the fact that they had relied on no specific Government by the state of t

promise except a promise to put them in juli if they did not show up at the appointed hour.

Those who have entered or do enter on or before January 31 will get, under the President's order, certain GI benefits not available afterward. We recommend that young men confronting the big decision seek a detailed explanation. We would not venture a guess as to how great an incentive the young men will find in these other benefits.

One example: The man in service before January 31 will be eligible for home, farm, or business loans partially guaranteed by the Government after he leaves service; the man who enters service afterward will not.

It may be doubted whether the prospect of a slight interest saving on a loan years hence will motivate many enlistments. But the educational provisions have been a powerful incentive.

The Government ought not to leave any of the men in its armed services suffering from a feeling that the Government has deceived or defrauded them.

Therefore, it should permit anybody now in service to accumulate the full potential of 36 months of educational benefits, even if the days on which the computation is based are served after January 31.

Because of the confusion about the new order, still not quite dispelled, this privilege ought to be extended in full to anybody, drafted or enlisted, entering the service prior to February 1.

We hope that Congress will promptly enact

legislation so providing.

It may be that the Government has been too generous with its educational benefits all along. It may be proper to curtail them or to eliminate them entirely (after proper notice) with respect to men entering the service hereafter.

But the Government should never misrepresent to its soldiers and sailors and airmen the terms on which it is dealing with

If Congress does not modify the effect of the Presidential proclamation, a very large proportion of them will have been deceived.

The Late John G. Cooper

SPEECH

OF

HON. OLIVER P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. OLIVER P. BOLTON. Mr. Speaker, I join my colleagues in an expression of respect and regret at the passing of the Honorable John Gordon Cooper, who served in this body with

honor and distinction for nearly a quarter of a century. He had been a member of this body for 14 years when my father began his first term here. As dean of the Ohio delegation, John Cooper was looked up to by the younger members for his fairness, fatherly counsel, and kindliness. He represented his district for a total of 22 years until 1936, yet there are many, many of my constituents in the counties of Ashtabula and Trumbull who still have close personal remembrances of him, their last Republican representative for 16 years. I extend to his family my sympathy for their loss, but they can be proud, I know, of the mark he made in his four score years of devoted service to his country in these halls.

A Veteran Thanks America

EXTENSION OF REMARKS

HON, EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. Louis Teplitsky showing his faith in America. I hope that many may have the opportunity to read it.

The letter follows:

A VETERAN THANKS AMERICA

"I am a disabled, honorably discharged veteran of World War II. A concert tenor by profession, due to a disability caused by the war my career was interrupted.

"However, I have now recovered and am about to resume my singing career.

"I wish to state that I am deeply grateful to the Veterans' Administration for the excellent care I was given in the form of treatment and training. I am also thankful to the people of the United States who made it possible. There is no country in the world that has contributed as much to the welfare of veterans as did the United States. I am proud to be a United States citizen for the justice, liberty, and freedom I have enjoyed all these years since I came to the United States from Russia in 1930. I wish from the bottom of my heart the people of the United States health, happiness, peace, and prosperity. A Merry Christmas and a very Happy New Year. May God bless our country and its people.

"Louis Teplitsky.

"BRONK, N. Y."

My Fellow Citizens: This ad appeared in the New York Times December 22, 1954.

I have received numerous letters, telephone calls, and telegrams from American citizens who have read my message. Many commented that this message of faith in America ought to be reported by the press and broadcast over the radio and television to our people all over the United States and by the Voice of America throughout the world. I was so deeply touched and inspired by their remarks that I have reproduced this message.

I have worked thirty 10-hour days of labor to pay for this message at a cost of \$211.68. It is the best investment I have ever made. It has brought me much happiness, as I love our beloved country, and this is only a small token in comparison with what America has done for me. I am proud of my adopted country and its people, who have contributed so much to the world with their lives, their wealth, science, medicine, culture, literature, art, and music for the betterment of mankind and for freedom everywhere.

I left Communist Russia because of tyranny, brutality, slavery, and persecution. America gave me a home when I was homeless; I was given food when I was hungry; I was given medical attention when I was sick; and I was given freedom to worship my religion. For all this I am very grateful. I pray to God that this small effort on my part for my country, which has done so much for me, may inspire us to think and search within ourselves so as to reinforce our faith in America, and make us happier as individuals and happier as a nation. May God bless you all.

Sincerely yours,

LOUIS TEPLITSKY.

Rev. Dr. David M. Cory

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct attention to Brooklyn's Man of the Week, Rev. Dr. David M. Cory, as chosen by the Brooklyn Daily Eagle on January 9, 1955.

The article is as follows:

BROOKLYN'S MAN OF THE WEEK—PROTESTANT COUNCIL CHIEF URGES THE FORWARD LOOK IN RELIGION

(By Beatrice Jones)

When the Reverend Dr. David M. Cory, minister of the Cuyler Presbyterian Church, formerly assumed, as of January 1, the post of executive secretary of the Brooklyn division of the Protestant Council of the City of New York, it involved just a move across the hall into more spacious quarters. For Dr. Cory has been performing many of the duties of that office at 252 Fulton Street ever since his election last October at a meeting of the board of directors of the council.

The appointment was made necessary by the death of the Reverend Dr. J. Henry Carpenter, his predecessor, last June 17. At that time, the Reverend Dr. J. Blaine Fister, director of Christian education of the division, was made interim staff executive, filling in until the board meeting.

No stranger to the community, having been pastor of the Cuyler Church since 1926, Dr. Cory is well acquainted with the problems of the borough's changing population and has definite ideas on how the church can meet its challenge.

DEPLORES BACKWARD THINKING

Deploring backward, nostalgic thoughts of old Brooklyn in church matters, Dr. Cory urges that leaders and congregation members of churches look ahead to the opportunities of the present and future.

"Instead of looking back to the good old days, the aim should be," he points out, "to look forward to the opportunities of the present to serve the in-migrants who have come to the community in the last 2 decades. Many of our fine old churches have a unique opportunity in this changing pattern of life to administer to the needs of new groups who have moved into the old areas of the city, and the effective city church must slant its program to meet the need of the people living in its natural area.

"This can be done in many cases by existing local churches and in other instances on an interdenominational basis by the opening of community churches," he declared, citing the Church of the Open Door in the civic center area as a fine example. In his own parish, Dr. Cory and the officers of the church have developed an inclusive program to meet the needs of a changing community.

FORESEES PROTESTANT EXPANSION

In listing favorable factors for Protestant expansion in the borough, Dr. Cory names four groups of what he terms "in-migrants": southern Negroes, who are traditionally Protestant; West Indian Negroes, who are largely Protestant; Puerto Ricans, whose traditional background is Catholic, but who reveal a large number of Protestant followers (about one-third), and displaced persons, mainly from the Baltic countries, Hungary and Germany, who are largely Protestant.

and Germany, who are largely Protestant.

As executive secretary of the council's Brooklyn division, which is a clearing house and voice for the Protestant groups of the borough, Dr. Cory plans emphasis on a program which will strengthen the work and leadership among these new Protestant groups.

LIKE DAD, HE'S INTERESTED IN INDIANS

Dr. Cory, who was born in Manhattan on February 10, 1903, is the son of Mr. and Mrs. David Cory. His father is the well-known children's author, whose books on Sioux Indian life, The Little Indian series, have proven popular through the years. Dr. Cory has followed his father's interest in Indians and when several hundreds of Mohawks moved into the neighborhood of Cuyler church from the Canadian reservation, Caughnawaga, about 20 years ago, he planned a program to meet their needs.

Monthly services were held at the church in Iroquis, a language which Dr. Cory learned to read and speak, as he puts it, "after a fashion."

HARDY MEMBER OF ICEBERG ATHLETIC CLUB

He still finds time to be involved in many other activities, calling himself "chief trucking man" at the council's office, personally performing the duty of picking up dolls and other toys contributed for church collections for children.

Surprisingly, Dr. Cory is also a vice president of the Iceberg Athletic Club, a brave group which finds great pleasure in dipping into the Coney Island surf all the year around. He has not missed a weekly dip in 8 years and semetimes has had 2 icy plunges a week to "cool him off."

Next June he and his wife, Mina, an enthusiastic worker at the council's office, will observe their 26th wedding anniversary. Their children, David H., a second officer with the United States Lines; Mina E., a secretary with WNBT; Daniel T. and John M., both pupils at Friends School, will help them celebrate.

The Late Senator Burnet R. Maybank

SPEECH

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1955

Mr. McMILLAN. Mr. Speaker, South Carolina and the Nation have just lost one of its greatest citizens in the passing of Senator Burnet R. Maybank, of Charleston, S. C. I, with 2 million other South Carolinians, mourn the passing of this great American. Senator Maybank was a statesman and gained the respect of all his colleagues in the Senate and

every other person privileged with his acquaintance.

I became acquainted with Senator MAYBANK while he was serving as mayor of the city of Charleston, S. C. I watched his career very closely from that time until his untimely passing. Senator MAYBANK made South Carolina one of its ablest governors and since that time has served with distinction as a Member of the United States Senate.

I wish that every person in the State of South Carolina had been privileged to know the late Senator Maybank as intimately as I was privileged to know him. He was a man with high principles, a heart of gold and a character of steel. He would never compromise any principle.

I shall greatly miss Senator Maybank as we assisted each other on numerous occasions in solving mutual problems. I remember very distinctly having Senator Maybank accompany me through the Pentagon Building on 2 or 3 distinct occasions in connection with securing an Army airbase for Florence, S. C., and Myrtle Beach, S. C., during World War II. He was also of great assistance to me in securing a Marine base at Georgetown, S. C., and in solving numerous other problems affecting the people of my District.

Senator Maybank called on me to assist him on a number of problems affecting our State and Nation. We usually saw eye to eye on the majority of the problems affecting our State and country. Our State and Nation can ill afford to lose many men of Senator Maybank's character and ability. I feel extremely honored to have been considered one of Senator Maybank's friends.

The Late Dwight L. Rogers

SPEECH

HON. PAUL BROWN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1955

Mr. BROWN of Georgia. Mr. Speaker, in the passing of our colleague, DWIGHT L. ROGERS, his district, his State, and the Nation lost a valuable public servant.

He was honest and honorable and highly respected by Members on both sides of the aisle. I do not think he had an enemy anywhere. He loved people. Nothing gave him more pleasure than to help someone.

He was born and reared in the State of Georgia, and graduated from the University of Georgia. A young man in his teens when he entered the university, he was admired by all and was elected president of the freshman class. Following his graduation at the university he practiced his profession for many years in Ocilla, Ga. He was a brilliant lawyer and highly esteemed by the judges and the lawyers.

His life was not a life spent in a mad struggle for material wealth. He pos-

sessed dignity without arrogance, and firmness without intolerance.

DWIGHT ROGERS will be greatly missed by all who knew him. I feel that I have lost one of my dearest friends. He always looked for the best in man and found it. Throughout his wonderful career I have never heard anyone speak ill of him.

I think every Member of this Chamber who knew Dwight Rogers loved him and feels a great loss in his passing.

I extend my deepest sympathy to his beloved wife and children.

Christians in Politics

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. TEAGUE of Texas. Mr. Speaker, the men of my hometown, Bryan, Tex., conduct what is called the layman's prayer meeting, which is a 45-minute devotional held every Friday morning in a local meeting place. It is composed of men from all walks of life and from all religious denominations. The various denominations take turns in conducting a 15-minute devotional period and program.

Under leave to extend my remarks in the REORD, I wish to include a paper entitled "Christians in Politics," prepared and read at one of these meetings by a young friend of mine, the Honorable Brownrigg H. Dewey, Jr., who at the present time is a member of the Texas State Legislature, representing my hometown. Brownrigg is an exceptional and able legislator, and I feel the following article is indicative of the honest and sincere feelings which this young man harbors with respect to his position. Who can fear for the future of America when we have young men of this caliber in public life. I commend the article to each and every Member of this body:

CHRISTIANS IN POLITICS—GOD-FEARING PEOPLE IN GOVERNMENT

It is a pleasure for me to be here this morning and to talk to you a few minutes on Christians in politics or God-fearing people in government.

Each one of us has his own definition of a Christian. Mine is, a Christian is one that believes in Jesus Christ, that he died for our sins and that anyone who really believes in Him shall have everlasting life. Of course we know of our Jewish friends' belief in God. In this great country of ours we really have freedom of religion, and we each worship our God as we please.

Of course, our definitions of politics are many and varied. A law dictionary says "politics is a science of government, the art of practicing or administering public affairs." A science of civil government. We have what we call political sentiments, political law, political questions all dealing with politics. We think of campaigning, voting, and paying our poll tax as politics.

In America we have the greatest democracy

In America we have the greatest democracy in the world, and it has been said that the soul of a democracy is the Christian religion. Democracy is a reality for us and a vague dream for others. No people can be free who do not maintain the privilege of paying their own bills.

Plutarch on Socrates said "They are wrong who think that politics is like an ocean voyage or a military campaign, something to be done with some particular end in view. Something which leaves off as soon as that end is reached. It is not a public chore to be got over with. It is a way of life. Politics and philosophy are alike, all your life, all the time, in everything you do, whatever you are doing, it is the time for philosophy. And so, also, it is of politics."

Why is it that a Christian is called to be a politician? We live in a time when many moral issues are won or lost in the arena of politics. It is our responsibility. not run away from politics, it is immoral to do so. We have a tendency to forget or deny that all men are of sacred worth and that all are sinful. We must be humble and be concerned for others. The test, of course, is supreme loyalty to God and not to party. The independent voter counts only once in November, but a party voter counts twice, once in the primary and once in November.

Someone has said our most potent weapons are the BB's of Christian democracy:

Bibles, backbone, brains, and ballots. Probably the reason America has done so well is that we have used our Bibles and ballots.

We are always saying that there are not enough hours in the day to get our work done and hardly enough money in the paycheck to give 20 to 35 percent to Caesar and 10 percent to God, and when we are needed in a meeting of the city council, school board, as well as in prayer meeting, it is hard for a Christian to draw the line between his duty to Caesar and his duty to God. We have a duty to both.

More than 700 years ago the Italian poet Dante said: "The hottest places in hell are reserved for those who, in a period of moral crisis, maintain their neutrality."

We talk a lot about Communists in Government and we should be worried about the number of Christians in Government.

We are in for many an ethical dilemma where either choice means compromising some important value. Someone said, "What is wanted is an ethical sense of timing coupled with the capacity to work with practical politicians without being taken in by them.'

Jesus used three figures of speech to describe the influence of Christians in society. He said, "They are like salt, preserving it from decay, (2) like light driving out the darkness of ignorance and sin, (3) like leaven pervading the whole mass, giving moral tone to all human relationships."

If Christians are to be effective in these ways, they must surely accept the responsibility of Christian citizenship.

We must realize that we are all politicians of one kind or another. One who abstains from taking part in the running of his country is simply an ineffective politician. He is a tool of all who would use politics for evil ends, the bosses, the peddlers of influence, the criminal element who live upon corruption in politics. You can be influential for good or bad, but you cannot avoid being influential. You may make little effort to know the issues and conditions and do something about them, but regardless of whether you make any effort or not you are bound to be affected by the state of things which prevail in your community.

Indifference to wrongdoing is still another attitude that keeps us from being Christian citizens. We are so engrossed in our own affairs and desires and ambitions that we do not make the problems of the city and the State and the Nation our concern.

Another reason for being a Christian citizen is that our public officials need your help. Most of them are inherently decent people. They would like to do a better job, and would if only the general public showed more positive interest in government and gave them year-round support. A question for us in what can the Christian citizen do?

1. He can understand that one person can be crucial in the democratic processes of government. One vote is important.

2. He can work in his local precinct and

bring his sense of Christian spirit to these meetings.

3. He can study the issues and try to understand the problems of the day.

4. He can vote and get others to vote. You can learn to distinguish propaganda which is inspired by hate, vindictiveness, narrowness, suspicion, and fear from the real facts and information.

When we speak of politics, we think about getting elected, campaigning, voting, passing special legislation, and keeping before the public. Anything you do to help yourself, some people say, is politics.

What are the essentials of a democracy?

1. Belief in work of the individual.

2. Democracy rests on the foundation of no class distinction.

3. Characteristic freedoms: freedom of opinion, freedom of speech, freedom of the press, freedom of assembly, academic freedom, and freedom of religious faith.

4. Democracy relies on tolerance.

Democracy means hard work.

6. Democracy believes that governments determine their powers from the government.

7. Democracy consists of an indefinable spirit. It is a spirit of give and take, of live and let live. Fight for the candidate of your choice and accept the elected opponent.

Government is your job to make it good. One of our late Presidents said, "We must not be confused about the issue which confronts the world today. That issue is as old as recorded history. It is tyranny versus freedom. Tyranny has, throughout history, assumed many disguises, and has relied on many false philosophies to justify its attack on human freedom. Communism masquerades as the doctrine of progress. It is nothing of the kind. It is, on the contrary, a movement of reaction. It denies that man is master of his fate, and consequently denies man's right to govern himself. And even worse, communism denies the very existence of God. Religion is persecuted because it stands for freedom under God. This threat to our liberty and to our fate must be faced by each of us."

The Gallup poll says that 67 percent of American parents do not want their children to go into politics. One of the reasons being that the whole field of politics is bad. However, 81 percent of those parents held that unless people with good ideas do go into politics and into government "democ-racy will die." Today we face the problem of driving Communists out of Texas and the United States, and the question is whether you believe in human freedom or whether

you believe in a police state. How can we make ourselves better Chris-

tians in politics? 1. Know your officials, city commissioners, county commissioners, etc.

 Know your Congressmen.
 Follow the voting records of your Congressmen, legislators, and commissioners. Keep abreast of the issues before your local, State, and National Government. groups, register and vote. Encourage people to be interested in Government. Be interested yourself.

What are some of the National Christian political issues?

- 1. Unemployment.
- Social security.
- Soil conservation.
- Slums. 4.
- 5 Old-age assistance

6.

Health and accident insurance. Simple honesty in Government. A political issue surely.

8. War or peace. World law or world

anarchy, or world dictator.

Henry Clay once said: "Government is a trust and the officers of government trustees. and both the trust and the trustees are created for the benefit of the people." This idea represents the hope and aspiration of all people who believe in a government of, by, and for the people. In government we always have the conflict between public and private interest, and, as Herbert Hoover puts integrity, truth, and honesty in public officials."

We know that eternal vigilance is the price of liberty. Thomas Jefferson said, "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind

Britain's Catholic historian, Lord Acta, said: "Power tends to corrupt and absolute power currupts absolutely." I would like to give you Bible of Americanism by Dr. Daniel L. Marty, former president of Boston University, which he calls the American canon:

1. The Mayflower Compact-our genesis. 2. The Declaration of Independence-our exodus.

3. Constitution of the United States-our book of law.

4. George Washington's Farewell Addressthe greatest of our major and minor prophe-

5. The Star-Spangled Banner-a national psalm.

6. Abraham Lincoln's Inaugural Address

the gospel of true Americanism.
7. Woodrow Wilson's last article, The Road Away From Revolution—the greatest of our

I would like to close with reading a prayer that was made by George Washington many years ago which is very applicable to this

day and time.
"Almighty God, who has given us this good land for our heritage, we humbly beseech Thee that we may always prove ourselves a people mindful of Th; favor and glad to do Thy will. Bless our land with honorable industry, sound learning, and pure manners.

"Save us from violence, discord, and confusion; from pride and arrogance, and from

every evil way.
"Defend our liberties and fashion into one united people the multitudes brought out of many kindreds and tongues.

"Endure with the spirit of wisdom those whom in Thy name we entrust the authority of government, that there may be peace and justice at home and that through obedience to Thy law, we may show forth Thy praise among the nations of the earth.

"In the time of prosperity, fill our hearts with thankfulness, and in the day of trouble suffer not our trust in Thee to fail. All of which we ask through Jesus Christ our Lord. Amen."

I challenge each of you to be better Christian citizens and take more interest in your government-local, State, and nationalyour church.

JANUARY 7, 1955.

Four Days Is Short Notice for California Witnesses on H. R. 1

EXTENSION OF REMARKS

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. PHILLIPS. Mr. Speaker, I rise today, under unanimous consent, to insert in the Congressional Record two telegrams which were received in my office this morning, protesting the scheduling of hearings on the proposed reciprocal trade agreements, and H. R. 1, to begin next Monday the 17th. That is only 4 days away, which is hardly time to get Californians to Washington, let alone to prepare themselves adequately for the hearing.

I have written the chairman of the committee, the gentleman from Tennessee [Mr. Cooper], calling his attention to this situation, which I am sure was unintentional. I know that the hearings will be extended to give an opportunity for our people to prepare themselves and appear. The situation will affect various commodity groups in California, although the walnutgrowers and the almondgrowers are the only two from whom I have as yet received wires:

Los Angeles, Calif., January 13, 1955.

Hon. John Phillips,

House Office Building,

Washington, D. C .:

Vigorously protest hasty scheduling of hearings by Ways and Means Committee on reciprocal-trade agreements, H. R. 1, beginning next Monday, because does not allow interested parties adequate time to prepare presentations. Tree-nut industries constantly endangered by excessive import competition, and believe committee exhibits prejudice against our viewpoint.

CALIFORNIA WALNUT GROWERS
ASSOCIATION.

SACRAMENTO, CALIF., January 13, 1955. Hon. John Phillips,

House Office Building, Washington, D. C.:

Rush hearings on H. R. 1 as set for January 17 are indicative of attempt to railroad measure seeking to dissipate existing congressional tariff authority. We earnestly urge you exert your fullest possible opposition to such steamroller tactics. Letter follows.

D. R. BAILEY, General Manager, California Almond Growers Exchange.

A Program of Financial Aid to Students in Higher Education and the Crisis in Western Leadership

EXTENSION OF REMARKS

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I am joining with the distinguished gentleman from Alabama, Carl Elliott, in sponsoring a bill to establish a program of financial aid to students in higher education. This bill was first developed by the United States Office of Education about 2 years ago in cooperation with some 30 leading national organizations in the field of education.

The Federal Government has now, as it has had in the past, an active responsibility for the education of our youth. This means not only institutional support as under the Morrill Land-Grant College and University Act of 1862, and special programs on a regional basis in such fields as public health

and veterinary medicine, but also a concern for the post-high-school education of this Nation's students, who are not able, otherwise, to continue their formal schooling. The Federal Government's responsibility is not merely residual, as has been maintained by some who have held important national positions during the past 2 years but must, for the good of the Nation, be conceived of as a dynamic one where the national interest is directly involved. Federal funds should be available for this purpose where State and local support is lacking in view of the fact of the high percentage of young people who, though qualified in all other respects, are financially unable to continue their education. active participation of the Federal Government may be needed in a variety of ways, for instance, to assist in identifying needy students who should be

It should be obvious to everyone that the minimum need for this Nation in the world of today is to hold its own in all ways against Russian communism and to attempt to win friends in other countries. These efforts must include all fields of knowledge such as the natural and social sciences and the humanities.

In 1900 the United States spent \$2 per capita on general governmental tasks as compared to \$1 per capita on education. In 1953 the Federal educational effort was \$76 per capita while general Federal expenditures, including defense, was \$467 per capita. In other words, the ratio of educational to general Federal expenditures, which in 1900 was 1 to 2, had declined, in the intervening 50 years, to a radio of 1 to 6. This has taken place at a time when Russian communism has risen to commanding power leading a totalitarian power bloc of hundreds of millions of people. The correlation between these facts seems fairly evident.

It is very important that we develop ways and means to bring to the hundreds of millions of people who are still free and who look to us for leadership a true picture of our form of government so that in the struggle that is going on for the loyalty, the minds, the hearts, and the souls of men throughout the world they will turn to us rather than to the Russians. Strong and courageous leadership is needed. This bill will assist in the development of the kind of leadership without which we may well lose the cold war. A short summary of the provisions of the bill I am sponsoring follows:

SUMMARY OF THE PROPOSED STUDENT AID ACT OF 1955

Under the bill, Federal aid would be made available to selected students in higher education in the form of scholarship stipends. The bill would also provide for Federal insurance of loans to students made by institutions of higher education. The institution, however, could assign its rights under such insurance to a financial institution as security to obtain funds for making loans to students.

Any high-school graduate would be eligible to apply for a scholarship. From

among those applying, those showing greatest promise would be granted certificates showing that they are American scholars. Stipends would be granted to the needlest among these scholars, the amount of the stipdend varying with the demonstrated need of the recipient, but not exceeding \$800 per acedemic year. The recipient could attend any bona fide college or university of his choice which admits him; and so long as he continued in good standing at the educational institution, his stipend would be paid directly to him in installments suited to the demands of the academic year.

During a time of active hostilities or when found by the President to be necessary in the interest of national defense, at least 60 percent of the stipdends must go to students engaging in studies which are determined in a manner prescribed by the President to be related to the national defense or defense-supporting activities. Scholars receiving stipends thus earmarked must, in general, continue their studies in the designated fields if they wish to continue receiving stipends.

The stipends are subject to annual renewal for the normal course of time necessary to complete the work for the first posthigh-chool degree, the amount of the stipend being fixed each year in terms of the financial need of each student.

The bill would authorize appropriations not exceeding \$32 million for scholarship stipends for the fiscal year 1956, \$64 million for the next year, \$96 million for the third year, and \$128 million thereafter. Each State would be allotted a proportionate share of the funds available each year, the amount being based on the number of high school graduates in the State and the number of youths between the ages of 18 and 21. The number of persons aided would depend on the amount of money appropriated by Congress; but the bill con-templates that when the program is in full operation approximately 50,000 to 60,000 men and women will enter college or university each year with the aid of Federal stipends of varying amounts.

Scholarship commissions in each State would receive applications from students, conduct the objective examinations to select the abler among the applicants, assess the financial need of those qualifying as scholars, and certify to the Commissioner of Education the persons eligible to be certified as scholars and those among the able whose financial need justifies the payment of a stipend, with the amount of the stipend in each case.

A national council on student aid, composed of 12 persons representative of individual, organizational, and professional interests in education and of the public, would advise and assist the Commissioner in the development of principles to guide the State commissions in the selection of persons for scholarship certificates and stipends, and on other important policy matters arising in the administration of the act. Provision is also made for consultation between the Office of Education and the

various Federal agencies, such as the Atomic Energy Commission, the National Science Foundation, and the Department of Defense, which operate special programs of aid to undergraduate and graduate students. The bill is so drawn as to assure full coordination of the Federal scholarship program with other federally supported programs which aid students in higher education.

The loan insurance program would eventually be self-financing, with the participating colleges and universities paying insurance premiums in to a revolving fund established in the United States Treasury, out of which 80 percent of the loss on each insured student loan would be paid. The interest rate charged the student would be geared to the average interest paid on marketable United States Treasury obligations. The institution would be permitted to charge the student this rate plus an additional amount of not more than 1 percent, plus the insurance premium charged by the Federal Government.

The student would not have to start repaying the principal of his loan until 4 years after he completes his education, and then would be given an additional 6 years to repay it. The institution could charge an additional 1 percent interest beginning at the time payments on the

principal become due.

With their losses thus insured by the Federal Government, it is expected that the educational institutions would have no difficulty in borrowing money from banks or other financial institutions with which to make loans to students. They could, if they wished, use their own funds or student loan funds over which they have control.

Any student would be permitted to borrow from educational institutions up to \$600 a year and up to \$2,400 in the aggregate. The total principal amount of new loans to students covered by insurance under the act in any fiscal year would be limited to \$10 million.

Mack Resubmits Moro Vets Bill

EXTENSION OF REMARKS

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article which appeared in the National Tribune-the Stars and Stripes, of January 13, 1955, entitled "Mack Resubmits Moro Vets Bill:

MACK RESUBMITS MORO VETS BILL—WOULD PENSION THOSE WHO FOUGHT TO 1914— IDENTICAL MEASURES DROPPED IN HOPPER

A new version of the Moro-Leyte-Samar veterans' bill, House Joint Resolution 65, was introduced in the House of Representatives on January 5 by Representative Russell V. Mack, World War I veteran, of Washington. Identical bills were also introduced by Representatives George S. Long, of Louisiana; Barratt O'Hara, Spanish War veteran, of Illinois; Roy W. Wirk, World War I veterans.

eran, of Minnesota, and Edith Nourse Rogers of Massachusetts.

The new bill, according to Jack Kyle, national legislative representative of the 1902-14 Philippine Command Committee, is designed to overcome numerous objections to similar bills in previous Congresses. old bills, Kyle said, undertook to write a new principle into veterans' legislation. Under their provisions, he said, pension payments would have been limited to those who could clearly establish combat service. Kyle pointed out that no such restriction or limitation is contained in the Spanish-American War Service Pension Act which House Joint Resolution 65 would extend to all who served in the Moro Province and in the islands of Leyte and Samar after July 4, 1902, and prior to the day following the last armed engagement in the province or islands in which they served, but no pension would be payable for any service after December 31, 1913.

The insular forces of the Philippines—the Philippine Constabulary and the Philippine Scouts—are specifically included in House Joint Resolution 65, but there was considerable doubt in the minds of many that they were covered in most of the bills in earlier Congresses.

MACK ISSUES STATEMENT

Congressman Mack issued a brief statement when he introduced his legislation which would grant to some 500 veterans of the Philippine Insurrection and an estimated 300 dependents the same benefits as are now available to Spanish war veterans.

"This legislation would apply to those members of the Armed Forces who served in the Moro Province, including Mindanao, or in the Islands of Leyte and Samar between July 4, 1902, and January 1, 1914," he said.

"Similar bills have been approved on four occasions by the House Veterans' Affairs Committee. On two occasions the House of Representatives has passed similar legislation. During the 78th Congress, such a bill was also passed by the Senate but vetoed by President Roosevelt.

"The Philippine Insurrection, which fol-

"The Philippine Insurrection, which followed the war with Spain, was officially terminated by Presidential proclamation on July 4, 1902. The actual fighting continued, however, and between that time and January 1914 some 103 engagements were fought. The intensity and extent of the fighting is indicated by the fact that the Army awarded 11 Congressional Medals of Honor to members of the armed services for service. In this area during this period. The number of casualties during the same period was about equal to those of the Spanish-American War itself."

A similar bill, H. R. 5380, was unanimously reported by the Committee on Veterans' Affairs in the 83d Congress, but was killed in the House Rules Committee.

TEXT OF RESOLUTION

House Joint Resolution 65 reads as follows:

"Whereas the Philippine Insurrection was ended by the Presidential proclamation of July 4, 1902, in all parts of the Philippine Archipelago except in the country inhabited by the Moro tribes, to which the proclamation did not apply; and

"Whereas it was necessary for the Government of the United States to employ its Armed Forces, including insular forces, against numerous inhabitants of the country inhabited by the Moro tribes who were in armed insurrection against the authority of the United States and/or political subdivisions thereof until in the year of 1913; and

"Whereas notwithstanding the aforementioned proclamation, armed hostilities did continue in the Islands of Leyte and Samar after July 4, 1902, necessitating the employment of the Armed Forces of the United

States, including insular forces, against numerous inhabitants of the said islands who were also in armed insurrection against the authority of the United States and/or political subdivisions thereof; and

"Whereas it has ever been the policy of the Congress to enact uniform and all inclusive pension legislation for the relief of former members of the Armed Forces who were employed in upholding and/or enforcing the authority of the United States and its political subdivisions in the States, Territories and insular possessions thereof: Now, therefore, be it

"Resolved, etc., That any person who served in the Armed Forces of the United States in the Moro Province, including Mindanao, or in the Islands of Leyte and Samar, after July 4, 1902, and prior to the first day following the last armed engagement between the Armed Forces of the United States and inhabitants of the Philippine Islands in the province or island in which he served, and who was honorably discharged from the enlistment in which such service occurred, and the surviving unremarried widow, child, or children of such person shall be entitled to pension under the conditions and at the rates prescribed by the laws reenacted by Public Law 269, 74th Congress, as now or hereafter amended: Provided, That no such pension shall be paid for service after December 31, 1913.

ber 31, 1913.

"SEC. 2. For the purpose of this act, the Armed Forces of the United States shall include the Armed Forces of the insular Government of the Philippine Islands.

"SEC. 3. This act shall be effective on the first day of the calendar month in which it is approved."

Coexistence

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I enclose an editorial appearing in the December 31, 1954 issue of the Catholic Standard, the official publication of the archdiocese of Washington. The editorial is a well considered and prepared one, expressing views worthy of deep consideration, particularly by Members of Congress:

COEXISTENCE

The dedication of the past Sunday, the feast of St. Stephen, as a special day of prayer for the persecuted, presents more than a solemn reminder to Christians of their duty to pray for those who are following the glorius example of St. Stephen. It also presents to Christians still free the problem of coexistence with this evil, communism.

Communism has proclaimed to the world its essential evil in a repetitious, ghastly pattern: the 10,000 Polish officers and priests slain like cattle at Katyn; the murder of Jews in Russia under the new crime called cosmopolitanism; the torture of American Protestant missionaries in China to extort accusations against their fellow prisoners; the shooting of manacled American prisoners of war in Korea; the clubbing of men, the snatching of babies from mothers in Vietnam, despite a solemn agreement in Geneva a few days previous, to prevent their seeking freedom in South Vietnam; the mass deportations that have terrorized and depopulated Esthonia, Latvia, Lithuania; the imprisonment of the cardinal primates of two great

Christian nations, Poland and Hungary, one cardinal being imprisoned immediately after his elevation so that the red hat became a symbol of his destiny. These are a few, but typical, glimpses of the horrifying and stupendous evil that has condemned to slave camps 15 million souls and has throttled the freedom of 800 million people living in nationwide prisons.

CHARACTER OF COMMUNISM

Look where we may at communism throughout the world, it presents the continuing denial of God's existence and His image in the sacred character of human personality. It could not be otherwise, communism is complete materialism and matter yields only to force; it recognizes no rights except those granted exclusively by the state.

So long as these realities persist, we must remain skeptical when we hear that the new rulers of Russia are reasonable men whose only aim is peaceful coexistence. The acid test for such assertions was given years ago by our Divine Savior, "By their fruits you shall know them." In this spirit, our own President asked for deeds, not words, as evidence of change of attitude. (November 23,

1954, press conference.)

We do not deny that some apparent changes have occurred. Only recently pow-erful leaders of the Presidium of the Communist Party of the Soviet Union rebuked their followers for intemperate attacks upon religion. The secretary of the party addressed friendly words to a Catholic priest who spoke to him on the subject of religious persecution. In area after area, there are carefully planted hints that a new regime is now in power and that moderation, peace, and friendliness will now be the order of the day. The lion shows no change in his nature, but he is now ready to coexist with the lamb. Peace is to reign in the world again.

MEANING OF TRUE PEACE

Peace is a word that we all welcome. are followers of Him who is called the Prince of Peace. The angels who greeted His coming promised peace to men of good will. Yet our Divine Savior did not embrace the idea of peace at any price. At one time He even said, when a conflict of principle was involved, "Do not think that I came to send peace upon the earth; I have come to bring a sword, not peace. For I have come to set a man at variance with his father, and a daughter with her mother * * * and a man's enemies will be those of his own household." (St. Matthew 34-36.) Of course, we know that our Lord does not desire war or discord. But He does place principle above mere harmony. Those who follow Him must at times accept strife, even death, rather than deny the high ideals He has given them.

We pray for peace. But our prayer is for the real peace of Christ, not the conformity that rules within prison walls or the cowed submission of a weakling in the face of the attacks of a bully. Our peace is one of honor, of justice, of strength. As our President, speaking for our country, said before Christmas, "She speaks for peace based upon decency and human rights. But let no man think that we want peace at any price; that we shall forsake principle in resigned tolerance of obviolus evil; that we may pawn our honor for transitory concession."

These thoughts we must remember in the months ahead, as leaders of the world debate the thorny question of coexistence. They will need our prayers in this difficult task. But more than that, they will need the guidance of religious men everywhere, to encourage them to live up to high principle and not to sell the priceless heritage of man's freedom for honeyed words and empty promises.

MEANINGS OF COEXISTENCE

Coexistence, by itself, is a term of many meanings. It can be used to mean some-

thing beneficent, such as the harmonious living together of many different strains and cultures in the unity of our great Nation. We live and work together, Protestant, Jew, and Catholic: immigrants and descendants of the pioneer settlers; men and women of many races, all united in the knowledge that our democracy respects man's God-given

But coexistence could also mean another Munich, appeasement of the dictator in the hope of buying him off at the expense of helpless peoples. It could mean trades and deals that practically recognize the ruthless regimes of communism, thus defiling our honor and betraying the hopes that untold millions have placed in us. It could involve acceptance of words instead of deeds, a grasping at a temporary peace that could lead to our certain ultimate destruction. Let us always have the wisdom to look behind the label and see precisely what is the meaning of this term we use so glibly.

CONDITIONS FOR NEGOTIATION

To safeguard ourselves from the acceptance of a ruinous coexistence which means, in practice, denial of principle, we should insist on the fulfillment of the following conditions during any negotiations with the Communists:

First, that we continue to negotiate on the basis of principle, not appeasement; of strength, not weakness. We do not seek war nor welcome it, but we would rather undergo war than become slaves to a godless dictatorship. We will not buy peace at the price of slavery.

Second, that any program of peace and disarmament consider all forms of war and all causes of war. Military conquest is not the sole means of enslaving peoples today, nor are conventional or atomic arms the only ways of conquest. Intrigue, subversion, propaganda and economic pressure are also weapons in the struggle of our age. They are weapons which have been used to diabolical perfection by the enemy of God and man. We must insist, therefore, not only that disarmament be carried out by them as a condition for disarmament by us but that they also desist from the nefarious means they have used to subvert and conquer nations.

Third, that no agreement be reached at the price of sanctioning past, present, or future injustice. We may not, short of war, be able to correct the gross injustice visited upon many peoples in the last decade. We may feel that the evils of such a war would be greater than the good it might accomplish greater than the good it might accomplish in liberating the oppressed. But, as the President said, "we dare not forget crimes against justice, denial of mercy, violation of human dignity. To forget is to condone and to provoke new outrage." We should at least unleash the moral strength of the world by calling tyranny and oppression by its right name.

Fourth, that any relaxation of barriers be truly reciprocal. If we are to lift restraints upon dealings behind the Iron Curtain and give even greater freedom to the emissaries of communism, we should in turn demand equal rights to meet freely with the oppressed peoples and to tell them of our ideals and practices. We need not fear any such exchange. We may hope that it may lead to a gradual removal of the shackles which now bind these hapless victims or the curtain which hides their plight.

Fifth, that we who believe in God and honor His name should cautiously await to see if the words of the Soviet promising religious toleration are matched by deeds. When freedom is given equally to all faiths in all parts of the Soviet empire, when ministers of religion may teach the children as well as hold services for adults, when they are allowed to speak freely the word of God, when they may communicate without re-straint with other believers throughout the world—Jew with Jew, Protestant with Protestant, Orthodox with Orthodox, and Catholic with Catholic—then only can we believe that there is reality behind the honeyed words of Mr. Krushchev.

CORRECT ATTITUDE AND OBLIGATION

Only if these conditions are fulfilled, can we hopefully accept coexistence with the Communist world, whether Soviet or Yugoslav. We can tolerate present coexistence as an alternative to the unlimited destruction of modern war, fearing that possibly total war may bring an increased evil, not its alleviation. We cannot admit the present coexistence as an acceptable, correct political arrangement in the same sense that democracies accept coexistence with principled monarchies or other legitimate governments. We should not live with communism on its own terms. We should never condone warlike actions as peace; tyranny as a people's democracy; injustice as right; or falsehood as truth. Men sometimes are helpless before brute force, but those who are free should never hesitate to speak the truth.

Now is the time for this Nation to offer moral leadership to the world, as it already enjoys political, economic, and military preeminence. The ultimate battle in our struggle with communism is in the realm of the spirit. We face a conflict for men's minds and men's souls. Too often we have lost segments of this war by default. We have seemed to other peoples to be a materialist, godless, undisciplined, and sensual nation.

MEANS OF MEETING OBLIGATION

Against this distorted view, alas not wholly false, let us first affirm the spiritual foundations of our democracy. Let God and His law be honored and effective in our political life, in our schools and universities, and in the great media which mold public opinion here and throughout the world. Surely all of us, of all religious faiths, can increase our efforts in this regard. Fruitful beginnings of such action, seen in a national conference held in this city last month, should be an encouragement to even more ambitious achievement. Religious leaders of all faiths here found a ground for harmonious discussion and a field for united action.

As the practical application of this truth, we must keep before our eyes and proclaim fearlessly the God who made us. We must not only pray to God, we must carry prayer into action. The Holy Father emphasized this need in his impassioned plea at Christmas, "Lastly, to all peoples, to their rulers, to those who bear the responsibility of the world's destinies, may the message of goodness and peace of the Son of God made man reach out—and be welcomed in the sincerity of deeds." This is a duty at any time; its fulfillment is more urgent now. In the words of a noted international authority, "What disturbs the Communist rulers is not the phraseology of religion, the lip service may be paid to it, or the speeches and declarations made in its favor. They are apprehensive before the profound social consequences of a religion that is carried into practice." Our own Benjamin Franklin stated this truth more succinctly, "He who shall introduce into public affairs the principles of primitive Christianity, will change the face of the earth."

Further, we must reaffirm the spiritual nature of our struggle against communism. Surely if God-fearing men throughout the world realized the real nature of this menace there would be no neutrality in the present world crisis. Men might still disagree about the wisdom of particular political, military, or economic measures. But they would be united in their determina-tion to stand firm against this godless tide. Here also is a cause in which we can stand together, regardless of differences in our religious beliefs.

Therefore, we must avoid as self-defeating the use of Communist terminology and

thought in combating communism. When the sufferings of large groups of persons become an impersonal problem, when we enlist the selfish interest of certain blocs of society, or even use religion as a military auxiliary in the fight against communism we have lost sight of the real conflict. Communism is not wrong simply because it will confiscate the fortunes of the wealthy or because its industrial system produces less goods—it is wrong because it denies man's freedom, man's will, man's soul.

Finally, let us be patient and understanding with those who must deal with other nations in making the momentous decisions of our time. The pace of international progress may be too slow in the judgment of many of us, but we should not overlook the fearful responsibility thrust upon the leaders of state at this hour. Allies may seem to disappoint us; the work of the United Nations may appear less effective than we hoped; the urge for simple, dramatic, and drastic decisions may be strong. But the stakes are high in the fateful decisions of Decisions reached may literally be world-shaking. Let not lack of decisive progress impel us to intemperate and ill-considered action. Above all, let us avoid strife and political aggrandizement at home that puts party or personal advantage above national interest.

PRAYER NEEDED

We face difficult years ahead. But all things are possible to those who believe and pray and carry prayer into action. As we face the challenge of moral leadership let us pray in the spirit of Archbishop Carroll, who invoked God's blessing upon our beloved country:

"We pray Thee, O God of might, wisdom, and justice, through Whom authority is rightly administered, laws are enacted, and judgment decreed, assist, with Thy Holy Spirit of counsel and fortitude, the President of these United States, that his administration may be conducted in righteousness and be eminently useful to Thy people over

whom he presides.

"Let the light of Thy divine wisdom direct the deliberations of the Congress, and shine forth in all the proceedings and laws framed for our rule and Government; so that they may tend to the preservation of peace, the promotion of national happiness, the increase of industry, sobriety, and useful knowledge, and may perpetuate to us the blessings of equal liberty.

"We recommend likewise to Thy unbounded mercy all our brethren and fellow citizens, throughout the United States, that they may be blessed in the knowledge and sanctified in the observance of Thy most holy law; that they may be preserved in union and in that peace which the world cannot give; and, after enjoying the blessings of this life, be admitted to those which are eternal."

New Front in the Cold War

EXTENSION OF REMARKS

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to insert the following article from the December 13 issue of Time magazine which carries some pungent comment on our search for a workable foreign economic policy:

New Front in the Cold War—The United States Searches for a World Economic Policy

The United States is preparing to open a new front in the cold war—an economic front. On presidential instructions, former Budget Director Joseph M. Dodge hastened back to Washington from his Detroit bank to undertake a sweeping review of "the entire field of cold war economic strategy." Secretary of State Dulles is pressing for a huge expansion of United States investments abroad; Foreign Operations Director Harold Stassen, whose department is slated to go out of business next summer, has proposed an ambitious scheme which is already being called a Marshall Plan for Asia.

The air is full of plans, but they have yet to undergo a purification by budget. Secre-tary of the Treasury George Humphrey, a hard man with a dollar and a weighty man in the Cabinet, is against any large-scale foreign spending; banker Dodge thinks Harold Stassen's plans are dangerously dreamy. The foreign aid enthusiasts think Humphrey and Dodge are dangerously unimaginative. But despite individual differences, the Cabinet is unanimous in its belief that the character of the cold war is changing, and that the United States urgently needs to reshape its foreign policy. The objective is to shift the emphasis of United States world strategy away from military containment, which leaves the initiative with the Communists closer to economic "liberation," with the emphasis on advance.

PAX ATOMICA

Currently, United States policy suffers from what one State Department man calls a heavy military bias. Too many United States officials have fallen into the habit of measuring progress or security exclusively by the number of nuclear explosions, the number of divisions mobilized. The result is that the United States is stuck with a war-like vocabulary (e. g., "massive retaliation"), while the Communists, who continue to aggress, have stolen the words of peace (e. g., "coexistence").

President Eisenhower is convinced that there is no longer any alternative to peace. The British believe that the world is entering a period of pax atomica, based on a recognition by both sides of a nuclear standoff. The new phrase spreading in both London and Washington is competitive coexistence.

In the next 10 years, warned the State Department last week, the main cold-war battleground may well be economic. "The leaders of the Soviet Union," said one of its experts, "are apparently proceeding on the theory that economics is the Achilles heel of the West." To meet this challenge, which in a period of cold peace might prove more dangerous than all the fleets and armies of Moscow and Peking, the United States needs to prove that democracy and capitalism have more to offer—in terms of freedom, justice, and plenty—than the Communists ever can. What is needed is no less than a new world economic policy.

The challenge is immense; it conjurs up a vision of United States capital and skill flowing out to far-off lands to dam great rivers, dig new mines, so that millions who know only hunger may share in the freedom and plenty that Americans take for granted. But the businessmen in the Eisenhower Cabinet are not interested in a return to expensive giveaway programs. Their WEP is based on spreading abroad the practices and philosophy that have made the United States the wealthlest, most progressive nation in history. Foreign investment is to the advantage of other nations who lack the capital to develop their resources; it is also to the advantage of the United States.

FOUR MILLION DEPENDENTS

With but 6 percent of the population, the United States produces and consumes almost 50 percent of the world's annual output of goods and services. Yet if Americans tried to make do without foreign trade, their standard of living would dwindle overnight. There would be no coffee, tea, or bananas in the United States shops; sugar and pineapples would be priced sky-high. Telephones (which need 48 different materials from 18 foreign countries), automobiles (300 items from 56 foreign countries) and shoe polish (8 items from abroad) would be scarce and more expensive. Said Harold Stassen last year: "The United States depends on the outside world for 100 percent of its tin, mica, asbestos, and chrome, for 99 percent of its nickel, 95 percent of its manganese, 93 percent of its cobalt, 67 percent of its wool, 65 percent of its bauxite, 55 percent of its lead, 42 percent of its copper."
Still more does United States prosperity

Still more does United States prosperity depend on export markets. Four million Americans work directly for overseas customers. In 1952 United States foreign sales of earth-grading machinery were equal to 30 percent of production; tractors, 23 percent; textile machinery, 22 percent; type-writers, 19 percent; trucks and buses, 16 percent; refrigerators, 13 percent; cotton textiles, 9 percent. United States farmers exported the produce of 40 million acres of land—between one-quarter and one-half of all their cotton, tobacco, corn, and wheat, About 30 percent of all United States farm marketings are dependent on foreign buyers, and in 1951 farm-export income, divided evenly among United States farmers, equaled \$1,100 per farm.

OFF THE UNITED STATES DOLE

Every year, still more Americans become dependent on foreign trade. United States productive capacity is outrunning United States domestic demand, and the result is that thousands of businessmen are seeking bigger outlets abroad. But if overseas customers are to buy more United States goods, providing more jobs for United States workers, they must obtain the dollars with which to pay for them. In the years after World War II, United States foreign-aid programs helped provide these dollars, 35 billion of them, not counting military spending. But the era of donation diplomacy is past. world must soon stand on its own feet," says Clarence B. Randall, chairman of the United States Commission on Foreign Economic Policy. "It must come off the American Policy. dole, as it wants to do, and earn its own way, as it is determined to do."

To help the rest of the world stand on its own feet, against poverty and communism, is the principal objective of a world-economic policy. Such a policy requires two simultaneous economic offensives: (1) a vigorous expansion of free-world trade; (2) a drive to raise living standards in the underdeveloped lands of Asia, Latin America, and Africa.

EXPANDING WORLD TRADE

Since 1939, world trade has been out of joint. Buffeted by war and cold war, it limps along a narrow defile between the face of the Iron Curtain and the perils of the "dollar gap." This year there has been marked improvement. Europe is back on its feet (Time, November 29), and 11 of its trading nations, accounting for three-quarters of its imports from North America, are quietly dismantling their restrictions on free trade. In some cases (e. g., Benelux) controls have been removed on almost 90 percent of all dollar imports. The vast sterling area, which accounts for 40 percent of all world trade, is slowly and cautiously approaching the day when the pound (and with it, most other currencies) will be declared freely convertible into dollars.

What happens next rests squarely with the United States. "As the strongest economic power," said the influential Committee for Economic Development last month "the direction which our tariff policy takes will * * * determine whether the free world moves ahead to widening markets and expanding production."

CHEESE AND SCARVES

Many United States tariff policies are still geared to the outdated habits of a nation trying to get onto its economic feet. Others are contradictory, and even self-defeating. Examples:

United States Marshall plan experts helped the Danes expand their blue-cheese industry, so that Denmark could earn the dollars it needed to buy United States goods. But when the Danes started selling their cheese, the United States imposed a quota to keep all but a sliver of foreign blue cheese out.

The United States lays great stress on the 1921 Anti-Dumping Act, which protects domestic markets from the unfair competition of foreign products sold below cost. Yet under the burden of its surpluses, the United States is peddling abroad \$1.4 billion worth of food, some of it in 6 million Christmas parcels to be distributed free by United States troops, much more at cut-rate prices that undermine its allies' markets.

Complaints about these, and countless other anomalies, pour into Washington each week. Last month 33 out of the 34 members of GATT (General Agreement on Tariffs and Trade) censured the United States for restricting dairy imports by quota. The London Economist wrote: "The United States is seeking two worlds—one where it can sell its surpluses freely, and another where no other country can sell farm products freely to it." Said a Japanese businessman: "The Americans tell us not to trade with the Communists, then they turn around and raise their duties on silk scarves. It doesn't make sense."

. Foreign businessmen consider these the biggest United States obstacles to expanding world trade.

The United States tariff wall. Yearly, the United States imports about \$11 billion worth of goods: of these, half enter duty free, and two-fifths pay duties of less than 30 percent. Yet cheap sun glasses pay 335.7 percent ad valorem, pocket knives with folding blades 89.5 percent, concentrated lemon juice 85 percent.

The Buy American Act, which prohibits the United States Government from buying foreign products unless the equivalent United States product costs at least 25 percent higher. Cost to the United States taxpayer in unnecessary Federal expenditures: \$100 million per year. Already, in individual cases, the Eisenhower administration is seeking ways to get around this depression measure.

United States customs procedure. "Many goods take longer to pass through customs than it took Columbus to discover America," said a 1953 United States Government report. There are 20 different chargeable rates on fine animal hair; half a dozen for leather gloves, depending on whether the seam is sewn by hand or by machine. Charges often vary as much as 25 percent between New York and New Orleans, and at the end of 1953 there were some 750,000 unsettled customs entries—the equivalent of a full year's work—pending on inspectors' desks.

ADVICE TO CONGRESS

To remedy the worst of these abuses, the Randall Commission proposed a cautious middle-of-the-road program (Time, Feb. 1). It advised Congress to:

Extend the Reciprocal Trade Agreements
Act for at least 3 years.

Empower the President to cut all tariff

Empower the President to cut all tariff rates by 5 percent each year over a period of 3 years.

Authorize the President to slash existing tariffs to not more than 50 percent ad valorem at his discretion.

Simplify tariff classifications and customs procedures.

Change the Buy American Act to permit foreign companies to bid on United States Government contracts without discrimination.

The timidity of the Randall Commission's recommendations was rooted in the notion that a bolder program could not get past high-tariff Republicans in Congress. President Eisenhower did not back the Randall proposals with his full prestige, and protectionists in Congress killed the program anyway. But Ike has decided to try again in January, and he should have more luck, since low-tariff Democrats will occupy the key committee chairmanships in both House and Senate.

RAISING LIVING STANDARDS

What Europe needs is trade; what Asia, Latin America, and Africa need is capital and know-how. Perhaps 1 billion people in these continents are experiencing what economists call a revolution of expectations. A fairly simple western notion-that poverty, disease, and illiteracy are not inevitable-is spreading like flery crosses among folk who for centuries have remained apathetic to advance. Having emancipated themselves from colonialism, millions of human beings are consumed by an aching need to pull from economic servitude. themselves up They look to industrialization as a magic panacea.

This blind and touching belief, and the rising expectations that impel it, have been seized upon by the Communists as a powerful lever of influence. From Moscow and Peking, communism is held out as a shortcut to material progress. Recently John Foster Dulles warned Americans that the Communists' "cruel system * * * does have a certain fascination for the peoples of underdeveloped countries who feel that their own economies are standing still." The danger is that those who compulsively hunger for economic advance will opt for the Communist alternative, if democracy's methods are too slow.

PARTNERSHIP FOR GROWTH

To meet this need and challenge, the Elsenhower administration is considering an imaginative proposal originally offered to the Government by MIT's Center for International Studies. Backed by a powerful segment of the State Department and by FOA's Harold Stassen, it calls on the United States to launch and lead a free world partnership for economic growth.

To start it going, the United States would earmark between \$2 and \$3 billion a year (about one-fifteenth of its arms budget) for the next 5 years, to provide an investment fund for underdeveloped nations. Britain and other industrial nations would be asked to supply additional billions; private investors, most of them Americans, would be encouraged to add to the kitty. Loans from this giant fund would be made available to the have-not nations without military or political strings, but each borrower would be expected to concentrate on those industries for which climate and resources best fitted it: there would be no partnership money to set up uncompetitive prestige industries, which might require high-tariff protection.

FAVORABLE BATTLEGROUND

Partnership protagonists in Washington expect to avoid the big error of the Marshall plan—that of handing over United States

aid on a government-to-government basis, As soon as the pumps are primed, partnership loans to governments would be quickly tapered off, and the building of dams and factories left to private capital, operating for profit. The partnership would also provide United States and European technicians, to teach Indians, Bolivians, Egyptians, how modern industry is run. United States experts believe that atomic-energy reactors might be used efficaciously to provide some of the power for industries in fuel-scarce areas.

State Department planners have accepted as a target MIT's cautious estimate that, once started World Partnership for Growth would make possible an overall 1 percent annual increase in income per capita for the underdeveloped nations of the world. Considering the poverity and vast size of the populations involved, this is no mean target. But it is easily within the giant capabilities of the United States.

Together with the President's program for expanding world trade, some such world-investment program is indispensable to (1) the security, and (2) the future prosperity of the United States. For if the West loses the struggle for one billion in-betweens, on three continents, the balance of world power may go in favor of communism.

There will be resistance to a world economic policy—at home and abroad. But economics, a field in which Americans excel, is a battleground which the United States might gladly choose to fight on.

Max Abelman

EXTENSION OF REMARKS

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following articles from the Brooklyn Eagle of June 5, 1954, and June 6, 1954, and the Jewish Daily Forward of June 26, 1954, which are a fine tribute to a distinguished Brooklynite, Max Abelman:

[From the Brooklyn Eagle of June 5, 1954] ABELMAN IN NEW ROLE, SALVAGING MARRIAGES

Max Abelman, long identified with philanthropic and hospital work in Brooklyn, has set his sights on another of the borough's—and for that matter the Nation's problems—effecting reconciliation of couples about to terminate their marriages in the courts.

The public-relations wizard, who recently retired as secretary of the board of Jewish Hospital and long a leading figure in many other charitable causes, volunteered his services to Supreme Court Justice Maximilian Moss. The latter is currently sitting in the matrimonial part of Brooklyn Supreme Court.

Since he began his work about 2 weeks ago, Abelman has effected three reconciliations of couples about to be divorced or legally separated.

He has also managed to prevent several drawn-out court battles by conciliating differences about alimony, property rights, etc., even though the marriage itself was beyond repair.

Justice Moss explained that he, like other furists, asks the lawyers in each case if there is any chance of reconciliation and, if there is, he talks to the couple privately without their lawyers.

¹ As of September 30, the United States was holding history's greatest hoard of unsold food and fibers: \$6.4 billion worth, including 277 million pounds of butter, 550 million pounds of cottonseed oil, 743 million bushels of wheat, 2 million pounds of tobacco.

However, these conferences frequently delay the trial of other cases, so Justice Moss asked Abelman to preside over a reconciliation conference. Abelman's success and en-thusiasm for the job prompted the jurist to ask him to continue.

As a result, the 67-year-old fund raiser has been spending several hours a day for the past 2 weeks in Justice Moss' chambers attempting to patch up marriages.

[From the Brooklyn Eagle of June 6, 1954] ONE MAN SAYS

(By Robert M. Grannis)

Months ago, when Max Abelman retired as public-relations director of the Jewish Hospital, I had a feeling that this great humanitarian was incapable of calling it a day. As long as there is life and a will and such devotion to the community, the final curtain on a busy life cannot descend. And it was no surprise to me at all when I learned that my good friend for so many years was lendhis services to Supreme Court Justice Moss in the needed work of attempting to patch up broken marriages. And he has done well in this volunteer role because Max is a gentle guy who understands people and their problems, and to him I say "Bless you, their problems, and to him I say Kid, and stay active," because there are too few Abelmans on the scene and none can be spared.

[From the Jewish Daily Forward of June 26, 1954]

MAX ABELMAN HELPS BRING TOGETHER COUPLES WHO HAVE QUARRELED

(EDTTOR'S NOTE.-The Brooklyn Jew who helps a supreme court judge smooth out family quarrels—his name is Max Abelman, and they call him the Ambassador From Brooklyn. He spent 50 years in community work; in 40 years he raised \$100 million for the Government and for Jewish organizations, and now for a talk with him.)

(By S. Regensberg; translated by Sylvia Haironson)

In Brooklyn supreme court sat the Jewish judge, Maximilian Moss, the former president of the board of education, worried. Couples who have quarreled are brought before the judge, fathers and mothers of children, who are unfriendly toward each other. The judge doesn't want to help them part. He asks the lawvers on both sides if there is a hope that the couple will make up. If the lawyers say "Yes" he leaves them in the court, and has a session with the couple privately. Such a procedure, however, delays the progress of other cases. Several weeks ago, the supreme court judge noticed a friend of his, Max Abelman, with whom he worked for many years in various organizations, sitting in his court. He called him over and invited him to sit down near him on the bench. Just then they brought in a couple who had quarreled. The judge's urging that the man and wife make up because of their children did not help and he turned to his friend and said. "Max, take this couple into my private chambers and see what you can do with them." In a half hour, the couple came out of the judge's office, smiling, arm in arm. Since then. Max Abelman, who is thought of as the unofficial ambassador of Brooklyn, every day sits by the side of the judge, whom he helped to reconcile many couples.

Who is this Max Abelman, who has a more convincing influence than the judge and the lawyers? Max (Melech) Abelman is 67 years old. He devoted 50 years to doing good. He didn't save up any money from his work, but he possesses good friends among whom are most prominent Jewish and American personalitics.

His parents brought him to America from Jassy, Rumania, when he was 5 years old. For many years, Max Abelman has been thought of as an expert fund raiser. In 40 years, he collected \$100 million, almost half for Uncle Sam in Liberty bonds in the Pirst World War. Jewish charity organizations in York and other cities in the country ask his advice on how to raise money for their organizations. He helped not only Jewish, but also Protestant and Catholic organizations, and through this became so beloved in the Jewish and Christian worlds that he was given the name "Good Will Ambassador of Brooklyn." Mr. Abelman came to America 62 years ago. His father, Abram, brickmason, and he wrote some shows for the Jewish theater, a number of which were actually produced. In 1916 his father died and he had to help his mother. five years ago, Max Abelman came to Brook-He went to Abraham Abraham, the founder of Abraham & Straus. There was no job for him there, but Abraham sent to Nathan S. Jonas, president of the then Citizens Trust Co., which later became part of the Manufacturers Trust Co. Jonas also had no job for him, but advised him to work for the Brooklyn Federation of Jewish Charities, the first charity federation in Brooklyn, which was being organized. Abelman took on a position as clerk in this charity organization, and remained there for 14 years. He worked out so well in this position that Felix Warburg invited him to help organize the New York charity organization. In 1920, Mr. Abelman told the writer, leaders of the Brooklyn charity federation needed \$1 million for a special building program. They didn't think they could support a new drive, so they wanted, since Mr. Abelman already had experience along these lines, that he give them advice. When Mr. Abelman said it was nothing to raise \$1 million, and that it could be raised in one night, they thought he was joking. They nodded their heads and complimented him by saying that if he said it could be done, it probably could. Mr. Abelman rolled up sleeves, and arranged a big dinner, at which \$1 million was raised. That same year, Abelman called together a conference of bankers and in one night sold them \$25 million of Liberty bonds. This was the largest sum sold in the country. Several years later, he called 44 bankers to a dinner and in one night sold them \$49 million of bonds.

Between Mr. Jonas and Mr. Abelman, there developed such a strong friendship that when the Abelmans had a son, they named him after Jonas, the man who gave Max his first chance and who later wrote a book Through the Years in which he praised Abelman highly. For 10 years, Abelman held an important post in the Manufacturers Trust Co. When he left for the charity federation, they gave him a dinner, at which were present judges, rabbis, and priests. 1932, Jonas influenced Abelman to go to the Brooklyn Jewish Hospital, and there as assistant to the president, and secretary to the board of directors, he performed wonders. One day, passing through the children's wards of the hospital, he noticed the children laying there, looking at the bare walls, in a very melancholy way. He went home and thought all night about this. Looking at the bare walls of his room, he too became melancholy. He decided to do something about He went to the artist, Albert brother of bandleader Xavier Cugat, and told him the story. Cugat came to the hospital and on the walls of the 16 children's wards painted 16 murals of characters in children's stories, such as Snow White, Pinocchio, Goldilocks, Red Riding Hood, Alice in Wonderland, Humpty-Dumpty, and others, which gave the children much joy. When the mu-rals were done, Abelman invited several famous personalities to visit the children's wards and autograph the murals. There Eleanor Roosevelt, General Carlos P. Romulo, General Marshall, General Bradley, Eddie Cantor, James Farley, Ralph Bunche, other diplomats, movie stars and opera singers. With every prominent per-

sonality that came to the hospital, there followed reporters, writers, etc. The hospital made a name for itself all over America, and bathed in money, and grew larger and larger. Soon the personnel of the Jewish Hospital will give Max Abelman a testimonial dinner. He will receive from the hospital a life pension, but a testimonial dinner is nothing new to Mr. Abelman. He would rather they would let him make banquets for others. has done for hundreds of famous Jewish and American people. The writer asked him which of the banquets he made stands out in his memory. He said that 12 years ago, he arranged a banquet for the Roman Catholic Bishop Molloy in Brooklyn. There came to the Waldorf-Astoria Hotel Jewish, Catholic, and Protestant guests. Abelman feels that he not only preached tolerance, but practiced it his whole life, and as a result he showed that Jews and Christians can live together as friends and work together for worthy causes.

Mr. Abelman, who feels that Brooklyn should not be a borough, but a city in itself, showed the writer a whole batch of articles about him which were written into the CONGRESSIONAL RECORD. The former first American Ambassador to Israel, James G. MacDonald, is one of his most intimate friends. His popularity in Brooklyn is so great, that he can run for any office and he would be elected. But Abelman is not in-terested in politics. He regrets that he allowed himself to be retired. He is now writing a book about fund-raising for philanthropic causes.

To the writer's question as to whether there has been any follow-up in this new undertaking in which Judge Moss gave the role of peacemaker, Abelman smiled and said, "Today, I am meeting with a wellknown psychologist, who charges his patients large fees. He is having family difficulties, and having read the newspapers about my work with Judge Moss, he made an appointment with me. Maybe I'll be able to help him also. I hope so, because I consider saving a life as though you're saving the world."

A Veteran Thanks America

EXTENSION OF REMARKS OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. BUCKLEY. Mr. Speaker, I include in my extension the following ad which appeared in the New York Times of December 22, 1954, and paid for by one of my constituents, Mr. Louis Teplitsky, of 3181 Rochambeau Avenue, Bronx, N. Y., as an expression of his appreciation for benefits received from the Veterans' Administration. Mr. Teplitsky is a naturalized citizen and his expression of gratitude for favors received from his adopted country is most commendable. This is his message of thanks:

A VETERAN THANKS AMERICA

I am a disabled, honorably discharged veteran of World War II. A concert tenor by profession, due to a disability caused by the war, my career was interrupted.

However, I have now recovered and am about to resume my singing career.

I wish to state that I am deeply grateful to the Veterans' Administration for the excellent care I was given in the form of treatment and training. I am also thankful to the people of the United States who made it possible. There is no country in the world that has contributed as much to the welfare of veterans as did the United States. I am proud to be a United States citizen for the justice, liberty, and freedom I have enjoyed all these years since I came to the United States from Russia in 1930. I wish from the bottom of my heart the people of the United States health, happiness, peace, and prosperity. A merry Christmas and a very happy new year. May God bless our country and its people.

LOUIS TEPLITSKY.

Our Merchant Marine: Is It Adequate for Defense?

EXTENSION OF REMARKS

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. TOLLEFSON. Mr. Speaker, an excellent and timely article by Helen M. Gibbs appeared in the July-August 1954 issue of the National Defense Transportation Journal. Miss Gibbs is an authority on ship transportation and is coauthor of a book entitled "Ocean Transportation." Her article merits the attention of every Member of Congress who is interested in the problems of national defense, and I insert it in the CONGRESSIONAL RECORD in order that it may be made available to them.

The article follows:

OUR MERCHANT MARINE: IS IT ADEQUATE FOR DEFENSE?

(By Helen M. Gibbs, research consultant and author)

In two world wars, this Nation was singularly dependent upon merchant shipping to transport men and materials to the combat areas overseas. The enemy, well aware of this, did all that could be done to destroy the United States merchant marine.

During the Battle of Norway, Winston Churchill declared: "It is no use thinking of this war in terms of the last war." To think of a future war in terms of the last one would prove equally futile. However, certain lessons concerning wartime employment of merchant ships can be learned from experience.

For months after the United States entered World War-II, production of war materials ran well ahead of the ability to move them. President Roosevelt summed up the situation in a 1942 message to Congress on lend-lease: "With available cargoes in excess of available ships, loading and routing become matters of strategic selection among conflicting needs."

In his report covering combat operations up to March 1944. Adm. Ernest J. King specially stated that even if the Nation had not suffered such severe losses at Pearl Harbor, it still would not have been possible to proceed to Manila, as many people supposed, because we did not have the means—the merchant ships—to carry out the undertaking. The Navy alone could not carry the war to the enemy.

During 1943 and 1944, United States ship-yards delivered over 3,400 ships—sufficient to carry the war to the enemy. In the latter part of 1944, the United States was supplying forces that had landed in Europe in June and building up for the assault on the Philippines. During this same period, nearly 3.5 million tons of lend-lease cargo was shipped from the United States to the Russian Army

on the eastern front, where it bolstered the successful winter campaign.

Even during the latter stages of the war, there was never a surplus of merchant tonnage, so great are the demands of modern overseas campaigns. One example will tell why: In the center of the great amphibious force that bore toward Okinawa were 1,213 vessels carrying 182,000 assault troops and their gear of war.

THE FLEET TODAY AND ITS ADEQUACY

On March 31, 1954, according to the Marltime Administration, the United States merchant marine consisted of 3,349 ships of over 36 million deadweight tons. Although an appreciable drop from the 5,529 ships in the fleet on January 1, 1946, when approximately 62 percent of the world's merchant tonnage was under the Stars and Stripes, it is still the largest fleet under the flag of any nation, representing roughly 25 percent of the world's ships and 30 percent of the tonnage.

This fleet in reality is two fleets: One of 1,157 ships and 14 million deadweight tons that is active and in operation, and a Government-owned fleet of 2,192 ships and roughly 22 million deadweight tons, most of which is in mothballs.

In any attempt to measure the adequacy of the two segments of the composite fleet as an instrument of national defense, one question always arises: "To what extent can the United States depend on American-owned foreign-flag tonnage?"

As all the world knows, considerable vessel tonnage under foreign flags is owned by American citizens or American companies. To secure exact figures is difficult, but at the end of 1952, American oil companies or their affiliates owned 342 tankers totaling 4.5 million deadweight tons registered under more than a dozen foreign flags. For the most part, this tonnage is registered under the laws of sovereign powers that will definitely want to control their merchant fleets during war or emergency.

The experience of World War II supports this. Only 145 foreign-flag ships were available for use by the United States through requisition, title, purchase, or charter.

Only the American-owned tonnage registered under the flags of Panama, Liberia, Venezuela, and Honduras is considered to fall in the category of shipping termed "effective United States control." On December 31, 1952, the total considered available consisted of 45 freighters and 137 tankers.

Cooperation among allies is another matter. During World War II, the position of a ship rather than the flag was the determining factor in vessel employment, and hundreds of thousands of American troops moved overseas in the Queen Elizabeth and Queen Mary.

In the tally of assistance among allied nations, however, the United States furnished more than was received. Throughout World War II, our allies furnished us 715,000 gross tons of shipping, against 5.5 million that was furnished them. The U. S. S. R. still has 83 ships of 785,000 deadweight tons furnished under lend-lease.

Korea furnishes further evidence that, in times of war or emergency, our allies are far more likely to be dependent upon us than we on them. True, many of the 700 ships withdrawn from the back channel following United Nations intervention in Korea were employed between the United States and the Far East, where the United States was furnishing the bulk of the men and material and the ships to transport them. But a substantial number of reactivated ships were employed in the direct interests of our friends and allies. At one time during the winter of 1951–52, a 10,000-ton coal ship left the United States every 2 hours day and night for Europe. Other ships were utilized to carry grain to Europe and India and also ores from Africa to the British Isles.

The Department of Defense holds that the combined fleet of roughly 3,350 ships is close to adequate to meet initial defense require-

ments insofar as number of ships is concerned but gravely deficient in other respects. In a statement made a year ago before a congressional committee investigating the merchant marine, Rear Adm. R. E. Wilson, Deputy Commander and Chief of Staff, Military Sea Transportation Service, said: "While the total national-defense fleet (active and reserve) is deficient only to a minor degree to meet initial defense requirements from a quantitative point of view, there is a serious deficiency from a qualitative point of view."

RESERVE FLEET

The principal deficiency of the national defense reserve fleet, which is entirely Government owned, lies in its composition. Out of some 2,000 ships, more than 1,500 are slow 10-knot Libertys.

A second deficiency concerns condition. Ships reactivated underwent voyage repairs before they were returned to reserve. If these vessels were again required for service, little or no delay would be encountered. But, according to the Maritime Administration, the custodian of the fleet:

tion, the custodian of the fleet:

"The remainder * * * are in various conditions of repair. During the first 2 or 3 years following World War II, voyage repairs (other than to insure watertight integrity) were not made at the time vessels entered the reserve fleet as it appeared that there might be as many as 1,000 to 1,200 ships in excess of the requirements for national defense. It was not then considered justifiable to expend funds for repair while there existed the probability that many of the ships would be scrapped."

Recently, there have been proposals for use of a limited number of these vessels. Early this year, the Maritime Administration called for bids to place a gas turbine engine in one of the Libertys to test the feasibility of modernizing and speeding up the slow-moving ships for future emergency.

The reserve fleet needs to be viewed realistically. The country should not feel that it is adequately taken care of because it has a fleet of old red-leaded ships. On the other hand, it has been deemed wise to hang onto the bulk of them until better ships are available.

ACTIVE OPERATING FLEET

The active operating fleet is facing block obsolescence. In the main, this is a privately owned fleet (1,047 ships out of the total of 1,157). Most of the ships owned by the steamship lines before the war were either worn out in war service or lost, and American owners replenished their fleets by purchasing from the Government's war-built fleet. As a result, the bulk of the active fleet has passed the halfway mark of its life.

Moreover, the Department of Defense has indicated that it considers the active operating fleet deficient in the following respects: 261 notional dry-cargo freighters of 10,000 cargo-measurement tons and 10 knots; 26 notional tankers of 16,500 deadweight tons and 15 knots; and 8 passenger ships of the Independence type.

The notional ship is, in reality, only a convenient term for the discussion of ship needs, and does not represent what the Department of Defense wants. The national freighter is approximately equal to the Liberty, and Defense has been most specific that it wishes "no truck" with the Liberty or any other 10-knot ship. For national-defense purposes, freighters should have speeds of at least 18 knots, tankers at least 20 knots, and passenger ships (troop ships) at least 24 knots.

Defense has a reason for being particularly interested in the active fleet and its expansion. All planning asumes that, if war comes, it will be precipitated by an act of aggression without warning from the enemy nation or nations. Hence, few if any of the reserve ships will have been reactivated in anticipation of the outbreak.

Almost immediately, there will be demands on ship repair facilities and manpower (1) to service United States active ships both merchant and naval, (2) to service allied ships, (3) to repair damage resulting from enemy action, (4) to reactivate laid-up naval ships, and (5) to reactivate laid-up merchant ships. Circumstances will undoubtedly determine priority.

From the joint of view of national defense, it is highly desirable that the United States have as large an active fleet as possible. This poses a problem that can be summarized in two words—more cargo.

NEEDED-MORE CARGO

For a number of years after the war, American-flag ships encountered little or no difficulty in keeping busy. Recently, trade conditions have changed.

Government-financed cargoes, 50 percent of which are required by law to move in American-flag ships, have shrunk to a fraction of their former level. This includes out-bound shipments of coal and wheat, which provided hundreds of cargoes. They have dwindled to a trickle. In addition, American-flag ships are encountering tough competition from ships of foreign countries that have been rapidly rebuilding their merchant marines with competitive ships.

Signs of the trend are numerous. During the first 3 months of this year 21 Government-owned and 56 privately owned ships were withdrawn from active service. By the end of March 192 privately owned ships were dide. Since no charters have been forthcoming for the Mariners delivered recently, MSTS is operating them to meet the 6 months' operating provision of the construction contract. In June, one of the larger steamship companies applied for permission to enter the intercoastal trade, and it was reported that the company was doing so in an effort to keep its ships busy.

In view of declining cargoes, the addition of large, fast, and expensive ships suitable for defense employment becomes a tough problem. It has been suggested that the Government construct the desired ships and stockpile them. That virtually is what is now happening with the mariners.

Mariners. When the first of the 36 Mariners, built at a cost of \$350 million, were delivered, they entered active service under charter arrangements. The first of them to enter the reserve fleet went in early this year. By June, 12 were in mothballs, with 14 more scheduled to go.

These ships are the only freighters built in the United States since the war. So far 1 company his signed with the Maritime Administration to purchase 3 still under construction, and other companies are expected to purchase Mariners to meet requirements of their agreements with the Government. The adjusted sales price has been announced at between \$4.1 and \$5 million.

For national-defense purposes these are our best freighters. With speeds of 20 knots, they are fast enough to travel out of convoy during wartime, they can be mass produced, and need no conversion for wartime employment. Vice Adm. E. L. Cochrane, Maritime Administrator, at the time the building program was initiated, has said of their military use:

"The advantage of the speed of the Mariners is that if you plan to arrive on an enemy coast at dawn, which is the usual thing then the width of the darkness zone that you have to make the final approach on is much quicker in a 20-knot ship—twice as much—as in a 10-knot ship. You are out that much farther and have that much more security against the enemy."

A 60 SHIPS A YEAR PROGRAM

In April the Maritime Administration in the Department of Commerce announced a shipbuilding program calling for the construction of 60 ships a year over the next 20 years. This is a step in the right direction. In the planning of the program not only the ships were considered but also its effect on the shipbuilding industry.

Shipbuilding: Maritime has determined that 60 ships a year will provide work for 36,000 shipyard workers, a number judged sufficient to provide a nucleus work force capable of expansion to meet estimated wartime mobilization requirements of around 430,000 workers. Plans call for construction in yards on all three coasts—Atlantic, Gulf, and Pacific.

The industry is definitely in need of orders if it is to be preserved as a nucleus for possible wartime construction. Since the war it has literally survived by constructing three passenger liners (the Constitution, Independence, and United States), the Mariners, tankers, and a few seatrains. The only ships now under construction are the last of the Mariners and tankers. Unless orders are forthcoming, the Maritime Administration estimates that employment in our coastal shipyards will drop to 1,200 workers by 1955.

Experience should have taught us that a far more active industry is needed as a nucleus for expansion for wartime construction. Although the Maritime Commission had been building ships at the rate of 1 every 2 days before we entered the war and there were over 770 ships either delivered or on the ways in October 1941, great difficulty was encountered in stepping up production to the 4½ ship per day rate maintained throughout 1943 and 1944.

The ships: The 1,200 ships produced over the 20-year period will be sufficient to replace virtually the entire active fleet of the present time. It is planned that the program works something like this:

New ships will replace active ships which, traded in, can take the place of some poorer ships in the reserve fleet which, in turn, will provide scrap for the construction of new ships.

The program, properly implemented, can go a considerable way toward: (1) breaking the bottleneck of block obsolescence in both the active and reserve fleets. (2) replacing currently operating ships such as the present 14-16½ knot freighters with ships which are faster, more modern, and more adequate to national defense, and (3) upgrading the reserve fleet.

This is not to say that there will not be knotty details to work out. The Maritime Administration recognizes the crucial period through 1965, which is really two crucial perriods.

Between 1955 and 1962, roughly 175 ships now operating will reach the ripe age of 20 years. If the first ships are delivered in 1956 (which is probably too soon for construction), ship production will run 420 ships. Hence, to get the new ships into active service—into the hands of private operators—it will be necessary to induce shipowners to turn in some of these ships, say 12-year-old or older ones, on new ships.

During the 3 years 1963 through 1965, nearly 900 ships will be 20 years old. If all of them are replaced during that period, a new block of obsolescence will be created to plague the merchant marine during the 1980's.

Even if construction is maintained at a 60-ship-a-year level 1956 through 1965, production will run to only 600 ships, whereas a total of close to 1,100 of the ships now operating will become obsolescent between 1955 and the close of 1965. Unless some adjustment is made, the fleet of 1966 could include roughly 500 slow and obsolescent ships.

Cost is going to be an item in the disposition of ships to private operators. In this respect, two classes or groups of shipowners need to be considered. (Incidentally, it is assumed that the Government will build the ships under much the same arrangement as that employed in the mariner pregram.)

Under the law now in effect, the Government can sell ships to all shipowners operating in our foreign trade, including tanker owners, at what is called an adjusted price. In essence, that price is the cost of construction in a foreign yard, minus the cost of national-defense features.

The 17 steamship companies operating on what are called United States essential trade routes have entered into agreements with the Maritime Administration that require them to utilize ships not more than 20 years old. These companies can be and are required to replace obsolescent ships. However, this provision does not apply to the nonsubsidized operators offering service in foreign commerce.

The second group of shipowners are those whose ships operate in the domestic trades, coastwise, intercoastal, and to noncontiguous territories. These shipowners are not at present eligible for assistance in acquiring new ships.

Shipowners operating domestically have, in general, been hard pushed, and the oldest operator completely withdrew from the intercoastal trade about a year ago. Since most of these shipowners are having difficulty operating ships that cost between \$600,000 (the statutory sales price for the Liberty) to around \$1 million to \$1.2 million (the cost of C-type vessels), one can only wonder how the domestic fleet can absorb its share of the 1,200 ships and remain in operation.

The problems of modernizing and of maintaining an American merchant marine adequate to national defense are knotty ones. But they are not insoluble if they are recognized frankly and if the shipping industry and the Government cooperate for the best interests and safety of the Nation.

The Congressman's Congressman: Mr. Sam Rayburn

EXTENSION OF REMARKS

HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include two outstanding journalistic comments about the personality and accomplishments of our very able, beloved, and humane Speaker.

The first is an editorial from the Fresno (Calif.) Bee of December 27, and the second an article from the January issue of the Democratic Digest. I am certain that nearly every Member of this body will recognize and applaud the deserved praise stated therein.

The articles follow:

[From the Fresno (Calif.) Bee of December 27, 1954]

A 1913 Texas Freshman Has Come a Long Way

March 4, 1913, was a gala day for the Nation's Democrats. Woodrow Wilson, the second Democratic President since 1857, was inaugurated.

And the political upturn of the preceding November had sent a lot of new and unknown men to the Congress, especially the House of Representatives. One of these was a soft-spoken Texan.

Of the 96 Members of the Scnate and the 417 Members of the House present on that far-off occasion, only he has the distinction of still being a Member of Congress.

In the Senate his closest competitor in length of service is WALTER F. GEORGE, of Georgia, sworn in on November 8, 1922.

This veteran legislator is Sam Rayburn, soon again to become Speaker of the House, an office in which he already has served longer than any man in American history.

Before being elected to Congress he had won the distinction of being the youngest man ever elected Speaker of the lower house of the Texas Legislature.

And the national speakership being what it is RAYBURN will become in January one of the most influential men in Washington

for the next 2 years.

Often called the greatest compromiser since the days of another famous Speaker, Henry Clay, of Kentucky, RAYBURN likes nothing better than to work quietly behind the scenes in shaping legislative history.

A whispered conversation here, a bit of personal counsel there or a quiet word where he thinks it will do the most good—for these he is best known.

Although his own speeches in the House are a rarity, he started the custom of letting Members speak for 1 minute before the House gets down to its regular business. That permits them to get the always popular extension of remarks printed in the Congressional Record. Said Rayburn:

"A politician has to have publicity to live."
Perhaps this incident helps to explain RayBURN's eminence in Washington and also
why he never has been the center of any
fierce personal struggle. He is beloved by
Republicans as well as Democrats.

It takes a man of exceptional character to play the stellar role without exciting either the envy or the jealousy of those cast in the lesser roles, especially on the political stage. What memories Raysuan must have as

he looks back through the years.

[From the Democratic Digest of January 1955]

THE CONGRESSMAN'S CONGRESSMAN: Mr. SAM RAYBURN

(By Eric Sevareid)

After January the American Congress will continue to be very evenly divided; no strong philosophy can dominate, but strong personalities can. There is no longer a Taft or a Vandenberg in the Senate, and after January, most surely, the single most dominating personality will be "Mister Sam," Mr. Sam Rayburn, once again Speaker of the House, who has already broken Henry Clay's record of tenure in that powerful office. If anyone around the Congress feels any regret at the reaccession of Mister Sam, it will be only because Speaker Joe Martin must step down—a man so much like Rayburn, not only in his bachelorhood, but in his plain, old-fashioned honesty, as unpretentious as the leather and horsehair furniture of his office.

The people and page 1 will be getting reacquainted with Mister Sam, and if those not yet acquainted wonder what it is in this small, stocky Texan with the strong, sad face that has made him an institution in our parliament, I can do no better, perhaps, than to repeat some former words on this

welcome subject:

"It comes down to the ultimate test, which politics, like all forms of social life, makes in the end—the test of character. men have learned to love Sam RAYBURN, many like him; all have learned to respect They respect him for his absolute fairness, his patience, his mastery of his job. But there is more to it than that-when they come to know him even a little, they sense in this homespun man a deep, inexpressible faith in other men, an unarticulated love of his country, in its past and its present and a natural, unquestioning belief in its fu-ture. Most men are a little bit lost, most men of present politics are confused, in this time of high-pressure techniques, of showmanship, of fear and witty disbelief, and they sense in this man RAYBURN something firm and clear, something that one can cling to.

"It occurs to no one to call RAYBURN a conservative or a liberal. He meets the test of no handy label, because he is not a man of political theory and doctrine at all. He follows the facts, wherever they may lead. But because he feels that too many men live too meager a life, the facts generally lead him to conclusions that are liberal, in the best, the moral sense of that word.

"His friend, David Cohn, once wrote of Mister Sam: 'When pressed to define his political and economic convictions * * * this small man with the sad, shrewd face * * is likely to say, without any touch of fraudulent plety, "Well, a little applied Christianity wouldn't hurt anybody."' Cohn describes a gathering in which somebody complained that hard-up farmers were riding around in cars. Rayburn said, 'Many a time when I was a child and lived way out in the country, I'd sit on the fence and wish to God that somebody would drive by in a buggy; just anything to relieve my loneliness. Loneliness consumes people. It kills 'em eventually, God help the lonely. I'm glad to see farmers have cars and use 'em.'

"RAYBURN was lonely and wretchedly poor, and he has not forgotten what that is like. And if anybody called his attitude New Dealism or socialism or do-goodism, he wouldn't know what they were talking about. As Cohn wrote, "RAYBURN was born on the farm in the prepackaging era, when folks got their cheese off the big round and their crackers out of the barrel and so * * he clings to the outmoded concept that the contents are more important than the package." His voice doesn't quaver when he speaks about 'the people,' said Cohn. 'He doesn't bait labor or capital, quote the Bible, or call the farmer nature's nobleman * * he doesn't think that a man is a saint because he wears overalls and chews Brown Mule, or that another is a devil because he is tailored by Savile Row and smokes coronas.'

"If SAM RAYBURN shares none of the contemporary hypocrisy about classes of men, it may be because, as a man, he is in a kind of class by himself."

Address by National Commander Seaborn Collins, American Legion

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include a copy of the address made by National Commander Seaborn Collins of the American Legion before the house of delegates of the American Medical Association at the McAllister Hotel, Miami, Fla., November 29, 1954.

The address follows:

I am grateful for the courtesy which you extended to the 4 million members of the American Legion and its auxiliary in extending me an invitation to address your meeting.

In recent years, any meeting between the American Legion and the American Medical Association has revolved around one paramount issue. Before offering my considered remarks on this important subject I would like to point out that in many other important areas the resources, experience and

abilities of our separate organizations are committed as they should be, to the common objectives of strengthening the security of our Nation and the welfare of all of our people.

Too often we're inclined to forget this fact. And, truly, we can't afford the luxury of such forgetfulness. At this critical time when the security of our Nation, internally and externally, demands the united, dedicated efforts of all of us, we must emphasize those things which bring and keep us together.

National defense, Americanism, child welfare, increased religious devotion—these are goals that command our common allegiance and dedication. Certainly, our separate efforts contribute toward the attainment of

these common objectives.

I think it appropriate to mention, too, another area in which the principles and objectives of the American Legion coincide with those of the American Medical Association. You know, the American Legion's membership encompasses every shade of political and religious conviction and all strata of our economic life. We hold two things common to all our members—honorable service to country in war and stanch Americanism in the basic sense of that word—connotating the right and duty of every man to stand on his own feet and make his own way.

Legionnaires as a group measure up to the best traditions of rugged individualism. And it is, I believe, because of this tradition of self-reliance that the American Legion through the years has consistently assumed a position of firm opposition to any program that could be considered akin to socialized medicine. I would venture to say that the Legion's record on this subject has been as firm and uncompromising as that of the medical profession. The American Legion, by its very nature, sustains the principle of the right of the individual to choose his own physician in his own way and to his own satisfaction.

I believe the American Legion will continue to be found standing firmly on this principle. I would ask the medical profession to remember the value of having a strong lay organization allied with it in warding off periodic attempts to folst this evil scheme to the American people.

I want to emphasize, in my concluding remarks, those essential areas in which your efforts parallel and complement ours. Immediately, however, I would like to mention briefly that subject on which the American Legion and the American Medical Association have not yet reached agreement.

I use the words "not yet" deliberately because I, for one, am hopeful that the practice of exchanging views between our organizations, initiated with such high purpose and aspirations nearly two decades ago, may yet

lead to agreement.

It seems to me that informed, reasonable men should be able to sit down around the conference table on any issue as long as there remains the need for understanding. Let me assure you that the American Legion is ready, and will remain so, to discuss with the American Mcdical Association and with any other interested group the system of hospital care for our Nation's war veterans.

May I try to formulate for you in a few words the position of the American Legion today on this subject?

The American Legion, because it is what it is—an organization of war veterans—bears a fundamental obligation to consider, study, and protect the welfare of our disabled comrades. Let me say, parenthetically, that I use the word "comrade" in its true meaning, and that we of the Legion refuse to surrender this fine old English word to the distortion of our Communist enemies. I am sure you can see and accept this obligation as ours, just as we accept your responsibility to study and to represent, as far as any group can, the needs and interests of the medical pro-

fession, and through them the betterment of our country and all of its people. Through the groups we represent, therefore, we both seek the betterment of America. In short, we are citizens first and doctors and veterans second.

Now the American Legion believes that both the obligation of the country, and the wishes of the American people for the Nation's war veterans, are fairly expressed in the provisions of Public Law 2, 73d Congress, as amended by Public Law 312 of the 74th Congress. The legislation provides:

"Any veteran of any war who was not dishonorably discharged, suffering from disability, disease, or defect, who is in need of hospitalization or domiciliary care and is unable to defray the necessary expenses thereforshall be furnished necessary hospitalization or domiciliary care in any Veterans' Administration facility, within the limitations existing in such facilities, irrespective of whether the disability, disease, or defect was due to service."

The American Legion neither expects nor wants the Government to give carte blanche entitlement to medical care to all veterans. We have not asked for it. The Veterans' Administration's goal now is 128,000 beds—for more than 20 million veterans. We are not seeking any major increase in this goal.

At the same time, the American Legion does not want to see any war veteran who is sick and in need go without proper treatment. We know the medical profession doesn't either. Further, we believe that the war veteran with honorable service has earned such necessary treatment from the Government he served.

We believe that the obligation to pear arms in defense of the Nation is a basic obligation of citizenship—and we believe this obligation begets an equal obligation on the part of the Nation to protect the welfare of the citizens who have defended it.

You know, as do I, that most of our veterans—and most Legionnaires—pay their own way and meet their own expenses, medical and otherwise. This is the American way, and this is why our country is morally and economically sound.

But gentlemen, you also know, as do I, that a percentage of our citizens must inevitably ask for help—because of disaster, misfortune, and other circumstances beyond their control. Every doctor gives part of his time to charitable practice. It is an accepted phase of the pursuit of his noble profession. The American Legion simply believes that this percentage of our citizens, when they are honorably discharged war veterans, have earned the necessary care as beneficiaries of the Federal Government.

We believe that the American people have accepted, approved, and activated that philosophy through legislation enacted by the Congress. We further believe that the country does not want or expect its veterans to impoverish themselves beyond possibility of economic recovery before seeking needed medical care through the Veterans' Administration.

This, very simply, gentlemen, is the position of the American Legion. We hold that it is reasonable. Please accept my profound declaration of our sincerity. We are genuinely sincere in dedicating ourselves to the welfare within the structure of our economy as it is is now constituted. We offer as proof, if proof is needed, the fact that the Nation's veterans are the backbone of that structure, that we fought to preserve it as it is, and that we have the most to lose should it be threatened.

At the same time, we acknowledge the sincerity and honesty of approach of the American Medical Association in its evaluation of this subject. So do we respect the right of the American Medical Association to develop and present its opinion on this subject. After all, gentlemen, the reason we American Medical Association to develop and present its opinion on this subject.

cans fought a war was to sustain your right and mine to differences of opinion.

We of the Legion do not like to see hospitalized veterans made the victims of a controversy which casts unnecessary and unfounded suspicions upon their entitlement to hospital care. You do not like that either, you couldn't, and still honor your obligation to comfort and heal the sick.

If we agree on that point, then we ought to try in all sincerity to broaden the agreement—and remove this particular controversy from the area of name calling and propaganda.

It takes two to make an agreement. For my part, I am prepared to appoint a special committee of American Legion representatives who know the background and facts surrounding veterans' hospitalization to meet with a similar committee of your choosing and work toward a better mutual understanding of the problem. I earnestly hope that you will see fit to participate in such an undertaking.

If our two groups approach the subject of medical care for veterans in this sincere, honest, and reasonable fashion, I believe that we can resolve our differences or at least achieve an understanding of each other's position which will permit us to continue to collaborate and cooperate in those fields where we do agree.

As I have already indicated, I believe those fields are substantial.

Communism thrives on disunity and dissension. It makes no difference what causes Americans to be divided. It matters not that we may be united in our opposition to communism and to everything for which it stands, if other issues keep us apart.

As Americans, we have the obligation to recognize the other fellow's right to disagree—and to try to understand his view-point and sincerity. Today, more than before, we need also to strengthen our interest and active cooperation in behalf of the security of our beloved country.

The American Legion and the American Medical Association are united in our separate determination to protect this Nation from the insidious, destructive forces of communism. We are united in our determination to secure for America an adequate, economical program of national defense. We are united in our determination to imbue our citizens with a fierce love of their country and an abiding faith and confidence in the imperishable principles that are our heritage.

Let us make certain that nothing ever comes between us to imperil this essential unity of purpose and action.

Democrats Blast Nixon Because He Is Effective

EXTENSION OF REMARKS

HON. JOSEPH F. HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. HOLT. Mr. Speaker, I should like to call the attention of my colleagues to an article from the Washington Evening Star of January 11, 1955, that I believe is very worthwhile reading in light of recent, unfair, purely political criticism of our outstanding and very capable Vice President, RICHARD M. NIXON.

The article follows:

DEMOCRATS BLAST NIXON BECAUSE HE IS EF-FECTIVE—SNIPING AT VICE PRESIDENT ALSO AIMED AT EISENHOWER

(By Gould Lincoln)

The concentrated Democratic attack on Vice President Nixon, which began immediately after the 1954 campaign and is now continuing with almost daily sniping, apparently has two basic and impelling reasons. The first is to rid the Democratic Party of the Communist issue—the Red issue—which has plagued the Democrats for years and has hurt them in a number of States. The second is to strike at the man closest to the White House and President Eisenhower himself—the Vice President of the United States.

So, beginning with former Democratic National Chairman Stephen A. Mitchell and continued by Adlai Stevenson, Speaker Sam Rayburn, Senator Richard L. Neuberger, and by other freshman Democrats in Congress, the drive is on to picture the Vice President as merely a smear artist and, as such, entirely unworthy, a man who hits below the belt. Their theme song is that he made the Democrats out to be a parcel of traitors over the last score of years, and disloyal at the very least.

CHARGED STUPIDITY

The facts in the case, as revealed by a perusal of the Vice President's campaign speeches, are that the Vice President did no such thing. What he did was to accuse the Democrats of stupidity because they did not recognize the Communist menace; that they did not take the steps necessary to check infiltration of the Reds, and that when cases were called to their attention they did nothing about them. For example, the case of Alger Hiss and Harry Dexter White.

The Vice President said repeatedly that communism should not be a political issue, and that there was no difference the loyalty of Democrats and Republicansbut he added some misguided officials of the Truman administration were blind or in-different to the danger from the Communists. That is the kind of criticism which hurt-and which was effective against the Democrats in the 1950, 1952, and 1954 campaign. The Democrats don't want any more of it. They have, they think, disposed of Senator Joe McCarthy, of Wisconsin, in such a way that he will not be effective in his attacks on them. He took no real part in the last campaign. Now they have turned on Mr. Nixon-who made effective use of the Red issue and is capable of doing so again. They picture him as a character assassin, the lowest kind of politician. They hope to get away with it, by a consistent campaign, of attack upon him.

NEUBERGER VERSUS NIXON

Senator Neuserger, without mentioning the Vice President by name but plainly indicating Mr. Nixon was his target, recently criticized the latter's campaign against him, Senator Neuberger. As a matter of fact, Senator Neuberger was 1 of the 5 leftwing Democratic candidates singled out by Mr. Nixon in his Pocatello, Idaho, address on October 25, 1954, when the Vice President asserted that the gains that the Democrats would make, if they took over the 84th Congress, inevitably would come from the ADA left wing of the party. The other 4 were Glenn Taylor, of Idaho, who ran for Vice President on the Henry Wallace ticket in 1948; former Representative John Carroll, of Colorado; Senator O'Mahoney, of Wyo-ming, and former Representative Yorty, of California. "The people," Mr. Nixon said, "do not want to go back to the Truman policies which mean war, corruption, toleration of communism, and economic policies which were never able in 20 years to provide prosperity except during wartime and which were inevitably leading the Nation down the road to socialism." Whether it was Mr. Nixon's

campaigning or not, 3 out of these 5 Democrats were defeated in their races for the Senate.

NIXON HOLDS HIS FIRE

Mr. Nixon is for the present, at least, holding his own fire. His defense is being made by other Republicans, among them Republican National Chairman Leonard W. Hall. Mr. Hall said it should be clear to everyone who reads the papers and hears the TV and radio that there is now underway a "highly-organized campaign to besmirch the Vice President. The technique is to smear him by faisely accusing him of smearing others. This is one of the lowest tricks in politics and in this instance destructive only to its perpetrators. Dick Nixon is one of the most effective campaigners in history. It is because he tells the truth and is effective that he is under attack."

But should Mr. Nixon find it necessary to reply, he is quite capable. Further, he knows a lot more about the Communist activities in this country than do his detractors. He was mainly responsible for the conviction of Alger Hiss. No one is going to say to him "You never got a Communist."

Nor can the Democrats get away from the fact they were blind to what was going on when Hiss and White and others were active in the Government.

Costa Rica

EXTENSION OF REMARKS

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. MORANO. Mr. Speaker, under leave to extend my remarks, I wish to include a telegram I dispatched on January 12, 1955, to Secretary of State John Foster Dulles and a copy of a press release which I prepared in connection therewith. They follow:

JANUARY 12, 1955.

Hon. John Foster Dulles, Secretary of State, Department of State, Washington, D. C

Washington, D. C.:
Grave situation in Costa Rica constitutes serious menace to the peace and security of the Panama Canal and of the entire Western Hemisphere. I respectfully urge immediate and vigorous action by the United States under your personal direction within the framework of the Organization of American States to bring about cessation of hostilities and needless bloodshed.

ALBERT P. MORANO, Member of Congress.

Representative ALEERT P. MORANO, Republican, of Connecticut, a member of the House Foreign Affairs Committee, has called upon Secretary of State John Foster Dulles to intervene in the grave Costa Rica situation to end a serious menace to the peace and security of the Panama Canal and the entire Western Hemisphere.

Morano's message to Dulles said, "Grave situation in Costa Rica constitutes serious menace to the peace and security of the Panama Canal and the entire Western Hemisphere. I respectfully urge immediate and vigorous action by the United States under your personal direction within the framework of the Organization of American States to bring about cessation of hostilities and needless bloodshed."

Elaborating on his message, Morano said, "The sending of a peace observation com-

mission by the OAS is a good, positive first step. We must have the facts. However, all immediate steps must be taken to insure that the increasingly bitter struggle does not further expand into a major holocaust which will endanger the peace of the Western Hemisphere.

"I am in hopes that the situation can be settled swiftly through OAS action under the direction of our able Secretary of State."

The Southern Democrat Now Takes Over

EXTENSION OF REMARKS

HON, ROBERT W. KEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. KEAN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by William S. White from the New York Times Magazine of January 9, 1955:

THE SOUTHERN DEMOCRAT NOW TAKES OVER (By William S. White)

Washington.—The southern Democrat—and the genus will here be rather arbitrarily described as though it were one man—has returned to a place of unsurpassed power in the life of the United States. He bestrides the new Democratic Congress as so often, minority man though he is in his party, he bestrode Democratic Congresses in the past.

He has come back with the quiet, softvoiced self-deprecation with which he is pleased to fool himself but not others; the others in politics have been on to him for a long time. They know that in political action he is as gentle as a paratrooper and that he is separated from his perquisites as easily as is a dowager from her duly appointed place at table.

He cannot run a national convention of the Democratic Party, but he can run the party in Congress and therefore to a considerable extent Congress itself when his party is in the majority. He cannot win a presidential nomination, but he can very nearly select, or at least hedge about, his party's presidential nominee. He cannot himself win a Congress, but when the dust and the smoke have cleared away, who is sitting at the top of Congress? The southern Democrat.

He is the Democratic boss in both Chambers of the new Congress. His face in the House of Representatives is the strong, lined, somewhat saturnine countenance of Sam Rayburn, of Texas, who is now the Speaker. His face in the Senate is the broader, more amiable mien of Senator Lyndon B. Johnson, also of Texas.

The Rayburn-Johnson Texan, however, is not altogether the Southern Democrat. The southern Democrat. The southern Democrat is also the patriarchal Senator Walter F. George, of Georgia; the gloomy, attenuated Representative Howard W. Smith, of Virginia; the aloof, patrician Senator Richard B. Russell, of Georgia; the boomingly extroverted Senator John Sparkman, of Alabama, a brilliant son of a share-cropper. And so on through a long list of men who vary much and yet, in another sense, vary not at all.

Some have said in acidulous jest that in Congress the South takes a recurrent and unending revenge in behalf of the long-dead Lee for Gettysburg. Those who say this are more often than not the frequently bewildered and sometimes frustrated Democrats of the other, or northern, breed. But the jest is not really the story. For in the last emergency—when the common Republican en-

emy's face is at length clear in the campaign gunsight—a George, of Georgia, will be found intoning the gravely considered view that a Senator Hubert Humphrey, of Minnesota, who drew angry southern blood in 1948 by stampeding the Democratic convention for a compulsory civil-rights program, is a very sound young man; very sound, indeed, and worthy of every ally.

The southern Democrat is, in fact, actually

The southern Democrat is, in fact, actually a forgiving chap but for one thing, and this thing is an offense against personal manners. A RAYBURN will reach the point of livid fury when, for example, he hears it said by a Republican speaker that the Democratic Party represents "20 years of treason." But he will not necessarily sustain this anger forever, while his anger at a personal slur may

stay with him to the grave.

It is this quality in the southerner—this and the sometimes unpredictable way in which he may define personal insult—that helps to keep him something of an enigma to his northern associates and to the Republicans as well. Equally, his political philosophy causes a good deal of trouble—this and the fact that, again in the last extremity, he will rarely permit that philosophy alone really to separate him from other southerners, no matter how heretical their political views. Often he thinks he will accept the final separation, but rarely will he really do so.

To describe the southern Democrat's philosophy, it is necessary first to subdivide both that term and him. For present purposes the collective southern Democrat will be defined by creating a photomontage absent from which will be all men like Senator LISTER HILL, of Alabama (much too liberal for this image) and Senator JAMES O. EASTLAND, of Mississippi (much too conservative).

Mississippi (much too conservative).

On the other hand, Mr. RAYBURN is too liberal, too (he still unashamedly loves Harry S. Truman), but he must be, irrationally, included. He must be included because he is, like Texas at the start of the War Between the States, almost an independent republic but in spirit and in strength a part inseparable from the whole. This is not clear? Very well, put RAYBURN in anyhow, and say only that the rule must have its indispensable exception.

Now, the southern Democrat, corporeally, has been subdivided down to where there is in him little or nothing of Hill on the left or of EASTLAND on the right. But when it comes to subdividing the philosophy one must nevertheless bring in a little of Hill and a little of EASTLAND, too.

For the southern Democrat, as here in part defined, likes public housing, and so does Hill. He likes public power, and so does Hill. The truth is, he likes, in spite of himself, a good deal more of the welfare state than he likes to admit, even to himself. He is, up to this point, the most practically effective liberal in the Congress of the United States—and the most liberal, too, in the purely material sense of that word, in dealing with the allies abroad and in general, with "such as have none to pray for them."

But the southern Democrat, as here in part defined, deeply dislikes all Federal interventions into intimately social relationships, he will, beyond question, maintain so long as it may remotely be in his power such highly controversial concepts as racial segregation and the limited southern ballot. And so will EASTLAND.

The southern Democrat deeply and genuinely resents the Supreme Court decision in the school-segregation case; he is in great fear that the Court is becoming emotional and subjective in dealing with the race question in general. And, like him or not, and like his determination or not, he will, as time goes on, go pretty far to alter the atmosphere in that Court. He will not, however, go so far as to attempt to pack the Court. Here, and here alone, is where he

really first left the man who had been his greatest idol since Woodrow Wilson—Frank-lin D. Roosevelt.

He will not attempt to pack the Court, or otherwise violently intrude upon it, simply because, unlike all other politicians, he regards the Court as a higher place even than the White House and, in his heart, considers the law to be the only acceptable profession, except the more dignified pulpits of the land. As to business life, he puts plantation-owning first, even though he is as ready as the next man to smile at the sentimentalities of the magnolia tradition. Second in his regard is the brokerage trade—especially in commodities such as cotton and tobacco.

His whole political life and his whole political creed suffer from a split personality for which he is not himself responsible but which he stoutly fosters and rationalizes with great skill. It is not, intellectually, a tidy thing genuinely to support public housing and also to object to whites and Negroes living side by side in those houses built by tax money from both races. But there it is, and there he stands. It is not, intellectually, a tidy thing to have a genuine world view, a genuine concern for the success of such enterprises as the United Nations, and yet to live in a tradition that compartmentalizes a single country. But there it is, and there he stands.

Nor is it logical to dislike certain advanced liberals as much as he does and yet go with and beyond these same advanced liberals in attacking, at the end, such manifestations as what it is called McCarthyism. But there he is, and there he stands.

The southern Democrat, as he has here been brought together, believes: in internationalism; in the most scrupulous observance of the Bill of Rights save in what he considers to be the debatable area of civil rights; in Federal subsidies in aid of nearly all who really need them; in strict national observance of good order (no one could more hate lynching, of any sort); in something approaching free trade in the world; and, finally, in the Democratic Party—if it is patterned more or less in his own image.

He does not, however, truly understand certain of the practical necessities of that party and because he has so long and on the whole so faithfully (even, possibly, blindly) supported it, he feels remarkably free to denounce it and, when the spirit moves him, even to bolt it. Because there is no genuine party discipline locally in the South—and need not be—he has little instinctive grasp of the absolute requirement for such discipline in the inherited two-party system which, like all traditions, he consciously venerates so much but sometimes serves so poorly.

He has, on the other hand, an almost dynastic hereditary political skill (it is commonplace among congressional correspondents that the most hostile observers eventually discover this with great wonder). In consequence, he actually can deal more successfully, and more comfortably, with Northern political bosses than can many of the elected colleagues of those same bosses. A HARRY BYRD and a Jim Farley, for example, will understand each other a great deal better than might be supposed, for all that Mr. BYRD operates from a colonnaded ancestral seat in Virginia while Mr. Parley frequents the terrifying canyons of Manhattan.

The southern Democrat differs, in Congress, from his northern colleague in narrow, but very important, areas. The two, of course, are profoundly apart on civil rights but aside from this they are more apart on customs. The southerner as a practicing congressional politician alternates between a serene silence, in which he leaves the distinct impression that the matters at hand are for lesser men than he, and a vehement

voice in debate that leaves his vis-a-vis all but windblown.

He expects people (meaning in practice the northern Democrats, for he has an uncomprehending tolerance and even affection for the Republicans as men from whom it would be foolish to expect much of anything) to understand certain political habits and prejudices that to the eye are rather complex. If he is a member of the party leadership—and, of course, he is—he assumes, for example, that others will instantly sense when he is speaking for the party hierarchy; when, again, he is speaking for himself, and, finally, when he is only speaking.

Because he has an almost tactile sense of the proper parliamentary procedure in a given circumstance, he is much put out when his northern colleagues act unsubtly. Sometimes he so far forgets himself and the amenities, which on the whole he himself so devotedly fosters, as to suggest to a nonsoutherner that it would be well if he just sat down.

He would never think of tolerating such a suggestion if made to himself—unless, perhaps, it came from a southerner senior to him. He is, in short, remarkably clannish and his unofficial caucuses, from which non-typical southerners are excluded by means as airy as a cloud but as cold as sleet, are like nothing so much as the far-spaced reunions of a large family of highly individualistic members who are nevertheless bound by the one bond.

Has Cousin Robert entered upon an unsuitable life (or got too close, say, to the CIO)? Well, this is deeply regrettable; but, after all, he is Cousin Robert. To break the clan spirit is the one thing Cousin Robert cannot do, just as it is the one thing a southern Democrat will not forget in another.

Senator Estes Kefauver, of Tennessee was defeated for the 1952 Democratic presidential nomination most of all because of a more powerful aspirant named Adlai E. Stevenson. It is a fact, however, that the literally implacable hostility of the southerners at the convention probably would have barred Mr. Kefauver in any event. What they held against him was no sort of even alleged crime, but to them it was unforgivable.

He had, first and most important, as a southerner taken what thye regarded as positions opposed to the sacred fillbuster right. He had, secondarily, made crime investigations in Illinois at a time when the non-southern but popular Scott W. Lucas of that State, then Democratic Senate leader, was up for reelection. Mr. Lucas was defeated. Finally, Mr. Kefauver took unsouthern positions at the convention itself.

All this might suggest that our southern Democrat is a haughty type and perhaps too sure of his own ideas and dignity. Such a notion would be less than fair. For the same man who feels free to offer suggestions that he would not care himself to receive is also the man who over and over in the daily free-for-all in Congress will make gestures of the greatest generosity to his opposition and will stoically sit on to hear them with suitable deference while other men have thankfully fled to the cloakrooms. And it is this man, almost invariably, who is the private hero of nearly every Senate employee, of whatever personal political view.

In short, from his lofty seats of power (most of the committee chairmanships, which he holds because he has been here longer) the southern Democrat will run an 84th Congress of many mixed characteristics. It will not please a good many people; certainly that is so. But it will have a certain grace about it. And for all true watchers of the political drama it will be a show of the greatest professional virtuosity. These, indeed, are the pros' pros.

The Nation's Oldest Attorney Is Called by Death—Distinguished American Barrister Passes at Age 103

EXTENSION OF REMARKS

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I would like to insert a memorial address given by the Honorable J. G. Waskom, of Marked Tree, Ark., honoring the late J. J. Mardis, of Harrisburg, Ark.

The address by Judge Waskom was given at memorial services held at the opening day of civil circuit court on December 13, 1954, with the Honorable Charles Light, of Paragould, presiding.

I have inquired of the records of the American Bar Association and with the Law Library of the Library of Congress, and it appears that Senator Mardis was the oldest practicing attorney in the Nation at the time of his death. J. J. Mardis was engaged in the active practice of law at the ripe age of 103 when death called him away from his duties.

Judge Waskom told the court at the time of the memorial services:

J. J. Mardis was born 3½ miles south of where Harrisburg is located. The county scat was then Boliver, the old site of which is a few miles north of Harrisburg. His father died when he was 5 years of age and he was reared by a widowed mother. He spent his early life working on the farm and raising stock. All the literary education he acquired was in going to the Farm Hill log schoolhouse some 2 or 3 months a year. After he finished school he borrowed law books and read at night by candlelight until he was admitted to the bar in 1882. When he was born on November 18, 1850, Millard Fillmore was President of the United States, who was succeeded by Franklin Pierce, who was succeeded by James Buchanan, who was succeeded by Abraham Lincoln.

When J. J. Mardis was born there were only 3 members of the Arkansas Supreme Court and Volume No. 10 of the Supreme Court reports had just been issued. Now there are 221. Mr. Mardis did not have the opportunity of attending a law school or studying in a law office but he knew the history of legislation, the principles that have been settled upon the field of war. He new the maxims-those crystallizations of commonsense, those hand grenades of argument. He was not a case lawyer-a decision index or an echo. He was original and thoughtful, with breadth and scope, resource and logic, and above all a sense of justice. He was painstaking and conscientious, anxious to know the facts-prepared for every attack, ready for every defense. He rested only when the end was reached. During the contest he neither sent or received a flag of truce. He was true to his clients, making their case his. He knew the boundaries of State and Federal jurisdiction and was familiar with those great decisions that are the peaks and promontories, the headlands and beacons of the law.

Mr. Mardis lived a long, long life, more than 103 years. He witnessed the greatest period of material development and progress in all human history. When he was born there were no matches—fire banks were kept; no cigarettes, no cigars, but clay pipes; no heating stoves, but open fireplaces; no mowers, no reapers, no thrashers, but cradle scythes and fialls; no educational institution in Arkansas except the schoolhouses; no telephones and telegraphy was in its infancy; no cotton gins except those operated by animal power; there was not a railroad in Arkansas; there were no typewriters, no electric lights, no conveyances except wagons and stagecoaches; no dynamos, no internal combustion engines, no photography, no airplanes, no atomic power.

Such were some of the conditions under which Mr. Mardis fought the battle of most of his early life, but by diligence and perseverence he contributed his part to his family, to his city, to his county, to his State, and to the maintenance of our matchless free Republic. He heard Lincoln's great proclamation and saw great numbers of slaves rove with joy the fenceless fields of freedom. He gave to every human being every right that he claimed for himself. He followed the golden mean between the two extremes. He fought the battle of life without bowing to place or power, with enmity toward none and charity to all.

On June 4, 1954, after a life well spent, with his every duty faithfully performed, the soul of J. J. Mardis, like a great and peaceful river, between green and shaded banks, flowed into the waveless ocean of eternal peace.

Mr. Speaker, the eloquence of Judge Waskom bespeaks his own great heritage of knowledge and the law, and indicates the love and the admiration he feels for the late Senator Mardis. Such men—both Senator Mardis and Judge Waskom—are a part of the great tradition of America—dedicated men to the operation of society along established rules of procedures to insure the greatest liberty for our citizens—zealous guardians of the power of the law.

Such men are inspirations to us all.

MRA Merits Admiration and Support

EXTENSION OF REMARKS

HON, THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. TOLLEFSON. Mr. Speaker, I desire to join in the sentiments expressed by the gentleman from California [Mr. Sheppard] and others with respect to MRA and wish to commend all of them for their statements. It has been my privilege to attend several MRA sessions and plays. To say that they have been most worthwhile is to state it mildly.

We live in a critical era—in a world filled with tensions and problems. People all over the world are seeking solutions to those problems which exist in almost endless number and in varying degrees of magnitude. We find nation pitted against nation, race against race, and class against class. Solutions must be found if civilization is to endure with a maximum of freedom and liberty for all people. But those solutions will be difficult, if not on occasion impossible, to find if our objectives are not higher than

the mere material. The objectives must involve that of which our President spoke in his State of the Union message when he said "man is a little lower than the angels—holding dominion over the works of his Creator."

MRA points up the need of such objectives, and seeks to show contending forces how those objectives might but be achieved. MRA has accomplished what may be termed wonders throughout the world. It is an organization which merits the admiration and support of all of us.

Address of Hon. Francis B. Sayre in Tribute to Dr. John A. Mackay

EXTENSION OF REMARKS

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. HAYS of Arkansas. Mr. Speaker, on September 30, 1954, the beloved president of Princeton Theological Seminary, Dr. John A. Mackay, was the honoree at the Upper Room annual citation dinner at the National Press Club. On that occasion Hon. Francis B. Sayre was the principal speaker, and his tribute to Dr. Mackay and his analysis of world conditions constituted a significant statement. Under leave to extend my remarks, I include Mr. Sayre's address, as follows:

I feel very grateful for the privilege accorded me by Dr. Potts of being present at this gathering of friends of the Upper Room. The Upper Room has come to mean so much in the lives of thousands and thousands of Christians all over the world that I should like, if I may, on behalf of its readers and admirers, to express our debt and our profound appreciation to Dr. Potts and to his coworkers of the upper room for their unique contribution to the cause of Christianity.

Tonight we are gathered to do special honor to one of the great leaders of our generation. It is a joy to share in this outpouring of tribute to him. He has truly sensed the nature of the critical need of our present tortured world and the one direction in which to turn for effective help. All his days he has followed the Vision and has brightened it for us. He has not been content merely to pray "Thy Kingdom come," but has devoted the whole of his working life to the active building of that Kingdom. John Mackay is one of Christianity's great apostles to our generation.

I think of John Mackay, leader in so many areas of the church's outreach into our world, as a symbol of the kind of work that God is calling all of us in our generation to achieve. First, he has comprehended with clarity the present world need; next, with power he has set about influencing and shaping other lives so as to help effectively to meet that need. Bearing him in mind, I want for a few minutes this evening, if I may, to sketch in some of the stark realities of this international picture as I have seen it from many different fronts across the world.

Mankind today is harried with fear. The 19th century sense of security and prevailing optimism is shattered. Two world wars have wrecked many of our settled beliefs and cherished institutions. The world is filled with false creeds and lying propaganda. Mankind, disillusioned and frustrated, is groping for help. In which direction shall

the hungering millions turn?

One of these false creeds, which in large areas of the world is eclipsing Christianity, is communism as taught and practiced by Russia today. While Russian communism preaches a better life for all mankind, it places all its faith in the supreme power of material force. It refuses to be bound or limited in the gaining of its materialistic ends by moral restraints. It ignores the fundamental God-given rights of individual men and women. It scoffs at the supremacy of spiritual and religious values. It laughs at any idea of an overruling God. There can be no possible reconciliation between the ideologies of Russian communism and Christianity.

The Soviet Union is like a great reservoir.

piping out streams of contaminating communism throughout Asia. China has already become engulfed with it. India, with its backbreaking problems of poverty and ignorance and religious hatreds will remain an uncertain factor in Asia for years to come. But Japan with her great industrial potentialities, her strategic geographic position on the eastern seaboard of Asia and her hardworking, self-disciplined people, intensely loval to such ideals as have been implanted in their hearts, is yet a power to be reckoned with. In many ways it is one of the most strategic spots in the world today. Will it be able to withstand the highpowered Communist propaganda which is flooding the countryside?

During the past year which I have been spending in Japan I have felt sometimes as if I were standing on a mighty battleground, watching God making history. A Christian Japan could turn the tide of history in Asia.

Can the mass of Japanese farmers and fishermen and city dwellers, be brought, before it is too late to understand and believe in the great teachings and concepts of Jesus Christ? That is the supreme question in the Asia of our generation.

In these fateful days we are watching the forces of communism sweeping across Vietnam. If Indochina falls, there will be but slender hope of saving Thailand; and from there direct routes lead south to strategic Singapore, northwestward into Burma and southwest into Indonesia.

Communism has engulfed already a third of all the people of the world. It is strongly advancing. Its banners fly the emblems of peace but its peace is only that of gaining world mastery through war and the denial of human rights.

Surely the forces of Christianity throughout the world must unite to fight, not the people of Russia, to whom we shall want some day to turn for comradeship and help, but the evil ideology which has gripped the Russian people and is threatening in Asia to eclipse Christianity. The forces of evil are compelling us these days to build military defenses to protect our lives; but these alone cannot conquer communism. Communism in the last analysis can be downed only by ideas, and these must be the ultimately conquering ideas and teachings of Jesus Christ. Nothing else can save.

That is one of the supreme things John Mackay is giving his life to teach.

We must not suppose that the conquest of communism will bring peace to mankind. Other profound issues and epochal changes are also convulsing our twentieth century world; these it would be fatal to forget or ignore because of our present acute struggie against communism.

One of these is the worldwide revolt against inhuman poverty. In most of Europe and America we have for centuries ignored the conditions of appalling human need which exist in the greater part of Asia and Africa. In many areas of these, life expectancy at birth is only 32 years. One out of every three babies dies before reaching its first birthday. Those suffering from malaria in Asia today equal the total population of the Western Hemisphere—and every year some 3 million of these sufferers die. More people in Asia and Africa are unable to read a word from a printed book than inhabit the whole of Europe and of the United States.

The United Nations' Food and Agriculture Organization has just submitted its report. "Fully half the world's people," says the report, "are still inadequately housed, clothed, and nourished."

We must see this portentous situation in its historical setting. Blighting poverty and need have in fact been the lot of all human beings except a very few in every age and in almost every society. Now in this epochal 20th century, with its unprecedented ad-vances in scientific invention, in international communication and trade and travel, for the first time it has become possible significantly to raise the living standards of the vast majority of the world's people. And for the first time they are becoming aware that they need not continue in utter destitution and want. Something tremendous and withal essentially desirable is taking place. If the world of those who already possess can but give to these awakening people the Christian answer, the outcome can be mag-nificent. But if Christianity does not play its part now in effective movements for raising among many suffering peoples economic social and educational standards through brotherly assistance of many varied kinds, most of Asia and Africa may rise in powerful revolt to overthrow existing governments and political systems. The resulting struggle could be more ominous and threatening even than our battle against communism today. Whether or not the world is to have peace during the 21st century depends in large measure upon how effective ly we can at this critical juncture of world history bring into effective play the forces of Christianity before the chance has passed—in assisting the needy people of the arth to lift themselves out of the bondage of poverty, ignorance, and disease.

IV

A third profound issue which confronts our political world today is the revolt against racial discrimination and exploitation. building up of materal power for a Nation's selfish ends through the exploitation of other peoples or the draining away of their natural resources will always lead to slow-burning resentment and world instability. So far as 19th century colonialism meant the exploitation of other peoples for material and selfish gain, it was bound ultimately to prove disastrous and self-defeating. Today in many parts of the world we are paying the dreadful price for our past sins of racial exploitation. In some future day the Russian people also will pay the price for their present exploitation of satellite and other Asian peoples.

The easy but superficial answer is prompt independence for all. But is this the Christian answer?

Genuine freedom cannot be achieved by a mere political grant or by a military victory. Freedom comes only as adequate political, economic, social, and educatoinal foundations can be prepared. Men can be as effectively manacled by economic and social forms of servitude as by political oppression. The real tragedy of Indochina today is that its people are not yet prepared and able to govern or to defend themselves. Through past decades there has been an unforgivable lack of educational and economic upbuilding.

The Christian answer to the problem of colonialism and alien rule must be based upon recognition of the inherent right of every people to freedom and thus to eventual

independent or self-government. But Christianity demands far more than political independence. Christianity demands the active assistance of every underdeveloped people to build up the social and economic and educational foundations necessary for meeting the responsibilities of independence. It is a task of vast proportions to be carried on along innumerable fronts over a period of many years. It demands unbounded faith and perserverance and understanding kindliness. But its ultimate reward is peace and definite progress along the pathway to the coming of God's Kingdom. Christians must urgently be about these God-given tasks.

Communism, the present-day revolt against centuries-old poverty and colonialism or other forms of human exploitation, are not the only deep-seated causes making for catastrophic, revolutionary changes in 20th century life—changes which almost inevitably produce struggle and warfare. Another profound cause of present-day strife is the breakdown of the system of nationalism.

The political state in its modern form has slowly been evolving and building up power since the 13th century. Vast concentrations of power in the hands of certain peoples have resulted. Unhappily this power has been too often used, not for the welfare and advancement of the peoples of the world but for selfish national ends. Too often power corrupts.

The climax was reached by the end of the 19th century with the full-blown evils of emperialism and colonisism.

But as a result of our 20th century developments of international trade and travel, of mass production and the resulting dependence of almost every people upon foreign raw materials and world markets, of the cost and destructive power of modern armament, nationalism can no longer offer security to any people. Internationalism has become the price of survival. No nation single-handed and without allies and friends can possibly defend itself in any war of world consequence today.

True Christians must know that, whatever its value under bygone conditions, the self-seeking nationalism of the past cannot serve our basic needs because we are under God one human family. All barriers of nationality, of race, of color, must go. Together we must plan and build and if necessary fight for the fundamental rights of human brotherhood.

Just as in prior centuries the allegiance of men and women to their clans and city states had to yield to an allegiance to the nation, so today the allegiance to the nation must come to yield to an allegiance to the cause of all humanity.

We must more convincingly help the peo-

We must more convincingly help the peoples of Asia and of Africa to feel themselves an integral part of the free world. The price of survival in our shrunken, interdependent world of today is a brotherhood of all free peoples.

Here is a prodigious new development in the slow advance of human thinking. Either men and women must now adopt the Christian teaching of world brotherhood must unite to support such organizations as the United Nations, representing all humanity—or with the development of the atom and the hydrogen bomb be snuffed out.

VI

Along what lines can these explosive new world forces be wisely met? How are communism, the world-wide revolt against inhuman poverty, and the far-flung rebellion against human exploitation, the breakdown of a world built upon self-seeking national-ism—how are these to be countered so that mankind may go forward?

In our fight against communism the issues were defined 2,000 years ago. Jesus Christ

taught that belief in the ultimate supremacy of material force leads only to disaster. He based the very essence of his teachings upon the transcendance of spiritual and moral values over purely material ones. And it is only by this faith that communism can be effectively conquered.

Concerning human poverty and need, also, Jesus' teaching took very definite form. To suffering humanity he gave the parable of the good Samaritan. He taught that the supreme values in the world are individual, human personalities. Only when welcomed in such a faith can the present worldwide revolt against debasing poverty be transmuted from a struggle of evil threatening disaster into an epochal step forward in human progress.

Jesus taught the equality of all men under God and the sacredness of each individual personality. How else can the evil of 19th century colonialism and present day forms of human exploitation be fought?

Jesus taught the eternal brotherhood of all men under God. Until we can replace the self-secking, narrow nationalism of former days by the determination to achieve international brotherhood, how can we go forward?

Years of struggle on the front line of international politics and diplomacy have taught me and countless others that there can be no solution of the problems and successive crises which crowd upon us in the political arenas of the world except those based upon the teachings of Jesus Christ. His teaching points the only possible pathway to human progress, to world peace, to the ultimate satisfaction of the most profound instincts and yearnings of the human heart.

Are we beginning to sense the crucial significance and need of spreading throughout the world in these critical days before destruction is upon us a comprehension and understanding of the great saving concepts taught by Jesus Christ—that upon them alone can human progress or lasting peace be built?

VII

In his realization and teaching of these profound truths we can sense something of the stature of John Mackay, modern apostle of Christianity. His lifelong work in colleges and universities in South and Central America, in Scotland and in numerous institutions and seminaries of the United States, has been spent in witness to their truth. Dr. Mackay with winning eloquence is calling men and women in every country of the world into the great fellowship of Jesus Christ. As he said in his pregnant book Heritage and Destiny: "God and His purposes stand above the Nation and the Nation's interests, and the highest role a nation can play is to reflect God's righteousness in national policy. * * *"

He sums up his teaching in what he has

He sums up his teaching in what he has written for the World Christian Fellowship Number of The Upper Room for Sunday, October 3: "Wide chasms divide men and nations. But on the horizon shines a star of hope. It is the existence of a worldwide fellowship of men and women who love and serve Jesus Christ."

In his potent work as president of the Princeton Theological Seminary, he is training and inspiring young men to go forth preaching the word with power. As chairman of the International Missionary Council, moderator of the general assembly of the Presbyterian Church and president of its board of foreign missions, and through his other missionary activities, he has strengthened immeasurably missionary work throughout the world and given new meaning to the words of Christ: "Go ye therefore and teach all nations, baptizing them.

• • • " (Math. 28:19). In his outstanding ecumenical work he has been drawing ever closer the bonds of Christian fellowship and

love and thereby with telling effect breaking down the barriers of misunderstanding and

of color and race prejudice.

I am convinced that the forces of Christianity today have it within their power with wise leadership and organized activity to play such a part in building for the coming Kingdom of God as Christian forces have never played before. If we, like John Mackay, but keep true to Jesus Christ, there can be no such thing as ultimate defeat. God is looking down upon us today with confidence and hope.

Are we ready to go forward?

Eisenhower Defends Nixon

EXTENSION OF REMARKS

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. HILLINGS. Mr. Speaker, I wish to place in the Record an article by Mr. David Lawrence in which he discusses the defense of Vice President Nixon against politically inspired smears which have been directed at the Vice President recently. This article which appeared in the New York Herald Tribune of January 13, 1955, and the President's statement should put at rest the unjustified attacks which have been perpetrated against Vice President Nixon. The article follows:

EISENHOWER WINS PRAISE FOR HIS DEFENSE OF NIXON

(By David Lawrence)

Washington, January 12.—President Eisenhower is beginning to get the feel of national politics and especially the way prejudices are built out of charges that have no foundation.

Instead of allowing his press conference to be used as a means of encouraging friction inside the Republican Party, the President answered firmly and courageously a question this week about Vice President Nixon's speeches which had been the subject of criticism by Speaker Raysuan and other Democratic leaders. Mr. Eisenhower made it clear that he didn't think Mr. Nixon had accused the Democratic Party of treason, as some Democrats tried to make it appear. By meeting this budding controversy in its inciplent stages, the President prevented the Democrats from maneuvering him into a battle inside his own political family.

ATTACKS ON NIXON

For several weeks now—in fact, ever since the November elections—various Democratic Party spokesmen have been saying over and over again that Vice President Nixon conducted an unfair campaign because of his references to the handling of Communists in Government by the Truman and Roosevelt administrations. The criticisms have been repeated often in Washington, where there still is a predisposition in some quarters to believe what Democratic politicians say without ferreting out the facts.

The President asked one of the reporters if he was inquiring about Mr. Nixon's speeches on the supposition that the Vice President had said what his critics claimed or on the basis of what Mr. Nixon really did say in the campaign. It tuned out that the query was based solely on the allegations of the Democrats.

PARTY OF TREASON

Mr. Eisenhower thereupon said he would give a few facts himself. First of all, he de-

clared that he didn't consider any political party in America to be a party of treason and that only the Communist Party could be held to be treasonable. At its last session Congress by statute declared the Communist Party subversive.

Next, the President said no such sweeping condemnation of any major party had been made by Mr. Nixon. Mr. Eisenhower revealed that he has been assured by the Vice President himself that never, even by implication, had he tried to condemn an entire party but that the speeches which had been criticized contained references only to individual cases and to the way they were handled administratively. Mr. Nixon, the President said, had questioned good judgment but never loyalty.

What the Democrats have employed recently is not, of course, a new device—to raise a smokescreen in rebutting a charge of administrative incompetence. When Attorney General Brownell made a speech in October 1953, criticizing former President Truman for having been lax in handling the case of Harry Dexter White after the FBI had made specific reports concerning White's role in a Communist ring, there was a hue and cry to the effect that Mr. Brownell had questioned the loyalty of Mr. Truman.

Despite Mr. Brownell's prompt disavowal of any such inference, the Democrats stuck to the accusation, and to this day their speakers repeat the canard that Mr. Brownell questioned the loyalty of the former President.

PROPAGANDA SCHEMES

Now it turns out that the same game is being played in an effort to discredit Vice President Nixon. In the past, such propaganda schemes have not been perceived by Mr. Eisenhower, and some of his answers at press conferences have been susceptible of an unfriendly interpretation with respect to members of his own official family.

By coming out flatly and demanding that the accusers of Mr. Nixon give chapter and verse to support their criticism, the President is well advised. It shows he is recognizing the importance of uniting the Republican Party and preventing political opponents from driving a wedge between him and other prominent Republicans.

If the Democrats think it politically desirable to pursue the controversy, they will in the long run be injuring themselves. For the last thing the Democrats should want to see happen is a rehash with kiefg lights of all the cases in which the Democratic administrations of the past were remiss in ferreting out Communists and security risks in government.

The President is acting more like the leader of his party, and it is a healthy sign, because in 1956 a united Republican Party is a prerequisite to victory.

With a Faith and a Flag They Called It America

EXTENSION OF REMARKS

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the Record, I am proud to include a speech delivered by Mrs. Roland Walter, president of the Iowa Department of the American Legion Auxiliary at their 1954 conference held at Council Bluffs, Iowa:

WITH A FAITH AND A FLAG THEY CALLED IT AMERICA

(By Katherine Watter, Lenox Iowa)

"God built a continent and filled it with untold treasures. He bedecked it with soft rolling prairies and pillared it with sweetflowing fountains and long winding streams. He graced it with deep shadowed forests and filled the trees with songirds.

"These treasures would have meant little if hordes of people had not come to its shore, each bearing a gift and a hope. Our forefathers had a glow of adventure in their eyes, and the glory of hope in their souls. And out of them, fashloned a nation blessed with a purpose sublime. And they called it America."

Our forefathers worked hard to give us a land of plenty, a land of mechanical miracles and great scientific achievements. Our vast material blessings have no equal in the long turbulent history of civilization. We seem to be at the peak of our prosperity but we find ourselves beset with fears, doubts, and uncertainties. There are some things that we as Americans must labor to get back—habits of thrift and self-denial; courage to face new adventures; the serene faith that was ours in simple creeds and established traditions; the patriotism that has put America first; the unshaken belief that was ours in American institutions and American ideals. We must return to sturdy, clean, upstanding Americanism of our forefathers, who went forward with a faith and a flag.

Today we seem to be standing at the crossroads in the history of a great nation. In this crisis we have at our command the strength, the courage, and the inspiration of our forefathers. Faith in God, faith in ourselves, faith in our fellow men, faith in our freedom.

The men who signed the Constitution, the men who braved the prairies to pioneer the land, lived by these faiths.

Down through the ages faith in God has been an all-powerful force in the lives of men. When the Pilgrim fathers waded onto the shores of New England, there was no government to give them aid and comfort or support. All they had to sustain them was a deep and abiding faith.

Throughout civilization faith has persisted and is woven into the foundation and uprights of our Nation. It has given us strength when we have faltered. Recognition of a Supreme Power and the dependence upon that Power for guidance is contained in the Declaration of Independence, in our National and State Constitutions. So strong was that faith that on our coins the words, "In God we trust," is stamped.

Faith in ourselves: Each of us can revive the spirit which built our country, by renewing this faith in ourselves. We know it has paid off in richer, happier, and fuller lives for us. We know it has brought us the greatest outpouring of goods and services the world has ever known. We know, too, it can bring peace and security for us. The history of our country is a history of a people with faith in themselves.

In recent years we've lost some of that faith. We are leaning on the Government for assistance and for the solution of many of our personal and community problems.

Faith in our own ingenuity, our resourcefulness, and our ability to take care of our basic needs of life is essential to the preservation of human rights and personal liberties. Faith in ourselves—it is our responsibility to preserve it untarnished and undiminished.

Faith in our fellowmen: Our forefathers possessed this faith, too. They lived by it; fought for it; and died to foster it. They wrote it into the Declaration of Independence that all who followed would not forget these words, "With a firm reliance on the Protection of Divine Providence, we mutually

pledge our lives-our Fortunes-and our Sacred Honor.

Today, no less than years ago, we must lek the strength such faith in our fellowmen yields. The preservation of this basic -the foundation of brotherly love is

our duty. Faith in freedom: Personal freedom was believed in by our forefathers. It was not a dream. They believed that it was a Godgiven right and they believed it so deeply that they made freedom an established fact. That is why we have freedom. That is why we have been so richly blessed with the good things of life. Our Nation has become a land of plenty—in a world beset with pov-

erty, hunger, and suffering.

Down through the years we have been free to dream, free to explore, free to invent, free to work, to achieve, and to accumulate, free to venture, free to earn and save, free to climb from lowly beginnings to positions of

power, honor, and trust.

But as we enjoy these blessings, we should remember always that freedom can be lost and will be if we take it for granted. Freedom is a sacred trust which is ours to hand on to our children as a birthright.

Let us look at the letters in the word "free."

F-the faith to uphold the ideals upon which our country was founded.

R—the responsibility not to encroach upon

the rights of others.

E-education, for education is the cornerstone of the brotherhood of man.

E-the experience of faith from which there is no substitute.

Putting the meaning of these letters together, we can and we will preserve our heritage.

Maj. Gen. Melvin J. Maas

EXTENSION OF REMARKS OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, I am glad to have permission to extend my remarks to include testimonials to the untiring and intelligent work of Maj. Gen. Melvin J. Maas, Chairman of the President's Committee on Employment of the Physically Handicapped.

The first article is an editorial entitled "Inspiring Courage." It appeared in the Bremerton Sun, of Bremerton, Wash., on October 8, 1954. The second is from the Sunday Pioneer Press of St. Paul, Minn., appearing December 5, 1954.

In conclusion, I want to add the very fine writeup by Robert E. Baker, staff reporter of the Washington Post and Times-Herald, on December 30, 1954. Mr. Baker has captured part of the enthusiasm my old friend and colleague displays when he talks about his main interest in life: Hiring the physically handicapped is just good business.

[From the Bremerton (Wash.) Sun of Octo-ber 8, 1954]

INSPIRING COURAGE

By word and by deed, a sightless war hero demonstrated during his visit here why he is the President's choice to head the Nation's program to hire the physically handicapped.

At two points in his tour of Puget Sound Naval Shipyard this week, Maj. Gen. Melvin J. Maas, United States Marine Reserve (retired), impressed his hosts.

Whe naccorded courtesy honors, General Maas moved briskly among the marines at attention as he had countless times in his military career. Stopping suddenly, he accepted an extended rifle and swung it skyward. His sightless eyes seemed to search the barrel. Aside, someone whispered, "He can smell a dirty rifle."

If General Maas' character flashed only briefly then, it was bared brightly in a naked moment aboard the U. S. S. Missouri. Because he had once visited aboard as a Minnesota congressman, Maas asked to be taken the Missouri's famed surrender deck. There, without prearrangement, he knelt to touch, like braille, the raised lettering on the bronze plaque.

To those privileged to witness the event, Maas symbolibzed mankind's humble beings who are great through human dignity in the face of adversity. Still later, Maas displayed another quality necessary in the conquering of physical handicaps. He joked about his.

Relating how an Army general had expressed surprise when he remained on active duty awhile after becoming blind, Maas said the officer commented he must be the first blind general to serve his country. Maas answer to the fellow officer was, "No, sir; just the first to admit he is blind." Then Maas, who had minimized his blindness, finally admitted he did have a handicap-false teeth.

By word and by deed. General Maas is doing a real job in job hunting for fellow Amer-He not only provides inspiration for his fellowman, he also demonstrates to employers that hiring the handicapped can, indeed, be good business.

[From the St. Paul (Minn.) Pioneer Press of December 5, 1954]

ST. PAULITE TO BE HONORED-SIGHTLESS MAAS AIDS HANDICAPPED

(By Walter T. Ridder)

Washington.-Maj. Gen. Melvin J. Maas is a man who practices what he preaches. The former St. Paul congressman spends his time these days roaming the United States of American and foreign nations, talking to all who will listen to the doctrine that the physically handicapped make fine employees

That Maas should have the interests of the physically handicapped close to his heart is not surprising. "Why, I'm physically handicapped myself," he will tell you with a broad grin. "I use false teeth."

Maas is returning to the Twin Citles this

weekend to be honored at a series of ceremonies. At the naval air station Saturday will be Mel Maas Day as the Marine Air Reserves salute him with mass formation of troops and a flyover of aircraft.

As father of Marine aviation in Minnesota, Maas organized the first Marine Squadron at the naval air station in 1931 and was its leader until 1940.

Civic and military leaders and a host of his friends will pay tribute to Maas Saturday night during a dinner in the Leamington Hotel, Minneapolis. Between 300 and 400 persons are expected to attend the func-

It is acceptance of physical disability with that kind of humor which Mass is con-stantly preaching, for in addition to the handicap of his false teeth, the St. Paulite in recent years has also lost his eyesight.

Three years ago, the light which had been fading, flickered out. To some, so stricken, the temptation might have been to call it a day and spend the rest of life being served and waited upon and making the darkness an excuse for doing nothing.

Not so Maas, who, one of his friends said, merely took a deep breath, reassessed his new position, and promptly lauched forth on a new career. As Maas himself recalls it: "I was so busy I never really thought about the blindness. I moved my tele-phone to the hospital and kept myself so busy that the question of how to readjust never came up.

Now as chairman of the President's Committee for Employment of the Handicapped, Maas argues that there is a definite relationship between being busy and adjusting oneself to physical handicap. "It shouldn't be just made-work," Maas says. "You've got to keep yourself busy on work which has a definite purpose."

The "definite purpose" to which Maas is now directing himself is trying to impress upon employers that the physically handicapped can pay their own way. "Why I've seen a blind man operate the most complex drill machine-and he can do it just as well and just as safely as the man with two good

In bringing his message to employers, Maas cresses two statistics. The first is that the stresses two statistics. The first is that the accident rate among the physically handicapped employed in factories is lower than that among so-called normal persons; the second, absenteeism is much lower among the handicapped than among their healthy co-workers.

Maas himself is an example of the independence with which a handicapped person can carry out his assignments. Since January, Maas has traveled over 70,000 miles, has ranged from the West coast to Vienna, Austria, and travels alone. "On my first trip as a handicapped person, I had an escort," he recalls with a chuckle, "but the guy became sick in the airplane and I had to take care of him the whole way. After that, I decided I could travel easier all by myself."

One of Maas' Washington friends remembers seeing the former Congressman dashing down one of this city's main boulevards, his cane uncannily picking his route, and huffing behind him was a lady. "I said to my-self," recalls the friend, "if she's his escort, she ain't doing him much good."

Nor is the job on behalf of the physically handicapped the only one to which Maas attends. Every three or four weeks he goes back on active duty with the United States Marine Corps. In his uniform of a major-general, he sits on the Reserve Forces policy board, an instrument of the Defense Department which advises and suggests on matters pertaining to America's reservists.

The Marine Corps has always been close to Maas' heart. He served in World War I as a marine flier and assiduously followed the Reserve training program in the years be-tween the wars, ultimately rising to the rank of colonel, at which rank he served during World War II. He was present at the battles of Guadalcanal and Milne Bay, and commanded two marine air bases on Okinawa.

His 14 years in the House of Representatives as Congressman from St. Paul gave him an opportunity to fight gallantly on behalf of the Marine Corps. As a ranking Republican member of the then House Naval Affairs Committee Maas was able to help beat off the oft-recurring suggestions that the Marine Corps be abolished.

The recent shooting of several Congressmen by Puerto Rican fanatics reminded Capitol historians that Maas had played the major role in a similar attempt back in 1932. A father, temporarily deranged by the problems of the depression, invaded the floor of Congress and, brandishing a revolver, threatened the Congressmen.

St. Paul's Congressman Maas approached the man, talked to him, and succeeded in disarming him before any damage had been done. For risking his own life on behalf of his colleagues Maas was awarded the Carnegle Silver Medal for heroism.

Defeated for reelection in the 1944 political campaign, Maas settled in Washington, living in Silver Spring, a Maryland suburb.

[From the Washington Post and Times Herald of December 30, 1954]

BLIND MEL MAAS, EX-CONGRESSMAN, TRAVELS 100,000 MILES IN YEAR—SAYS FALSE TEETH ARE HIS CHIEF HANDICAP

(By Robert E. Baker)

"I am very seriously handicapped," said Mel Maas. "I wear false teeth."

The totally blind 56-year-old retired marine major general and former Congressman was showing off his specially equipped study in the lower level of his Somerset, Md., rambler.

Arranged around the soundproofed room were a braille typewriter, a regular electric typewriter, a talking-record machine, and many file slots. Maas sat down on a stenographer's chair, equipped with casters, and pushed himself from place to place, showing his prowess.

Then he plumped comfortably in a contour chair in the corner with the talkingrecord machine.

"This is where I sit at night, after the family's gone to bed, with a Scotch in one hand, a cigar in the other. And I just listen to the best books there are."

That's about the only time this remarkable man is still.

During this year he has traveled 100,000 miles alone and has made 280 speeches. "Being an oldtime politician, that doesn't faze me," he said. He belongs to 72 duespaying organizations.

But his main interest these days concerns his job as chairman of the President's Committee on the Physically Handicapped. He

gets no pay.

"That's the way I want it," he said. "I don't want to upset my amateur standing, and I do want to be able to tell anybody to

go to hell if they're wrong."

Always known for his outspokenness, his

agility with a quip, and his all-out vigor, Maas hasn't changed a bit.

"I don't feel a bit older since my sight vanished in August 1951," he said. "Probably because I can't see myself in the mirror."

A native of Duluth, Minn., he attended public schools in St. Paul and St. Thomas College and the University of Minnesota. He recently received an honorary doctor of laws degree from St. Thomas. "But nobody will call me doctor," he lamented.

After college, he went to Texas into the oil business, joined the National Surety Corp. in 1920, set up the Dmyer-Maas Co. insurance agency in St. Paul in 1925.

A year later, he was elected to Congress at the age of 28, as Republican Representative from Minnesota, It wasn't long before he grew a moustache, and sported pince-nez, which had window-glass lenses.

"I got tired of being referred to as the baby Congressman," he said.

He was known as the Flying Congressman, too, in those days. Maas was a marine filer during World War I.

Once, he buzzed the Capitol during a joint session of Congress with President Hoover. Wishin; to show a plane could bomb the Capitol and wipe out the Government, he

succeeded in cracking the skylight glass and sending the officials scurrying.

Then, before returning to Bolling Field in his P-1 biplane, he buzzed the White House, zoomed low over Pennsylvania Avenue, and

thumbed his nose at policemen.
"I would have been sent to the penitentiary if I wasn't a Congressman," he said.

On December 13, 1932, a maniac flourished a loaded revolver in the House Gallery. Representatives dived for the nearest exit. Mass remained and explained to the youth it was against the rules to shoot a Representative.

The youngster tossed the weapon to Maas, who was awarded the Carnegie medal the next year.

During these years, Mass was a tireless advocate of bigger and better ships and guns. After World War II broke out, Mass raised a storm in November 1942, when he accused the Navy high command of concealing from the public that things weren't going right in the Pacific. Before his speech, a delegation of high officers visited him and applied pressure to at least tone it down.

"I told them where to go, of course," said Maas.

He got a leave of absence, served at Guadalcanal and New Guinea. In 1944, he was defeated for reelection, and promptly reported back to the Marines on Okinawa. After the war he was made special assistant to the board chairman of the Sperry Corp., and was with that firm when the Korean conflict broke out.

A severe critic of the Government's Reserve officer's programs, Maas was called back to work out a new program. His sight failed in August 1951, and he was retained on full active duty until his retirement in August 1952. Why blindness struck is unknown.

He had been serving on the President's Committee on the Physically Handicapped before his blindness. He sent in his resignation.

President Truman turned it down, saying: "Now you can get us inside information on the problem." Mass went into the work with customary vigor.

He reported to the Hines, Ill., Veterans Rehabilitation Center and learned how to get along without sight. He had company—Korean veterans. He's writing a book on this experience, called Soup With a Fork.

Maas is deadly serious when it comes to his job of trying to sweep away the prejudice and misunderstanding some employers have about employing handicapped persons. "We're getting more and more acceptance," he said, "but we've a long way to go."

Recently they held Mel Maas Day in St. Paul and Minneapolis. Dressed in uniform, Maas proceeded to troop two lines of a Marine honor guard at the Marine Air Reserve Training Station in Minneapolis.

Suddenly, Maas stopped in front of a marine in line, smartly yanked his rifle away and swung it skyward with his right hand. He held the barrel to his eye momentarily.

"It looks clean to me," he quipped, returning it to the marine.

National Affairs Platform of the American Veterans Committee

EXTENSION OF REMARKS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. BOLLING. Mr. Speaker, there follows the national affairs platform adopted by the American Veterans Committee at the eighth annual convention held in December 1954, at Boston, Mass.:

NATIONAL AFFAIRS PLATFORM THE NATION'S PREEDOM

We reaffirm our belief in the traditional American freedoms embodied in the Bill of Rights. Legitimate measures designed to safeguard our national security and to combate espionage can be adopted, without permitting the erosion of our principles. These principles are the bulwark of our democracy and constitute our real strength and pride.

We oppose efforts to suppress criticism, dissent, and the freedom to read and think. We oppose censorship.

We deplore the present tendency to water down the safeguards of the present Bill of Rights. We reaffim the importance to all Americans of the right to counsel, to freedom from unlawful search and seizure, and to due process of law.

We oppose resort to the "test oath" which cannot prevent, detect, nor protect against disloyalty. We urge Congress to enact legislation giving to each person whose loyalty or integrity is attacked before a congressional committee the rights to a bill of particulars of the charges against him, to make a timely defense against the charges, and to confront and cross-examine witnesses.

We recognize the considerable gains that have been made in the last year in the field of civil rights of certain minority groups, particularly of nonwhite Americans. We are, however, aware that such gains have been greatly offset by the general curtailment of civil liberties, induced by fear of the Soviet Union and of the Communist conspiracy. We assert that an increase in equality in a steadily decreasing field of freedom must result eventually in the equal sharing of nothing. With this warning in mind, but recognizing that the drive for abolition of second-class citizenship must continue, we urge:

1. The elimination of all statutes, ordinances, or regulations, whether civil or military, which require, encourage, or condone discrimination in civil life or in the Armed Forces, by segregation or otherwise, on the basis of race, color, ancestry, national origin, or religion.

2. The enactment of legislation to prevent denial of equal opportunity in employment, in the use of public facilities and places of accommodation open to the general public, and in participation in public life and to prevent the denial of human rights when such denial is based on discrimination because of race, color, ancestry, national origin, or religion.

3. The enunciation and the implementation by the executive branch of the Government of all affirmative policy directing all executive departments and administrative agencies to carry out their functions, programs, and services in a manner calculated to eliminate discrimination, segregation, and inequality based on race, color, ancestry, national origin, or religion in all phases of activity upon which they can have a direct or indirect effect.

4. Revision of the immigration and naturalization laws to eliminate racial and religious discriminations, to reform the outdated national origins quota systems and to do away with unwarranted distinctions in the treatment of native-born and naturalized citizens which stamp the latter as second-class citizens.

THE NATION'S ECONOMY

We believe that under our private enterprise system in which business, labor, and agriculture cooperate, the Government has an overall responsibility to act in such a manner as to maintain the national economy at a high level of activity and full employment in line with an increasing population and a rising standard of living. opposed to any fiscal policy which in the political attempt to be all things to all people would purport to carry out the provedly incompatible policies of balancing the budget, cutting personal and corporate income tax, and maintaining an adequate national defense and other Government service at one and the same time. Such a policy can only lay the foundation for future catastrophe. We are opposed to any present reduction of tax revenues. As a sound fiscal policy consistent with full employment permits further reduction in taxes, priority should be given to the reduction of those taxes which fall most heavily upon the lower income groups rather than those taxes which are borne principally by the higher income groups or by corporations.

Labor policy

We urge that a new labor law be enacted at the forthcoming session of Congress eliminating those unrealistic and unreasonable

provisions of the Taft-Hartley Act in derogation of the right of labor to organize, and also providing protection of the public interest and of the personal freedom of union members.

We urge revision of the unemployment insurance, workman's compensation, and sickness disability laws to provide for improved benefits and greater uniformity of benefits among the States.

Credit and monopoly

We are disturbed by the resurgence of the trend toward monopoly in the Nation's business. We recognize that our increas-ingly complex technological, manufacturing and distributive processes encourage that trend. We believe, however, that a demo-cratic form of government is threatened as much by overconcentration of economic power in the hands of private individuals or corporations as it may be by overconcentra-tion in the hands of Government itself. It is the duty and responsibility of our Government, under both our general philosophy and under the antitrust and antimonopoly laws to guard; and maintain a truly competitive free-enterprise system and to use its legislative, legal enforcement and vast purchasing power to that end. We urge the Government particularly in this time of merger and of disappearance and difficulty of small businesses, to establish credit facilities for small and medium size businesses, to utilize its purchasing power not only for efficiency in governmental expenditure but also to maintain a healthy economy to which the participation of small business is essential, and to rigorously enforce the antitrust and antimonopoly laws.

Foreign-trade policy

We call for a realistic policy of trade, not aid through the encouragement of freer trade through low tariffs and a stable tariff program.

Natural resources

The utilization of natural resources should benefit the American people as a whole. The Federal Government must obviously play a prominent role in planning their conservation and development. We deplore the all too obvious trend to grant exploitation rights, frequently on a monopoly's basis, in our great natural resources to private enterprises, without any or insufficient Federal safeguards or control. We believe such a policy represents a shortsighted surrender to the powerful interests and lobbies of the present without true regard for its future impact upon the Nation's economy, welfare, and defense.

We call again for the establishment of regional river valley authorities since private interests and Federal and States agencies have not yet provided sound interstate development programs.

We oppose the drive to reverse national power policy by renouncing Federal responsibility for governmental power development and low-cost supply of federally produced power to Federal and domestic consumers. Public-power districts, cooperatives, and municipalities should be assisted in the distribution of power at low cost in the interest of the people of the area served.

THE NATION'S WELFARE

Education

We agree with the basic principles stated by the National Citizens Commission for the Public Schools:

"The problem of its children's schools lies at the heart of a free society. None of man's public institutions has a deeper effect upon his conduct as a citizen, whether of the community, of the Nation, or of the world.

"The goal of our public schools should be to make the best in education available to every American child on completely equal terms. "Public-school education should be constantly reappraised and kept responsive both to our educational traditions and to the changing times."

We welcome the Supreme Court decision abolishing segregation in the schools, and pledge ourselves to work in our own communities to see to it not only that this decision is carried into effect but that every child, regardless of race, creed, or color, is given both the right and the opportunity to a first-rate education.

We deplore the lack of respect for the teaching profession, especially elementary and high school teaching, and urge increased remuneration for teachers corresponding to the important task which they fulfill, and greater recognition by the community of the teacher's status as a citizen and a free human hairs.

man being.

We urge the appropriation of State and local funds for public education, including the improvement and expansion of the over-taxed physical plant of America's public schools, for the granting of scholarships for both training and research, and for increasing teachers' salaries. We urge a program of Federal aid to education to assist in meeting these objectives.

We call upon Americans to participate actively in those organizations dedicated to the support and improvement of the Nation's public schools and to oppose the pressures upon schools and teachers by forces which seek to negate a basic principle upon which the American system of education is found-d—free inquiry into and the discussion of the controversial problems of our times.

Health

We urge the expansion of medical insurance and group medical-care plans. We urge adoption of a plan of national health insurance to assure a higher national standard of health which will enable our people effectively to meet the mounting demands and challenges of citizenship.

Housing

We deplore the utter failure of Congress to recognize the continuing existence of a grave shortage of low-rent and middleincome housing throughout the Nation. We believe that approximately 2 million units a year will be required for the next 10 years in order to meet urgent and minimum housing needs. We urge the immediate enactment of legislation authorizing construction of 200,000 units per year of low-rent public housing as a bare minimum program. We urge a realistic Federal program designed to encourage the construction of middle-income housing by fostering expansion of a genuine cooperative housing program, including provisions for a broad program of Government expert and technical assistance to cooperators. We commend the program to aid urban renewal and redevelopment embodied in the Housing Act and call for its expansion. We urge in this connection rigid and adequate safeguards for a realistic relocation program designed to prevent the creation of additional blighted or substand-

We endorse all the efforts of the Federal Government and State and local governments to provide assistance for low- and medium-priced rental housing and for home maintenance and renovation.

We urge, in the interests of a true slumclearance program, that a plan be adopted which will provide construction of an adequate number of units on vacant land in proportion to the number of units to be constructed on presently improved property.

THE NATION'S GOVERNMENT

This country's form of government has proved democratically responsive to modern needs. A strong executive has greatly contributed to its success. We deplore the growing tendency of Congress to usurp functions

which should properly be exercised by the executive branch of the Government. We oppose enactment of the Bricker amendment or of any substitute as contrary to the separation of governmental functions and as crippling the conduct of our foreign relations.

Congress

Experience since the adoption of the La-Foliette-Monroney Act demonstrates the need for further modernization of congressional procedures. We support especially the bipartisan effort to establish a code of ethics and procedures for congressional investigations. We reiterate our belief that the Senate rules must be amended to bring fillibusters under control and that the power of the House Rules Committee over legislation must be restricted.

Civil service

We are disturbed by recent evidences of a return to the spoils system in the field of Pederal Government employment. We warn against any use in a security system for Federal employees, of spurious categories of so-called policy-making positions, or of partisan methods of recruiting personnel which would destroy the hard-won merit system in our civil service and which would place partisanship before competency or the legitimate rights of tenure.

We urge the President to provide additional safeguards for the rights and reputations of Federal employees in the conduct of Federal security program, with particular reference to: the right to a fair, complete, and factual statement of charges, the right to confront and cross-examine witnesses, the right to subpena witnesses, the right to examine documentary evidence, the right to a reasonably speedy hearing at or near the employee's place of employment or residence before a hearing board untrammeled by extraneous political considerations. We urge the abolition of the present system of suspension without pay of Government employees pending final decision in security cases. We urge careful reconsideration and revision of the present standards established by the President's executive order for determination of security risk.

State and local government

We urge reapportionment of State legislatures to provide for representation based on current population distribution. We urge modernization of State and local governments to meet present day needs.

We warn against burdening the States with functions which they are not equipped to perform. Under no circumstances can we approve the excuse of States rights as a device for sloughing off the responsibilities of the Federal Government.

Proposed Tariff Reductions on Textile Goods

EXTENSION OF REMARKS

HON. E. L. FORRESTER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. FORRESTER. Mr. Speaker, the Committee for Reciprocity Information has been conducting hearings concerning tariff reductions on textile goods to be brought into this country from Japan and other countries.

This is most alarming inasmuch as these tariffs have been steadily reduced during the years of reciprocal trade agreements, and this country is already flooded with goods manufactured in other countries.

To consider further tariff reductions on textile goods indicates that our leaders are not familiar with the fact that our American textile industries are already in a precarious condition and can be forced into bankruptcy.

In the district I represent there are many textile manufacturers and approximately 100,000 people earn their living by working in these factories. These mills are efficient and modern, but they made no money last year and they cannot stand more unfair competition from goods manufactured abroad by cheap labor. I am incorporating herein a letter written me by Hon. Henry W. Swift, executive vice president, Swift Spinning Mills, Inc., Columbus, Ga., who happens to be an outstanding textile man. That letter is completely sound and portrays eloquently the textile situation. The letter reads as follows:

SWIFT SPINNING MILLS, INC., Columbus, Ga., December 31, 1954. Hon. E. L. Forrester,

House of Representatives,

Washington, D.C.

DEAR Trc: I am quite sure that you are thoroughly familiar with the hearings now going on in Washington prior to the formal hearings to be held in Geneva in February of next year with respect to the overall tariff situation.

While there are always two sides to every question, I would like to tell you that in my personal opinion, anything that is done to hurt the textile business can very well be disastrous as we have been in a very serious recession for the past 18 months. You no doubt are familiar with the fact that Columbus is very dependent upon the textile industry and, as a matter of fact, there are over 100,000 people in the State of Georgia employed in the textile mills. Any downward revision of the present tariffs could have a very profound effect upon Georgia's overall economy.

The objective of these forthcoming tariff discussions is—and should be—to develop a sound world trade program and to strengthen the economy of our Allies. We in the cotton textile industry, far from having any quarrel with those objectives, are all for them.

But we do say that it would be the height of folly to take such steps as would undermine a large and important segment of our own economy and which, at the same time, would not accomplish the purpose for which they are designed.

The truth of the matter is that the American textile market already is the widest open of any great consumer market in the world. And that may not be generally recognized is that United States textile tariffs have been steadily reduced during the past 2 decades of reciprocal trade agreements.

Now what has been happening while we have been cutting our tariffs? Simply this: Every other country—with the important exception of Canada—has been violating the spirit and the ideal of reciprocity. Since the end of the last World War, many foreign countries have proceeded to impose import quotas, exchange controls, exorbitant tariffs, and numerous other artificial barriers to trade. And most of these actions have been aimed deliberately against the United States.

Now it seems to me that the objective of a sound foreign trade policy should be to correct this state of affairs—to induce these countries abroad to set their own economic houses in order. But instead of that, our policymakers seem determined to create an economic booby trap—a trap that will sacrifice our textile and apparel employees and workers in related industries, while actually benefiting nobody.

I don't want to bore you with figures, but figures prove beyond any doubt that the flood of Japanese cloth into this country is becoming increasingly great. Why can foreign cloth come into the United States and sell in the American market? For one reason and one reason only—because it is cheap. And why is it cheap? For one reason and one reason only—because it is made with cheap labor.

Our textile wage rates are 10 times those of Japan. Some folks may say: "Oh, well, the American industry can overcome this tremendous wage gap because its more efficient."

Let me say to that, that the Japanese textile industry has become a new textile industry since the war. The Japanese mills are modern in every respect. They are equipped or can be equipped with the same machines we have.

Far from being monopolistic, our textile industry is composed chiefly of small independent units which are highly competitive with one another. And we own no patents of any consequence. We have to be efficient—or we go out of business.

Compare this with our foreign competition, which operates under the cartel system or some system of State trading. The purpose of the cartel is usually to protect the least efficient of its members. And such systems facilitate the dumping of goods when and where the cartel or Government decides to dump them.

I say to you that if these proposed textile tariff reductions are put into effect, we here in the southeast will have to prepare ourselves for a catastrophe. Our mills will be forced out of business; our employees out of jobs, and our living standards and our economic strength will be lowered tragically.

And I say that instead of cutting further our already low tariffs, we ought to work for a positive foreign trade program that will eliminate artificial barriers and enable the underdeveloped countries to achieve a more abundant life.

This letter has been very lengthy; how-

This letter has been very lengthy; however, there was much ground to be covered, and I trust that you will do everything possible to look after our best interest.

With kindest personal regards and best wishes for the new year, I am,

Yours sincerely,

HENRY W. SWIFT.

Mr. Speaker, there is a limit to what we can do to build up other countries and we have reached that limit on textiles and on many other commodities. If further tariff reductions are ordered, Congress will have to correct the mistakes speedily, or witness the closing down of our textile mills with the textile laborers being without employment and suffering the humiliation of living off of Government doles.

As I understand the President's message on the state of the Union, the administration has envisioned that unemployment will result from tariff reductions, but that the unemployed will be given doles and handouts. That is tragic thinking and planning. I sincerely hope we will never do anything deliberately which will take work from our laboring masses on the theory that we can care for them through handouts.

A few days ago the United States Tariff Commission conducted hearings for the purpose of determining whether 200,000 tons of foreign peanuts would be brought into this country. If that permission is granted, it will be against the

will of the Congress and will annul the laws of Congress, and it will be the first time this Government has willfully and deliberately caused a surplus. There are enough peanuts now in this country to fill the demands of all legitimate consumption until the 1955 crop is harvested.

Mr. Speaker, if there are any further tariff reductions on textiles and agricultural products, such as peanuts, or any other agricultural product, and if these products are brought into this country to compete against our textile factories, textile laborers, and farmers, we can all be certain that the economy of this country will suffer irreparable damage.

Pope's Warning to the World

EXTENSION OF REMARKS

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following editorial from the New Orleans Item of January 10, 1955:

Pope's Warning to the World

Pope Pius XII is perhaps the first world leader to look as far into the future as the end of the era of peaceful coexistence—which we only now have begun to discuss.

The pontiff told the world January 3 that the present coexistence in fear has only two possible prospects before it—war, or a true peace following the terms of the Divine moral order.

So far, according to the Pope's interpretation, the fashioners of the cold peace have taken many steps that lead in the direction of war. The reason: Both camps in the great world struggle are making errors.

Not identical errors, since the principles of each camp are so different. But distinctly different errors about the same considerations: nationalistic politics; overdependence on economic solutions to human problems; false ideas about the routes to permanent peace.

It is seldom that the Western camp can get as neutral an appraisal of itself as presented in the Pope's message. The Roman Catholic pontiff, an Italian, is of the West. But, speaking as head of his church, his expressed concern is for all human beings in all parts of the world.

The Western camp was told this about its errors—

It musted the chance afforded by World War II to truly unify Europe. Instead, it revived nationalistic states, closed within themselves * * * unsettled * * * periled.

Many observers interpret this passage of the Pope's message as lamenting the failure of EDC, and the substituting of the more nationalistic West European Union.

Secondly, the West, so rich economically, has lost sight of all other means of preserving peace. Economic wealth has exercised a fascination superior to its potentialities for producing a firm peace.

While so fascinated, the West has, thirdly, forgotten that it already possesses an idea that is true and has been successfully tested in the past—the sanctity of human rights, as defined by the divine moral law.

Pius XII believes that the West's errors are far less grievous than the East's—and its contributions to a permanent peace immeasur-

ably greater.

He said that many government leaders in our camp have already recognized the errors and are moving away from them and toward truth.

The next step toward peace: Building a bridge of truth between East and West. The flow of truth across that bridge would dispel the mutual disillusionment between the two camps-the climate of fear in which one side tolerates the existence of the other because it does not wish itself to perish.

The whole world will benefit if the message of Pius XII is studied closely in both coexisting camps. It ranks among the most significant pronouncements of the pope's

16-year pontificate.

Beloved Man of God

EXTENSION OF REMARKS OF

HON, ROBERT T. ASHMORE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. ASHMORE. Mr. Speaker, when a Carolina mountain preacher rises to the top of his profession, it is appropriate for all of us to pay him homage.

Seventy-three years ago, Dr. J. Dean Crain was born under the shadow of Glassy Mountain in Greenville County. S. C. He obtained an education largely through his iron will and determination. His call to the ministry was so strong that he could not resist, and for almost half a century he fought the sins of man in every State of the Southland.

Not only was he loved and esteemed by his fellow preachers, but by all who knew him, and many referred to him as a Baptist institution. Throughout his ministry he was an outstanding Christian leader and true servant of mankind. His faith in God and man was unshakable, and his character was as strong as the hills from whence he came.

His primary purpose was to save souls, but his interest in local, State, and National Government never lessened. realized a democracy is based on Christian principles. He was certain the strength of his country depended on the moral and spiritual strength of the individual citizen. He was a great minister of the gospel, but underneath it all. he was a great American.

I am including in my remarks an editorial from the Greenville News, January 11, 1955:

BELOVED MAN OF GOD

A long and useful life dedicated to the work of the church and to the cause of Christian education has come to its close in the death of the beloved Dr. J. Dean Crain.

Dr. Crain was a product of the hills of upper Greenville County. Public-school facilities were meager in his boyhood, but he took advantage of them and he was among the first students at what was then North Greenville Baptist Academy. After his graduation at Furman University in 1910 his active ministry began which was to last for more than half a century.

This man of God accepted every opportunity to serve that he could. He worked with his denomination's mission board to help Baptist schools, colleges, rural churches, and missions. He served for a time as head of North Greenville Baptist Academy which has become North Greenville Junior College. While serving as pastor in Columbia he also left the impress of his fine character on prisoners at the State penitentiary in the capacity of director of religious activities. For three decades he was a trustee of Furman University and he was active in the affairs of the State and Southern Baptist conventions for many years.

From 1930 until his retirement almost 3 years ago he was a valued member of the Greenville religious community in the capacity of pastor of one of the city's largest

churches, Pendleton Street.

It is the privilege of few men to be blessed with the rare good humor, love of his fellow man and implicit trust in his Maker that characterized the everyday life of Dr. Crain. He combined these gifts to lift the low in spirit and to inspire all with whom he came in contact. He served man and God with equal devotion. As he goes to his rich reward a host of men, women, and children whom he loved and pointed to a better life will remember him with grateful appreci-

Dean Crain, as he was affectionately known in his younger days, first saw the light in a mountain home on an October morning in 1881. It can be said in all truth that this man of God left the world better than he found it. And he leaves a leaven of inspiration and kindly humor to enrich the lives of thousands.

American Aid in Italy

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mrs. ST. GEORGE. Mr. Speaker, the article I am placing in the RECORD at this point appeared on the front page of the New York Times of December 25, 1954.

The article tells a story that I hope will be read and carefully pondered by all Members of this House. It is the story of a man, a constituent of mine. Anthony Cucolo, who loves his fellow men and who uses his head as well as his heart in giving them the help they need.

We have gone all over the world giving away money, but we have done it impersonally and unintelligently, in most instances. This is amply proved by the results.

Here we see one man giving wisely, through the local officers of a village, giving the needful through the friends and neighbors who understand the problem. As a result, this small Italian village has turned away from the left and the blandishments of communism, more than any of its neighbors.

This one man has accomplished more than our Government, with all its wealth, has been able to do, in most of Italy.

We, as a people, must use our minds as well as our hearts if these programs are to succeed. Anyone who has been to Europe knows that much of our spending has brought only frustration and disappointment. Here is a real success story. Let us follow this path, spend far less and accomplish far more:

American's Aid to Town in Italy Wins 92-Percent Vote for Democracy—Govern-MENTS STUDY PLAN OF SUFFERN MAN THAT CURBED APPEAL OF THE REDS

SUFFERN, N. Y., December 24 .- Both the Italian and American Governments are studying a method for feeding poor people that has resulted in a trend away from leftwing tickets in recent elections in one Italian community.

The method was developed by Anthony Cucolo, roadbuilder and philanthropist of this community. It has been put into practice to feed the poor during the winter months in Summonte, Italy, for the last 5

Under the plan Mr. Cucolo sends about \$2,000 annually to a committee in Summonte made up of a physician, the mayor,

and another prominent citizen.

The committee purchases, locally, at low cost such staples as spaghetti, rice, potatoes, and sometimes meat. These foods are then distributed to those in need. Mr. Cucolo, who returned 2 weeks ago from Italy, discovered that his expenditures had resulted in a decisive result in the voting in Summonte. Premier Mario Scelba notified Mr. Cucolo this week that he had ordered the Director General to investigate the plan.

When Mr. Cucolo was told the leftwing groups were using propaganda to influence votes, and he, without any motive except philanthropy had won the people of Sum-monte over to the cause of democracy, he decided to get in touch with the Italian

Government

"Local officials in Summonte told me the feeding of these people had been the deciding factor in their attitude on life." Mr. Cucolo said. "The American Government could carry out a similar plan in all the 5,100 villages in Italy at a cost of about \$10 million annually.

"This has nothing to do with present State Department and Marshall plan expenditures, but I believe our American ideals could

be furthered greatly by using this method of direct philanthropy."

A check of the balloting in recent elections shows Summonte citizens voted 92 percent for the party representing democracy and only 8 percent for leftwing candidates. Within a 3-mile radius the citizens in Monteforte Irpino voted 29.7 leftwing, while in the adjacent villages of Mercogliano, Ospedaletto, St. Angelo a Scala, and Pietrastornina the votes ranged from 19 to 23 percent leftwing.

Mr. Cucolo, who built the Storm King bypass, is now constructing the bridge-deck roadway for the New York State Throughway 3-mile bridge across the Hudson River between Nyack and Tarrytown.

Mr. Cucolo was the founder of the Rockland Voluntary Aid, a local plan of taking care of persons in temporary need that has been copied in many places. This plan received national attention because, like Mr. Cucolo's operation in Italy, it brought relief to a community at a minimum of cost.

In 1949, on a visit to Summonte, he observed women carrying water from a trickling fountain to their homes. It took hours to get a supply for a day. Through a United States Government agency he obtained an appropriation of \$100,000 to build a water-

Ambassador Clare Boothe Luce told Mr. Cucolo on his recent visit she would attend the dedication of the Summonte waterworks on July 16.

Mr. Cucolo has two sons, both graduates of West Point, who served during the war. Belmonte is an engineer on the Florida Throughway and Anthony, Jr., who recently returned from Korea, is now associated with his father. Mr. Cucolo also has two daugh-

"If the spirit of Christmas could be exemplified all year round and directed to the people and international relations, I know we could accomplish more," Mr. Cucolo said, "I had no idea 5 years ago my small contribution to my village would have an influence on the people. I hope the American Government, at a small cost compared to the amount now being spent, will see the light."

The Dixon-Yates Contract

EXTENSION OF REMARKS

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. JONES of Alabama. Mr. Speaker, I would like to invite the membership's attention to a recent newspaper article by Morris Cunningham, a prominent newspaper writer for the outstanding Commercial Appeal, Memphis, Tenn, and also to an editorial appearing in this paper concerning the Dixon-Yates contract and how it has been managed by the principals in the Atomic Energy Commission.

The article follows:

REPORT OF STRAUSS' SPEECH QUOTING UNITED STATES ENGINEERS ON DIXON-YATES FALSIFIED—OFFICIAL RECORD FAILS TO INCLUDE ENDORSEMENT AEC CHAIRMAN SAID CORPS HAD GIVEN TO WEST MEMPHIS POWERPLANT SITE

(By Morris Cunningham)

Washington, January 8.—By doctoring the transcript of a recent news conference the Atomic Energy Commission under Chairman Lewis L. Strauss has gone into the novel business of rewriting history.

The news conference was the one held by

The news conference was the one held by Admiral Strauss December 11 in which he said the Army Corps of Engineers had approved the site of the Dixon-Yates plant.

The statement was not true and it was not surprising that the Corps of Engineers reacted with strong protests after they read

published reports of it.

The surprising aspect was that a man in

such close communion with the Dixon-Yates deal as Admiral Strauss would offer the assertion to a roomful of newsmen as a state-

ment of fact in the first place.

But the surprises did not end there. The latest came this week when a printed copy of the stenographic transcript of the news conference was distributed to Washington newsmen. More about that in a moment.

The morning after Admiral Strauss' news conference, Maj. Gen. Bernard L. Robinson, of Washington, acting chief of the Corps of Engineers, telephoned the writer a categorical denial that Army engineers had approved the s. e.

This automatically raised a question of whether Admiral Strauss had been quoted accurately.

After a telephone call to Morse Salisbury, AEC Information Chief, the writer and Richard Dudman, a reporter for the St. Louis Post-Dispatch, taxied to the AEC offices and inspected a carbon copy of a transcript of the admiral's news conference.

The transcript was fresh from the typewriter of a stenographer and was made available by Mr. Salisbury.

STRAUSS NAILED

In the transcript the two reporters and Mr. Salisbury found this statement by Admiral Strauss, made, according to recollection, while the admiral was pointing to a chart: "There has been some discussion of whether it was wise to have put the plant there in the first place. The Corps of Engineers and engineers retained by the sponsoring companies have examined some 16 sites on the river and have selected this as the preferable one.

"This elevation here shows the maximum flood record in the river, the 1937 flood. I understand that records have been made since 1880, or thereabouts, some 74 years of record, and the plant has been located at what the Corps of Engineers feel is a safe place."

Mr. Salisbury, aware of the denial from the Corps of Engineers, admitted the statement was erroneous. He called it a "slip of the tongue."

This week—almost a month after the admiral's news conference—the AEC quietly distributed printed copies of what purports to be an accurate stenographic transcript of the conference.

RECORD IS TAMPERED

On page 10 of the printed version there is this carefully doctored version of what Admiral Strauss is purported to have said about the approval of the site.

"There has been some discussion of whether it was wise to have put the plant there in the first place. Engineers retained by the sponsoring companies have examined some 16 sites on the river and have selected this as the preferable one.

"This elevation here shows the maximum flood record in the river, the 1937 flood, I understand that records have been made since 1880 or thereabouts, some 74 years of record, and the plant has been located at what our AEC engineers, after discussions with the Memphis District Office, Corps of Engineers, and review of the data, feel is the best place."

The revised version eliminates Admiral Strauss' statement that the site was approved by the Corps of Engineers. And had not two reporters seen the original, unedited transcript and obtained a statement from Mr. Salisbury, a question would be raised as to whether Admiral Strauss ever said it in the first place.

The changes were made in the printed version without any footnotes or other indications of revision.

The incident smacks of the procedures outlined by George Orwell in his satirical novel on totalitarian government entitled "1984." In this fantasy history was rewritten at will to suit the circumstances.

The incident also sets a novel precedent for Washington news handling. Newsmen may have to be on guard in the future, lest their reports—though entirely accurate—be refuted later by a carefully revised stenographic transcript.

Admiral Strauss was not the first to say the Corps of Engineers had approved the site. Similar inferences previously had been drawn by E. H. Dixon, a principal to the contract, on the Meet the Press television program, and by R. W. Cook, Assistant AEC Manager, in sworn testimony before the Joint Atomic Energy Committee.

ENGINEERS NOT APPROACHED

The fact is that the Army Corps of Englneers not only has not approved the site, but in fact did not even receive an application for a permit for construction of the plant until this week.

The incident, however, is only one of several of similar nature that have occurred during the course of the AEC's all-out advocacy and defense of the half-billion dollar contract.

It was such incidents that last November prompted Senator LISTER HILL (Democrat, of Alabama), to charge before the Joint Committee that AEC Manager K. D. Nichols had made misleading statements and offered

incomplete data in the course of assaults upon TVA.

"General Nichols could have had only one purpose—to discredit the record of that fine agency which has done so much for AEC, to impugn the probity of the staff which had dared to question the basis for AEC's conclusions. Such reckless assaults are costly to the reputation of the public servants who launch them. I fear the AEC will pay a heavy price for its entanglement with Dixon-Yates."

Senator Hnl., who will head the Senate subcommittee that controls AEC and TVA pursestrings in the new Congress, also had a word about Admiral Strauss.

"As a consequence of his willingness to usurp the authority of another independent agency of the Government [TVA], the Chairman of the Atomic Energy Commission, representing only a minority viewpoint, has not only diverted the time and talent of his staff from the grave matters which are their concern, he has gravely damaged the prestige of the agency for which he has responsibility," Senator Hnl. told the joint committee.

QUESTIONS AEC'S VERACITY

"He has made us wonder if we can trust the AEC. We have learned that major members of his staff are careless with data, that their presentation of material is likely to be blased, that they are seemingly indifferent to the expenditure of millions of dollars a year.

"The Committee on Appropriations of the Senate, of which I am a member, must take on the burden of more careful analysis of every estimate, more skeptical appraisal of every argument.

"Before we can proceed in confidence that committee, and I am sure your committee and other committees, must determine why this Dixon-Yates proposal is advanced with such tenacity and stubbornness. What and who is behind it?"

This week, with the new Democratic-controlled Congress in session, Senator Hill and his fellow opponents to the half-billion-dollar deal were busily planning an investigation aimed at determining the answer to his question. Developments can be expected before the new Congress is much older.

AROUND THE HILL

Representative JERE COOPER, Democrat, of Tennessee, was 1 of 3 House Members picked to escort President Eisenhower to and from the rostrum for his state of the Union message this week. The others picked for the honor were House majority leader, JOHN W. McCORMACK, Democrat, of Massachusetts, and ex-Speaker Joseph W. Mar-TIN, Jr., Republican, of Massachusetts. The selection of Representative Cooper was a tribute to his power and influence in the new Congress. Newsmen must have special passes on the days the President addresses Congress. Police surround the Capitol and visitors have to pass through one cordon after another. Northern Democrats have decided to bypass another civil rights fight for the time being. Senator James O. EAST-LAND, Democrat, of Mississippi, is assured of the chairmanship of the important, Communist-hunting Senate Internal Security Subcommittee. Representative Jamie L. WHITTEN, Democrat, of Mississippi, won a victory when the Agriculture Department ordered a survey on the economic effect of cutbacks in cotton acreage. Representative J. PERCY PRIEST, Democrat, of Tennessee, has been named to the House Democratic steering committee. Tennessee's newest Congressman, Representative Ross Bass, of Pulaski, is trying for an assignment to the House Agriculture Committee. Representative James W. TRIMBLE, Democrat, of Arkansas, will be named to the House Rules Committee and will relinquish his post on the Public Works Committee. Representative

FRANK SMITH, Democrat, of Mississippi, will advance a notch on the Public Works Committee as a result. Chances appear good for favorable TVA representation on the Independent Offices Appropriations Subcommittees. Representative Tom Murray, Democrat, of Tennessee, chairman of the House Post Office and Civil Service Committee, will play an important role in such major activities as pay raises for Government employees, regulation, and the Democratic investigation of the administration's "numbers game" on the dismissal of subversives.

CHICANERY IN HIGH PLACES

On December 11, newspapermen heard Lewis L. Strauss. Chairman of the Atomic Energy Commission, say Army engineers have approved location of proposed Dixon-Yates power plant.

K. D. Nichols was present and kept silent as Mr. Strauss spoke. Mr. Nichols, now AEC manager, has been an Army engineer general. He must have known how extraordinary it would have been if the Army engineers had advised Dixon-Yates to build anything anywhere.

As a matter of plain fact, the Army engineers had neither approved nor been asked to approve the site. The first connection of the Corps of Engineers with Dixon-Yates came nearly a month after the Strauss Incident, when approval was asked for a part of the plans involving only the coal unloading and cooling water structures in the river.

Highest officials of the Engineer Corps pro-

tested strongly when they learned what Mr.

Strauss had said.

A stenographic transcript made by the AEC showed that Mr. Strauss had said the Corps of Engineers took part in selecting the site as the best of 16 examined. He went further, according to the stenographic record, to say that after looking at flood records the Corps of Engineers considered the site to be safe.

But the AEC has now published its record of what was said and the Corps of Engineers has strangely disappeared from the remarks about examining 16 sites and choosing the

west Memphis location. The record has been doctored.

Who did the doctoring?

The Late Dwight L. Rogers

SPEECH

HON, EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 5, 1955

Mr. KEOGH. Mr. Speaker, of few Members of this House could it be more truly said than of DWIGHT L. ROGERS that every colleague was his good friend. The late gentleman from Florida proffered his sterling friendship freely, and only a petrified heart could rebuff it. No matter how gray the day or grim the legislative task at hand, it seemed that he had always with him the essence of Florida sunshine to share with one and all.

Mr. Rogers came to this House with a fine background in the law and substantial experience as a State legislator. He applied himself conscientiously to the committee tasks assigned him, and he won quickly the respect and confidence of his colleagues here. It was my privilege to serve with him for a time on the great Committee on Interstate and Foreign

Commerce, and I profited from the association. I do not believe anyone could have failed to be the gainer from knowing DWIGHT ROCERS

In the committee room, in the House Chamber, wherever he was in these halls of Congress, there was the spirit of genuine friendliness. This is not to suggest that Mr. Rogers took his legislative labors lightly. He was a gentleman of natural dignity who demonstrated a deep consciousness of the honor and responsibility which were his as the Representative of the Sixth District of Florida.

The fine citizens who sent Dwight ROGERS to serve with us lost in his passing an earnest and effective legislator and a kindly and engaging ambassador of goodwill. All of us who knew and loved him were deeply saddened in the knowledge that we were to return to the Capitol and find him no longer here. Our sincere sympathy goes to his widow and sons

Pay Increase for Postal and Federal Employees

EXTENSION OF REMARKS OF

HON, VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 11, 1955

Mr. ANFUSO. Mr. Speaker, one of my first duties after taking my oath of office as a Member of the 84th Congress was to introduce a bill to increase the salaries of all postal workers and Federal employees, including those in the executive, legislative, and judicial branches of the Government, as well as those employed by the Government of the District of Columbia.

My bill provides for a pay increase of \$1,000 per annum to all such employees; those who are employed on an hourly or part-time basis are to receive additional compensation at the rate of 50

cents per hour.

Mr. Speaker, the prime justification for this measure is to compensate the postal workers and Government employees for the inadequate salaries paid them in recent years. I have maintained all along that their salaries have never been adequately adjusted to meet the high cost of living, particularly since the war in Korea. This has resulted in real losses of actual earning capacity for them and caused great hardship to many of these employees who are unable to cope with such problems as the increased cost of food, higher rents, and other essentials.

During the past few years the salaries of postal and Federal employees have lagged behind those doing comparable work in private industry. Government employees in the lower income brackets are finding this situation almost intolerable as they struggle to maintain their family, upkeep of a household, education of their children. In many instances it was found that they had to supplement their income by part-time work outside the Government, or have their wives seek employment when they should give their full attention to the children and maintenance of the household.

I should like to call to the attention of my colleagues that unlike other workers in private industry, postal and Government workers are prohibited by law from engaging in political activity in order to improve their situation. Furthermore, long before the United States Government inserted no-strike provisions in the laws affecting Federal employees, the postal workers had voluntarily relinquished all rights to declare strikeswhich, as you well know, is one of labor's most potent weapons in its efforts to improve conditions for the laboring masses.

Mr. Speaker, I was extremely disappointed when the 83d Congress dragged out this issue until the very end of its second session and then adopted only a 5-percent increase in salaries, which was subsequently vetoed by the President. Surely, the 83d Congress could have taken earlier action in the matter and adopted a more adequate measure.

Postal workers and Federal employees are a conscientious and loyal group, hard working, industrious. They deserve full consideration. They deserve fair remuneration for the important services they perform to keep our Government functioning smoothly and efficiently. They should not be placed in a position of being forced to seek outside income to obtain the necessary essentials for themselves and their families. I want to stress as strongly as possible that the proposed pay increase will be used largely for meeting normal living expenses, and not for luxuries.

Mr. Speaker, we have started a new congressional session. Let us avoid the mistakes of the past by taking prompt and early action on this matter. Let it not be said of us that we ignore the postal and Federal workers whose pay increases are long overdue. Action today is worth more than all the promises for tomorrow.

House Resolution 18 To Establish a Select Committee To Investigate the Civil Aeronautics Board

EXTENSION OF REMARKS OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. BOGGS. Mr. Speaker, last week I introduced House Resolution 18 to establish a Select Committee To Investigate the Civil Aeronautics Board. Such an investigation is desperately needed if American civilian aviation is to continue to advance.

In this connection I an enclosing herewith an editorial which appeared in American Aviation on December 20, 1954.

I will incorporate further information in the Congressional Record in the next few days.

PERSONAL VIEW
(By Wayne W. Parrish)
DETERIORATION

For those who have known the Civil Aeronautics Board best through the years since its creation in 1938, its steady deterioration especially during the past several years, has been the source of increasing alarm and concern. Unless there is a positive change of direction, there can be nothing but trouble ahead—trouble which will be to the detriment of the entire air transport industry.

The Eisenhower administration has been aware of this deterioration. Many promises of corrective action have been made. But so far nothing has happened to halt the decline of this vital five-man Board which was created in 1938 as a quasi-judicial agency.

The sad truth is that CAB is no longer functioning as a quasi-judicial body. It relies on expensive and painstakingly prepared records only to support language and points for decisions which, in many cases, have been made months before the cases were even formally submitted to it, and sometimes before cases have even begun.

One observer who knows the CAB intimately has this to say: "All five members appear to be caught in the tide of an intangible force which compels them to put their personal reasons, ambitions, antagonisms, and political alliances ahead of the judicial reasoning which the Civil Aeronautics Act requires. At the present time not one member of the Board is voting as an impartial judge."

Another close observer commented recently that every case before the Board is like a crackerjack box—"a prize in every package." Weighty problems are getting only cursory attention. No real thinking is going into the votes. It isn't crookedness that prevails—it's a shallowness arising from the weight of pressures, personal feelings, and politics. For the past 6 months the situation has become more embroiled than ever through the rivalries of the 3 Republican members, 1 wanting to be reappointed, and all 3 want-

Ing to be Chairman.

The airlines themselves are being criticized for the political and other pressures they're exerting on pending cases. Those who say they don't want to win cases by the back door insist they have to do so because their competitors do, so it's a matter of self-defense. There is considerable logic in the argument, for the Board itself has within its power the ability to stop backdoor maneuvering.

Those who want the Board to succeed and those who have watched it closely through the years are genuinely alarmed. Continuation of the present trend will lead to major trouble; the explosion won't be pleasant for anyone.

Hon. Pat McCarran

SPEECH

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1955

Mr. KEOGH. Mr. Speaker, it is very difficult for me to contemplate Congress divested of the presence of the Honorable Pat McCarran, of Nevada. With all deference to the other distinguished men who have been privileged to represent this great State of Nevada, it had seemed for more than 20 years that Nevada and

PAT McCARRAN were virtually synonymous in Washington. Nevada never had cause to complain that its interests were not being diligently and courageously represented. Senator McCarran was the vigilant sentry, the tenacious battler.

Coming to Washington with a distinguished background as lawyer and jurist, he soon demonstrated that he was, above all, a lawmaker of great craftsmanship. He abhorred careless legislating. He believed that the great body of the law could and should be shaped and reshaped to serve the changing requirements of an ever-growing Nation, but he demanded the painstaking approach. His resistance to legal tinkering and experimentation was prodigious.

Senator McCarran strove for orderliness in the complex of Federal statutes. His service as chairman of the Senate Committee on the Judiciary gave him countless opportunities to work for sensible legal reforms, and he welcomed them as a passionate believer in the importance of firm legal basis for every action of Government.

Few Members of the Congress have had the capacity for so wide a range of legislative interests. Among the measures in which his authorship loomed large were the Civil Aeronautics Act of 1938, the first Urban Redevelopment Act passed by Congress in 1944, the Reorganization Act of 1945, the Administrative Procedure Act of 1946, the Internal Security Act of 1951, and the Immigration and Nationality Act of 1952.

Senator McCarran was a dedicated patriot. He was born and reared among pioneers in a pioneering State. He knew from personal experience that the greatness of the United States of America was built by hard work. He could not abide apathy where the national interest was concerned. During most of his service in Congress, he lived and worked in an atmosphere of present or impending dangers.

He never underestimated the perverted skills of the agents of international communism, but he never doubted the ability of a republic to meet and best them without compromising its own liberties in the doing. Because he knew the measure of the Communist menace. Senator McCAR-RAN fought for the improvement of domestic legal weapons against its operatives. In the field of diplomacy, his views were equally realistic. Never a warmonger, he believed in preparation against the horrible worst, and he advocated seeking allies among those who not only said they opposed communism but also gave evidence of their willingness to take up arms against the evil movement, should eventualities dictate.

It was my privilege to enjoy the counsel of Senator McCarran on numerous occasions. As a fellow lawyer, I came to know and marvel at the breadth of his legal comprehension and the incisiveness of his thinking. His passing, an incalculable loss to the Nation and to his great State, represents a deep personal loss to me. My sympathy goes out to the fine family he left in moving on to his reward.

Saline Water Conversion Program

EXTENSION OF REMARKS

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. ENGLE. Mr. Speaker, I am introducing legislation to amend the Saline Water Act of 1952, to provide for its uninterrupted continuation and to enable the officials in charge of the program to have the advantage of a limited amount of technical assistance from existing Federal scientific facilities. I authored the 1952 legislation which initiated the saline water conversion program. This program, under the direction of the Department of the Interior, has the objective of developing economically feasible processes for converting saline water to fresh water. I am concerned at all times over our diminishing water supplies, both in this country and throughout the world. As the water needs of our country grow and our available supplies dwindle, the importance of water to our well being and to our overall national economy is impressed upon us more and more.

I have followed closely the program which has been conducted under the 1952 legislation. Much progress has been made and it now seems clear that the results of the research and the studies now under way will, if given time, result in large-scale conversion of salt water to fresh water for municipal and industrial purposes. It also seems clear that, in time, conversion of sea water as well as brackish water for agricultural purposes in certain areas will be achieved. Although it had been thought that the extension of the program should be made toward the close of the initial 5-year period progress now indicates clearly the desirability of assuring at this time continuity and some minor expansion of activity to accommodate and make full use of the initial results now flowing in. There should be no slowdown or interruption in the program, and both the Department and private industry, which has assisted in the research, should be given assurance by this Congress that the program will be continued. For these reasons, I am introducing legislation at this time.

The Secretary of the Interior has just transmitted to the Congress his third annual report covering this program, and I am pleased to report briefly to my colleagues upon the progress that has been made.

The Department of the Interior accomplishes this saline water conservation program by conducting scientific research and development through federally financed grants and contracts, encouraging such development by correlating and coordinating efforts in this field, and stimulating the interest of private and public organizations and individuals in the problem. Private development of processes is being encouraged, and a few industrial firms have

undertaken independent research in this field during the past year, and the Department has received wholehearted cooperation from several organizations now engaged in these activities.

At the beginning of the program, the cost of converting sea water to fresh water by the best processes in use was about \$400 to \$500 an acre-foot. cordingly, an arbitrary criterion was set for the intial phase of the program, for water for municipal and industrial purposes. This goal was \$125 per acrefoot-38 cents per 1,000 gallons-which was believed, on the basis of available data, to represent about the maximum that could be borne by these types of use. It was thought that if this goal could be approached during the initial phase, further reduction might be possible in a second phase.

The work accomplished so far indicates that attainment of the first goal of obtaining fresh water from sea water at a price which municipal users and some industries might pay, and the conversion of brackish water to irrigation uses, seems to be in sight although much work will be necessary before either can be brought to realization. The task of converting sea water for irrigation is more difficult but the researches continually produce new ideas and one of these may well point a way to its attainment.

Some of the investigations initiated earlier in this program have been completed and the results described. Other research investigations are being continued and many new research and development problems are being studied. All of these are described in some detail in the third annual report covering the program.

The report indicates that during the past year 39 proposals for research were evaluated formally and several dozen additional suggestions were considered. Eleven new research and development contracts were let. Work under 11 other research contracts initiated earlier was completed with affirmative results definitely justifying further research in 8. Two processes give promise of converting sea water at less than half present costs, and one for brackish water has reached pilot-plant stage and is being field tested. Information has been obtained and exchanged on developments in this field in the United States and more than a dozen other countries from Europe to Australia.

I am advised that progress during the year has demonstrated the need for a central governmental program of this nature having no interest in the development of one industrial process over another. Few industrial firms appear to feel justified in carrying the development of saline water conversion equipment further than improvements in present equipment. However, to reach the ultimate objective of the programdemineralized water in large quantities at a small fraction of present costs for the general economic benefit-more than minor improvements in processes are needed. The governmental program would assure that research and development would be continued persistently, including minor local improvements in processes, until in time, low-cost water in large quantities was made available to the general public.

The report indicates that, during 1954, new light has also been cast upon the direction which the program should take in the development of unconventional energy sources for demineralization. The energy required for extracting 1 acre-foot of fresh water from sea water is about 900 kilowatt-hours. From research under the program, it has been estimated that the minimum that might be reached in practice would probably be 4 to 5 times that quantity. energy cost alone would not be less than about \$20 per acre-foot at 5 mills per kilowatt-hour. The amortized cost of equipment and the cost of operation would probably at least equal the energy cost. This is for sea water, and the costs are generally less for brackish waters. Thus it becomes important that nonconventional low-cost energy such as solar energy, for example, be explored in connection with process development and use.

I am pleased to hear that the nine eminent members of educational, scientific, and industrial organizations who, at the beginning of the program, agreed to serve as advisers to the Secretary on broad policy matters, are all continuing to serve in this capacity and that they have provided some very substantial advice and assistance.

Lowering Our Tariffs on Japanese Goods

EXTENSION OF REMARKS OF

HON, DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. REED of New York. Mr. Speaker. one of the reasons why the proposed extension of the President's authority to enter into trade agreements assumes such vital importance to the American people at this time is the pending agreement with Japan.

Trade negotiations with Japan are expected to get underway shortly. They may have already begun. Included among the hundreds of items with respect to which tariff concessions will be considered are the products of many American industries which are already feeling the devastating effect of foreign competition. These include chemicals, china and porcelainware, glassware, optical instruments, machinery, fish, and a wide variety of textile products. There are many others.

I believe that up-to-date information on the negotiations with Japan is essential to our enlightened understanding of the issues presented by current trade legislation. For that reason, I am pre-senting for the information of each member a list of the items announced by the State Department to be subject to negotiation with Japan:

LIST OF ARTICLES IMPORTED INTO THE UNITED STATES PROPOSED FOR CONSIDERATION IN TRADE AGREEMENT NEGOTIATIONS JAPAN AND OTHER COUNTRIES

TARIFF ACT OF 1930, TITLE I. DUTIABLE LIST Schedule 1. Chemicals, oils, and paints

Paragraph 5: Ajinomoto and other monosodium glutamate preparations.

Paragraph 27 (a) (1) (5): Acetanilide not suitable for medicinal use alphanaphthol. aminobenzoic acid, aminonaphthol, aminophenetole, aminophenol, aminosalicylic acid, aminoanthraquinone, aniline oil, aniline salt, anthraquinone, arsanilic acid, benzaldehyde not suitable for medicinal use, benzal chloride, benzanthrone, benzidine, benzidine sulfate, benzoic acid not sulfable for medicinal use, benzoquinone, benzoyl chloride, benzyl chloride, benzylethylaniline, beta-naphthol not suitable for medicinal use, bromobenzene, chlorobenzene, chlorophthalic acid, cinnamic acid, cumidine, dehydrothiotoluidine, diaminostilbene, di-anisidine, dichlorophthalic acid, dimethyl-aniline, dimethylaminophenol, dimethylphenylbenzylammonium hydroxide, dimethylphenylenediamine, dinitrobenzene, dinitrochlorobenzene, dinitronaphthalene, dinitrophenol, dinitrotoluene, dihyroxynaphthalene, diphenylamine, hydroxyphenylar-sinic acid, metanilic acid, methylanthraquinone, naphthylamine, naphthylamine, nitroaniline, nitroaniline, nitroanthraquinone, nitrobenzaldehyde, nitrobenzene, nitronaphthalene, nitrophenol, nitrophenylenediamine, nitrosodimethylaniline, nitrotoluene, nitrotoluylenediamine, phenylenediamine, phenylhydrazine, phenylnaphthylamine, phenylglycine, phenylglycinerotho-carboxylic acid, phthalic acid, phthalimide, quinaldine, quinoline, resorcinol not suitable for medicinal use, salicylic acid and its salts not suitable for medicinal use, sulfanilic acid, thiocarbanilide, thiosalicylic acid, tetra-chlorophthalic acid, tetramethyldiaminotetramethyldiaminodiphenbenzophenone. ylmethane, toluene sulfochloride, toluene sulfonamide, tribromophenol, toluidine, tolidine, tolylenediamine, xylidine, carbazole having a purity of 65 percent or more; all the foregoing products (not including phthalic anhydride, anthracene, or naphthalene) whether obtained, derived, or manufactured from coal tar or other source.

Paragraph 27 (a) (3) (5): All products (except products chiefly used as assistants in preparing or finishing textiles and except azo salts, fast-color bases, fast-color salts, naphthol AS and it derivatives), by whatever name known, which are similar to any of the products provided for in paragraph 27 or 1651, Tariff Act of 1930, and which are obtained, derived, or manufactured in whole or in part from any of the products provided

for in either of said paragraphs.

Paragraph 27 (a) (4) (5): All mixtures, including solutions, consisting in whole or in part of any of the products provided for in subdivision (1), (2), or (3) of paragraph (a), Tariff Act of 1930 (except sheep dip medicinal soaps, and except products chiefly use as assistants in preparing or fin-

ishing textiles).

Paragraph 41: Agar agar.

Paragraph 47: Licorice, extracts of, in pastes, rolls, or other forms.

Paragraph 51: Camphor, natural (crude and refined) and synthetic.

Paragraph 51: Menthol.

Paragraph 58: Oils, distilled or essential, not mixed or compounded with or containing alcohol: Sandalwood.

Paragraph 60: Safrol, not mixed or compounded, not containing more than 10 per-cent of alcohol, not marketable as cosmetics, perfumery, or toilet preparations, and not specially provided for.

Paragraph 66: Pigments, whether dry. mixed, or ground in or mixed with water, oil, or solutions other than oil, not specially provided for: Vandyke brown and Cassel earth.

Paragraph 67: Barytes ore, crude or unmanufactured, or ground or otherwise manufactured.

Paragraph 83: Potato starch.

Paragraph 84: Dextrine, not otherwise provided for (not including dextrine made from potato starch or potato flour), burnt starch or British gum, dextrine substitutes, and soluble or chemically treated starch.

Paragraph 87: Cerium nitrate, cerium fluoride, and other salts of cerium not

specially provided for.

Schedule 2. Earths, earthenware, and glassware

Paragraph 204: Dead burned and grain magnesite, and periclase, not suitable for manufacture into exychloride cements. Paragraph 206: Pumice stone, wholly or

partly manufactured.

Paragraph 210: Rockingham earthenware. Paragraph 211: Earthenware and crockery ware composed of a nonvitrified absorbent body, including white granite and semiporcelain earthenware, and cream-colored ware, terra cotta, and stoneware, including all articles wholly or in chief value of such ware; any of the foregoing which are tableware, kitchenware, or table or kitchen utensils, however provided for in paragraph 211, Tariff Act of 1930.

Paragraph 211: Articles, other than tableware, kitchenware, or table or kitchen utensils, however provided for in paragraph 211, Tariff Act of 1930, if valued under \$10 per

Paragraph 212: China, porcelain, and other vitrified wares, including chemical stone-ware (but not including chemical porcelain ware, sanitary ware and fittings and parts therefor, or electrical porcelain ware), com-posed of a vitrified nonabsorbent body which when broken shows a vitrified or vit reous, or semivitrified or semivitreous fracture, and all bisque and parian wares, including clock cases with or without move-ments, plaques, pill tiles, ornaments, charms, vases, statues, statuettes, mugs, cups, steins, lamps, and all other articles composed wholly or in chief value of such ware; all the foregoing, however provided for in paragraph 212, Tariff Act of 1930, not containing 25 percent or more of calcined bone. Paragraph 213: Graphite or plumbago,

crude, or refined: Amorphous (except arti-

Paragraph 218 (c): Illuminating articles of every description, finished or unfinished, wholly or in chief value of glass, for use in connection with artificial illumination:

Chimneys, globes, and shades, and parts thereof, wholly or in chief value of glass.

Paragraph 218 (f): Table and kitchen articles and utensils, and all articles of every description not specially provided for composed wholly or in chief value of glass, blown or partly blown in the mold or otherwise, or colored, cut, engraved, etched, frosted, gilded around (exc pt such grinding as is necessary for fitting st ppers or for purposes other than ornamentation), painted, printed in any manner, sand-blasted, silvered, stained, or decorated or ornamented in any manner, whether filled or unfilled, or whether their contents be dutiable or free:

Christmas tree ornaments valued under

\$7.50 per gross;

Other articles or utensils valued not over \$1.66% each (except articles or utensils commercially known as bubble glass, if produced otherwise than by automatic machine but not cut or engraved and valued at \$1 or more each, and except Christmas tree ornaments).

Paragraph 225; Spectacles, eyeglasses, and goggles, and frames for the same, and parts thereof, finished or unfinished, valued not over \$2.50 per dozen.

Paragraph 226: Lenses of glass or pebble, molded or pressed, or ground and polished

to a spherical, cylindrical, or prismatic form, and ground and polished plano or coquille glasses, wholly or partly manufactured; all the foregoing (except lighthouse lenses and except eyeglass and spectacle lenses with edges unground and value at \$10 or more per dozen pairs).

Paragraph 228 (a): Spectrographs, spectrometers, spectroscopes, refractometers, saccharimeters, colorimeters, cathetometers, interferometers, haemacytometers, polarimeters, polariscopes, photometers, ophthalmoscopes, slit lamps, corneal microscopes, optical measuring or optical testing instruments. testing or recording instruments for ophthalmological purposes, frames and mountings therefor, and parts of any of the foregoing. finished or unfinished.

Paragraph 228 (a): Prism binoculars having a magnification of 5 diameters or less and valued at not over \$12 each; frames and mountings therefor, and parts of any of the foregoing; all the foregoing, finished or un-

finished

Paragraph 228 (b): Opera or field glasses (not prism binoculars), frames and mountings therefor, and parts of any of the foregoing; all the foregoing, finished or unfinished, not specially provided for (except opera or field glasses valued over \$1 each).

Paragraphs 228 (b) and 1551: Photographic lenses, frames and mountings therefor, and parts of any of the foregoing; all the foregoing, finished or unfinished, not specially provided for (including cameras and parts of cameras of which a photographic lens is

the component of chief value).

Paragraph 228 (b): Telescopes, valued not over \$2 each; frames and mountings there for; parts of any of the foregoing, suitable in type and not excessive in quantity for use with, and imported in the same shipment with, telescopes valued not over \$2 each; frames and mountings for, and parts of telescopes and of frames and mountings therefor, imported separately; all the foregoing, finished or unfinished, not specially provided for.

Paragraph 228 (b): Azimuth mirrors, parabolic or mangin mirrors for searchlight reflectors, mirrors for optical, dental, or surgical purposes, projection lenses, sextants, octants, microscopes, all optical instruments (not including photographic lenses, opera or field glasses, and telescopes), frames and mountings therefor, and parts of any of the foregoing; all the foregoing, finished or unfinished, not specially provided for.

Paragraph 229: Incandescent electric-light

bulbs and lamps, with or without metal or

other filaments.

Paragraph 230 (b): Glass mirrors (except framed or cased mirrors in chief value of platinum, gold, or silver), not specially provided for, not exceeding in size 144 square inches, with or without frames or cases.

Paragraph 233: All articles composed wholly or in chief value of agate or other semiprecious stone (not including rock crystal), except such as are cut into shapes and forms fitting them expressly for use in the construction of jewelry, not specially provided for.

Schedule 3. Metals and manufactures of

Paragraph 301: Iron in pigs and iron kentledge, whether or not containing vanadium, tungsten, molybdenum, or chromium in quantities specified in paragraph 301, Tariff Act of 1930.

Paragraph 302 (c): Tungsten ore or con-

Paragraph 302 (d): Ferromanganese containing 4 percent or more of carbon.

Paragraph 302 (n) Titanium.

Paragraph 312: Sheet piling.

Paragraph 329: Chains of iron or steel, used for the transmission of power, of not more than 2-inch pitch and containing more than three parts per pitch, and parts thereof, finished or unfinished; and all other chains

used for the transmission of power, and parts thereof.

Paragraph 331: Upholsters' nails thumb tacks, of two or more pieces of iron or steel, finished or unfinished.

Paragraph 343: Needle cases or needle

books furnished with assortments of needles or combinations of needles and other articles.

Paragraph 343: Needles for knitting machines of every description, not specially provided for.

Paragraph 354. Cutcile knives, corn knives, nail files, tweezers, manicure or pedicure nippers, and parts thereof, finished or unfinished, by whatever name known.

Paragraph 359: Surgical instruments, and parts thereof (except hypodermic and other needles, but including hypodermic syringes and forceps), composed wholly or in part of iron, steel, copper, brass, nickel, aluminum, or other metal (but not in chief value of glass), finished or unfinished.

Paragraph 359: Dental instruments, and parts thereof, wholly or in part of iron, steel, copper, brass, nickel, aluminum, or metal, finished or unfinished: Dental burrs.

Paragraph 359: Surgical instruments and parts thereof and dental instruments and parts thereof, any of the foregoing in part of iron, steel, copper, brass, nickel, aluminum, or other metal, and in chief value of glass, finished or unfinished.

Paragraph 364: Bicycle, velocipede, and similar bells, finished or unfinished, and parts thereof.

Paragraph 365: Shotguns, valued over \$25 each.

Paragraph 365. Barrels for shotguns, further advanced in manufacture than rough bored only; stocks for shotguns, wholly or partly manufactured; parts of shotguns, and fittings for shotgun stocks or barrels, finished or unfinished; and shotgun barrels, in single tubes, forged, rough bored.

Paragraph 366: Pistols and revolvers, automatic, single-shot, magazine, or revolving,

valued not over \$8 each.

Paragraph 372: Sewing machines, specially provided for, valued over \$10 but not over \$75 each.

Paragraph 372: Parts of sewing machines, not specially provided for, wholly or in chief value of metal or porcelain.

Paragraph 372: Printing machinery; and parts of printing machinery, not specially provided for, wholly or in chief value of metal or porcelain: Duplicating machines (not including printing presses), and parts thereof.

Paragraph 372: Knitting machines (except full-fashioned hosiery and circular knitting machines), finished or unfinished, not specially provided for, and parts thereof, specially provided for, wholly or in chief value of metal or porcelain. Paragraph 382 (a): Aluminum foil less

than six one-thousandths of 1 inch in thick-

Paragraph 397: Articles or wares, not specially provided for, not plated with platinum (unless in chief value of platinum, gold, or silver, or colored with gold

whether partly or wholly manufactured.

Composed wholly or in chief value of lead.

Composed wholly or in chief value of base metal other than iron or steel: Screws, commonly called wood screws, having shanks not exceeding twelve-one-hundredths inch in diameter; and screws other than those commonly called wood screws, having shanks or threads not exceeding twenty-four-one hundredths inch in diameter.

Composed wholly or in chief value of plati-

Schedule 4. Wood and manufacture of

Paragraph 404: Japanese white oak and Japanese maple: In the form of sawed boards, planks, deals, and all other forms not manufactured than sawed, and further flooring.

Paragraph 409: Split bamboo.

Paragraph 409: All articles not specially provided for, wholly or partly manufactured of rattan, bamboo, osier or willow (except tennis-racket frames, valued at \$1,75 or more

Paragraph 410: Toothpicks of wood or

other vegetable substance.

Paragraph 411: Porch and window blinds, baskets, bags, chair seats, curtains, shades, or screens, any of the foregoing wholly or in chief value of bamboo, wood, straw, papiermache, palm leaf, or compositions of wood, not specially provided for (except baskets and bags wholly or in chief value of straw or willow or osier).

Paragraph 412: Bentwood furniture, wholly or partly finished, and parts thereof.

Paragraph 412: Folding rules, wholly or in chief value of wood, and not specially pro-

Paragraph 412: Manufactures of wood or bark or of which wood or bark is the component material of chief value, not specially provided for:

Brush backs.

Schedule 5. Sugar, molasses, and manufacture of

Paragraph 505: Levulose.

Schedule 7. Agricultural products and provisions

Paragraph 703: Hams and shoulders, prepared or preserved: If cooked and packed in air-tight containers, but not made into

Paragraph 710: Cheese, made from sheep's milk, in original loaves, not suitable for grating.

Paragraph 712: Birds, prepared or pre-served in any manner and not specially provided for (except chickens, prepared by removal of the feathers, heads, and all or part of the viscera, with or without removal of the feet, but not cooked or divided into portions).

Paragraph 713: Eggs of poultry (except of chickens), in the shell.

Paragraph 713: Dried egg albumen, whether or not sugar or other material is added. Paragraph 717 (b): Fish, fresh or frozen (whether or not packed in ice), filleted, skinned, boned, sliced, or divided into por-

tions, not specially provided for: Swordfish. Paragraph 717 (c): Pish, dried and unsalted (except cod, haddock, hake, pollock,

and cusk, and except shark fins).

Paragraph 718 (a): Fish, prepared or preserved in any manner, when packed in oil or in oil and other substances: Tuna.

Paragraph 718 (b): Fish, prepared or pre served in any manner, when packed in air-tight containers weighing with their con-tents not more than 15 pounds each (except fish packad in oil or in oil and other substances): Tuna.

Paragraph 721 (a): Crabmeat, fresh or frozen (whether or not packed in ice), or prepared or preserved in any manner, including crab paste and crab sauce.

Paragraph 721 (b): Clams other than

razor clams, and clams in combination with other substances (except clam chowder), packed in airtight containers.

Paragraph 721 (e): Oysters, oyster juice, or either in combination with other substances, packed in airtight containers.

Paragraph 727: Broken rice, which will pass readily through a metal sieve perforated with round holes five and one-half sixty-fourths of 1 inch in diameter.

Paragraph 730: Soy bean oil cake and soy bean oil-cake meal.

Paragraph 730: Vegetable oil cake and oilcake meal, not specially provided for: Coconut or copra, linseed.

Paragraph 736: Berries, edible (except blueberries), prepared or preserved (not including berries in brine, dried, desiccated, evaporated, or frozen), and not specially provided for.

Paragraph 738: Cider.

Paragraph 743: Oranges, Mandarin, packed in airtight containers.

Paragraph 748: Plums, prunes, and pru-

nelles, green, ripe, or in brine, Paragraph 753: Lily bulbs.

Paragraph 760: Walnuts of all kinds, shelled, or blanched, roasted, prepared, or preserved, including walnut paste.

Paragraph 761: Cashew nuts, shelled (including blanched) or unshelled.

Paragraph 763: Grass seeds and other forage crop seeds: Clover, not specially provided for.

Paragraph 764: Tree and shrub seeds, Paragraph 768: Mushroom, dried.

Paragraph 775: Vegetables (including horseradish), if cut, sliced, or otherwise reduced in size, or if reduced to flour, or if parched or roasted, or if packed in oil, or prepared or preserved in any other way and not specially provided for (not including dehydrated onions in any form of vegetables pickled, or packed in salt or in brine).

Paragraph 775. Soybeans, prepared or pre-

served in any manner.
Paragraph 775: Pastes, balls, puddings,

hash (except corned beef hash), and all similar forms, composed of vegetables, or of vegetables and meat or fish, or both, not specially provided for.

Paragraph 776: Chicory, crude (except endive), or ground or otherwise prepared.

Paragraph 779: Rice straw, and rice fiber. Paragraph 781: Curry and curry powder.

Schedule 8. Spirits, wines, and other beverages

Paragraph 804: Rice wine or sake.

Schedule 9. Cotton manufactures

Paragraph 904 (a) (b) (c) (d): Cotton cloth, however, provided for in paragraph 904, Tariff Act of 1930 (not including tire fabric or fabric for use in pneumatic tires)

Paragraph 905: Cloth, in chief value of cotton, containing silk, or rayon or other synthetic textile.

Paragraph 909: Pile fabrics (not including pile ribbons), cut or uncut, whether or not the pile covers the entire surface, wholly or in chief value of cotton, if velveteens.

Paragraph 910: Table damask, wholly or in chief value of cotton, and all articles, finished or unfinished, made or cut from such table damask.

Paragraph 911 (a): Blankets or blanket cloth, napped or unnapped, wholly or in chief value of cotton, whether in the piece or otherwise, if Jacquard-figured.

Paragraph 911 (a): Quilts or bedspreads,

wholly or in chief value of cotton, whether in the piece or otherwise, not Jacquard-figured, if block-printed by hand.

Paragraph 911 (a): Towels, other than pile fabrics, wholly or in chief value of cotton, whether in the piece or otherwise, and whether or not Jacquard-figured.

Paragraph 911 (b): Sheets and pillowcases, wholly or in chief value of cotton.

Paragraph 911 (b): Table and bureau covers, centerpieces, runners, scarfs, napkins, and doilies, made of plain-woven cotton cloth, and not specially provided for.

Paragraph 912: Boot, shoe, or corset

lacings, wholly or in chief value of cotton or other vegetable fiber.

Paragraph 915: Gloves and mittens, finished or unfinished, wholly or in chief value of cotton or other vegetable fiber, made of fabric knit or a warp-knitting or other machine.

Paragraph 917: Underwear, outerwear, and articles of all kinds, knit or crocheted, finished or unfinished, wholly or in chief value of cotton or other vegetable fiber, and not specially provided for (except knit underwear valued over \$1.75 per pound, and crocheted underwear).

Paragraph 919: Clothing and articles of wearing apparel of every description, manufactured wholly or in part, wholly or in chief value of cotton, and not specially provided for (except coats valued \$4 or more each; vests valued \$2 or more each; dressing gowns, including bath robes and beach robes, valued \$2.50 or more each; underwear valued 75 cents or more per separate piece; and except pajamas valued \$1.50 or more per suit).

Paragraph 921: Rag rugs, wholly or in chief value of cotton, of the type commonly known as hit-and-miss; chenille rugs, wholly or in chief value of cotton; and all other floor coverings, including carpets, carpeting, mats, and rugs, wholly or in chief value of cotton (except cut-pile and hand-hooked floor coverings and imitation oriental rugs).

Paragraph 922: Rags, including wiping rags, wholly or in chief value of cotton, except rags chiefly used in papermaking.

Paragraph 923: Manufactures, wholly or in chief value of cotton, not specially provided for (except articles of pile construction other than terry-woven towels, and except bougies, catheters, drains, explorateurs, instillateurs, probes, sondes, and other urologiinstruments, yarns containing wool molded, cotton and rubber packing, and printers' rubberized blanketing).

Schedule 10. Flax, hemp, jute, and manufactures of

Paragraph 1001: Flax, hackled, including dressed line.

Paragraph 1001: Flax, not hackled. Paragraph 1003: Jute yarns or roving, single; and jute sliver.

Paragraph 1006: Gill nettings, nets, webs, and seines, and other nets for fishing, wholly or in chief value of flax, hemp, or ramie, and not specially provided for.

Paragraph 1015: Fabrics with fast edges, not exceeding 12 inches in width, and articles made therefrom: Webbing wholly or in chief value of jute.

Paragraph 1019: Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single varns made of jute, jute butts, or other vegetable fiber, not bleached, dyed, colored, stained, painted, or printed, not exceeding 16 threads to the square inch, counting the warp and filling, and weighing not less than 15 ounces nor more than 32 ounces per square yard.

Paragraph 1021: Common China, Japan, and India straw matting, and floor coverings made therefrom.

Paragraph 1021: Floor coverings not specially provided for: Grass or rice straw.

Paragraph 1022: Pile mats and floor coverings, wholly or in chief value of cocoa fiber

Schedule 11. Wool and manufactures of

Paragraph 1101 (a), (b): Hair of the camel, however provided for in paragraph 1101, Tariff Act of 1930.

Paragraph 1111: Blankets and similar articles (including carriage and automobile robes and steamer rugs), made as units or in the piece, finished or unfinished, wholly or in chief value of wool, not exceeding 3 yards in length.

Paragraph 1114 (b): Hose and half hose, finished or unfinished, wholly or in chief value of wool.

Paragraph 1114 (d): Outerwear and articles of all kinds, knit or crocheted, finished or unfinished, wholly or in chief value of wool, and not specially provided for:

Hats, bonnets, caps, berets, and similar articles (except infants' headwear), valued over \$2 per pound.

Other (except infants' headwear and other infants' outerwear).

Paragraph 1117 (c): Floor coverings, including mats and druggets, wholly or in chief value of wool, not specially provided for, valued over 40 cents per square foot (except such floor coverings wholly or in chief value of hair of the alpaca, guanaco, huarizo, llama, misti, suri, or a combination of the hair of two or more of these species, or wholly or in chief value of hair of the Angora goat).

Paragraph 1117 (c): Floor coverings, including mats and druggets, wholly or in chief walue of wool, not specially provided for:
Wholly or in chief value of hair of the

Angora goat.

Schedule 12. Silk manufactures

Paragraph 1201: Silk partially manufactured, including total or partial degumming other than in the reeling process, from raw silk, waste silk, or cocoons, and silk noils exceeding 2 inches in length; all the foregoing, if not twisted or spun.

Paragraph 1202: Spun silk or schappe silk yarn, or yarn of silk and rayon or other synthetic textile, and roving, whether or synthetic textile, and roving, whether or not bleached, dyed, colored, or plied. Paragraph 1205: Woven fabrics in the

piece, wholly or in chief value of silk, however provided for in paragraph 1205, Tariff Act of 1930 (except fabrics with fibers wholly of silk, not bleached, colored, dyed, or if Jacquard-figured; with fibers printed. chiefly but not wholly of silk, not bleached, colored, dyed, or printed, if Jacquard-figured, or bleached, colored, dyed, or printed, whether or not Jacquard-figured; and except

silk bolting cloth).
Paragraph 1208: Gloves and mittens, knit or crocheted, finished or unfinished, wholly

or in chief value of silk.

Schedule 13. Manufactures of rayon or other synthetic textile

Paragraph 1301: Yarns of rayon or other synthetic textile, singles or plied, not specially provided for (except single yarns weighing 150 deniers or more per length of 450 meters), and regardless of the number of turns twist per inch.

Paragraph 1302: Filaments of rayon or other synthetic textile, not exceeding 30 inches in length, other than waste, whether known as cut fiber, staple fiber, or by any other name.

Paragraph 1309: Gloves and mittens, knit or crocheted, finished or unfinished, wholly or in chief value of rayon or other synthetic textile, valued under \$1.50 per dozen pairs.

Schedule 14. Papers and books

Paragraph 1403: Masks composed of paper, pulp, or papier mache, not specially provided for.

Paragraph 1404: Papers commonly or commercially known as stereotype paper, copying paper, or bibulous paper, not specially vided for, colored or uncolored, white or printed, whether in sheets or any other form, and weighing less than 10 pounds to the ream.

Paragraph 1405: Bags and other articles, except printed matter, composed wholly or in chief value of any of the papers provided for in any of the provisions of paragraph 1405, Tariff Act of 1930, preceding the provision for bags, and not specially provided for (not including boxes of paper or papier mache or wood covered or lined with any such paper).

Paragraph 1405: Sensitized paper to be used in I lotography.

Paragraph 1409: Hanging paper, printed, lithographed, dyed, or colored.

Paragraph 1409: Papers, not specially provided for (except stencil paper, unmounted, and except strawboard and straw under 0.012 but not under 0.008 inch thick).

Paragraph 1410: Books, unbound or bound (except those bound wholly or in part in leather), and sheets or printed pages of books bound wholly or in part in leather, not specially provided for, if of bona fide foreign authorship: Prayer books and sheets or printed pages of prayer books.

Paragraph 1410: Blank books and slate

books: Diaries, notebooks, and address books.

Schedule 15. Sundries

Paragraph 1502: Baseballs, and balls wholly or in chief value of rubber (except golf and lawn-tennis balls), finished or unfinished, primarily designed for use in physi-

cal exercise (whether or not such exercise involves the element of sport), all the foregoing, not specially provided for.

Paragraph 1502: Tennis rackets.

Paragraph 1503: Beads of ivory; hollow or filled imitation pearl beads of all kinds and shapes, of whatever material composed; imitation solid pearl beads; and iridescent imitation solid pearl beads.

Paragraph 1504 (a): Braids, plaits, laces, and willow sheets or squares, composed wholly or in chief value of straw, chip, paper, grass, palm leaf, willow, osier, rattan, real horsehair, cuba bark, or manila hemp, and braids and plaits, wholly or in chief value of ramie, all the foregoing suitable for making bonnets, or hoods, ornamenting hats, whether or not bleached, dye, colored, or stained, and whether or not containing a substantial part of rayon or other synthetic textile (but not wholly or in chief value thereof), except any of the foregoing (other than willow sheets or squares) not containing a substantial part of rayon or other synthetic textile and not bleached, dyed, colored, or stained.

Paragraph 1504 (b) (1) (2): Hats, bonnets, and hoods, wholly or in chief value of chip, paper, grass, palm leaf, willow, osier, rattan, real horsehair, cuba bark, or manila hemp, whether wholly or partly manufactured, not blocked, trimmed, or sewed, whether or not bleached, dyed, colored, or stained (not including any of the foregoing known as harvest hats and valued under \$3 per dozen, or hats and hoods, not bleached, colored, dyed, or stained, wholly or in chief value of fiber of the carludovica palmata, commercially known as toquilla fiber or

Paragraph 1504 (b) (2) (4): Hats, bonnets, and hoods, whether wholly or partly man-ufactured: Wholly or in chief value of straw or ramie, bleached, dyed, colored, or stained, but not blocked, trimmed, or sewed; or wholly or in chief value of straw, if sewed (whether or not blocked, trimmed, bleached, dyed, colored, or stained).
Paragraph 1504 (b) (3): Hats, bonnets,

and hoods, composed wholly or in chief value of straw, chip, paper, grass, palm leaf, willow, osier, rattan, real horsehair, cuba bark, ramie, or manila hemp, whether wholly or partly manufactured, blocked or trimmed (whether or not bleached, dyed, colored, or stained).
Paragraph 1506: Toilet brushes (not in-

cluding tooth brushes), the handles or backs of which are composed wholly or in chief value of any product provided for in paragraph 31, Tariff Act of 1930.

Paragraph 1506: Handles and backs for tooth brushes and other toilet brushes, com-posed wholly or in chief value of any prod-uct provided for in paragraph 31, Tariff Act

Paragraph 1506: Hair pencils in quills or otherwise.

Paragraph 1506: Brushes, not specially provided for (except paint brushes).

Paragraph 1510: Buttons not specially provided for (except horn and composition horn buttons, buttons wholly or in chief value of any compound of casein and valued over 60 cents per gross, buttons wholly or in chief value of glass, buttons commonly known as Roman pearl, fancy buttons with a fish-scale or similar to fish-scale finish, buttons wholly or in chief value of wood, and buttons wholly or in part of textile material).

Paragraph 1511: Cork tile in the rough or wholly or partly finished.

Paragraph 1513: Dolls wholly or in chief value of china, porcelain, parian, bisque, earthenware, or stoneware, or wholly or in chief value of any product provided for in paragraph 31. Tariff Act of 1930, and parts of dolls (including clothing), and doll heads, however provided for in paragraph 1513, Tariff Act of 1930 (except dolls and doll clothing composed in any part, however small, of any of the laces, fabrics, embroideries, or

other materials or articles provided for in paragraph 1529 (a), Tariff Act of 1930).
Paragraph 1513: Toys, and parts of

(not including dolls or parts of dolls) composed wholly or in chief value of any product provided for in paragraph 31, Tariff Act of 1930.

Paragraph 1513: Toy games, toy containers, toy favors, toy souvenirs, of whatever materials composed; toy balloons; and toy books without reading matter (not counting as reading matter any printing on removable pages), other than letters, numerals, or descriptive words, bound or unbound, and parts thereof.

Paragraph 1513: Toys, not specially provided for:

Wholly or in chief value of china, porcelain, parian, bisque, earthenware, or stoneware.

Wholly or in chief value of rubber.

Toys having a spring mechanism (except figures or images of animate objects, wholly or in chief value of metal).

Stuffed animal figures not having a spring mechanism.

Paragraph 1513: Parts of toys, not spe-

cially provided for.
Paragraph 1515: Bombs, rockets, roman candles, and fireworks of all descriptions, not specially provided for (not including firecrackers).

Paragraph 1516: Matches, friction or lucifer, of all descriptions, in boxes containing

not over 100 matches per box.

Paragraph 1518: Artificial or ornamental fruits, vegetables, grasses, grains, leaves, flowers, stems, or parts thereof, composed wholly or in chief value of yarns, threads, filaments, tinsel wire, lame, bullions, metal threads, beads, bugles, spangles, or rayon or other synthetic textile, or composed wholly or in chief value of other materials (except feathers) and not specially provided for; and boas, boutonnieres, wreaths, and all articles not specially provided for, composed wholly or in chief value of any of the foregoing fruits, vegetables, grasses, grains, leaves, flowers, stems, or parts.

Paragraph 1523: Hair press cloth, not spe-

cially provided for.

Paragraph 1526 (a): Hats, caps, bonnets, and hoods, trimmed or untrimmed, including bodies, hoods, plateaux, forms, or shapes, for such hats or bonnets, composed wholly or in chief value of fur of the rabbit, beaver, or other animals, and valued over \$24 but not over \$48 per dozen.

Paragraph 1527 (a) (2): Jewelry, common-ly or commercially so known, finished or unthereof), finished (including parts whatever material composed (except jewelry and parts thereof composed wholly chief value of gold or platinum, or of which the metal part is wholly or in chief value of gold or platinum); all the foregoing valued over 20 cents but not over \$5 per dozen pieces.

Paragraph 1527 (c) (2): Articles valued above 20 cents per dozen pieces, designed to be worn on apparel or carried on or about or attached to the person, such as and including cardcases, chains, cigar cases, cigar cutters, cigar holders, cigar lighters, cigarette cases, cigarette holders, coin holders, combs, match boxes, mesh bags and purses, millinery, military and hair ornaments, pins, powder cases, stamp cases, vanity cases, watch bracelets, and like articles; all the foregoing and parts thereof, finished or unfinished, composed wholly or in chief value of metal other than gold or platinum (whether or not enameled, washed, covered, or plated, including rolled gold plate), or (if not composed in chief value of metal and if not dutiable under clause 1 of paragraph 1527 (c), Tariff Act of 1930) set with and in chief value of precious or semiprecious stones, pearls, cameos, coral, amber, imitation precious or semiprecious stones, or imitation pearls (except cigar and cigarette lighters and parts thereof, buckles, collar, cuff, and dress buttons, ladies' hand-

bags set with and in chief value of rhinestones, mesh bags and parts thereof, all the foregoing valued above 20 cents and not nbove \$5 per dozen pleces or parts; and except all articles and parts, other than cigar and cigarette lighters and parts, valued above \$5 per dozen pieces or parts).
Paragraph 1528: Diamonds, rubles, and

sapphires, cut but not set, and suitable for use in the manufacture of jewelry.

Paragraph 1528: Pearls and parts thereof, drilled or undrilled, but not set or strung (except temporarily), if cultured or cultivated; imitation half pearls, and hollow or filled imitation pearls of all shapes, without hole or with hole partly through only; imitation solid pearls and iridescent imitation solid pearls, unpierced, pierced or partially pierced, loose, or mounted, of whatever shape, color, or design.

Paragraph 1529 (a): Laces, lace fabrics, and lace articles, made wholly by hand and containing no machine-made material or article provided for in paragraph 1529 (a), Tariff Act of 1930, all the foregoing not wholly or in chief value of vegetable fiber other than cotton, if over 2 inches wide and valued not over \$50 per pound, or if not over

2 inches wide, regardless of value.
Paragraph 1529 (a): Fabrics and articles (not wearing apparel), in part but not wholly of handmade lace and containing no ma chine-made material or article provided for in paragraph 1529 (a), Tariff Act of 1930, if all or part of the lace is over 2 inches wide and the fabrics or articles are valued not over \$50 per pound, or if none of the lace is over 2 inches wide, regardless of the value of the fabrics or articles.

Paragraph 1529 (a): Fabrics and articles embroidered (whether or not the embroidery is on a scalloped edge), tamboured, appliqued, ornamented with beads, bugles, or spangles, or from which threads have been omitted, drawn, punched, or cut, and with threads introduced after weaving to finish or ornament the openwork, not including one row of straight hemstitching adjoining the hem; all the foregoing, and fabrics and articles wholly or in part thereof (not including fabrics and articles in any part of lace), however described in paragraph 1529 (a). Tariff Act of 1930; any of the foregoing if wholly or in chief value of cotton and included in subdivision [6] of paragraph 1529 (a) of "United States Import Duties (1952)" (but not including wearing apparel), or if included in subdivision [9] of paragraph 1529 (a) of said "United States Import Duties" (except gloves and mittens included in such subdivision [9] wholly or in chief value of wool and except other wearing apparel included in such subdivision [9] wholly or in chief value of cotton or other vegetable fiber or wholly or in chief value of rayon or other synthetic textile).

Paragraph 1529 (a): Bureau and table covers, centerpieces, dollies, napkins, run-ners, and scarfs, made of plain-woven cotton cloth, block printed by hand, and in part of fringe.

Paragraph 1529 (a): Quilts or bedspreads, wholly or in chief value of cotton, in the piece or otherwise, block printed by hand, and in part of fringe.

1530 (b): Upper leather made from calf or kip skins, rough, partly finished, or finished, but not cut or partly or wholly manufactured into uppers, vamps, or any forms or shapes suitable for conversion into boots. shoes, or footwear.

Paragraph 1530 (e): Boots, shoes, or other footwear, made wholly or in chief value of leather, not specially provided for: Slippers (for housewear).

Paragraph 1530 (e): Boots, shoes, or other footwear (including athletic or sporting boots and shoes), the uppers of which are composed wholly of in chief value of wool, cotton, ramie, animal hair, fiber, rayon or other synthetic textile, silk, or substitutes for any of the foregoing:

With soles wholly or in chief value of leather.

With soles wholly or in chief value of india rubber or substitutes for rubber.

With soles wholly or in chief value of other materials (except boots, shoes, or other footwear with uppers wholly or chief value of vegetable fiber other than cotton, or with uppers and soles both in chief value of wool felt, and except alpargatas with uppers wholly or in chief value of cotton).

Paragraph 1531: Bags, baskets, belts, satchels, cardcases, pocketbooks, jewel boxes, portfolios, and other boxes and cases, not jewelry, wholly or in chief value of leather or parchment, and manufactures of leather, rawhide, or parchment, or of which leather, rawhide, or parchment is the component material of chief value, not specially provided for (except straps and strops):

Belts and buckles designed to be worn on the person.

Coin purses, change purses, billfolds, bill cases, bill rolls, bill purses, banknote cases, currency cases, money cases, card cases, license cases, pass cases, passport cases, letter cases, and similar flat leather goods, not wholly or in chief value of reptile leather.

Women's and children's handbags or pocketbooks, not wholly or in chief value of reptile leather.

Leads, leashes, collars, muzzles, and sim-

ilar dog equipment. Wearing apparel (other than belts and buckles).

Bags, baskets, belts, satchels, pocketbooks, jewel boxes, portfolios, and boxes and cases, not jewelry (except articles named in any of the above subdivisions, whether or not wholly or in chief value of reptile leather).

Paragraph 1531: Articles provided for in paragraph 1531, Tariff Act of 1930, if wholly or in chief value of reptile leather and permanently fitted and furnished with traveling, bottle, drinking, dining or luncheon, sewing, manicure, or similar sets.

Paragraph 1532 (b): Gloves, wholly or in chief value of leather made from horsehides or cowhides (except calfskins), whether wholly or partly manufactured.

Paragraph 1535: Artificial flies, snelled hooks, leaders or casts, finished or unfinished; fishing rods, and parts thereof, finished or unfinished, not specially provided for; fishhooks, artificial baits, and all other fishing tackle and parts thereof, fly books, fly boxes, fishing baskets or creels, finished or unfinished, not specially provided for, except fishing lines, fishing nets, and seines (and not including fishing reels and parts thereof).

Paragraph 1536: Candles.

Paragraph 1536: Manufactures of amber or bladders or of which these substances or either of them is the component material of chief value, not specially provided for.
Paragraph 1537 (a): Manufactures of bone,

chip, grass, sea grass, horn, straw, weeds, or whalebone, or of which these substances or any of them is the component material

of chief value, not specially provided for. Paragraph 1537 (a): Manufactures of chip

Paragraph 1537 (b): Manufactures of india rubber or gutta-percha, or of which these substances or either of them is the component material of chief value, not specially provided for (including boots, shoes, or other footwear, wholly or in chief value of india rubber), except the following: Bougles, catheters, drains, sondes, and other urological instruments; gloves; gaskets, packing, and valves; golf-ball centers or cores, wound or unwound; nursing nipples or pacifiers; tires wholly or in chief value of india rubheels and soles for footwear wholly or in chief value of india rubber; hose and tubing; and other articles (not including

¹Listed subject to amendment of par. 1530 (e), Tariff Act of 1930, by Public Law 479, 83d Cong., approved July 8, 1954.

automobile, bicycle, or motorcycle tires), wholly or in chief value of gutta-percha

Paragraph 1537 (c): Combs of whatever material composed not specially provided for: Combs composed wholly of rubber or compounds of cellulose.

Paragraph 1541 (a): Musical instruments and parts thereof, not specially provided for: Stringed instruments (not including planos) and parts thereof (not including bows).

Paragraph 1541 (c): Carillons containing not over 34 bells, and parts thereof.

Paragraph 1549 (a): Pencils of paper, wood, or other material not metal, filled with lead or other material, and pencils of lead, not specially provided for.

Paragraph 1549 (a): Pencils stamped with

names other than the manufacturers' or the manufacturers' trade name or trade-mark.

Paragraph 1549 (a): Pencil point protectors, and clips, whether separate or attached to pencils

Paragraph 1550 (c): Mechanical pencils. Paragraph 1551: Photographic cameras and parts thereof, not specially provided for (except motion-picture cameras and parts thereof and cameras, other than fixed-focus, valued \$10 or over but not over \$50 each).

Paragraph 1551: Photographic dry plates,

not specially provided for. Paragraph 1552: Pouches for chewing or smoking tobacco, finished or partly finished (except pouches wholly or in chief value of leather).

Paragraph 1553: All thermostatic bottles, carafes, jars, jugs, and other thermostatic containers, or blanks and pistons of such articles, of whatever material composed, constructed with a vacuous or partially vacuous insulation space to maintain the temperature of the contents, whether imported, finished or unfinished, with or without a tacket or casing of metal or other material, and parts of any of the foregoing.
Paragraph 1554: Walking canes, finished

or unfinished.

Paragraph 1554: Handles and sticks for umbrellas, parasols, sunshades, and walking canes, wholly or in chief value of wood and valued under \$2.50 per dozen or wholly or in chief value of compounds of cellulose.

Paragraph 1558: Raw or unmanufactured articles not enumerated or provided for: Frogs (not including live frogs) and frog legs.

Paragraph 1558: Articles manufactured, in whole or in part, not specially provided for: Coconut shell char.

TARIFF ACT OF 1930, TITLE II, FREE LIST

Paragraph 1656: Coir yarn.

Paragraph 1677: Fish imported to be used for purposes other than human consumption: goldfish.

Paragraph 1686: Gums and resins: Kadaya.

Natural gums, natural gum resins, and natural resins, not specially provided for: Talka.

Paragraph 1688: Hair of horse, cattle, and other animals, cleaned or uncleaned, drawn or undrawn, but unmanufactured, not specially provided for: goat and kid hair (except dressed soft hair).

Paragraph 1703: Joss stick or joss light.

Paragraph 1705; Kelp.

Paragraph 1731: Oils, distilled or essential, not mixed or compounded with or containing alcohol: camphor.

Paragraph 1754: Santonin, and salts of.

Paragraph 1756: Tuna fish, fresh or frozen, whether or not packed in ice, and whether or not whole.

Paragraph 1761: Shellfish, fresh or frozen (whether or not packed in ice), or prepared or preserved in any manner (not including pastes and sauces) and not specially provided for (except shrimps, prawns, lobsters, crabs, clams, quahaugs, unfrozen fresh scallops, fresh or frozen oysters other than seed oysters, and abalone).

Paragraph 1762: Silk cocoons and silk waste.

Paragraph 1763: Silk, raw, in skeins reeled from the cocoon, or rereeled, but not wound, doubled, twisted, or advanced in manufacture in any way.

Paragraph 1768 (2): Spices and spice seed: Cardamom.

Paragraph 1796: Wax, vegetable, not specially provided for: Japan.

Paragraph 1803 (1): Sawed lumber and timber, not further manufactured than planed, and tongued and grooved, not specially prvoided for: Japanese white oak, Japanese maple, and teak.

The Late Senator Burnet R. Maybank

SPEECH

OF

HON. ROBERT T. ASHMORE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 5, 1955

Mr. ASHMORE. Mr. Speaker, I shall long remember the morning of September 1, 1954. For some unknown reason, I had failed to turn on my radio to get the early news as I ate breakfast that morning. On my way to work one of my neighbors stopped me in the street and said, "Did you know BURNET MAYBANK died last night?" I replied, "Oh, no. You do not mean it."

This sad news was not only shocking to me, but to all the people of South Carolina. We knew we had lost a most worthy representative and a real statesman.

I first knew Burner Maybank when he ran for Governor of South Carolina. At our first meeting I was impressed with his abounding energy, strong personality, and firm, but friendly, handclasp. He never lost any of these attributes, but on the contrary, attained many more during his years of public service.

He gained new friends fast, because he knew how to be a friend.

Soon after coming to the United States Senate, it became evident to the people of South Carolina that Burnet Maybank was not only a man of ability, but also one of great influence. Although he represented a State solidly Democratic, some of his closest friends in the Senate and Nation were Republicans. They, like many of his own party, respected, admired, and esteemed him for his clear thinking, sound judgment, and complete integrity.

He was loved by all who knew him for his sincerity and devotion to duty. But of his many fine qualities I think his honesty stood out like a lighthouse to a struggling seaman. I am sure he never took a tainted dollar. He was absolutely honest, not merely in the business world, but honest in his political life as well. The spoils of high political office never infected his body or soul.

His willingness to accept responsibility and his capable and conscientious service to the people of South Carolina and the Nation made him almost invulnerable as a candidate in his home State. His constituents recognized him as the great Senator he was. In South Caro-

lina, it is almost unheard of for a United States Senator to be unopposed in a primary election. But Burner Maybank had just been accorded that honor a few weeks before his untimely death.

He loved his family deeply. Since I have been in Washington, he never saw me without inquiring about the welfare of his son who for several years has lived in my home city of Greenville.

The people of his State and Nation share with his family the loss of this great man.

A National Materials Handling Week

EXTENSION OF REMARKS

HON, PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 11, 1955

Mr. RODINO. Mr. Speaker, I wish to direct my remarks in behalf of my resolution proclaiming a National Materials Handling Week. Many of you may not be familiar with the term "materials handling" and what it constitutes. Actually, materials handling is just what the words mean—the handling of materials. It represents much, if not most of the physical activity in any plant. From receiving yard to shipping dock, materials are unloaded, moved, stored for minutes, moved, stored for hours or days, and moved again into manufacturing. Thereafter, they are moved from one process to the next, and so on, for 10, 20, or 100 such processes, each followed by another movement and often by one or more temporary storages. And, finally, comes movement to inspection, to storage, to shipping dock, and to common carrier, at which point they enter the distribution cycle-and that is a series of moves and waits.

The story is the same in steel mills and dairies, department stores, machine-tool plants, in arsenals and tooth-paste factories. Handling materials is a large part, if not the major part, of the activity. It is large in man-hours absorbed and large in costs hidden in such things as inventory, space utilization, output per square foot of plant, and other such measures. It is the very heart of many industries, for example, mining, and the key to superiority in others, for example, automobile manufacturing.

During World War II, men engaged in this type of work were taken from industry and placed in positions where their all-round know-how of material handling, supply, warehousing, transportation and related operation and equipment, was utilized to great advantage in the battle of the supply lines. The familiar expression "get there fustes" with the mostes" is the epitome of materials handling during a national emergency. The Seabees carved the airfields out of the jungles of the Pacific Island with bulldozers, earthmovers and similar material handling devices. The derricks and cranes raised the

sunken ships at Pearl Harbor; the fork-lift trucks moved vast mountains of materials to and from ships at dock-side operations; the tractor-trailer trains serviced the bomb-loading operations at airfields. The entire supply line of our Armed Forces was dependent upon material handling and material handling devices. Anything moved in any direction, whether fluid or solid, whether the device used is a pipeline, freight car, pneumatic tube, elevator, forklift truck, or a hand truck is a material handling operation.

Great strides have been made in the last 25 years because of the developments brought forth by the material handling profession. In the constant battle against occupational hazards and diseases, material handling equipment has been the basic factor in reducing these hazards. Today one can see conveyors miles-long bringing ore, coal and slag from mines far underground to the surface without back-breaking labor. thousands of men of yesterday, old and broken before their time by exhaustive back-breaking labor, would be amazed today at the sight of a giant forklift truck moving through a steel mill carrying an 80,000-pound coil, with one man operating it as comfortably and effortlessly as the average man operates the family car.

Better methods of material handling have greatly benefited our way of life by adding to our comfort, well-being and leisure hours. As a matter of fact, the automobile, radio, television, electric refrigerator, washing machine and the supermarket are available to every individual in this country today because better methods of handling material have made them available.

Interchangeable parts manufacturing and mass production methods were used on the Springfield rifle during the Civil War. The punch press and automatic screw machine have been in existence for many years but the greatest strides in industry were not realized until better material handling methods were devised.

It is only since World War II that the materials-handling function has begun to get needed recognition. A few companies have made real progress and are reaping the benefits, and more companies have made a good start. The first independent technical group of its kind was organized in Pittsburgh in 1945 as the Material Handling Society. Another group was organized in 1946 as the Material Handling Society of Philadelphia and in 1947 the Indiana Material Handling Society was formed.

In 1947 the Material Handling Institute, an association of equipment manufacturers, helped to organize groups in various parts of the country. In the same year independent societies were organized in Boston and Cleveland. In 1948 other societies were organized in Chicago, Toledo, Detroit, Syracuse and Houston. An organization very similar in its aims and purposes, The Society of Industrial Packaging and Material Handling Engineers was incorporated and received its charter in June 1945 in the State of Illinois. The science of packaging is important to the handling of ma-

terial-consider the development of the waterproof package.

The American Society of Mechanical Engineers has a division devoted exclusively to material handling as does the Society for the Advancement of Management.

With the increasing interest in materials handling, it became evident that a national organization composed of local chapters was needed. So in January 1949, steps were taken to form the American Material Handling Society, Inc. A charter was obtained and temporary officers were elected. The first annual meeting was held in June 1949, and the society was formally organized and chapter charters were issued in Boston, Chicago, Detroit, Houston, Indianapolis, Louisville, Pittsburgh, and Syracuse. Chapters in many other cities across the country have since been added. As a matter of fact, since 1949 the society has grown to 34 chapters in the United States from coast to coast, and 5 chapters in Canada. It is expected that with the beginning of the New Year there will be a total of 45 chapters, one of which will be in Mexico City, Mexico.

The scope of interest in materials handling is today truly international. In January 1954, the society affiliated with the Institute of Material Handling of London, England, whose membership approximates our own in size. The British society includes 88 members at large

from 26 foreign countries.

The activities of the American Material Handling Society have included such things as the sponsorship of technical sessions at Material Handling Exhibi-tions in Cleveland, Philadelphia, and Chicago and regional conferences in every corner in the country. A national education committee and a college-industry committee cooperate with various colleges to increase the quality and scope of material handling education. For example, the New Jersey Chapter and Stevens Institute of Technology have cosponsored a forum for the past 3 years at Stevens Institute. The society has cooperated with the armed services to develop better material handling methods and personnel has been furnished to government agencies to assist them in specific investigations.

The aims and purposes of the American Material Handling Society, Inc., include: the advancement of the theory and practice of materials handling; the promotion of the welfare and future of the profession; keeping its members in touch with materials handling information and influence not ordinarily available through their individual occupations; conducting and promoting studies of the principles governing the art and science of materials handling; publishing technical, statistical and engineering data covering all phases of the profession; determining and encouraging the formation of operating and safety codes: cooperating with other engineering societies and educational institutions in furthering the interest of the engineering profession; and establishing a better understanding of the scope of the Materials Handling Engineers' field of operation.

Because materials handling is so basic to our whole economy, the economy of the greatest manufacturing country the world has ever known, the 4,000 members of this growing society and myself urge the enactment of this special legislation setting aside a "National Materials Handling Week", a week to pay tribute to the man who pushes the wheelbarrow and to all the men who contribute to our vast production lines. Each one of them is doing his share in making our life more comfortable and secure in peacetime and giving us greater protection in wartime.

Woodrow Wilson, by Bernard M. Baruch

EXTENSION OF REMARKS OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD. I have the honor to include a timely and penetrating article from the January 2. 1955, issue of the New York Times magazine on the late great Woodrow Wilson. The article is written by that great American statesman and intimate associate of Wilson, Bernard M. Baruch. In a concise and interesting manner, Mr. Baruch emphasizes the greatness and genius of Wilson as a practical statesman and leader of men.

In 1956 we shall celebrate the 100th anniversary of President Wilson's birth in Staunton, Va., in the congressional district which I am honored to represent. For the appropriate observation of this anniversary, the Congress and the Commonwealth of Virginia have designated commissions, which, it is hoped, will soon be functioning in order that the Nation shall pay such tribute that the imprint of Woodrow Wilson on the pages of history justifies and requires.

The article by Mr. Baruch follows:

Like a mighty mountain, the figure of Woodrow Wilson, seen from the distance of a generation, is more impressive, more imposing than ever, towering over his time and casting his shadow down through the years.

Almost a century has passed since he was born-three decades since he was laid to rest. The world has changed greatly since his day, and, in many ways, regrettably, not at all. Perhaps in the thought and spirit of that singular man we can find the key to the problems, old and new, which confront usand at the same time replenish our minds and hearts.

Woodrow Wilson offers us the rare example of the practical dreamer. He, as much as any man in our history, epitomized the idealism upon which, for all our pragmatism and materialism, the American heritage rests. At the same time, he was endowed with a stern sense of realism.

Although more than half of Wilson's life was spent in the realm of scholarship, it was not confined to an ivory tower. As a student of government and politics, he was concerned not with the "abstract and occult." as he wrote, but with the "practical and suggestive." not alone with the theory of government but with its actual operation. too. He was interested in affairs, not doc-

Thus he was equipped, when he assumed public office, with a knowledge and an understanding of government which few Chief Executives have possessed. He knew the real workings, potentialities, limitations of government—and of men. He knew that hu-man affairs do not lend themselves to theories, no matter how persuasive they may appear in the solitude of the library.

"Life is a very complex thing," he said. "No theory I have ever heard will match its varied pattern, and the men who are dangerous are the men who are not content with understanding, but go on to propound theories * * * which will make a new pattern for society and a new model for the universe. Those are the men not to be trusted. Because, although you steer by the North Star, when you have lost the bearings on your compass you must nevertheless steer a pathway on the sea—you are not bound for the North Star."

Wilson indeed steered by the North Star, but his goal was not so distant. It lay al-ways within the grasp of men if they would but extend themselves. Of a well-known theorizer who sought to remake the world. Wilson once wrote, "I know of no man who has more perverted the thinking of the world than Karl Marx."

Wilson's goal was a better America, a better world, not a perfect one. He knew that men might achieve much, but not perfection. And he knew that progress comes by slow stages, that you cannot throw off the habits of society immediately any more than you can throw off the habits of an individual immediately. "You cannot in human experience rush into the light," he wrote. "You have to go through the twilight into the broadening light of day before the noon comes up and the full sun is upon the landscape."

He sought ever after the warm sun of peace, freedom and justice, and sought a place be-

neath its rays for all men.

As governor of New Jersey and as President. Wilson helped to clear away the rank growth of political inequality and economic and social injustice which was stifling American life, at the same time he prepared the ground for a new growth of opportunity and freedom, whose fruits we enjoy today. The best of contemporary American liberalism derives from him.

Despite the clamor raised against Wilson's program of tax, tariff and electoral reforms, of restraints against monopoly and irresponsible business practice, of concessions to labor and aid to agriculture, there was nothing radical in it. Wilson did not seek change for the sake of change or ride "booted and spurred * * * the wild horses of reform," to win the applause of the multitude.

Indeed, as with every true liberal, there was a deep conservative instinct in him. His reforms were not intended to remake the American political and economic system but to conserve its essence. They were designed to strengthen it, to preserve it, to protect it (from itself, in many respects) by correcting and eliminating abuses which had grown up about it. He sought new means to preserve old ends. "The New Freedom," as he said, "was only the old revived and clothed in the unconquerable strength of America."

Wilson devoted his life to preserving, strengthening and extending democracy. Democracy, he said, was the most difficult form of government, yet he knew that it was the best ever devised by the minds of men. knew that to survive, it must constantly adapt itself to changing circumstances. If it remained static it must wither and decay. and die under the impact of forces, destructive and disorganized, which would spring up. "Liberty is not something that can be laid away in a document, a completed work," he wrote, "Democratic institutions are never done—they are like the living tissue, always a-making."

The torch of liberty that burned so bright in Wilson made him a beacon to which men and nations turned their eyes. Passionately as he was devoted to it, he knew that liberty was not an end in itself. Rather it was the catalyst which released human energies, the key which unlocked the door of opportunity and thus permitted men to achieve their potentialities. He knew, too, that liberty, unrestrained by discipline and responsibility is anarchy. "Liberty," he said, "is not itself government. In the wrong hands—in hands unpracticed, undisciplined—it is incompatible with government."

The First World War transformed Wilson from an American leader into a world leader and he responded nobly to the challenge and the opportunity. Under his direction, America mobilized all her resources of men, material, and spirit and threw them into the conflict. He was an inspiring war leader, but he fought for peace, not military victory. And it is as a champion of internatonal peace and order that he reputation is most luminous.

The concept of an international organization to enforce peace was not original with Wilson. For centuries men had proposed it. He was the first to translate the idea into a reality. "What we seek," he said, "is the reign of law based on the consent of the governed and sustained by the organized opinion of mankind."

He knew that without such a reign of law civilization itself might crash in ruins in another outburst of lawlessness. In the debate in the United States over the League of Nations, he said: "I can predict with absolute certainty that, within another generation, there will be another world war if the nations of the world do not concert the method by which to prevent it." How true that prophecy was we well know.

ecy was we well know.

Wilson's quest for a reign of law among nations failed. But the failure was not his. As the late Jan Christiaan Smuts said, the failure was humanity's. In the United States, partisanship, selfishness and blindness prevented our joining the League and doomed it to failure. Without the force of American example and leadership other nations gave only lip service to the principles of the League and pursued their separate ways which met finally in catastrophe. As Ray Stannard Baker said in the League Wilson gave the nations of the world an instrument for expressing good will, but he could not give them good will.

Critics of Wilson have charged him with responsibility for America's failure to join the League of Nations. They argue that had he been less stubborn he would have compromised with his opponents and accepted half a loaf.

This characterization of Wilson as dogmatic and uncompromising is wholly inaccurate. He compromised often and without embarrassment. Compromise is the essence of democracy. No man can lead a nation who canno' reconcile divergent views. The list of cor. promises he accepted in the Treaty of Versallies is long. But while he would compromise readily on detail, on method, on pace, he would not compromise on principle. And he was right.

The controversy over the treaty, in the last analysis, centered around article X which contained the pledge to preserve the territorial and political independence of all members of the League. This was the heart of the question. To abandon this article, as his opponents demanded, would have been to create a cardboard structure that would topple at the first thrust of an aggressor. The League, said Wilson, was the indispensable instrumentality of peace. It was necessary to guarantee that peace, Article X was the guaranty.

was the guaranty.

The very same issue confronts us today in the question of the control of atomic energy, disarmament and peace. There must

be a guaranty. Declarations of intent and good will are not enough. Agreements which fall to provide for direct and effective control of the atom and close supervision of disarmament are meaningless and worse, incalculably dangerous.

To enter such agreements while abandoning the principle of international inspection and control would mean the dismemberment of our strength, while other nations, without our moral compunction, could maintain, behind the cloak of duplicity, the strength to destroy us. We cannot gamble with our survival. As Wilson refused to compromise on the essence of the League, we must stand fast on the principle of effective atomic control. In that case and this, half a loaf is not better than none.

Wilson left the White House broken in body but not in spirit, his faith in men and in his own ideals untarnished. He did not live to see his somber prophecy fulfilled. But his principles were at last adopted. It is his spirit which animates the United Nations, and if we can recapture his spirit we can make that as yet imperfect instrument succeed.

Woodrow Wilson will be an example and an inspiration to men as long as we admire greatness. Greatness, he once observed, is a word which we Americans use loosely. Yet who deserves that accolade more than he. Gifted as few men are, the true source of his greatness lay not so much in his intellect, his eloquence, his courage, or in all the other qualities with which he was endowed. It lay in the fact that he devoted these qualities not to his own interest but to the interests of humanity.

We need men such as he; men devoted to democracy, who seek the sure road of progress while avoiding extremes; men who are ambitious to serve in government without serving themselves. We need men of courage and integrity, men who love humanity but understand it. We need men with vision enough to see the mountaintop and ability enough to lead us there.

For that is our goal—the mountaintop where men may breathe the clear, pure air of freedom and peace and justice. We will not reach it unless we link our arms together and pull together up the long, hard slope. Even if we ourselves do not reach that summit, we will, at least, have marked the way for others.

"All through the centuries," wrote Wilson, "there has been this slow, painful struggle forward, forward, up, up, a little at a time, along the entire incline, the interminable way. What difference does it make if we do not reach the uplands? We have given our lives to the enterprise, and that is richer and the moral is greater."

Export-Import Policy

EXTENSION OF REMARKS

HON, CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I desire to call the attention of my colleagues to the address of Mr. O. R. Strackbein, chairman of Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy, which appeared in the press recently.

Mr. Strackbein points out the danger of a further slash in our tariff rates and deals with the great disparity of employment caused by mounting imports and with the dangerous policy of American exporters to maintain their foreign markets in face of a decreasing demand for their products.

The address is as follows:

THE WAGE EARNER AND FOREIGN TRADE

What would be the consequence if we followed the clamor of the export interests and slashed our tariff still more? Or if we repealed the escape clause of the trade agreements law?

Mind you, there is no point in blaming the exporters for wanting to sell as much in overseas markets as they did when the whole world cried for their goods. Exports were profitable and they did provide em-ployment. But the situation has changed. Many of the foreign demands for our materials have been filled. The dollar gap is about gone. But for the shipment of military equipment to help arm Europe and other areas, the dollar gap is closed. tary shipments are not true exports in any They result from national defense policies and are no part of regular commerce. Yet our official export figures include these military shipments and create the impression that our total exports are much higher than our total imports. In 1953 our military exports amounted to \$3½ billion.
In order to keep exports sky high the de-

In order to keep exports sky high the demand from the export interests today is to increase imports to the level of total exports by cutting the tariff still more.

Once again it should be said that there would be nothing wrong with this if it simply meant benefiting our export interests, the automobile industry, manufacturers of office equipment, iron and steel, industrial machinery, etc., and the farm crops such as wheat, cotton, tobacco, and rice.

But it is not as simple as that. We are already letting in duty-free, noncompetitive products, accounting for over half of our imports and have already cut our tariff by an average of 75 percent on the goods that do carry a duty. Obviously what is involved in further tariff reductions is a very serious question of how much damage would be done as against any benefits that would come from increased exports.

WHAT THE SHOOTING IS ABOUT

Here we come down to brass tacks. Or to put it differently, this is what all the shooting is about.

Many industries can already tell you what happens when the tariff is cut too deeply. We have previously pointed out that the Swiss have captured and held over 80 percent of our total market for watches. Imports of apparel wool have taken more than 60 percent of our market. The number of sheep in this country has dropped to a point lower than at any previous time since the Civil War. New England cod and haddock fisheries have seen imports in a matter of a dozen years grow from 10 to 50 percent of the market. The tuna fisheries of the west coast have watched Japanese imports grow from less than 20 million pounds per year to over 100 million pounds. Lead and zinc producers, manufacturers of bicycles, and others can relate similar experiences.

There can be no question, after all the theorizing about how our higher productivity leads to lower costs of production, that where our tariff is not high enough or if we have no quota to limit imports, our producers see their market taken away from them before their very eyes. Each year imports take more of the market and there seems to be nothing to stop them.

Of course, there was a day when the employer could put up a notice telling his workers that sorry though he was, he found himself forced to cut wages 10 or 20 percent to meet import competition. Is that what the export interests are really after? Is that why

they are joined by so many people who have no direct interest at stake, no job in a plant hit by import competition or no money in any such enterprise? As a way of beating down wages no weapon is more powerful than competition with low-wage products.

Very well, imports could be increased through further tariff cuts.

Let me say categorically that more people, more workers, would be hurt in this way than would be benefited. Only a part of our export employment could be affected because about half of our total exports owe their existence to the dollars received by other countries for the goods that we import free of duty. No tariff cut could help them because there is no tariff to cut.

At the outside from 1,500,000 to 2,000,000 workers owe their jobs to making and servicing for export those goods that would benefit from further tariff cuts. The usual figure given is about twice that high; but those who use it overlook that part of our exports that arises from our duty-free imports. In other words, even if all our duties were so high as to exclude imports we would have enough imports under the free list to give rise to about half our exports.

HOW WOULD WORKERS BE AFFECTED?

Now, how many workers would stand to get hurt by taking off the tariff or cutting it sharply below present levels?

Some of the crystal gazers have guessed that only from 100,000 to 200,000 workers would lose their jobs if the tariff were taken off entirely and all import quotas were abolished.

Of course, no one is Solomon enough to forecast what would happen, except fessor type economists who thoroughly hedge what they prophesy; but ponder this:

The industries, mines, waters, forests, and farms whose products face import competition in varying degrees of severity employ directly 4,500,000 to 5,000,000 workers at production. These jobs give rise to twice as many who are indirectly employed in all service, professional, distributive, and other occupations—teachers, barbers, salesmen. bankers, insurance people, truckdrivers, railroad people, etc. That makes a total of some 10 million, which, if added to the 4½ to 5 million makes a total of nearly 15 million workers who stand to be hurt by increased imports resulting from any general tariff reduction. That compares with 11/2 to 2 million who now owe their employment, direct and indirect, to those of our exports not accounted for by our free-list imports. The ratio is nearly 10 to 1.

The History of a 55-Year Struggle by the Veterans of Foreign Wars of the United States in Behalf of the Veteran and His Dependent

> EXTENSION OF REMARKS OF

HON, JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. VAN ZANDT. Mr. Speaker, the history of the Veterans of Foreign Wars is truly the history of a dramatic 55-year struggle to keep the American people conscious of their patriotic obligations to the Nation's welfare-and to the men who have risked their lives in defense of America in time of war.

This tabulation of VFW historical highlights accents only a few of the significant milestones in the progress of this organization as a national body. Unfortunately, it is impossible to point up the countless thousands of examples of great good that have been accomplished by VFW posts deeply concerned with the betterment of the communities in which they exist.

To the younger members of the VFWas well as to the old timers who have contributed so much personally to this glowing record of VFW achievementthis review of the past should serve as a magnificient inspiration—one that fully justifies continuous membership loyalty and support in the future.

Here is the record that gives millions of Americans good reason to say, "The

VFW is a good outfit."

Eighteen hundred and ninety-nine: Founding of the Colorado Society of the Army of the Philippines, the American Veterans of Foreign Service in Ohio, and a similar organization with the same name in Pennsylvania. Composed of veterans exclusively-these overseas three groups established the tradition that men who fought together overseas in time of war should join together in an organization dedicated to the service of their country, and to the needs of their less fortunate comrades.

Nineteen hundred and fourteen: The amalgamation of the above-named groups to form one single nationwide organization to be known henceforth as the Veterans of Foreign Wars of the United

Nineteen hundred and seventeen: As urged by the VFW, Congress adopted the War Risk Insurance Act, under which compensation and pension benefits were created for World War I disabled veterans and the widows and dependents of the Nation's war dead.

Nineteen hundred and eighteen: Enactment of Public Law 178 marked achievement of another major VFW objective. For the first time in United States history, the Federal Government adopted the basic principle of vocational training for disabled veterans whose handicaps required special training for complete rehabilitation.

As advocated by the VFW, pensions were granted to widows and orphans of Spanish-American War veterans.

Nineteen hundred and twenty: Due primarily to the organized efforts of the Veterans of Foreign Wars, Congress passed the first pension bill for Spanish-American War veterans. Representative Thomas Crago, of Pennsylvania, author of this pension bill, served as commander in chief of the VFW in 1914-15.

Nineteen hundred and twenty-one: In response to VFW pleadings, Congress adopted legislation creating an independent agency known as the Veterans Bureau for the handling of all veteran affairs pertaining to hospitalization, compensation, pensions, training, and so forth.

As forerunner of the present Loyalty Day program, the VFW designated April 27 to be observed each year as National Americanization Day-a counterdemonstration to Communist May Day rallies each year on May 1.

Nineteen hundred and twenty-two: The VFW became the first veteran organization to launch a nationwide sale of symbolic memorial flowers made by disabled Veterans-the VFW buddy poppy—as a means of raising funds for veteran welfare and relief purposes.

Nineteen hundred and twenty-three. National headquarters of the VFW, located at 32 Union Square, New York, N. Y., was transferred to Kansas City,

Kans.

Nineteen hundred and twenty-four: Enactment of the World War Veterans Act of 1924, as recommended by the VFW. authorized the establishment of approximately 100 regional offices of the Veterans Bureau throughout the country.

Nineteen hundred and twenty-five: The VFW national home for widows and orphans was founded at Eaton Rapids,

Nineteen hundred and twenty-six: At its 27th national encampment, El Paso, Tex., the Veterans of Foreign Wars became the first major veteran organization to adopt resolutions asking Congress to outlaw the operations of the Communist Party in the United States-and to establish a permanent system of universal military training.

Nineteen hundred and twenty-seven: Under VFW leadership, the national commanders of five major veteran organizations endorsed the following definition: "Americanism is an unfailing love of country; loyalty to its institutions and ideals; eagerness to defend it against all enemies: undivided allegiance to the flag: and a desire to secure the blessings of liberty to ourselves and our posterity."

Nineteen hundred and twenty-nine: Vigorously urged by the Veterans of Foreign Wars, Congress voted approval of a Gold Star Mothers' pilgrimage to the graves of World War I dead in France.

Nineteen hundred and thirty: As strongly recommended by the VFW, Congress authorized the consolidation of all Federal agencies handling matters pertaining to veterans under the control of one agency, the Veterans' Administra-

The offices of the National Headquarters in Kansas City, Kans., were moved to Broadway at 34th Street, Kansas City,

Despite opposition from other major veteran organizations, the VFW waged a single-handed victorious fight for the payment of disability allowances to nonservice-connected disabled veterans with permanent disabilities. Under this law, veterans suffering with disabilities ranging from 25 percent to 100 percent received pensions from \$12 to \$40 per month. Although only 100 percent totally and permanently disabled veterans are entitled to disability pensions under existing laws-the precedent of pension payments to non-service-connected disabled World War I veterans was established by this law—marking a significant achievement to the exclusive credit of the Veterans of Foreign Wars.

The bodies of 86 American war dead buried in Russia were exhumed and returned to the United States for burial by a special VFW mission. In the absence of diplomatic relations between the United States of America and Russia, the project to retrieve these American war dead was sponsored exclusively by the Veterans of Foreign Wars. Nineteen bodies were shipped from Brooklyn to relatives in various States, with burial arrangements supervised by local VFW units; the bodies of 56 were shipped to Detroit, Mich., for burial under the auspices of VFW Polar Bear Post 436, Detroit, and the Polar Bear Association, Three of the bodies were buried in Arlington Cemetery, Washington, D. C., under VFW auspices.

Nineteen hundred and thirty-one: Climaxing an intensive Nationwide campaign conducted exclusively by the Veterans of Foreign Wars, Congress enacted legislation that made The Star Spangled Banner the official national anthem.

In response to VFW demands for cash payment of World War I veteran adjusted compensation certificates (the so-called bonus) Congress enacted legislation granting 50 percent payment.

Nineteen hundred and thirty-three: VFW achievements in veteran welfare suffered a severe blow when the National Economy Act became effective on Black Friday, June 30. This law nullified disability pensions for about 400,000 World War I veterans; pensions for 170,000 Spanish-American War veterans; hospitalization and domiciliary care for countless thousands.

Nineteen hundred and thirty-four: A long standing VFW objective was accomplished when Public Law 484 was adopted, granting outright pensions to the widows and children of deceased World War I veterans, regardless of service connection.

Nineteen hundred and thirty-six: Acting again in response to persistent VFW demands, Congress voted to pay World War I veterans the cash balance due on World War I bonus certificates.

Nineteen hundred and thirty-eight: VFW posts gathered millions of signatures in a nationwide campaign petitioning Congress to create a national-defense system strong enough to keep America out of war.

Nineteen hundred and forty: In December 1940 the VFW launched the Speak up for Democracy series of monthly Americanism talks, a project that continues to earn the cooperation of approximately 800 radio stations.

Nineteen hundred and forty-two: At the request of the War Department, the VFW promoted an intensive drive for Air Force recruits through the sponsorship of a nationwide air cadet scholastic training program designated to assist enlistees in meeting eligibility requirements. Within 1 year the War Department gave credit to the VFW for more than 42,000 recruits.

The VFW contributed \$150,000 to the War Department for the purchase of 15 trainer planes.

Nineteen hundred and forty-three: On March 17, 1943, Congress responded to VFW appeals for veteran-welfare justice by passing Public Law 10, creating benefits for World War II veterans and their dependents similar to those in force for World War I veterans. Nineteen hundred and forty-four: Adoption of the Servicemen's Readjustment Act of 1944, the so-called GI bill of rights, incorporating most of the basic veteran-welfare principles advanced by the VFW ever since its founding in 1899.

Nineteen hundred and forty-five: With VFW representatives serving as consultants, the United Nations Conference on International Organization met in San Francisco to formulate the Charter of the United Nations.

Nineteen hundred and forty-six: The 12-story office building in which the national headquarters is located in Kansas City, Mo., was purchased by the Veterans of Foreign Wars of the United States.

For the first time in history, VFW membership passed the 1-million mark. Nineteen hundred and forty-seven: The first VFW national marble tournament was held in Boys Town, Nebr.

Endorsed by the VFW, Congress voted for immediate cash payment of World War II terminal-leave bonds; a 20-per cent increase in Spanish-American War veteran pensions; unification of the Armed Forces,

Nineteen hundred and forty-nine: In observance of the 50th anniversary of the founding in 1899, the period of April 3-9 was celebrated as Golden Jubilee Week. Highlight of the week was a special hour-long NBC radio network show featuring Bob Hope, Dinah Shore, and Janis Page.

Another VFW Golden Jubilee project enlisted the cooperation of 637 radio stations and 850 newspapers in advertising the free distribution of more than 300,-000 booklets listing the various benefits to which all veterans and their dependents were entitled under Federal laws.

Nineteen hundred and fifty: An organized American sovereignty campaign to combat the United World Federalist movement was launched by the VFW—a drive that has succeeded to date in persuading all but 3 of 21 State legislatures to rescind the adoption of favorable resolutions.

Nineteen hundred and fifty-one: With cash prizes valued at \$35,000 the VFW inaugurated the most intensive nationwide community service campaign ever sponsored by any organization—one that produced a total of 503,000 separate VFW community service projects during the year 1953-54.

Nineteen hundred and fifty-two: The tradition of annually observing National VFW Week during the last week of January was established.

Donald D. Dunn, World War II veteran and a victim of the 1951 floods in Kansas, was picked as the winner of a \$50,-000 farm in the Columbia Basin reclamation project, Washington. The big search for the Nation's most deserving veteran to receive this prize was conducted by the VFW in cooperation with the Columbia Basin donors.

Nineteen hundred and fifty-three: Heroic VFW efforts forced administration leaders to abandon a nearly successful effort to make drastic reductions in the VA budget for disabled veteran care. The proposed reductions threatened a repetition of the evil effects of the National Economy Act of 1933.

Nineteen hundred and fifty-four: In response to widespread VFW demands on the post, State and national levels, the administration gave approval to the passage of two measures granting a 5-percent increase in compensation and pension rates for all disabled veterans, and the widows and orphans of deceased veterans.

Congress adopted legislation designed to outlaw the Communist Party in the United States—an objective the VFW has recommended since 1926.

Closing of Deputy United States Marshal's Office in Helena, Mont.

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. METCALF. Mr. Speaker, last month I was informed that the deputy United States marshal now stationed in Helena, Mont., had been transferred to Great Falls, Mont. After inquiry, I learned that it was proposed to close the deputy United States marshal's office in Helena and have the branch office in Great Falls, together with the main office in Butte, serve papers and perform other duties of the marshal's office for the people in and around Helena.

At that time I wrote Attorney General Brownell protesting closure of this office in the State capital. I was joined in this protest by members of the Helena Bar Association, the president of the Montana Bar Association, and others. It was urged that the office remain open in order that service to the State and Federal agencies located in the capital be most efficiently maintained.

As yet I have not received a reply to my letter of protest, and, as far as I know, the other interested organizations and individuals in Montana have received no response to their letters. They have written me requesting further information on this proposed transfer.

As a result, I have joined with Senator Mansfield in sending the following telegram to Attorney General Brownell:

Montana Bar Association, Helena, Mont., Chamber of Commerce, and local bar associations in Montana are continuing to press for your decision with respect to closing of the marshal's office in Helena, Mont., on February 1. May we have a reply to our letters of December 22, December 27, and January 10?

I have today introduced a bill to require the United States marshal to maintain an office in the State capital of every State so that in the future this situation cannot recur. Apparently only the passage of legislation can prevent arbitrary elimination of those needed facilities and require the Department of Justice to respond to the protests of the individuals and organizations such facilities are designed to serve.

No Coexistence of Religion and Communism

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 11, 1955

Mr. ANFUSO. Mr. Speaker, we hear a great deal these days about coexistence of one sort or another. In the field of religion we all know that coexistence with communism is impossible because of the godless philosophy of communism.

This was the theme of my address last Sunday, January 9, 1955, at the Holy Family Church in my district in Brooklyn, popularly known as the Slovak Church, which is celebrating the 50th anniversary of its founding. I was privileged to be the guest speaker at this celebration, over which Auxiliary Bishop Raymond A. Kearney presided.

The text of my address follows:

SPEECH BY CONGRESSMAN VICTOR L. ANFUSO, ON SUNDAY, JANUARY 9, 1955, IN CELEBRATION OF 50TH ANNIVERSARY OF SLOVAK CHURCH

My fellow Americans, it is impossible for me-a Member of the Congress of the United States—to face this devoutly religious audience in this safe and free environment, and close my mind to the outrages that are being perpetrated, even as I speak, against the religious spirit of man wherever communism holds sway. For me the significance of the event we celebrate today—the 50th anniversary of this church—is symbolic of the eternal victory of the Christian Church that was born on the Rock of Peter. It is a manifestation of the challenge of the faithful to the enemies of Christendom, whose brutal strength in our day derives from the Communist total state. We here at this Communist total state. hour, in this church, in this community, are but a fragment-but I hope a potent oneof a monumental and historic world struggle. My assignment today in this celebration limits me to but a moment, and yet that moment will be rich in fruitfulness for the free religious world if I can associate this event, local as it is, with the holy cause into which world affairs have swept us all.

The cause of which I speak has to do with the religious soul of man and is not-for the moment-concerned with territorial aggres sion as such, with political or with economic considerations. And in that sphere-as perhaps in all spheres-let me make it plain, there can never be any coexistence of any kind, in any way, between the free and the slave world. The Communists themselves have thrown the gantlet into the face of God. Kopecky, the Iron Curtain's Minister of Information in Czechoslovakia, said in July 1952: "People who go to church demonstrate their opposition to the people's democ-(people's democracy is their word for the total state). He goes on: "They gain courage in church to invoke American imperialism." "In the struggle against such enemies," says Kopecky, "we stop at nothing." Stalin put it just as baldly: "Communism," he said, "will agitate against both Catholicism and Protestantism, and against orthodoxy in order to bring about the triumph of the socialistic-world outlook,"

To me, this church is one of the millions of fortresses against these openly declared enemies of God. I will not distress you with the antireligious tortures and the massacres and the purges, the confiscation of church property, and the deliberate, cunningly contrived misuse of the church itself, as an in-

strument of the total state. You know the cruelties that have been perpetrated upon Mindszenty in Hungary, upon Budkiewicz and Wyszynski in Poland, and upon saintly Slovak churchmen and Catholics generally beyond counting; in Czechoslovakia where the Catholics constitute 10 million out of a population of 12 million. Our job here is as plain as day. We must strengthen ourselves in our own faith. We must assure this religious edifice an enduring and a vital place as a voice in support of spiritual growth and freedom. The Slovak people have a long tradition of progress in architecture, in music, in literature, with which the whole of western civilization has enriched itself. And the very fiber and sinew of this great tradition of culture is the Catholic faith of the Slovak people.

The people of the Slovak racial strain are no newcomers to the struggle for liberty. When Czechoslovakia won its independence after the First World War, that struggle was part of a story that goes back to the Middle Ages, back to the ninth century even and to the great Moravian Empire. Masaryk and Benes carried in their hearts the fire of the ancients. You who know so well the story of Czechoslovakia's fight for independence in our own time, know also that much of the struggle was carried on here on this free American soil, so hospitable to human liberty everywhere. I urge you in the same way to let this church serve as a base for the strengthening of the faith. By paths that you know better than I, you must help the people of your racial strain in Czechoslovakia to surmount the crisis that now confronts them. They must feel confidence in your devotion to the altar of God at which in your hearts you both pray-you in freedom, they in slavery.

I hold that the degree of your devotion to the Roman Catholic faith is the degree of your weight and your valor in the fight against communism as, indeed, I believe it to be the degree of your faith in your country and your patriotism. For the 50 years of the existence of this church community are integrated into the 2,000 years of the existence of the Roman Catholic faith. And the Roman Catholic faith is beyond all peradventure of a doubt the most formidable weapon spiritually against the great antireligious conspiracy of communism. It is this conspiracy, which is indigenous to com-munism and to the total state, that points up the basic struggle between communism and religion. It makes what is called coexistence spiritually as impossible as it is incomprehensible. Communism and the church must remain forever mutually antag-

To put it in a word, communism—now that nazism has been whipped—is today's embodiment of the total state. It coils its poisonous tentacles from its center in the Kremlin beyond the borders of the Soviet Union into the heartland of Europe and the Far East. It represents a clear and present danger to civilization itself. This danger goes to the very roots of life. It is political. It is geographical. It is economic. It is personal, It affects every department of living.

For for us the danger is above all-spiritual.

In our form of government there is no conflict between God and loyalty to country. Our literature is replete with such expressions as "This Nation under God." The two—God and country—represent an amalgam of the spiritual and the political. Our system of government accepts the supremacy of God. The Soviet state does not. There is the underlying difference.

You can divide geographically. You can share economically. You can endure politically. But no system has yet been devised for cutting the human soul in twain and making it serve two masters. Our soul be-

longs to God—and only to God. The total state is the absolute state. It has no room for God. It cannot share its monolithic authority with any other institution. Its basic credo forbids it to accept the supremacy of the people in government or the principle of obedience to God. With diabolical cunning—especially in recent months—it seeks to subvert religion and God to a position of subordination to the state. By raw tyranny, by defection, it is reducing religion to the position of serving as a creature and utensil of the state.

This is the most wicked element of all in the total fraud that is the total state.

This calls for war against a devastating enemy on the spiritual plane.

In such a spiritual war none of us can afford to rest.

It is a war that will have to be fought in the Halls of the Congress of the United States. It will have to be fought—as indeed in many ways it is being fought—in the United Nations.

It will have to be fought—and the campaign will have to be sustained—in institutions like this church. By giving voice to your faith, by meeting the crisis when the hour of decision arrives, by offering succor to your friends and relatives abroad, you will, all of you—perhaps in our own time—bring about the doom of the enemies of God. You who are so loyally American and have contributed so much in life, in treasure, in culture, to the upbuilding of this country, will serve its free institutions best by giving yourselves to your God and your country in the next 50 years as you and your forebears gave yourselves in the 50 years we celebrate today.

We who have faith know that regardless of its temporary gains communism will be eventually defeated and destroyed because of its godless philosophy.

Trade Agreement Negotiations With Japan and Other Countries

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement of the National Association of Cotton Manufacturers before the Committee for Reciprocity Information in the matter of public hearings in connection with proposed trade agreement negotiations with Japan and other countries:

The National Association of Cotton Manufacturers, founded in 1854, represents northern cotton and manmade fiber mills located predominantly in New England. Cotton mills in this group generally manufacture fine-combed cotton fabrics; others produce carded goods and manmade fiber textiles.

POSITION

The New England mills are opposed to the invasion of the American home market by Japanese or other imported cotton textiles. Present duties may not be high enough to prevent such an occurrence, but a further lowering of duties to permit entry of more Japanese textiles would result in the displacement of American fabrics, unemployment, and heavy losses to investors and to

those dependent upon the industry as a source of income.

Injury to the American textile industry would be an unwise method for the United States to pursue in connection with its policy toward Japan. The Trade Agreements Act of 1934 has among its purposes "restoring the American standard of living and overcoming domestic unemployment." Concessions on textiles to Japan would tend to lower the American standard of living and cause unemployment, a policy which our Government should not sanction, directly or indirectly. Maintenance of a healthy United States economy is of importance pot only to ourselves, but to other free nations as well. The British Economic Survey, 1954, states that in assessing the course of world trade in the immediate future. "* * the level of activity in the United States is likely to be the most decisive single factor. This is because the United States is such a large importer, and the changes in her demand for imports, which usually result from changes in industrial production, can have far-reaching effects on the export earnings of other countries, especially those which are mainly producers of food and raw materials."

UNEMPLOYMENT AND LOSSES

(a) Present conditions

Textile imports will displace American goods. The American market for cotton textiles is in a depressed condition. Cotton consumption has dropped 22 percent since January 1951, spindle activity has declined 16 percent, and production is off 13.6 percent. Production of broad woven synthetic goods has declined by over 25 percent in the same period. These declines have been even greater in New England where cotton consumption has declined 48.9 percent and spindle activity by 47.3 percent since January 1951. Synthetic broad woven production has dropped 41.4 percent since the first quarter of 1951. The past 12 months have contributed markedly to this decline. (See table I.)

Per capita consumption of textiles in the United States has declined by the following significant amounts since 1950:1

	Percent
Cotton Manmade Wool	* 1.0
American	20 6

Sales of broad woven goods have dropped 30.5 percent since January 1951, and since August 1953 have dropped 5.2 percent.

This depressed condition has brought

This depressed condition has brought about a decline in employment in the textile industry of 268,000 jobs and in the cotton and synthetic textile industry of over 60,000 jobs since January 1951. In New England alone employment has fallen by 48 percent since 1951 and by 26.7 percent since September a year ago in cotton and rayon mills. (See table I.)

The industry is currently capable of not only supplyin: the full domestic demand and maintaining exports, but of increasing its output within a few months by an additional 15 percent as it did under the stimulus of the Korean War in 1950.

Unlike a growing industry which might be able to share its growth with others, the cotton and synthetic textile industry of the United States has no growing market to partition. It would be forced to give up a market which is not big enough for its present capacity. This condition is due in large measure to the expansion of capacity and output which took place to meet war and immediate postwar needs.

The textile industry would be a most unfortunate choice to carry the burden of Japan's dollar shortage. Serious unemployment and losses to communities and regions, as well as stockholders, would follow with great rapidity.

Footnotes at end of speech.

(b) Unemployment

A substitution of foreign for American cloth would increase current unemployment to an extent which no agency of the Government should recommend or sanction. The decline in employment in New England cotton and synthetic textile mills since January 1951, over one-half of which has occurred since September 1953, has left a serious unemployment problem. In addition, many mills are operating and have been operating on a short-time basis of 3 or 4 days a week with temporary shutdowns of a week or more at a time.

The impact and extent of unemployment in textiles is severe because the industry is composed of a large number of small and medium-sized establishments employing over 350,000 workers with heavy employment concentrations in local areas. The average number of employees in textile mills in the United States is low in all regions and all branches of the industry.

Employees per establishment

	United States			South
1. Cotton and related broad woven fabrics	401	469	81	688
2. Yarn and thread mills, except wool	188	212	74	250
3. Rayon and related broad woven	193	257	73	615
. Woolen and worsted manufacturers	217	249	173	305

Source: Report of the committee appointed by the New England governors, 1952.

The textile industry, in addition to being one of the largest employers of American labor, is characterized by the fact that mills employ a relatively high proportion of the workers in the labor-market areas where they are located. Hundreds of mills are situated in small towns where they provide either the sole or principal source of income to their community. Other mills are located in "textile centers," such as Fall River and Lowell, Mass., where they represent a large proportion of the total manufacturing employment in the area. (See also tables II and III.)

In New England 1 out of 6 manufacturing jobs is in textiles; in Massachusetts, 1 out of 7; and in Rhode Island, 30 percent of all manufacturing employees are employed in textile manufacturing. The following table shows the concentration of cotton and synthetic-textile employment in typical New England textile communities:

Textile employment 1 as a percent of manufacturing employment

! Deadominantly satten and synthetic textiles	

1 Predominantly cotton and synthetic textiles.

As the industry is made up of many independent units and is the principal source of employment in communities, unemployment causes unusual hardships. Textile workers displaced by foreign or domestic competition either remain unemployed or are forced to take lower paying jobs. Experience has proven that so-called growth industries

do not absorb such workers. A study of 1,705 displaced New England textile workers recently completed by the Bureau of Business and Economic Research of Northeastern University shows that less than half the workers were reemployed, and of this number two-thirds were earning less pay. Other textile mills provided the chief source of reemployment, a situation which makes the problem more acute if textile closings were to become widespread. The study concludes that "workers displaced * * are not being absorbed in large numbers by the industries which have been expanding in this area."

(c) Loss to communities and areas

An area or community stranded by the loss of one of its principal industries does not attract other industries. In New England the textile mill industry is still the largest manufacturing employer with 173,000 jobs. In each of the States in the area it is an important factor. The cotton and synthetic mills in the area annually provide a payroll in excess of \$200 million a year, produce goods valued at \$590 million, pay taxes of many millions, purchase supplies in the amount of \$24.4 million per year in their own communities and \$48.9 million in New England. In addition, New England cotton and rayon mills spent \$185 million in modernizing plant and equipment between 1946 and 1953.

The impact of increased unemployment in this region would be increased sixfold in other areas of the country where the industry is larger and even more concentrated. "It is no exaggeration to say that one textile job lost and not replaced means a loss to the community of twice the textile wages cut off." "

Many other New England industries, such as trucking, rallroads, textile machinery, utilities, and the innumerable suppliers of goods and services, are dependent upon the well-being of the New England cotton and synthetic textile industry for their health. Each year the New England mills support the regions railroads to the extent of nearly \$2 million, and buy over one-half million bales of cotton.

(d) Loss to investors

Investment of over \$8.2 billion in textile mills would be jeopardized by a lowering of textile tariffs. Investment in New England is estimated at \$1.5 billion and replacement at \$2.7 billion. The opening of our home market for textiles to the competition of low cost Japanese mills would subject this investment to serious losses because textile mill properties and equipment could not be profitably liquidated under such circumstances,

Cotton textile concerns cannot long operate at a loss. Low priced foreign goods even though not imported initially in large quantities nevertheless so curtail sales and depress prices that operations soon become unprofitable. In such a situation textile mill managements have little choice but to cease operations altogether. This situation aggravates the losses out of proportion to the actual volume of imports and in turn creates a situation favorable to more imports.

(e) Unemployment and losses will progress rapidly

Because of the nature of the industry overall and of the fine combed goods industry in particular (50 percent of which is located in New England), the substitution of imported fabrics for our own will accelerate at a rapid pace. The industry is noted for the severity of its price competition. It is estimated that over 90 percent of American production of cloth is in staple items. Industries of other countries can and do produce these staple goods and will compete on a price basis with United States fabrics. Differences in cost of production and resulting level of prices which a producer can offer control the volume of his sales.

Footnotes at end of speech.

Wages and other forms of compensation are the most important factor in measuring the cost of producing fine combed cotton goods. In such goods it is estimated that labor equals 43 percent; raw material equals 40 percent; and all others equal 17 percent.

A comparison of our wages with those of oter major textile-producing countries emphasizes the rapidity with which the American industry would be undermined by these enormous differentials.

Textile industry wage data—the United States and principal textile-producing countries

² The United States and northern earnings for July

Sources: Bureau of Labor Statistics, U. S. Department of Labor, and Daily News Record of Oct. 5, 1954.

Japan's present-day cotton textile industry is almost wholly new having been rebuilt after World War II and now consists of 7.8 million spindles and 336,000 looms. It is no secret that Japan is concentrating on the export of cotton textiles and has plans to increase these exports by 38 percent by 1956. Japan has even carried this so far as to endeavor to increase the proportion of synthetic textiles used by the Japanese people in order to make available greater quantities of cotton textiles for export. There is no reason to believe that Japan, in striving for this objective, cannot and will not continue to expand her cotton textile capacity. There is no indication that Japan's rapid expansion of cotton textiles will cease. Japan has increased her production by 246 percent since 1948 and today produces cotton cloth at a rate commen-surate with prewar production with only two-thirds of her prewar spindleage (see tables IV and V).

The competitive characteristics of the cotton textile industry are basically the same throughout the world. Japan has access to the same raw materials, machinery, and techniques which are available to the American industry and has had years of textile experience.

According to the Mitsubishi Economic Research Institute of Tokyo, in its Survey of Economic Conditions in Japan-September 1954, "The Japanese cotton industry * is again competitive in overseas markets through the modernization of equipment and the process of rationalization. duction in costs through the use of raw cotton imported with low-interest American credit is also noteworthy." In the finegoods field, which uses Egyptian cotton, American manufacturers have to contend with a quota and duty on imported Egyptian

Japan's new cotton-textile industry is capable of producing combed goods of high quality which are currently being brought into this country at prices, duty paid, lower than those of American mills. Broadcloth, ginghams, and lenos are among such fabrics now being sold in New York. Between September 15 and November 17 of this year, quantitles of certain of these fabrics imported from Japan are as follows: Grey broadcloth,

Footnotes at end of speech.

2,358 bales; grey shirting, 2,220 bales; grey poplin, 1,033 bales; handkerchief cloth, 159 bales and 18 cases; gingham, 312 bales and 108 cases; combed gingham, 366 bales; velveteens, 23 bales and 1,102 cases; handkerchiefs (cotton, rayon, and mixed), 137 bales and 245 cases

(Source: Association of Cotton Textile Merchants of New York.)

Productivity in Japan's textile industry has been increasing steadily since the end of World War II, and the index prepared by the Mitsubishi Economic Research Institute of Tokyo in its Survey of Economic Conditions in Japan shows an increase in productivity from 100 in April 1950 to 224.5 in June

Although we have so far been unable to secure accurate information on the extent of Japanese production and capacity in combed and higher-count goods, it is certain that she is now producing such goods, that her spindles spinning Egyptian cotton have increased 54 percent between January 1953 and January 1954 (United States declined 17 percent), and that at the beginning of this year Japan had almost one-half million spindles spinning Egyptian cotton. The Kureha Textile Review, published in Tokyo, stated in 1953 that "we must endeavor to manufacture cotton goods of higher process as well as cotton of finer qualities together with devicing to make novel cotton textiles blended with manmade fibers domestically produced."

New England mills, which produce the higher grade cloths, are even more vulnerable to further reduction of duties because "on fine cotton cloths made of combed yarns, * * particularly those cloths made of imported long-staple cotton, the degree of protection is much less" than on other fabrics. Outles on higher grade cloths were reduced in 1939 with Great Britain and confirmed and reduced further at Geneva and Annecy. These new rates are now being subjected to the test of competition for the first time.

If tariff reductions are used as a method of carrying out a policy of increasing Japanese textile imports, there will be no limit to the volume of such imports. A tariff which permits the profitable import of a million yards also permits the import of a billion yards.

Industrially mature Japan, equipped with a new textile industry, operating at wages vastly lower than the American standard, and backed up by an ever-growing supply of cheap labor, can be expected to expand her present large textile capacity if she has a reasonable prospect that American policy will not prevent her from invading the United States market. Her expansion will keep pace with our acceptance of her textiles.

It is our belief that a reduction of tariffs would stimulate an ever-increasing acceleration of Japanese imports. Our reasons for this are based not only on the character of the industry and the depressed conditions in the United States but also on the experience of the New England mills with the shift of the industry from that region to the Southeast.

"The major explanation of the New England decline in textiles is the large differen-tial between wage costs" in that area and other parts of the United States. "In highly competitive markets an addition of a few cents a yard in the cost of producing cloth in any one area eventually means loss of sales and brings on operating deficits and resultant loss of employment." "Industries, in which labor costs are an important part of total costs, will gravitate where wages are low and labor productivity high. Labor costs are the most important costs in the textile industry other than raw materials costs, the latter relatively not subject to revision, and the differentials in the cost of labor more than any other factor account for the threat to the New England textile industry." *

The significance of the enormous wage differentials between our American cotton textile industry and that of Japan and other textile exporting countries is emphasized by the fact that our own industry shifted in response to wage differentials of much smaller amounts. Compare wage and com-pensation differentials within the country, which have varied from 20 to 30 percent. with foreign differentials of 200 to 1,200 percent. This loss happened to the largest employer in an industrially mature and competent region (New England) simply because wages were significantly higher than those in an area which was predominantly agricultural.

With differentials of 20 to 30 percent, the loss of New England textiles has been so great as to cause chronic unemployment in the area and a continued legacy of hardship to workers, communities, and stockholders. A flow of Japanese or other foreign textiles into this country would bring about an even more rapid liquidation of the American cot-ton textile industry than that which has occurred in New England.

A policy of encouraging Japanese imports would be a policy of encouraging production in low wage areas. Government encourage-ment of low wages will retard improvement in technology and productivity, and will foster low standards of living. A worldwide competitive struggle based on lower wages and lower standards of living in textile industries will only damage the United States and the free world.

The New England Governors have stated: "In view of the concentration of the industry in this country, in view of the overcapacity and frequent depression periods in the industry, and in view of the peculiar problems of New England, we urge the Government to concentrate tariff concessions on other products; and above all to withhold trade concessions in this industry when unemployment prevails."

(f) Losses to the military

Cotton textiles are as important to a war economy as to a peacetime economy. Losses to employees, communities, and stockholders are not the whole story. The quantity of cotton broad woven goods utilized for war purposes during the years 1942-45, inclusive. is illustrative of the vast military needs. During this period more than 20 billion yards of cotton broad woven goods, or 51.4 percent of total production, was used for war.

Cotton broad woven goods IThomsand linear mardal

	War	Civilian	Total	Percent war
1942	5, 485, 3	5, 623. 0	11, 108. 3	49, 4
1943	5, 517, 6	5, 064. 6	10, 582. 2	52, 1
1944	5, 789, 6	3, 757. 1	9, 546. 7	60, 6
1945	3, 752, 2	4, 959. 5	8, 711. 7	43, 1

It is also important to note that the need for textile products in time of war grows at such a rapid rate that only existing, efficient operating facilities can meet the pressing need. An example of the urgency of the need for textiles is found in the fact that the military use of cotton fabrics jumped by over 800 percent in just 1 year— from 1941 to 1942. An additional example is the fact that during this same period the quantity of cotton goods devoted to military use increased almost 1400 percent over the pre-emergency year 1939.

SUMMARY AND CONCLUSION

Japanese textiles or the textiles of other countries should not be permitted to invade the American market because the unemployment and losses caused in America will not only be great but will be rapid and will be of such a nature that no effective remedy can be devised.

Under the tariff system on cotton textile goods there is no way to limit the quantity of foreign imports once they are permitted to enter. Even though small quantities enter at first, they will so depress the market as to cause liquidations of mills and an ever-increasing flow of foreign goods.

The solution to Japan's dollar-exchange problems does not lie in the sacrifice of one of our basic industries. The workers, investors, and communities whose welfare depends upon this industry cannot effectively bear, nor should they be asked to bear, the burden of this problem.

The consequences of turning the American textile market over to foreign producers in order to assist in Japan's dollar problems will result in such losses to the United States as to compel a withdrawal of such concessions and a repudiation of such policy. Our experience with Japanese goods in 1935 is an example of this. In short, it is an impractical solution, and will be of little value to the Japanese.

Respectfully submitted.

THE NATIONAL ASSOCIATION OF COTTON MANUFACTURERS, SEABURY STANTON, Chairman. WILLIAM F. SULLIVAN, President.

Governor Johnson, of Colorado, Puts Some Cards on the Table

EXTENSION OF REMARKS

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 11, 1955

Mr. SAYLOR. Mr. Speaker, in proposing the gigantic upper Colorado River project, the States of Utah, New Mexico, Colorado, and Wyoming have cited the Colorado River compact as the law of the river, under which they are entitled to build the multibillion dollar development.

Congress is now being asked to consider the project (H. R. 270) and its satellite, the Fryingpan-Arkansas project (H. R. 412).

Former Senator Ed Johnson, now Governor of Colorado, is an authority on western reclamation. In a recent press statement he recited a number of facts about the upper Colorado River project that I believe should be studied by Members of Congress who must pass on it.

Governor Johnson showed that provisions of the bill now before Congress violate the acknowledged law of the river—the Colorado River compact, which Congress itself approved.

With documentary evidence, Governor Johnson shows that by building the two main dams of the project, at Glen Canyon and Echo Park, the upper Basin States are imperiling their entire share of the Colorado River.

Governor Johnson specifically points out that the compact denies any State the right to build a power dam when the water stored behind it cannot be used for agricultural or domestic purposes. The project bill proposes to do just that. It calls for the building of power dams to be used solely as cash registers to pay for irrigation projects far upstream.

I commend to my colleagues Governor Johnson's excellent analysis of this immense Federal expenditure which the Congress is now being asked to make.

The full text of Governor Johnson's statement follows:

STORAGE BELOW THE STATE OF COLORADO IS NOT THE ANSWER

(Statement released December 20, 1954, by Governor-elect Ed C. Johnson, of Colorado)

Interested persons on the eastern and western slopes of Colorado have expressed confidence in me, as Governor, to resolve the very controversial water problem that plagues both slopes. This is a tremendous responsibility and challenge but its vital nature demands my acceptance. Accordingly, I shall do my utmost to work out something which will benefit both slopes and injure neither.

However, before we begin the task of allocating Colorado's share of the water of the Colorado River system, we first must take stock of the quantity and the location of the water that is available to us. There are very serious misconceptions, widely held, in regard to the burdens placed on this State by the specific provisions of the seven-State compact and the official interpretations with respect to them. These limitations should be understood clearly by all parties concerned, since they are basic to any plan to develop the upper Colorado River Basin. It is with that purpose in mind that I have prepared this document. If my conclusions are in error I want to be shown wherein the error lies.

Either the seven-State compact specifically denies to the upper basin the right to withhold water which it cannot use for agricultural and domestic purposes or it does not deny us such a right. Either it denies to the upper basin the right to withhold water to develop power or it does not deny us that right. Let us look at the document which has been ratified by the legislatures of seven States for the correct answers to these pertinent questions.

Here is that irrevocable record:

"Article II:

"(h) The term 'domestic use' shall include the use of water for household, stock, municipal, mining, milling, industrial, and other like purposes, but shall exclude the generation of electrical power.

"Article III:

"(e) The States of the upper division shall not withhold water, and the States of the lower division shall not require the delivery

²Estimated on basis of rate of production during January-June 1954.

of water, which cannot reasonably be applied to domestic and agricultural uses.

The Honorable Herbert Hoover, Secretary of Commerce of the United States, was ap pointed by the President to serve as Chairman of the Seven-State Compact Commission as the official representative of the Government of the United States, pursuant to an act of Congress. He was the Chairman of the Colorado River Commission that drafted and signed the seven-State Colorado River compact. In answer to the question propounded by Congressman Hayden these points in the compact were interpreted officially by him on January 27, 1923, before any State had ratified the compact, as follows:

Question 14: "Can paragraph (d) of article III be construed to mean that the States of the upper division may withhold all except 75 million acre-feet of water within any period of 10 years and thus not only secure the amount to which they are entitled under the apportionment made in paragraph (a) but also the entire unapportioned surplus waters of the Colorado River?"

Answer: "No. Paragraph (a) of article III apportions to the upper basin 7,500,000 acre-feet per annum. Paragraph (e) of article III provides that the States of the upper division shall not withhold water cannot be beneficially used. Paragraph (f) and (g) of this article specifically leave to further apportionment water now unapportioned. There is, therefore, no possibility of construing paragraph (d) of this article as suggested."

Question 19: "Why is the impounding of water for power purposes made subservient to its use and consumption for agricultural and domestic purposes, as provided in paragraph (b) of article IV?"

Answer: "(a) Because such subordination conforms to established law, either by constitution or statute, in most of the semiarid States. This provision frees the farmer from the danger of damage suits by power companies in the event of conflict between

"(b) Because the cultivation of land naturally outranks in importance the generation of power, since it is the most important of human activities, the foundation upon which all other industries finally rest.

"(c) Because there was a general agreement by all parties appearing before the Commission, including those representing power interests, that such preference was proper.

Question 20: "Will this subordination of the development of hydroelectric power to domestic and agricultural uses, with the apportionment of 7,500,000 acrefeet of water to the upper basin, utterly destroy an asset of the State of Arizona consisting of 3,000,000 horsepower, which it is said could otherwise be developed within that State if the Colorado River continue to flow, undiminished in volume, across its northern bour lary line and through the Grand Canvon?

Answer: "(d) The compact provides that no water is to be withheld above, that cannot be used for purposes of agriculture. The lower basin will therefore receive the entire flow of the river, less only the amount consumptively used in the upper States for agricultural purposes.'

On December 15, 1922, Hon. Delph E. Carpenter, commissioner for Colorado, reported to Gov. Oliver H. Shoup his analysis of this compact which he helped to formulate. His comments and observations are especially pertinent. In this official report he said:

"Power claims will always be limited by the quantity of water necessary for domestic and agricultural purposes. The generation of power is made subservient to the preferred and dominant uses and shall not interfere with junior preferred uses in either basin."

On March 20, 1923, Delph E. Carpenter in joint letter to Colorado senator, M. E. ashor, and Colorado representative, Royal

W. Calkins, said among other things:
"All power uses in both basins are made subservient to the use and consumption of such water for agricultural and domestic purposes and shall not interfere with or prevent use for such dominant purposes.

The interpretation of Hon. W. S. Norviel, commissioner for Arizona, published January 15, 1923, contains this language:

The third principle established by the compact was to fix a time when the remainder of the water unallotted and unused might be apportioned.

"The fourth principle fixes a preference in agricultural uses over power.

"The fifth principle, that the upper States shall not withhold water that cannot be reasonably applied for agricultural uses.

Senator HAYDEN, Arizona, propounded 19 questions to Hon. A. P. Davis, Director, United States Reclamation Service, to which the Director made the following replies on January 30, 1923: Question 10: "Is it true that, if the Colo-

rado River compact is adopted, all of the water that Arizona will ever get out of the main river will be enough to irrigate only 280,000 acres of land, of which 130,000 acres are now embraced in the Yuma project and 110,000 acres in the Parker project?"

Answer: "The Colorado River company

does not attempt to divide the water of the river between individual States. Except for rights already initiated by California and Nevada, there is nothing in the compact that will prevent the State of Arizona from taking from the river all the water that it can put to beneficial use." Question 19: "Any further comment that

you may care to make relative to the approval of the Colorado River compact by the Arizona State Legislature will be appre-

Answer: "The Colorado River compact provides that the lower basin shall be guaranteed an average of 7,500,000 acre-feet of water annually from the upper basin and all of the yield of the lower basin, and that any water not beneficially used for agricultural and domestic uses shall likewise be allowed to run down for use below."

It should be noted that these official interpretations were made before the compact was ratified by any State except Nevada and were not disputed by Colorado or any other State at the time it ratified the compact. Most certainly we are bound hand and foot by them.

At the tome the seven-State campact was adopted and ratified, it was contemplated that a treaty would be negotiated later between the United States and Mexico which would allocate to Mexico certain quantities of water defined in acre-feet, out of the Colorado River system. Furthermore, it spelled out just how that burden should fall upon the lower basin and the upper basin. compact specified that to the extent there is surplus water in the Colorado River system, such surplus water would be utilized and the balance of the burden would be shared equally by the upper and lower basins.

Article III:

(c) If, as a matter of international comity, the United States of America shall hereafter recognize in the United States of Mexico any right to the use of any waters of the Colorado River system, such waters shall be supplied first from the waters which are surplus over and above the aggregate of the quantities specified in paragraphs (a) and (b); and if such surplus shall prove insufficient for this purpose, then, the burden of such deficiency shall be equally borne by the upper basin and the lower basin, and whenever necessary the States of the upper division shall deliver at Lee Ferry water to supply one-half of the deficiency so recognized in addition to that provided in paragraph (d).

(d) The States of the upper division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75,-000,000 acre-feet for any period of 10 consecutive years reckoned in continuing progressive series beginning with the 1st day of October next succeeding the ratification of this compact."

If the upper basin States build storage eservoirs at the Glen Canyon and Echo Park sites as is now contemplated, the water withheld thereby will of necessity, be surplus water since the upper States cannot use it for agricultural or domestic purposes, and the upper States, therefore, must deliver such water to Mexico as is allocated to her under the provision of the seven-State compact.

Senator HAYDEN asked Chairman of the Commission, Herbert Hoover, about this and was answered as follows:

Question 15: "Does paragraph (d) of article III in any way modify the obligation of the States of the upper division, as expressed in paragraph (c), to permit the surplus and unapportioned water to flow down in satisfaction of any right to water which may hereafter be accorded by treaty to Mex-Within any year of a 10-year period. could the States of the upper division shift to the States of the lower division the entire burden of supplying such water to Mexico? Answer:

"(a) No. It is provided in the compact that the upper States shall add their share of any Mexican burden to the delivery to be made at Lee Ferry, whenever any M can rights shall be established by treaty. By paragraph (c) of article III, such an amount of water is to be delivered in addition to the 75 million acre-feet otherwise provided for.

"(b) In the face of the specific provision of article III (c) that the burden of any deficiency must be 'equally borne.' see no possibility of placing upon the lower division the entire burden. If the surplus is sufficient, there is no burden on anyone. If it is insufficient the plain language is that it must be equally shared, with the equally plain provision that the upper division must furnish its half.

Delph Carpenter in his official report to Governor Shoup said:

"Any waters necessary to supply lands in the Republic of Mexico (hereafter to be determined by international treaty) shall be supplied from the surplus flow of the If the surplus is not sufficient, any deficiency shall be borne equally by the upper basin and the lower basin. * * *"

I am certain that Mr. Carpenter would have added, had he thought such a doubt were to be raised, "Water held in the upper basin to generate power and which for physical reasons could not be used by the upper basin for agricultural or domestic purposes is surplus water to the upper basin." Such an interpretation must be crystal clear to any student of the seven-State compact and the official interpretations of its provisions.

The upper and lower basins were each apportioned from the Colorado River system the exclusive beneficial consumptive 7,500,000 acre-feet of water per annum, and in addition the lower basin was given the permission to increase its beneficial consumptive use of an extra million acre-feet per annum of surplus water. However, the 7,500,000 acre-feet awarded to the lower States had a very clear priority over the 7,500,000 acre-feet awarded to the upper States. In reality, the compact gave the lower States 7,500,000 acre-feet of water per annum and the upper States that much water if there should be any water left in the river, provided the upper States used that water only for domestic or agricultural purposes.

Article III:

"(a) There is hereby apportioned from the Colorado River system in perpetuity to the upper basin and to the lower basin, respectively, the exclusive beneficial consumptive use of 7,500,000 acre-feet of water per annum, which shall include all water necessary for the supply of any rights which may now exist.

(b) In addition to the apportionment in paragraph (a) the lower basin is hereby given the right to increase its beneficial consumptive use of such waters by 1 million

acre-feet per annum."

But here is the catch in this award:

"(d) The States of the upper division will not cause the flow of the river at Lee Ferry to be depleted below an aggregate of 75 mil lion acre-feet for any period of 10 consecutive years reckoned in continuing progressive series beginning with the 1st day of October next succeeding the ratification of this compact."

The following quotes from the questions by Senator HAYDEN and answered on January 27, 1923, by Chairman of the Commission Herbert Hoover, leave nothing to the imagination with respect to the extra 1 million acre-feet of surplus water awarded the lower basin. The extra million acre-feet is to be met out of surplus waters over and above the 7,500,000 acre-feet allocated annually to each of the 2 basins and it does not take priority over the upper States award of 7,500,000 feet provided they use all of their 7,500,000 for agricultural and do-mestic purposes. If the upper basin stores water for power purposes at least a million acre-feet per annum must go to satisfy this

Question 6: "Are the 1 million additional acre-feet of water apportioned to the lower basin in paragraph (b) of article III sup-posed to be obtained from the Colorado River or solely from the tributaries of that stream within the State of Arizona?"

Answer: "The use of the words 'such wa ters' in this paragraph clearly refers to waters from the Colorado River system, and the extra 1 million acre-feet provided for can therefore be taken from the main

river or from any of its tributaries."

Question 22: "Does the Colorado River compact apportion any water to the State of

Arizona?"

Answer: "No; nor to any other State individually. The apportionment is to the groups.

It should be noted, and I repeat, that Secretary Hoover's official interpretations were made before the compact was ratified by any State; furthermore it was not disputed by any of them when they did ratify it.

On December 15, 1922, Colorado Commissioner Delph E. Carpenter, in his official report to the Governor of Colorado, the Honorable Oliver H. Shoup, submitted several tables explaining the allocation of the water of the Colorado River System.

Table 4 reads as follows:

				Acre-jeet
Upper	division	allocation	1. in-	-10102582005
		consumpt		7, 500, 000
Lower	division	allocation	i, in-	
clude	es present	consumpt	ion	7,500,000
Lower	division	permissib	le in-	
creas	e in wate	r consump	tion	1,000,000
	Total all	ocated or	per-	A DOLLAR
	mitted			16,000,000
Unallo				4, 500, 000
-	Estimated	average s	nnual	

Mr. Carpenter also said in this report: "At any time after 40 years, if the development in the upper basin has reached 7,500,000

__ 20, 500, 000

water supply___

acre-feet annual beneficial consumptive use or that of the lower basin has reached 8,500,-000 acre-feet, any two States may call for a further apportionment of any surplus waters

On March 20, 1923, Colorado Commissioner Delph E. Carpenter in a joint letter to Colorado Senator M. E. Bashor and Colorado Representative Royal W. Calkins said, among other things:

"Paragraph (b), article III, permits the lower basin to increase its annual beneficial consumptive use of water 1,000,000 acre-feet. The two paragraphs permit an aggregate annual beneficial consumptive use of 8,500,-000 acre-feet, and no more. The words 'per annum,' as used in paragraph (b) are not synonymous with the word 'annually.' No cumulative increase is intended by that paragraph."

On February 10, 1923, Colorado Commissioner Dolph E. Carpenter addressed a tele-gram to the Honorable Herbert Hoover, Chairman, Colorado River Commission, and received a prompt reply. On February 13, 1923, he addressed a telegram to the Honorable R. T. McKisick, deputy attorney general, Sacramento, Calif., and that same day received a reply.

These exchanges of telegrams are pertinent to an understanding of this phase of the compact and are inserted here:

DENVER, Colo., February 10, 1923. Hon. HERBERT HOOVER,

Chairman, Colorado River

Commission, Washington, D. C .:

Do you concur with me that the intent of the Commission in framing the Colorado River compact is as follows:

That paragraph (b) of article III means that the lower basin may increase its annual beneficial consumptive use of water 1 million acre-feet and no more?

DELPH E. CARPENTER.

WASHINGTON, D. C., February 12, 1923. DELPH E. CARPENTER,

State Capitol, Denver, Colo .:

I concur with you, and shall so advise Congress in my report, that the intent of the Commission in framing the Colorado River compact was as follows:

Paragraph (b) of article III means that lower basin may acquire rights under the compact to annual beneficial consumptive use of water in excess of the apportionment in paragraph (a) of that article by 1 million acre-feet and no more. There is nothing in the compact to prevent the States of either basin using more water than the amount apportioned under paragraphs (a) and (b) of article III, but such use would be subject to the further apportionment provided for in paragraph (f) of article III and would vest no rights under the present compact.

HERBERT HOOVER.

DENVER, Colo., February 13, 1923. R. T. McKisick,

Deputy Attorney General,

Sacramento, Calif .: Do you concur with me that intent of Commission in framing Colorado River Compact was as follows:

That paragraph (b) of article III means that the lower basin may increase its annual beneficial consumptive use of water 1 million acre-feet and no more?

DELPH E. CARPENTER.

SACRAMENTO, CALIF., February 13, 1923. Hon. DELPH E. CARPENTER,

State Capitol, Denver, Colo.

Am of the opinion that paragraph (b) of article III permits increase of annual beneficial consumptive use of water by lower basin to 8,500,000 acre-feet total or 1 million in excess quantity apportioned each basin in perpetuity by paragraph (a), article III, and no more. When both paragraphs are read together no other construction tenable. "Per annum" not synonymous with "annually."

R. T. McKisick.

SACRAMENTO, CALIF., February 15, 1923.

DELPH E. CARPENTER,

Denver, Colo.:

My interpretation of article III and VIII well expressed in McKisick's wire of the 13th. W. F. McClure,

Seven State Compact Commission-

er for California.
Utah commissioner, R. E. Caldwell, in his report to the Utah Senate, among other things said:

"The lower basin States, for the most part, when they divert their water, wholly consume it and they get no credit for use of return flow for it does not exist, and they are, therefore, limited to the diversion of 8,500,000 acre-feet and are held strictly to the requirement of 'consumptive beneficial use' of such as they do divert."

In the report to the Governor of California by Hon. W. F. McClure, commissioner for California, made January 8, 1923, appears

this statement:

"In conclusion permit me to add that the terms of the compact do full justice to the States in interest, and the equitable division and apportionment of the use of the waters of the Colorado River system whereby the lower basin is allocated 7½ million acre-feet per annum, with an allowable increase of i million acre-feet per annum by reason of the probably rapid development upon the lower river, and fully guarantees to Cali-fornia an ample water supply to adequately care for the enormous future growth of the Imperial Valley and adjacent territory."

The Honorable Herbert Hoover, who, as I have said, was the chairman of the commission that drafted and approved by its unanimous vote the seven-State compact.

said:

The lower basin will, therefore, receive the entire flow of the river, less only the amount consumptively used in the Upper States for

agricultural purposes."

The Honorable A. P. Davis, director of the Reclamation Bureau, on January 30, 1923, announced that "the Colorado River compact provides that the lower basin shall be guaranteed an average of 71/2 million acrefeet of water annually from the upper basin and all of the yield of the lower basin, and that any water not beneficially used for agricultural and domestic uses (in the upper basin) shall likewise be allowed to run, down for use below."

This data proves conclusively that the extra 1 million acre-feet of water per annum allocated to the lower basin is to be acquired from the surplus and otherwise unallocated water of the Colorado River system. same is true of the 11/2 million allocated annually by treaty to the United States of Mexico.

I am compelled to keep emphasizing that whatever water is stored in the Glen Canyon and Echo Park reservoirs will be surplus to the agricultural and domestic needs of the upper basin, and must be delivered to the lower basin to satisfy the award of 11/2 million acre-feet to Mexico and 1 million acre-feet to the lower basin. Furthermore, should the lower basin require an addi-tional supply of water for agricultural and domestic purposes the water stored in these reservoirs must be released.

Under the Seven State Compact the upper States must deliver at Lee Ferry in each 10year period 75 million acre-feet to the lower States and 7½ million acre-feet to Mexico before they can use one drop of water for themselves beyond what they used before the seven-State compact was ratified. In the current 10-year period that will leave only 3,250,000 acre-feet per year for their total use. In the previous 10-year period they would have had 4,150,000 acre-feet a year. In 1902 the upper-basin States under this formula would have had no water at all. The Reclamation Bureau estimates that the proposed storage reservoirs in the upper Colorado Basin will cost the upper basin 830,000 acre-feet annually in evaporation. It will be charged to the upper basin as consumptive use. Colorado's portion of that loss would be 400,000 acre-feet.

Water still does not run uphill, and storage down the river from Colorado to generate electric energy, frowned upon by the Seven State Compact, cannot secure for us one drop of water, but to the contrary, will cost us 400,000 acre-feet annually in evaporation, which under the Upper Colorado Basin compact will be charged to Colorado as consumptive use.

Colorado is close to the bottom of the barrel insofar as Colorado River water is concerned. Colorado has a record of lavish generosity to all of her neighbor States. Now at this late date it will be State suicide unless she looks after her own interests with courage and wisdom. She positively cannot afford the loss of 400,000 additional acrefect. She cannot afford to agree to a storage plan whose certain effect will be to create additional surplus water out of the upper basin's meager supply, which under the Seven State Compact must go to the lower basin. Colorado must insist that the 42 reservoirs surveyed in the high country of Colorado be authorized simultaneously with the authorization of the storage plan and which will give Colorado an absolute right to the water which is developed.

The Hill report prepared pursuant to a contract with the Colorado Legislature indicates there is something over a million acre-feet of unappropriated water in the Colorado River system in Colorado. However, the Hill report did not charge Colorado with the burden of Colorado's portion of the priority commitment to Mexico, which under the 7-State compact cannot be less than 375,000 acre-feet. And, another thing, if Glen Canyon and the Echo Park Reservoirs are built, Colorado's portion of the Mexican burden becomes not less than 750,000 acre-feet annually. Had Mr. Hill recognized these binding and irrevocable priorities and the evaporation of the downriver storage plans, which is to be charged to Colorado as consumptive use of 400,000 acre-feet, he could not have shown any unappropriated water whatsoever in Colorado for Colorado.

Colorado has entered into irrevocable compacts with all of the States to the east, west, north, and south. In each of these compacts Colorado has been generous to a fault. Now most of her water is lost forever, and yet her neighbors are asking her to surrender more and more of this most precious resource. The time has come when Colorado's dwindling supply must be guarded jealously and protected fully. That is a responsibility which I, as Governor of Colorado, must assume.

Who will say that the Glen Canyon Dam in the State of Ai sona and the Echo Park Dam on the Colorado-Utah border are not extraordinary dams from an engineering point of view. Glen Canyon is the sort of project that makes an engineer's mouth water, and the Reclamation Bureau is a bureau of engineers. Who will say that these projects will not be of incalculable value to the lower basin. Glen Canyon, which will collect 100,000 acre-feet of silt a year, will extend the life of the Hoover project 500 years, but what I want someone to tell me is, "Why should they be built with Upper Colorado Basin funds at the water expense of the State of Colorado?"

There is only one route remaining for us to take. We must put our water to beneficial use in our own State if we are to gain any right to it. That is the plain language of the seven-State compact. It states that condition without equivocation.

The Reclamation Bureau has explored 42 reservoir sites high up on the Colorado River system in Colorado. We cannot, we dare not, settle for less than their authorization now. Congressional authorization does not mean immediate construction, but it will give to these proposed reservoir sites an official priority. Colorado contributes 72 percent of the water of the Upper Colorado River Basin. Is it asking too much that we be allowed to use less than one-fourth of what we produce? If that is wrong, then I am wrong.

International Affairs Platform of the American Veterans Committee

EXTENSION OF REMARKS

HON, RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. BOLLING. Mr. Speaker, there follows the international affairs platform adopted by the American Veterans Committee at the eighth annual convention held in December 1954, at Boston, Mass.:

INTERNATIONAL AFFAIRS PLATFORM

The unchanging goal of the United States is world peace and the defense of the free world. The position of the United States in the world has passed from a status of leadership to that of partnership with non-Communist nations. Within this concept the United States should pursue positive policies by strengthening all forces devoted to peace and democratic ideas.

The United States has two special temptations: The extremes of total withdrawal or of preventive war. As veterans of two world wars and Korea, we of AVC urge the United States to reject both of these extremes. The grave problems facing the world today cannot be solved either by withdrawal or by ruthless initiation of war.

We recognize the United Nations system as the world's most hopeful institution today, to and through which we can look for maturing and enduring peace.

In arriving at the decisions which must be made, we believe that the following considerations are fundamental;

ASIA

In Asia the danger of war is always imminent, and non-Communist nations face many problems. One involves the growth of stable political institutions under stress. Development of these institutions is handicapped by economic insufficiencies, by an anticolonial heritage which now also manifests itself in anti-Westernism and anti-Americanism, and by social and cultural disruption which those nations are now undergoing in the process of reforming their national existence.

The United States can help to develop democratic, political institutions in these countries by means of adequate and long-term economic and technical-assistance programs, administered through the United Nations, where possible, and almed at training local administrative and technical personnel to take over as rapidly as circumstances permit; an effort to repair and maintain friendships even though policies of Asian nations may diverge from that which the United States considers best advised; and a program to make our cause known to Asia through an intelligent, factual, and low-keyed information program.

A second problem in Asia is that of Communist aggression and subversion. The free nations face an aggressive and totalitarian Communist China. The United States, in cooperation with Asian nations, must establish firm safeguards against overt or covert aggression. These should be backed up by resolute military measures which may take the form of security organizations such as SEATO, or of other collective efforts by the free nations concerned, including the United States, and including the great neutrals—India, Burma, Ceylon, and Indonesia.

Such military measures must be limited to the size and scope of the aggression, a tough but necessary doctrine if we are to forestall aggression without bringing on a

general war.

One of the festering sores in our relations with China, exacerbated by the recent sentencing of 13 United States Air Force and Government personnel, is the detention of American nationals in total disregard of civilized standards of international behavior. It is hard to see how relations between the United States and China can be improved so long as these men are held as political hostages. For this reason, among others, we, therefore, oppose the admission of Communist China into the United Nations at this time.

EUROPE

The main purpose of United States policy in Europe is defense of the West and preservation of peace. The best means for defending the West lie in the military and political integration of Western Europe already begun by the nations of that area, We welcome the additional steps taken toward that goal at the London and Paris conferences, but we emphasize the necessity of constant vigilance in connection with the rearmament of Western Germany. Accordingly, any program to rearm Western Germany must be tied inextricably to the collective organization of western democ-NATO or otherwise-so that racies-be it Germany be irretrievably committed to the interests of the free western world.

In Europe also the agonizing problem of the captive peoples continues to exist. We cannot abandon the people of Eastern Europe. The ultimate aim of western policy must be a free, non-Communist Europe.

LATIN AMERICA

United States activity in Latin America has often been characterized more by economic exploitation and dumping than by the good-partner policy we profess. The time has come for a real implementation of a good-partner policy by exerting a serious effort to enable the people of Latin America to achieve economic progress and a better standard of living. We should do our utmost to encourage democratic governments in Latin America and to conduct a vigorous program of anticommunism.

AFRICA

In Africa, there is a revolutionary ferment. There is rebellion against European domination and the false principle of supremacy, yet there is not everywhere an adequate tradition or a political system to replace the government of the colonial powers. If the West does not act to satisfy legitimate native aspirations to self-government there will be chaos which will be exploited by the Soviets and from which only the Soviets can gain. It is the taskand the opportunity-of the United States foreign policy to help reconcile these aspirations with the political and economic interests of the colonial powers; in this way both the native African countries and the occupying European nations can realize the maximum benefits from the inevitable achievement of African independence and self-government.

Generally speaking, there is a vacuum in American popular opinion on the subject of Africa. An active American interest in Africa is a compelling necessity. One need is for an educational program for training native leaders in the United States in order to afford them an opportunity to experience the values of democratic self-government.

NEAR EAST

Tensions between Israel and the Arab nations make this area a grave threat to world peace. United States policy should be aimed at reducing these tensions and minimizing the possibility of their being transferred into open warfare. We oppose the allocation of arms to any of the partisans in this controversy.

ARMAMENTS

The impending leveling-off of Soviet and American air-atomic power compele us to find a new policy for the use of nuclear weapons as a deterrent to war, as instruments of war, or for the abolition of nuclear war.

All plans which offer a genuine hope of disarmament, provided that they are accompanied by provisions for the general control of conventional as well as nuclear weapons, should be energetically pursued by our Government. This is the only real solution to the problem.

But if we must continue without international control of armaments, then these

principles seem basic:

Instruments of war must be such as to destroy the political ends of national policy. That is, we cannot afford to use weapons in war which make peace impossible. While we must continue to maintain our airatomic power in order to deter war, we must not follow a military policy of nuclear obliteration.

UNITED NATIONS

We reaffirm our whole-hearted endorsement of the United Nations and its family of specialized agencies.

We recognize the United Nations' present limitations, and we believe their remedy can be secured and corrected by national ratifications of the positive results coming out of such Charter Revision Conferences as may be held in 1956. We are aware that difficulties beset the eventual transformation of the United Nations' system into a body of limited sovereign powers and enforceable sanctions, and that, further, parliamentary chaos and untold damage to the U. N. may result if substantial changes are sought too early on an unwilling majority or forced on a significant minority of nations or peoples.

But we also know that only through such a strengthening of the United Nations with constitutional transfers, not surrenders, of the sovereignty and powers required for the job—can the yearning of mankind for a world with universal enforceable disarmament among nations and progressive technical and economic development among

peoples become real.

We urge the strengthening of the UN and all its resources, so that all its efforts and activities may be directed toward the development of atomic energy for peaceful uses for the benefit and welfare of all the peoples of the world.

UNITED STATES FOREIGN SERVICE

The United States cannot conduct an effective foreign policy of any kind without a competent, intelligent and resourceful Poreign Service, selected by the highest standards of ability and loyalty. We deplore decisions or administrative actions which penalized foreign service officers for exercise of their judgment or honest reporting within the scope of their duties; such actions damage the prestige of our foreign service, and consequently, blunt a vital instrument of our foreign policy.

FORCED LABOR

Millions of human beings now under Communist rule are imprisoned in forced labor camps under conditions which are in utter violation of all standards of human decency. We urge intensified exposure of these conditions; and we seek the elimination of forced labor everywhere in the world.

FOREIGN TRADE POLICY

We urge a greater emphasis on economic aid for underdeveloped countries rather than relying so exclusively on military aid, and a long-range policy for strengthening the democratic countries through encouragement of freer trade through low and stable tariffs.

Shipbuilding and Ship Repair

EXTENSION OF REMARKS

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. SIEMINSKI. Mr. Speaker, under unanimous consent, listed below is a talk on shipbuilding and ship repair which I believe will be of interest to the House. It is by Mr. J. J. McMullen, Chief, Office of Ship Construction and Repair, Maritime Administration, United States Department of Commerce:

THE MARITIME ADMINISTRATION'S SHIPBUILD-ING AND REPAIR PROGRAM

(Address by J. J. McMullen, Chief, Office of Ship Construction and Repair, Maritime Administration, U. S. Department of Commerce, American Merchant Marine Conference and 28th annual meeting of the Propeller Club of the United States, Miami, Fla., Wednesday, December 8, 1954)

It is with great pleasure that I am able to present to the panel a summary of what the Maritime Administration has accomplished and what these and future accomplishments mean in relation to the American shipbuilding and ship repair industries. Moreover, I am very pleased and proud to make this report because we who are administering the programs, as approved by the Congress, feel that we have carried out the programs in a commendable fashion and with rapid speed in order to benefit our shipbuilding and ship repair industries.

As you all recall, one of the most interesting of our new projects is the Liberty ship conversion and engine improvement program. This program has several purposes. First of all it will permit the Maritime Administration to evaluate the possibility of upgrading the vast numbers of Liberty ships which are now available in our reserve fleets. As you all realize, these are slow speed 10knot ships, and while many will be service-able at 10 knots, the demands of modern warfare require that any ship should have a speed of at least 15 knots. The secondary purpose of the program was to assist the American merchant marine in the development of propulsion plants and comparing these new types with those already in existence. It is intended that these new engine propulsion plants will not only result improved fuel economy, but also in lower maintenance, replacement and operating costs. The third purpose of the program was to investigate the possibilities of improving the standard cargo handling techniques in existence by investigating new type cranes which will permit a reduction of in-port time for our cargo ships.

The Liberty ship conversion and engine improvement program is now well underway and as many of you have read in the various newspapers and periodicals, contracts have been awarded for the conversion of one ship to steam turbine. This ship will be converted by Ira S. Bushey and Sons, Inc., Brooklyn, N. Y. The steam turbines and gears to be used have been removed from our warehouses as an example of what could be acomplished by taking turbines and gears from existing stockpiles. The hull has not been lengthened in order that we could actually investigate the strength and speed characteristics of our existing Liberty ships at sea with the horsepower increased from 2.500 to 6,000 SHP. The cargo handling gear has been revamped in that we are installing MSTS type of cargo handling gear. This portion of the program was coordinated with the MSTS in order that we could fulfill many of their requirements.

A contract has also been let on the second Liberty ship which is to be converted to diesel propulsion. This conversion will be made at the Key Highway Repair Yard of the Bethlehem Steel Co. in Baltimore, Md. The present bow will be cut off about 110 feet aft and a new bow installed which will result in an overall increase of 25 feet in length. We did this in order to improve the sea-keeping qualities of the Liberty ship. All of the present propulsion equipment will be removed and two Baldwin-Lima-Hamilton 3,000 horsepower diesel engines driving through a reduction gear will be installed. These engines have been guaranteed to burn bunker C fuel. This conversion will also incorporate the experimental cargo gear which, in general, will consist of athwartship positionable cranes forward and longitudinal. ly moving cranes aft. In this conversion the Maritime Administration set up only performance specifications and it is the responsibility of the industry to meet these performance requirements in the best fashion possible. In addition to these two actual conversion contracts, the contracts for the main propulsion equipment for the third and fourth conversions have been awarded. The General Electric Co. will supply a 6,000 horsepower two shaft regenerative type open cycle gas turbine driving through a reduction gear and a controllable pitch propeller, manufactured by the S. Morgan Smith Co., of York, Pa. The main propulsion equipment in the fourth conversion will be a free piston gas generator-turbine combination and the Cleveland diesel engine division of General Motors Corp. has been awarded the contract to supply 6 1,000 shaft horsepower gas generators driving through 2 3,000 shaft horsepower turbines, each fitted with the reversing elements, through a reduction gear and a fixed pitch propeller.

Other contracts which have been recently awarded by the Maritime Administration are for the four 25,000 ton DWT 18-knot tankers which the Maritime will construct for MSTS. Three of these ships will be constructed by the Sun Shipbuilding Co., and the fourth by the Ingalis Shipbuilding Corp.

In addition to the above tankers, the Maritime Administration was instrumental in instigating the trade-in-and-build program under which the Cities Service Co. has already signed contracts with the Sparrows Point Yard of the Bethiehem Steel Co., for the construction of two 32,000 DWT tankers with the third contract to be let on April 1, 1955. In addition, approval in principle, has been given to applications from the Esso Shipping Co. for the possible construction of two 35,500 DWT tankers.

Another program which has been administered in the last 6 months by the Maritime Administration is the emergency ship repair program. This has as its purpose two primary objectives; first, to survey and make the necessary repairs to those ships of our reserve fleet which have not been inspected since World War II; and secondly, to provide relief to the ship-repair industry of the United States during this critical period. As

you realize, it is always expedient to either build or repair ships during the period of a lull when the work can be accomplished with speed at a low overall cost. The program is now approximately 50 percent completed, and we are proud to state it has progressed without a flaw. Actually we think this has been a great achievement because a program of this nature can become complicated. We have faced squarely the problems of split bidding, recapture clauses and allocations to various areas and feel that our decisions have been just and equitable.

We based the allocation of these vessels to various areas on the basis of existing manpower because it is our belief that the important thing in the ship repair facilities of the United States is to preserve skilled manpower. We can preserve lacing the men. The problem of split bidding has been, and always will be a controversial one, but there can be no question that this Nation will require all types of repair facilities in time of emergency and that it is equally important for us to preserve both the drydock facilities and the shoreside facilities. In this connection I might state that the entire shipbuilding industry should recognize this problem and rather than perpetuate a division between those yards with drydocks and those without, there should be some unity within the industry itself. As far as the recapture clause is concerned in the emergency ship repair program, we feel that in view of the need to allocate ships that it was found necessary to protect the Government's interests in those particular circumstances when competitive bidding would not insure the Government a fair price.

The above completes a very general resume of what has been accomplished during the last 6 months and I should like to point out that in each one of these cases where the Maritime Administration controlled the funds, the programs were initiated and en-

acted promptly and swiftly.

Now, as for the contemplated ship construction for early 1955, I should like to briefly outline the possibilities. First, of course, we have the proposed new passenger-cargo ships of both Grace and Moore-Mc-Cormack Lines. The contract plans and specifications for these ships were submitted to the Office of Ship Construction and Repair in the Maritime Administration on December I, and it is anticipated that after review and inclusion of national defense features that these ships will go out for bid about the end of January 1955. Permitting a bidding period of approximately 90 days, the contracts for these four passenger ships should be signed sometime in May 1955.

One of the associated problems before the award of these contracts is the determination of the foreign construction subsidy differential. The Maritime Administration is confident that this problem will be resolved on a fair and equitable basis and in a business like fashion. It must be pointed out in this connection that the purpose of the construc-tion subsidy differential is to establish parity and that the American ship operator is entitled to what it would cost to build his vessel in a foreign port. Actually, the subsidy is to the shippards of the United States and not to the ship operators. In the past there has been a great deal of misunderstanding because the differential has always been mentioned in terms of percentage. Actually the percentage can vary a great deal depending upon the relative "hunger factor" of the low cost foreign shipbuilding center and here in the United States.

In addition to these passenger-cargo ships, the Maritime will administer the construction of seven vessels for MSTS. The total funds for this program amount to \$50 million, and it is expected that all seven ships will be awarded during the spring of 1955. These ships consist of four prototypes: (1)

the roll-on roll-off ship, (2) the AOG—ice strengthened tanker, (3) the AK—ice strengthened cargo ship, (4) AKD—ice strengthened cargo ship dock.

In addition to the new construction outlined, there are also several conversions which will be out for bid early in 1955. These are the American President Lines conversion of four Mariners to suit the requirements of their round-the-world trade, and secondly, the conversion of two mariner-type ships to passenger ships for Oceanic. In addition to these the Pacific Far East Line, Inc., is presently completing three Mariners for service in their Far East trade. The first of the Pacific Far East Line ships will be delivered early in 1955.

It appears appropriate to mention the Maritime Subsidy Policy Report prepared by the Under Secretary of Commerce for Transportation and the Maritime Administration, which indicated the need for maintaining a nucleus of 36,000 shipyard workers for mobilization purposes. It is interesting to note that the aforementioned shipbuilding programs will materially increase the present shipyard employment and assist in reaching the necessary mobilization requirements.

In other words, at this time, as the American merchant marine is being confronted with its block obsolescence, the Maritime Administration is vigorously pursuing a program of Government and private shipbuilding to insure orderly replacement. It is our intent that the ships of our future merchant marine will incorporate the most modern developments in hulls, machinery, and cargo-handling gear. A program of this nature must necessarily result in a more active and more stable shipbuilding industry for this Nation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized book dealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by book dealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a. Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

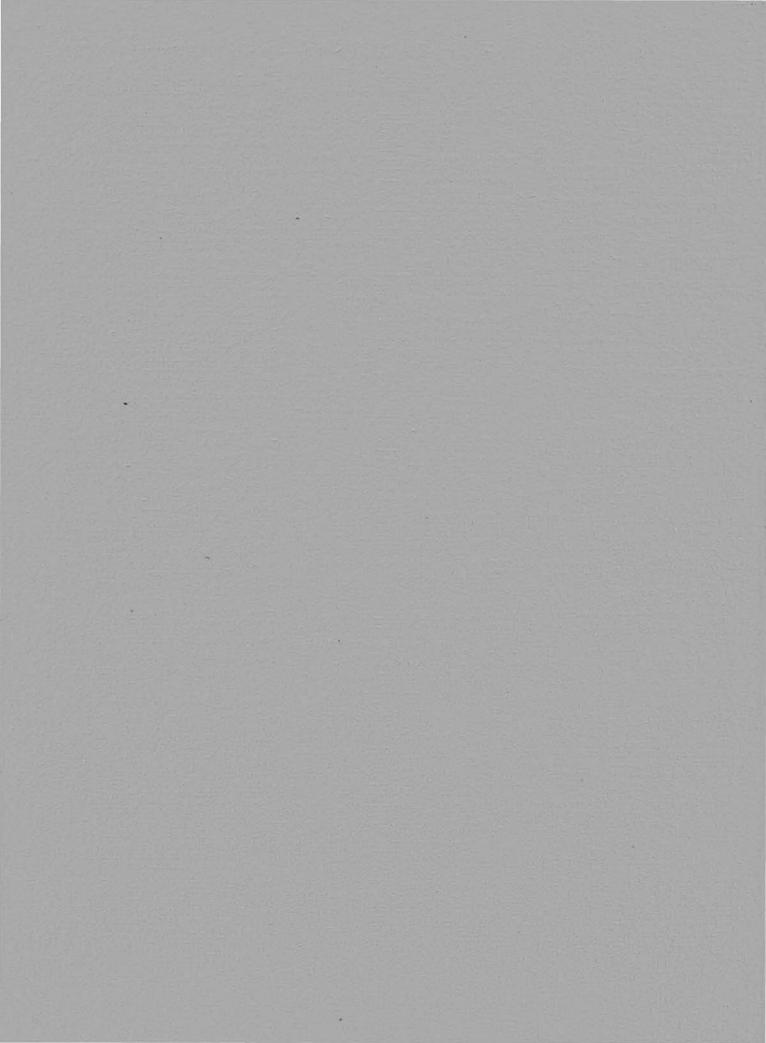

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Address by Hon. William F. Knowland, of California, at Second International Student Exchange Dinner, Houston, Tex.

EXTENSION OF REMARKS

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of a speech I delivered last night at the second annual international student exchange dinner in Houston, Tex.

There being no objection, the address was ordered to be printed in the Record, as follows:

EXCERPTS OF A SPEECH OF UNITED STATES SEN-ATOR WILLIAM E. KNOWLAND BEFORE THE SECOND ANNUAL INTERNATIONAL STUDENT EXCHANGE DINNER, JANUARY 13, 1955, HOUS-TON, Tex.

Mr. Chairman, Mr. Mayor, ladies and gentlemen, I am pleased to be here in Houston at the second annual international student exchange dinner and to be in the home State of my two able Senate colleagues, Lyndon Johnson and Price Daniel.

In the year 1919 the founders of the Institute of International Education set forth the objectives of the organization. They are as applicable today as they were 36 years ago: "To enable our people to secure a better understanding of foreign nations, and to enable foreign nations to obtain accurate knowledge of the United States, its people, its institutions, and its culture."

Never was it more important that this aim be implemented by Government officials and leaders in education, business, agriculture, and labor, and by the average citizen who travels abroad and is in a sense an ambassador of our country.

Our press, radio, and television industry also has an important mission in reflecting a true cross-section of our country abroad. For the most part they carry out their function with responsibility.

During my last visit to India I had an opportunity to get up into the Punjab territory. This, as you know, is the home of the Sikhs. While visiting some of the projects that had received technical help from the United States, I met a young exchange farmer from Minnesota. His name was Peterson, and he had a Scandinavian background. He had done a fine job of public relations and fitting into the agricultural life of the area. When he came out to meet us he was well tanned and wearing a turban, with a reddish imitation of a Sikh beard, and the farmers in the neighborhood had renamed him Peter Singh.

Both as a member of the Senate and as a newspaperman I have had the opportunity to see some of the other exchange work being done in various parts of the world. As has been the case with a considerable number of American newspapers, we have had men from overseas come and work in our office at the Oakland Tribune for a period of time, and have had some of our people go abroad.

There have also been a considerable number of delegations, of educators, students, newspapermen, and public officials who have had the opportunity of coming to this country and seeing a cross-section of America.

Too often when our people visit abroad or when others come here they only see the capital city and perhaps the chief metropolitan areas. Visiting only Washington and New York certainly does not give a visitor a rounded picture of America and what has made it a leading world power.

made it a leading world power.

All of our citizens desire to live in peace and to devote their efforts to the building of America so that we may leave it as a better land than we ourselves found. This has been the hope and aspiration of Americans ever since we became a Nation.

We recognize that where other nations believe in human freedom and the establishment of international law and order for the preservation of peace in the world for ourselves and our children, we can maintain close and cordial relations with them.

An example is our 3,000 mile frontier with our neighbor of Canada to the North, where for a long period of our history there has not been a single military fortification of any type or character along that whole frontier. We have also developed a comparable friendly relationship with our neighbor Mexico to the South.

However, the American people must be realistic enough to recognize that all nations are not as civilized or peace loving as are our neighbors, Canada and Mexico. Hence it becomes important that we remain as prudent as the early pioneers, who continued to hope and pray for peace but kept their powder dry.

This organization is to be complimented on the constructive work it does. The exchange of students is, of course, of great importance in the building of a better world. These young men and women will carry heavy responsibilities in the years ahead, and it is essential that they have accurate information regarding world affairs.

Even though the Iron Curtain exists between the free world and that of Communist tyranny, we should not consider all the people behind that curtain as being enemies of the free way of life.

As a matter of fact the people of Russia were the first victims of Communist tyranny from which we may hope they will some day be free. The enslaved people of the satellite states of Eastern Europe, of Asia and even of Russia may turn out to be among our stanchest allies in the event of Communist aggression.

Foreign and defense policies are and need to be the people's business. The decisions that are made in the months ahead may well determine whether we are to have a free world of free men.

The wise men who drafted our Constitution knew well the history of the world up to their time.

to their time.

They knew that where people had lost their freedom it was because of the concentration of power in one agency of the government.

Not only did they set up three great coequal branches of the Federal Government as checks and balances one against the other but they made the Federal Government one of limited and specified powers, reserving to the several States or the people thereof all other powers.

Though a Republican, in each of the almost 10 years I have been in the Senate I have become more firmly convinced of the importance of preserving our States rights as a vital part of maintaining our way of life.

Some, though not all, of our present problems vis-a-vis the Communist world stem from the secret agreements of Yalta, Teheran, and Potsdam.

Without the knowledge or consent of either the American people or their elected Representatives in Congress commitments were made for the postwar period which enabled the Communist conspiracy to gain control of Eastern Europe, China, and North Korea.

Since the year 1945 which saw the end of World War II in Europe and Asia, international communism has made great strides.

In January of that year there were less than 200 million people behind the Communist Iron Curtain. Today, just 10 years later, there are over 800 million. The world's balance of power has been upset.

Thirty years ago Lenin said "the road to Paris is through Peking." What he meant was that China was the key to all of Asia with its billion and a half people. Once consolidated with the manpower and resources of Asia communism could turn with overwhelming power against the West.

Peace with honor is and should be the policy of the American people. This is certainly far different from a policy of "peace at any price." Unless this is thoroughly understood, we could be lured into a sense of false security by the words of the men in the Kremlin which do not conform to their actions or their policies.

We must never lose sight of the fact that communism is the most brutal, godless tyranny the world has ever known. As a temporary expedient they may change their day-to-day tactics, but their long-term strategy remains the same under Malenkov as it was under Lenin and Stalin.

Some time between 1913 and 1915 Lenin studied the works of Karl Von Clausewitz who is rated as one of the outstanding theoreticians of war. Clausewitz's statement that the conqueror always pretends to be peace loving because he would like to attain his objectives in a bloodless fashion (as indeed does the bank robber who kills only when resisted or distured in carrying out his mission) and that, therefore aggression must be presented as a defensive reaction of the attacking nation was considered by Lenin to be a good idea. This idea is still at the bottom of Communist pacifist propaganda—peaceful coexistence.

The Kremlin's basic strategy is that communism will dominate the world, and free institutions and enterprise as we know them will be destroyed. Neither as a member of the Foreign Relations Committee nor as a party leader in the Senate has the slightest reliable evidence been presented to me which would demonstrate that the Communist leopard has changed its spots.

We and the free world must not allow ourselves to be paralyzed while nation after nation in Asia and in Europe is brought behind the Communist Iron Curtain. In such an event we might ultimately find ourselves as an isolated Island of freedom in an otherwise totalitarian world.

Under such conditions, though the difficulties would be great, we might exist as

sort of a continental Dien Bien Phu. However, we would not be able to maintain the same political or economic system which has enabled this country of ours to grow from a small colony of 3 million on the Atlantic seaboard to a world power of 162 million, the most productive industrially and agriculthe world has ever known.

The doctrine of peaceful coexistence is being advanced by the men in the Kremlin, by the neutralist nations which do not desire to take sides as between freedom and slavery, and by some of our people who have not necessarily followed the full implications of what the Communists mean by peaceful coexistence.

Among some our associates abroad, and in some unofficial quarters in our own country, the term peaceful coexistence is becomsynonymous with peace at any price. Should such a condition become general, either here or abroad, it would be a fatal It would almost assure the Communist conquest of all the peripheral countries.

There are some individuals who believe that if and when the condition of atomic stalemate is reached, this in itself will assure a period of peace. In dealing with the ruthless. Godless men of the Kremlin I believe that this is a naive approach. Two individuals may be placed in a room—each having a Colt .45. If one is a law abiding citizen who, because of his training and religion, values human life, and the other is a gangster, killer at heart, who places no value on human life, the equality of weapons does not assure that both will come out of the room alive.

Their basic policy is and has been that they would permit a nation to peacefully coexist for such a time as suited the Kremlin's convenience and until they could either be subverted by communism from within or taken over by Communist aggression from without. They have in mind for us the peaceful coexistence the Thanksgiving turkey has (well fed and housed) until the axe falls.

Whatever their station in political, economic, or academic circles those who lose sight of this basic fact endanger the freedom of this Republic and the hope of gaining or preserving a free world of free men. You could, of course, always buy temporary respite by a policy of appeasement, but the world should have learned at the time of Munich that the road to appeasement is not the road to peace. It is only surrender on the installment plan.

Proposals almost certain to be made if and when a Big Four Conference is held:

1. Recognition and approval of the present borders of the Iron Curtain.

2. Communist China in the United Na-

This would mean the perpetual slavery of hundreds of millions of people without hope of ultimate freedom.

On November 15 in the Senate of the United States, in discussing coexistence, I

"Are 'coexistence' and 'atomic stalemate' synonymous terms? If they are not, just what is the difference? Is the former merely an inevitable prelude to the latter? And what of our foreign policy and our defense policy when such an atomic stalemate takes place? Does not atomic stalemate mean inevitable Communist nibbling aggression, rather than peace in our time? How many years remain when we still have some initiative left? These are some of the basic questions before the Government and the people of the United States."

The United Nations has passed a resolution giving support to the American position relative to the 15 American airmen being illegally held by the Chinese Communists.

Both the resolution and the overwhelming majority by which it was adopted is most welcome.

However, the American people will judge the effectiveness of this resolution and the journey of the Secretary General to Pelping by whether or not these men are promptly released.

Since they have acknowledged that they hold these 15 men in uniform, there is reasonable grounds for belief that they may be holding other unaccounted for Americans missing. During the Korean war there were 931 unaccounted for Americans in uniform who had fallen into Communist hands and were held as prisoners of war. Neither alive nor dead have they been returned to us in the exchanges made pursuant to the armistice. We also know that they have 28 American civilian citizens still in Communist jails, many of them having served there for 3 or 4 years. Some have been held in chains without any type of what civilized people would call a trial.

All of us will hope that the efforts of the Secretary-General may be successful. This Nation will want to know what additional steps the United Nations will promptly take to secure the release of the uniformed personnel without paying ransom or tribute. The fact that the bandit returns the loot does not entitle him to an award of the Legion of Merit.

Are they prepared to apply against the Chinese Communist regime economic sanctions as well as moral condemnation by resolution? If these are not successful are they prepared to support a tight naval and air blockade upon the China coast?

The religions and cultural background of the free people of China made them "slow Their nation is today behind to anger. the Iron Curtain and millions have been liquidated, including teachers, small merchants, businessmen, and non-Communist workers and farmers. The free people of Czechoslovakia were "slow to anger, today behind the Communist Iron Curtainthough in the preceding election less than 20 percent of their people had voted the Communist ticket.

I cannot help but review some of our own history. What a great difference it would have been had the people of Texas, instead of rallying behind the cry "Remember the Alamo," followed the doctrine "after all, they have been liquidated and we shouldn't make much ado about it."

Some of our associates abroad apparently want to brain wash us of some of the history that has made America great.

We did not change from a small colony of 3 million on the Atlantic seaboard to the great nation of 165 million because we had the most people in the world. There have been a good many other nations that have had larger populations.

We did not reach our present place be-cause we had the most resources in the world, for there are other nations which undoubtedly have greater material resources.

I believe that we came to our present position of leadership because the founders of this Republic gave us a heritage of courage and a written constitution that, better than any other document drafted by man, given to our people the freedom-political and economic-without which this great progress could not have been made.

In this free atmosphere the American We were guaranteed spirit had free reign. the right to worship God, each according to his beliefs. To be sure, we have demonstrated time and time again that as a nation and as a people we are indeed "slow to anger."

But, there comes a time, as my old New England grandmother used to say, when we reach a point of righteous indignation, and out of this has come—cherished to each American generation, one succeeding the other—such terms as:

"Remember the Alamo."

"Give me liberty or give me death."
"Don't give up the ship."

"Damn the torpedoes; full speed ahead." And "Praise the Lord and pass the ammunition."

Despite the fact that in many instances we were faced with what appeared to be overwhelming odds, we have never found it necessary to sacrifice our national honor when a vital principle was at stake.

Nor must we ever permit any cabal or international organization to so dilute or undermine our spirit so that Gulliver becomes chained by the Lilliputians and we are unable to even protect our own.

In the final analysis, neither the American Government nor the Congress can escape the responsibility for taking whatever effective steps are necessary to secure the release of these men wearing the uniform of this country.

United Nations record in Korea. It was not effective security in action. The United States furnished 90 percent of the manpower. Only 17 out of 60 members supplied any manpower at all.

Soviet chairmanship of Security Council at intervals during Korean war was like asking town arsonist to head the fire department. The Soviet Union admitted supplying arms, ammunition, and moral support the aggressor. With this prima facie case before it, the Soviet Union should have been expelled as a violator of the Charter they had pledged to uphold.

While it is perfectly proper to seek the moral and effective support of our associate in the Korean war, if they fall to take effective steps, our obligation is not discharged. By this time next week we shall know the success or failure of the Hammarskjold mission.

What is the test? The immediate release of all prisoners of war desiring to return home without any political or monetary price being paid.

It is my belief that there are conditions being brought back. An attempt will be made to jockey us into another Panmunjomtype negotiation. Days will pass into weeks and months while American uniformed personnel remain in Communist cells.

It is the American Congress under the Constitution which is responsible for raising and supporting our Armed Forces and passes the selective service and other laws under which our armed service personnel is secured. It is the Government of the United States that ordered these men to Korea to participate in a collective security action against aggression. These men are Americans. I shall not remain silent while a single one of them remains in Communist hands.

If we will only show the same courage and commonsense that motivated the men who sat in Philadelphia and under divine inspiration gave us first the Declaration of Independence and then the Constitution of the United States, there are none of our domestic problems we cannot solve and there is no foreign foe we need ever fear.

The Dixon-Yates Power Contract

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1955

Mr. SPARKMAN. Mr. President, in its issue of October 19, 1954, the Des Moines (Iowa) Register published an editorial entitled "Dixon-Yates Contract Needs Close Scrutiny." I call particular attention to the editorial because of the

fact that it appeared in a newspaper which I believe gave all-out support to General Eisenhower when he was a candidate for the Presidency. I ask unani-mous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD,

as follows:

DIXON-YATES CONTRACT NEEDS CLOSE SCRUTINY

The proposed Dixon-Yates contract has now been made available to several newspapermen, although it has not yet been officially released by either the Atomic Energy Commission (AEC) or the Joint Congres-

sional Atomic Committee.

The contract, which is in technical language, is a 56-page affair, and accompanying it are 104 pages of pertinent documents. It will take even the legal and power experts considerable time to determine all the facts about this contract. However, enough has been revealed to show that some provisions are so questionable and controversial there should be a complete and thorough congressional hearing.

Senator BOURKE B. HICKENLOOPER, of Iowa, is head of the subcommittee of the Joint Atomic Committee which will conduct the hearing. He has set it for immediately after the election. Though this has displeased some Democrats, it seems reasonable to us, because the election campaign would make an impartial, complete hearing unlikely be-

fore November 2.

The contract provides for a company, formed by the Dixon and Yates private utility groups, to build a \$107 million steamelectric plant at West Memphis, Ark. This plant would supply power to the Tennessee Valley Authority (TVA) system. TVA then would supply the same amount of power to the AEC's atomic-energy plant at Paducah, Ky. The contract calls for the AEC to buy power-from Dixon-Yates-for TVA.

The Eisenhower administration apparently meant this contract to be a shining symbol of its determination that the Government should not continue to expand in the

field of public power.

Perhaps it seemed a clear case to the administration-that TVA couldn't supply the additional power needs of AEC without building a steam plant, and that private enterprise could just as efficiently, or more effi-ciently, build and operate a steam plant. So the administration, virtually by decree, is giving the contract to the Dixon-Yates group of private utility interests.

The public power against private power issue is involved here. But the method by which the contract is being awarded is also an issue. Terms and provisions of the contract also are proper questions for considera-

tion by Congress.

The Eisenhower administration's goal of less government in business, of less "creeping socialism," as President Elsenhower at one time labeled TVA, won't be speeded by ramming through a questionable private power contract. Instead it could be set back decidedly.

Questions about the way the contract was agreed upon arise because: (1) Views of both AEC members and TVA directors who opposed the proposal-and apparently a majority of them did before recent appointments changed the composition of the groups—were ignored; and (2) apparently no alternative plans, including proposals from other private utilities, were given any serious consideration.

The provisions of the contract which need airing are those which virtually guarantee the Dixon-Yates group a 9 percent return on its \$5½ million investment. The AEC would, in effect, pay the company's taxes, although the Senate has ruled out any direct rebate

on taxes in such a contract. Increases in costs of fuel and labor also would be taken care of by the AEC. There may be good reasons for some of these provisions. No one would suggest that a private power company should lose money on an enterprise of this kind.

However, the provisions in the Dixon-Yates contract seem to add up to the utility company taking little or no risk, being guaranteed a handsome profit and the Government paying more for power-if critics of the contract are right—than it would if TVA had built the plant.

If the congressional hearing develops that this is the situation, the Dixon-Yates contract can't be regarded as any shining symbol of private enterprise. There will be little, if any, private enterprise involved in a project based on "all profit-no loss" provi-

Instead, the contract will be an example of a bright idea gone wrong, because the proposal was handled without full and adequate discussion and consideration of everything that was involved.

Second Inaugural Address by Gov. Theodore R. McKeldin, of Maryland

EXTENSION OF REMARKS

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1955

Mr. BEALL. Mr. President, on Wednesday, January 12, 1955, Gov. Theodore R. McKeldin was inaugurated as Governor of Maryland for a second term. This is the first time in the history of Maryland that a Republican has ever been reelected as its Governor, which certainly is a tribute to Governor McKeldin's splendid administration of the past 4 years. In order that people of other States may read his inaugural address, I ask unanimous consent to have the full text of the speech inserted in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. THEODORE R. MCKELDIN DELIVERED UPON THE OCCASION OF HIS SEC-OND INAUGURATION AS GOVERNOR OF MARY-LAND ON WEDNESDAY, JANUARY 12, 1955

It is my happy privilege again to express my deep gratitude to my fellow citizens for electing to continue me in the high office of Governor of Maryland.

The keen realization of grave responsibility which I described in my first inauguration 4 years ago has not lessened.

Indeed, it has been enhanced by the passage of the years, and by my daily contacts with the many problems of government in this rapidly growing State.

Official tasks have been eased, however; encouragement has been constant, and accomplishments have been made well worthwhile by the magnificent sense of citizen responsibility demonstrated by you—the people of Maryland.

You have kept your Government aware of your hopes, your wishes and your sover-eign demands. We, in the administration, have sought, I believe with a reasonable measure of success, to interpret them into Your representatives in executive action. the general assembly have responded admirably to the consensus of your voice. We

have moved consistently forward. We continue to advance.

This is democracy at its best.

I have some specific proposals relating to the conduct of the State's affairs during the next 4 years. Some of them I have already submitted to the legislature and to the public for their consideration. Others I shall submit in the near future. But today it seems to me more appropriate and useful to turn from specific details of business and to consider some of the fundamentals on which all these details are based.

It is a common human failing to become so obsessed with the means that we forget the ends of our policies. It seems to me that such a moment is upon us. Let us in the solemnity of this occasion seek to gain clarity and perspective. It will stand us in good stead in deciding our course as Ameri-

cans and as Marylanders.

The United States is confronted with perils both serious and numerous. So grave is the situation that we are spending two-thirds of the Nation's revenues providing safeguards against possible attacks, and it is inevitable that our thoughts should be largely concerned with the problem of military defense. But that is only the begin-ning. At present we are not being assailed by armed enemies, but only by clever propagandists, who are seeking to turn the minds of men against us; and that, too, must

occupy our thoughts to a very large extent.

Maryland almost surrounds the National Capitol. We are, therefore, at the very heart of all this perturbation, and are bound to be affected by it. We are so strongly affected, indeed, that we are in danger of losing sight of the object of all our labor of hand and brain; and if we do that, we will lose the very thing that we are trying to preserve.

For this that we are defending, this Nation, and specifically this part of it that we call Maryland, is not a geographical expression, is not merely a certain part of the earth's surface, is not simply an area containing so many structures and so many people. If that were all, it would not be worth the tremendous effort we make to defend it. The greater part of it, the more valuable part, is an intangible thing, a compound of history and tradition, of manners and customs, of attitudes and ways of life, imperceptible by any of the five senses, yet more real than these buildings around us, more real than the solid earth on which they stand.

To perpetuate this invisible Maryland, this creation, not of our hands, but of our minds and spirits, we, no less than our forefathers long ago have pledged our lives, our fortunes and our sacred honor. Most of the time we take it as a matter of course, the basis of our entire political and social system; but from time to time we should pause for a moment and examine it to renew our appreciation of its value; for, like the giant Antaeus whose strength was renewed whenever he touched the earth, we may draw a brighter courage, a stouter confidence, a firmer resolution whenever we remind ourselves of how much we

The characteristic of the United States of America that makes it unique among the nations is its achievement of unity in diversity. "From many, one," the motto that we have stamped in Latin on our coins, is the ultimate American reality; so when I describe what I conceive to be the spirit of Maryland my words cannot be applied literally to any other State, and yet to the extent that what is Maryland goes to make up what is American, I am speaking of every one of the 48. The emphasis shifts as you proceed from State to State, but the ultimate meaning remains the same; so when I celebrate our own particular values, it is not in disparagement of those cherished by our sister States, but only to strengthen our determination to protect what belongs to us in particular and to all America in general.

Long before Maryland became a State one of the most important patterns of its life was already set. This was the tradition of tolerance which is, after all, nothing more than recognition of the brotherhood of men under the fatherhood of God. Tlike to think of its beginning with Father Andrew White, that sturdy priest whose ability to administer spiritual consolation to penitents did not interfere with his ability to swing an ax with the best of them when the forest was being cleared—father in God to burdened souls, he was at the same time brother to the woodsmen. I like to remember that in early Maryland Captain Cornwallis was seized by Catholic officers and punished by a Catholic governor because he had denied freedom of worship to his Protestant servants. I like to believe that it is still true in Maryland that a man who attempts to suppress liberty is worthy of punishment because he has denied the faith, whether that faith is Catholic, Protestant, Jewish, or other.

The strong tradition of religious tolerance has resulted in making Maryland barren ground for the propagation of fanaticism of any kind. I do not claim that we have escaped entirely; our history has been punctuated from time to time by outbreaks of bitter oppression, but they have been only numerous enough to remind us that we, too, are vulnerable to the weakness and folly that beset other men and are under obligation to be forever on guard against the evil in our own hearts.

Yet I think it is true that the tolerance that began in affairs of religion has spread into social and political and economic activities. God has given us a pleasant land, and it would be ingratitude not to enjoy it; but it would be worse than ingratitude, it would be wickedness, while enjoying it ourselves to try to deny its enjoyment to others merely because their ways are not our ways. It is not our practice in Maryland to attempt to correct our neighbor's habits for his own good; we correct him only when his habits begin to threaten law and order, and that is for the good of all of us, not for our neighbors in particular. Sometimes the rigidly austere profess to be scandalized by this and demand that we use the power of the State to put down sin, as well as crime; but I deem it a higher morality that holds a man answerable to the State only for his crimes, and admits that for his sins he is accountable to God alone.

Nevertheless, while we have created here a tolerant society it is still a society, which means that a man incurs inescapable obligations by being a member. This implies that the strong are measurably responsible for the welfare of the weak, including the very young, the very old, and the very unfortunate. This responsibility varies with varying conditions, and there is always room for debate as to the adequacy with which we have met it; but nobody denies the principle and nobody denies our duty to meet new demands with new expedients.

I believe it is the sincere desire of the overwhelming majority of our people to perpetuate the thing that we have created and that we call Maryland. Please note that I said "perpetuate," I did not say "petrify." Maryland is a living organism, or it is nothing, and change is the law of life. If it were possible to assure the indefinite existence of Maryland exactly as it is, what we should have would be a mummy, utterly useless in a world of living men.

What we wish to perpetuate is not institutions, but the spirit that created them—first, liberty, then tolerance, then brother-hood. In assuming the responsibilities of the office of governor for the next 4 years I pledge to that purpose every vestige of strength, whether of arm, or of head, or of heart, that I possess. That is, if you please, a generality, but it is not a gittering one. On the contrary, the condition of the modern world makes it a somber one, not for me

alone but for you, for every man and woman in Maryland.

For liberty, tolerance, and brotherhood are all under furious attack from many quarters. The merchants of hate are busy everywhere and some of them have risen to high places where their influence is exerted upon millions. When the Four Horsemen of the Apocalypse are spurring hard, when war, famine, pestilence, and death are thundering across the world it is easier to be a Paladin, it is easier to be an Ajax or a Siegfried, than it is to remain a free, reasonable, and kindly man.

Maryland is in danger indeed, but the enemy bombers are still beyond the horizon. The danger that is directly over our heads is not a threat to any material thing, not to the things that might be destroyed by atom bombs, but to that greater part of Maryland that lives and moves and has its being in the minds and hearts of men.

My fellow citizens, I summon you to the defense of that Maryland even more energetically than you are now defending our cities and harbors and fields. I call you to arms against the forces of hatred and ignorance and prejudice, more insidious and more dangerous than any horde that the steppes once ruled by Genghis Khan might spew upon us. It may be that eventually foes will come upon us from across the sea, but fanaticism is already here, lurking in darkened minds and shriveled souls, ready to creep upon us the moment our backs are turned.

But as long as he is faced resolutely, that foe is important; and he will be faced resolutely as long as we remember how great is the treasure that we guard. The liberty that our fathers won for us we hold in trust for our sons; it must not be diminished by jot or tittle through any failure of ours, and it will not be while we remember how precious it is.

That is why I have devoted this speech to reminding you of it. With a confidence in the future born of the glory of the past, we shall preserve for the next generation and for the world that part of the wealth of Maryland impossible to coin at the mint because it is "the gold of a vision that angels cannot buy," and my counsel to you is so far from being new that it is older than Maryland itself, far older than all the dangers that threaten us. It is simply the ancient cry, "To your tents, O Israel," and let us, like the ancient Israelites, make of this time of stress the prelude to our era of greatest splendor.

And so once again I dedicate myself as the humble and loyal servant of God and the sovereign people of the State of Maryland. To be your twice-chosen governor is an expression of confidence which I shall ever cherish and seek to deserve. With the help of our Lord, I shall earnestly do my best to serve Him and you.

To have the opportunity of sharing in the creative development of our beloved State as its chief executive is a supreme privilege. I trust that all of us may consider ourselves as fellow workers in the constructive task of making this Commonwealth the home of an ever-happier and prosperous people. In her long and distinguished history our State has become famed for her great cities, her charming villages, her beautiful countryside, and lovely waterways. From the great bay to her hills, enshrouded in their mystic haze of blue, she is a lovely land—Maryland, my Maryland.

Let it be known, too, in every clime and to the ends of the earth, that on the soil of Maryland every man is of sacred worth as a child of God, and all share equally in the responsibilities and blessings of freedom. To that end we dedicate ourselves anew to the further advancement of human values as the greatest contribution we may make to our day and age.

Therefore I solemnly dedicate myself not only to preserve and uphold the constitution

of our State but to maintain and strengthen its noblest traditions as well, the traditions of tolerance, brotherhood, and human freedom without limitation.

Sincerely and earnestly do I ask your prayers, my fellow citizens, as indeed I pray for all of you. God bless and guide the people of Maryland.

The Edward John Noble Foundation

EXTENSION OF REMARKS

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. ANDERSON. Mr. President, the New York Herald Tribune of Monday, December 20, 1954, had a news story under the headline "Edward J. Noble Gives \$5 Million to Fund." It told of Mr. Noble's fine gift to the Noble Foundation, a philanthropic agency founded in 1940 by Mr. Noble.

There are two interesting aspects of this news story to me. The first is the fact that the newspaper points out that Mr. Noble came from a poor family, supported himself at college, and then proceeded to build a very substantial fortune, giving evidence thereby that America still is the land of opportunity for those who are determined to recognize and take advantage of their opportunities.

Second, I am impressed by the fact that Mr. Noble hopes that his \$5 million gift to the foundation may encourage other businessmen to give as individuals to charitable causes or to foundations "which strive to meet the constantly increasing needs of charities, of hospitals, and of educational institutions."

As one who has known Mr. Noble since his first venture in Government as Chairman of the Civil Aeronautics Authority, I commend his charitable impulses and praise him for the lifetime of endeavor to be of help to his fellowmen, and ask unanimous consent to have printed in the Appendix of the Record the news story from the New York Herald Tribune.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDWARD J. NOBLE GIVES \$5 MILLION TO FUND

Edward J. Noble, of Greenwich, Conn., has given \$5 million to the Edward John Noble Foundation, it was announced yesterday. The foundation, a philanthropic agency, was founded in 1940 by Mr. Noble, who is chairman of the finance committee of the American Broadcasting-Paramount Theaters, Inc., and chairman of the board of Life Savers, Inc.

Last year Mr. Noble gave \$2 million to the foundation, which has a large endowment, the income and principal of which support charitable, educational, and hospital institutions.

PHILANTHROPIC OBLIGATIONS

Mr. Noble said in an announcement yesterday that the \$5 million gift was an individual effort to carry out a philanthropic obligation commensurate with the success that has come my way as an American businessman.

"I hope," he said, "that this \$5 million

gift to the foundation, together with my previous gifts over the years to the endowment of the foundation, will encourage other businessmen to give as individuals to charitable causes or to foundations which strive to meet the constantly increasing needs of charities, of hospitals, and of educational institutions."

Mr. Noble said he intends to contribute to the foundation each year with the plan that the endowment will be of substantial proportions "by the time I'm 6 feet under." He said that "if there's any good I can do in this world I'd like to do it now, when I'm alive.

In the last dozen years or so, Mr. Noble and the foundation have contributed to charities and institutions in New York City and throughout New York State. Among beneficiaries of the foundation have been St. Lawrence University at Canton, N. Y., of which Mr. Noble was chairman of the board for 13 years, and North Country Hospitals, Inc., which operates as a unit, three hospitals at Gouverneur, Canton, and Alexandria Bay, all in northern New York State.

OTHER BENEFICIARIES

Other gifts have gone to charities in New York, such as the Salvation Army and the National Foundation for Infantile Paralysis and to community chests and other charities in Greenwich, Conn, and in New York State communities such as Port Chester, Gouverneur, Watertown, Canton, and Alexandria Bay.

Mr. Noble, a former Chairman of the Civil Aeronautics Authority and a former Under Secretary of Commerce, served as general chairman of the Salvation Army's maintenance appeals for 1947 and 1948 and was chairman of the Greater New York 1953 campaign of the National Foundation for Infantile Paralysis. He was appointed to the St. Lawrence Seaway Development Corporation last July by President Eisenhower.

tion last July by President Eisenhower.

In 1948, 1949, and 1950 the foundation was one of the principal contributors to the construction and operation of the Noble hospitals in Gouverneur, Canton, and Alexandria Bay, areas long in need of hospital facilities.

Born in New York State's north country, in Gouverneur, on August 8, 1882, Mr. Noble recalled that he spent summer vacations in the Thousand Islands and dreamed of making a fortune some day in advertising. This was before he attended Syracuse University. Coming from a poor family, he supported himself at Syracuse by working as a reporter for the Watertown Daily Times and as treasurer of the Gouverneur Athenian Society.

Later he went to Yale University and was graduated in 1905. At Yale he organized an eating club and accumulated a considerable financial surplus. After Yale, he entered the advertising business as a space salesman for the card advertising firm of Ward & Gow, of New York City.

His first success came in 1913 when he and a friend bought Life Savers for \$1,900 from a Cleveland candymaker.

Mr. Noble has been chairman of the finance committee of the American Broadcasting-Paramount Theaters, Inc., since the merger of the two corporations in 1953.

Centennial of Land-Grant Colleges

EXTENSION OF REMARKS

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. McNAMARA. Mr. President, I am informed that the Post Office De-

partment is about to issue a special postage stamp commemorative of the centennial of the founding of land-grant colleges. It happens that Michigan State College was the first land-grant college, and I ask unanimous consent that some remarks of mine upon the subject be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MCNAMARA

The Post Office Department is about to issue a stamp commemorating the establishment 100 years ago of the first 2 land grant colleges in the United States—Michigan State College and Pennsylvania State University. This centennial anniversary is a source of real pride to the people of Michigan; and I am particularly proud of the fact that the first of the two colleges to be established was Michigan State College, which is thus the oldest of the land-grant colleges in America.

Michigan State College was actually established before the Federal Land Grant Act, the Morrill Act, was adopted by Congress. It was established with money appropriated by the State legislature in compliance with a requirement in the new State constitution. While Michigan did not wait for Federal money to establish its college, the State was grateful for the aid received when Congress did adopt the Morrill Act in 1862 and made possible an increase of 100 percent in the service rendered to Michigan by the college.

This centennial celebration invites us to take another look at the history of Federal aid to education in this country and to contrast that history with the situation today.

The history shows that the first piece of major legislation in support of public education was adopted by our Federal Government as far back as 1785, even before the adoption of our Federal Constitution. This was the famous Northwest Ordinance, which initiated the policy of setting aside Federal land and Federal moneys to aid education. Since then more than 160 acts have been passed by the Congress to help the States support schools.

A list of the major acts is as follows:

Seventeen hundred and eighty-five; Ordinance of 1785.

Seventeen hundred and eighty-seven: Ordinance of 1787.

Seventeen hundred and ninety-six: Ohio Salt-Land Grant Act. Eighteen hundred and two: Ohio Enabling

Act.
Eighteen hundred and three: Ohio Ena-

bling Act amendment.
Eighteen hundred and thirty-three:

United States Deposit Fund Act.

Eighteen hundred and thirty-six; Surplus Revenue Loan Act.

Eighteen hundred and forty-one: Internal Improvement Act.

Eighteen hundred and fifty: Swamp-Land

Grant Act.
Eighteen hundred and sixty-two: Morrill

Eighteen hundred and sixty-seven: Department of Education Act.

Eighteen hundred and eighty-seven:

Hatch Act.

Eighteen hundred and ninety: Second
Morrill Act.

Nineteen hundred and six: Adams Act. Nineteen hundred and seven: Nelson amendment to Morrill Act.

Nineteen hundred and eight: Federal Forest Reserve Fund Act.

Nineteen hundred and eleven: State Marine School Act.

Nineteen hundred and fourteen: Smith-

Nineteen hundred and fourteen: Smith-Lever Act.

Nineteen hundred and seventeen: Smith-Hughes Act. Nineteen hundred and twenty: Federal Mineral Royalty Act.

Nineteen hundred and twenty: Civilian Vocational Rehabilitation Act.

Nineteen hundred and twenty-five: Purnell Act.

Nineteen hundred and twenty-seven: Federal School Land Act.

Nineteen hundred and twenty-eight: Capper-Ketcham Act. Nineteen hundred and twenty-nine:

George-Reed Act.
Nineteen hundred and thirty-four:

George-Elizey Act.
Nineteen hundred and thirty-five: Bank-

head-Jones Act.
Nineteen hundred and thirty-six: George-Deen Act.

Nineteen hundred and forty: Vocational education for national defense

Nineteen hundred and forty-four: GI bill

Nineteen hundred and forty-five: Amendment to the Bankhead-Jones Act.

History reminds us that the States have not sat on their hands waiting for the Federal Government to do it all. As Michigan did in the case of its State college, the States have taxed themselves for their schools, only turning to the Federal Government for help over and above what they themselves were able to do. History shows also that even when Federal aid was generously given, it was given without any requirement that the States give up control over their school systems. This thing that some people claim to fear today—the loss of local control over education—just has not happened in the past. It need not happen today.

Today, surveys of school needs have made clear the fact that our children need more than \$10 billion worth of school constuction. The facts have been presented over and again. The States are laboring to do their share to meet these needs. But the Federal Government, unlike some periods in the past, is sitting on the sidelines, waiting for the matter to be hashed over at 49 conferences before it decides how to act, if at all.

As one of those who has joined with the distinguished senior Senator from Alabama, Senator Lister Hill, in sponsoring a bill to provide at least part of the needed aid now, I hope that this Congress will take both heart and instruction from the history of Federal aid to education, and begin immediately to meet our responsibilities in this crucial area of our lives.

Twenty-second Anniversary of the Lone Ranger

EXTENSION OF REMARKS

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement relative to the 22d anniversary in radio of the program The Lone Ranger.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TWENTY-SECOND ANNIVERSARY OF THE LONE
RANGER

(Statement by Senator Daniel)

On January 30, 1955, The Lone Ranger, oldest continuous half-hour program in radio, will observe its 22d anniversary.

I extend my congratulations to Mr. Jack Wrather, of Dallas and Los Angeles, who now owns this program. The Lone Ranger has long been, and will continue to be under Mr. Wrather's direction, an aggressive force for good, a fine example for the young men and women of America, and an excellent specimen of the kind of entertainment our American airways have to offer youth and adults alike.

This program has served as a vital factor in keeping alive in the minds of people, both in the United States and abroad, the traditions and ideals of the Texas Ranger organization and its work in maintaining law and order. As a radio and television program, it has received many national awards and citations from responsible organizations for its good work in fostering youth betterment and combating juvenile delinquency.

The Lone Ranger, hero of this program, teaches the principles of good citizenship. He fosters honesty, patriotism, fair play, tolerance, and a sympathetic understanding of human beings. Some 90,000,000 people throughout the world weekly feel his impact in one form or another of entertainment.

Although The Lone Ranger is classified as a children's program in radio and television circles, it is interesting to note that adults make up more than 55 percent of its listening and viewing audience. To this audience the program serves as a constant reminder of the American tradition as it was laid down by our forefathers—the tradition for which we fight today and which we strive on all fronts to preserve and defend.

Inaugural Address of the Governor of Kansas

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. CARLSON. Mr. President, last Monday marked another milestone in the history of Kansas when we inaugurated the Honorable Fred Hall as Governor of Kansas.

Governor Hall became the 33d Governor of the State of Kansas and is the youngest Republican Governor in the Nation today.

The inaugural exercises were unique, in that they were held on the steps outside of the statehouse, and it was the first outdoor inaugural since 1879.

While Kansas weather is very unpredictable, the elements cooperated. It was a clear, bright, sunshiny day.

The Governor in his inaugural message stressed the fact that "the continued success of our Federal system of government lies solely in the ability of the Federal and State Governments to cooperate with each other on problems where they each share a mutual responsibility. Competition between the two governments must give way to cooperation."

This statement is most important, in that it is necessary to preserve the position of our States if we are to continue as a strong democracy.

The natural tendency in the last decade has been toward an ever-growing and powerful Federal Government, often at the expense of the State governments.

Mr. President, I ask unanimous consent to have made a part of these remarks the inaugural speech of Gov. Fred Hall and the farewell speech of the outgoing Governor, the Honorable Edward F. Arn.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

TEXT OF GOVERNOR HALL'S ADDRESS AT INAUGURAL MONDAY

My fellow officers, distinguished guests, ladies and gentlemen, as provided by the constitution of Kansas, we are gathered here for the purpose of inaugurating the men whom you have elected to perform executive and judicial functions of the State government.

The past 4 years I have served with most of these men. I congratulate them and look forward to working with them during the term of our respective offices.

The ceremony of this inauguration is taking place on the steps of our beautiful capitol building. It is the second time we have done so and the first time since 1879. The decision to do so again was a wise one. Since the beginning of civilization people have always manifested their faith through magnificent buildings and edifices—cathedrals to express their beliefs in a God—capitols to express their beliefs in themselves. This building is the symbol of our belief in Kansas and the United States of America.

The history of civilization is the history of the rise and fall of men and their beliefs. This history has all been written and it has been pages of tragedy. Only the shattered edifices remain to remind us of once great governments and civilizations—the temples of India and China, the pyramids of Egypt, the ruins of Athens and Rome.

On the occasion of this inauguration, we are writing, in a small way, a line in the history of all the United States of America. It is an experience we are sharing with most of the 47 other States in the Union who are having similar ceremonies.

The United States of America were founded and dedicated on the basic principle of freedom to all men. The Declaration of Independence declares: "We hold these truths to be self-evident; that all men are created equal; that they are endowed by their Creator with certain unallenable rights; among these are life, liberty, and the pursuit of happiness."

By the bloodshed of Revolutionary and Civil War we built a government to make this principle a reality. In America freedom has become a reality and by any standard of comparison the United States of America is the greatest nation in the world.

We are a blessed people. God has given us a fertile land. On it we have built a mighty agriculture and a mighty industry. Our land and our industry have been the tools by which we have lived, multiplied, and prospered—by which we have grown strong as a state and a nation.

With the good use of these tools we have grown up. Our national progress has been great, but our greatest progress is not alone the material standard of living which we have attained; it is the more magnificent fact that we are 165 million people continuing to hold the right to govern ourselves by this federation of 48 States and under the basic principle of freedom to all men, regardless of race, color, or creed.

The challenge to each of us today, as citizens of this state and this Nation, is to protect and promote our growth and our greatness, that when our page in history is fully written, it will not be the ghastly tragedy of another broken civilization.

The freedom of all peoples in the world is in imminent danger—in danger of the tyranny of a thing called international communism. It has brought us into the atomic and hydrogen bomb age. The tempo of these times, the importance of the decisions to be made, the speed with which adjustments must be carried through, have never been surpassed or equalled. It is putting another real test on the whole strength of America—its peoples and its Government. In fact, we are now at a time when failure or incompetency in government cannot be tolerated.

It is a fundamental observation that your governments must carry out their obligations to you the people. The only way we shall preserve our freedom is for governments to accept the responsibility to govern and to govern wisely. If we are to be strong abroad, we must be strong at home.

The problems of government are unprecedented in difficulty and magnitude. On the one hand, the Federal Government is confronted with the most dangerous international situation in the Nation's history. On the other hand, the States are confronted with all the complexities of a growing population and the dynamic development of the country.

Kansas certainly has its share of these problems. They are reflected in education, where we must face a tremendous increase in students and standards, at least for the foreseeable future; in social welfare where the number of elder citizens has increased by a large percentage, as well as those who are or will become mentally ill; in penal institutions where the rising rate of crime is crowding our facilities; in our highways where we have not been able to keep pace with increased traffic leads; in the needs of agriculture, industry and labor; in the shortage of water which now threatens the entire future development of our State.

The record of State government in Kansas has been good. In every important field of State function and responsibility, Kansas occupies a commendable position amongst the States. Our progress has been good but, as with all States, we are finding the new problems more difficult to solve. The fact of the matter is, that many of these problems facing our States today are beyond their administrative and financial capacities to solve. This is especially true so long as the Federal Government continues to preempt the major sources of tax revenue.

This situation is now forcing a complete reexamination of the balance of authority between the States and the Federal Government. Unfortunately the right to govern ourselves under the Federal Union has been distinguished more for competition than for cooperation. During our many years as a nation we have differed, argued, quarreled and fought over the rightful balance of authority between the two governments. The whole problem has a history, at times an explosive and violent one—the Articles of Confederation—Thomas Jefferson and States rights—Calhoun and Webster—Lincoln and Douglas—even the Civil War.

Douglas—even the Civil War.
For the first 150 years we followed a very rigid concept of States rights. In the economic depression of the thirties the pendulum swung the other way. I believe too far the other way. The power and the place of the State governments declined. The Federal Government becamse all-powerful.

This experience taught us a hard lesson. It taught us that the United States of America is too big and complex for one big government. The wisdom of the Founding Fathers was again vindicated. Only under a cooperative system could the functions of government be performed beneficially and economically. Every level of government, both Federal and State, had its place. The lines were not too rigid but each had its rightful place.

I believe the continued success of our Federal system of government lies solely in the ability of the Federal and State governments to cooperate with each other on problems where they each share a mutual responsibility. Competition between the two governments must give way to cooperation.

ernments must give way to cooperation.

In recent years there has been a strong trend in State leadership toward the more sterile and rigid concept of States rights

rather than the concept of cooperation. Some of this leadership finds great satisfaction in deploring the "do-gooders." Frankly, I think the real danger is with the "do-nothings." They are the leadership which deplore the situation confronting our Government, regretting tearfully that nothing can be done. They completely misjudge the pulse of the American people. We are a dynamic people in a dynamic country. We either go forward or we fail. We are not content to stand still. This policy can only lead us down a dead end road toward the ultimate destruction of our country.

We see this conflict going on today in the important fields of education and highways. These are two of the traditional functions of the States which may prove to be beyond the capacities of the States to solve. As a matter of fact, the President of the United States is offering to give additional assistance to the States on these functions. In this regard he has called a national conference on education and has established a President's commission on highways. Of course, any such solution would involve some Federal control and additional Federal financial aid. Those who espouse the strict doctrine of States rights are opposed to any such approach to our problems.

I wish to make my position very clear. I believe these are but examples of problems where the Federal and State Government may share a mutual responsibility. I believe in the doctrine of cooperation and I am not opposed to the consideration of these

kinds of program.

I am not afraid of the policies of a President who shares my political faith. I am mindful of his statement to the Governors of our States a year ago when he said, "I am here for a very simple purpose. Because of my indestructible conviction that unless we preserve in this country the place of the State government, its traditional place, with the power, the authority, the responsibility and the revenues necessary to discharge those responsibilities, then we are not going to have America as we have known it; we will have some other form of government."

I have always believed in States' rights but I also believe that States' rights is a responsibility for action and not an excuse for inaction. During my administration as Governor, I intend to do everything possible to preserve and exalt the power and the place of State government. I know this can only be done by discharging the constitutional obligations of State government to the

people.

I describe myself neither as a "do-gooder" nor a "do-nothing." For lack of a better term I describe myself as a "do-something." Perhans I am what the President has termed

a "progressive moderate."

As the Governor of this State, I am also considered to be the head of my political party. I should like to say this about party responsibility. Under the American system of government, it is fundamental that the political party which has been put in power by the people has not only the solemn obligation of service to the people—but to administer the affairs of government with efficiency and integrity. This carries with it the equally solemn duty of self-discipline, to police one's own house and to keep it in order. I give you my solemn pledge that so long as I am the head of my party we shall keep our house in order.

I am very grateful to all of you for the opportunity to serve you. I believe never before in our State has a Governor owed so little to so few, and so much to so many, as I do to you, the people of Kansas. I am under no obligation to no one but you. I have

no master but you.

And now as I enter this high office, with all the humility at my command, I pray to God for the physical strength, the mental ability and the moral courage to discharge the responsibilities which are mine. I pray for these things as, together, we embark on this great and thrilling adventure in the history of our country—the 33d chapter of the State of Kansas.

GOVERNOR ARN'S FAREWELL TO KANSAS CITIZENS

Before I bid you farewell, I want particularly to tell you how much Mrs. Arn, our daughters, and I have appreciated the hospitality we have received here in Topeka. Because of your kindness we shall always feel at home here in the capital city. And equally heartwarming, have been our visits to other cities of the State, and our reception there we also appreciate. I am grateful also for the help and cooperation I have received from so many fellow Kansans, both in the public service, and in private capacities.

I shall always be very proud to have served as your governor for these 4 years. It has been a rich experience. During that period I have traveled to every part and corner of our State; and such a tour of Kansas is a wonderful textbook on Kansas progress and

history.

Of course, progress always leaves in its wake challenging problems—but I know Kansas and Kansans will meet any new problems just as they have been met in the past, resolutely, confidently, and successfully.

My visits with our people of the Sunflower State have strengthened my conviction that they are closer to the pioneer spirit and virtues than the people of any other State. And it is understandable that this should be so, for Kansas was not founded by men seeking gold, or hunting for a fortune; but by men in search of, and willing to die for, an ideal.

Do you remember the words of Whittier on that mural just behind the Governor's desk: "They crossed the prairies as of old the Pilgrims crossed the sea, to make the West, as they the East, the homestead of the free."

That spirit still lives in Kansas. It has been nurtured on our farms, in our towns and cities, and upon the broad plains.

Yes, we in Kansas proudly answer to being called a conservative State and a conservative people—yet we have made progress unequaled by most of our sister States. We have led the Nation in many fields of governmental progress, we have no debt, we operate on a payas-you-go basis, and our financial house is in good order.

I am certain it is that pioneer spirit that has guided us through flood and drought, good times and bad, and has helped Kansas

to lead the way.

We are proud too, that in our Nation's Capital there is a Kansan, possessed of that same spirit, who is there leading the way—leading the way for a better nation, and a better

world-at peace.

We have just concluded a holiday season during which, for the first time in nearly 20 years, war has not been in progress somewhere around the world. Our fellow Kansan in the White House is directly responsible for this accomplishment, and I know we all hope and pray that as that time draws near, President Elsenhower will again answer the call to continue his fine leadership of this great Nation. We will need him again, even more than we did in 1952.

And now, I leave the office of governor, with all of its honor and responsibilities with a feeling of humble pride—with deep gratitude to the people of Kansas and to my fellow workers, legislators and State officials.

And as I leave this capitol building today with great confidence that our State will continue its march of progress—I pledge my cooperation to our new governor and official family, with a wish to him and to them for every possible success as we all work together for an even greater Kansas,

Foreign Trade and Milwaukee

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. ZABLOCKI. Mr. Speaker, in a few weeks, this House will once again consider the question of United States foreign trade policy. In the belief that the information appearing below will prove of interest and help to the membership of this body in conjunction with that issue, I wish to place in the record the complete text of an informative study entitled "Foreign Trade and Milwaukee."

This study was initiated at my request during the early months of 1953, and it was completed and released on November 4, 1954. The survey was conducted under the general supervision of Dr. Howard S. Piquet, senior specialist in international trade at the Legislative Reference Service of the Library of Congress, with the collaboration and assistance of Mr. Harold T. Lamar, of the Senior Specialists Division of the Legislative Reference Service, who prepared the report.

I should like to express my sincere appreciation for the very fine work which Dr. Piquet and Mr. Lamar did on this study. We are also indebted to Dr. Ernest S. Griffith, Director of the Legislative Reference Service, without whose cooperation this study could not have been

possible.

Much of the routine and clerical work incident to the gathering of the data for the report on "Foreign Trade and Milwaukee" was done at my office, and I have carefully followed each stage of the survey. The entire study consumed very much effort, and I sincerely hope that the resultant findings will prove of value to the Members of this body and to all other persons interested in the question of our foreign trade policy.

It should be mentioned at this point that this study was not intended to be all-inclusive. Its main emphasis is on the primary impact of foreign trade on manufacturing firms in the Milwaukee metropolitan area. Within this and other limitations described in detail below, the study constitutes, in my opinion, a constructive and valuable contribution to a better understanding of what foreign trade means to all of us.

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D. C., October 14, 1954.
The Honorable CLEMENT J. ZABLOCKI,
House of Representatives,
Washington, D. C.

DEAR MR. ZABLOCKI: We are pleased to submit herewith the report Foreign Trade and Milwaukee which we have prepared at your required.

As you know, this report was written in the Senior Specialists Division by Harold T. Lamar, under the general supervision of Howard S. Piquet, senior specialist in international trade.

We want to take this opportunity to thank you and your staff for the splendid cooperation rendered to us in the preparation of this Survey.

Cordially yours,

ERNEST S. GRIFFITH, Director.

FOREIGN TRADE AND MILWAUKEE INTRODUCTION AND SUMMARY

This report was prepared by the Legislative Reference Service at the request, and with the cooperation of, Representative CLEMENT J. ZABLOCKI, of the Fourth Congressional District, Milwaukee, Wis.

Considerable attention is being given to United States foreign-trade policy. The time-honored arguments of the protectionists and free traders are still being used, but to many, the tariff remains a pretty dry In these postwar days of renewed competition in world markets and the threatened splits in the economic solidarity of the free world the general public should have a clear idea, as individuals, of their economic position with regard to foreign trade. By examining the impact of foreign trade on their own communities, citizens will be better equipped to know the direction in which their interest lies as between encouraging imports and exports by lowering trade barriers and maintaining import barriers when necessary to protect industries whose continued healthy operation is in their own interest.

Surveys or studies of the impacts of foreign trade upon particular cities, counties, and other political subdivisions have been criticized by some on the ground that they do not present a picture of the full impact of foreign trade. These areas are hardly ever self-contained economic entities, and economic forces in other parts of the economy inevitably affect the local situation. Admittedly, it would be difficult to trace all of the indirect effects of foreign trade on a

particular region's economy.

This is a survey of the initial impact of foreign trade on the Milwaukee metropolitan area. The word "initial" is emphasized be-cause a study covering all the ramifications of the effects of foreign trade on Milwaukee would entail much more exhaustive and detailed analysis than time or available tools permit. Since no field work was possible in connection with this survey certain aspects of Milwaukee's foreign trade position have possibly been overlooked.

As a survey of the initial impact of foreign trade the main emphasis in this study has been on the manufacturing firms and their employees in the metropolitan area. less direct effects of foreign trade on other sectors of the economy such as transportation, trade and services are less adaptable to a detailed analysis on a community basis. Since Milwaukee is a manufacturing center the direct effects of foreign trade on agriculture are not of immediate concern. manufacturing firms and their workers in the area produce goods that are exported, or that are competitive with imports. They also use the raw and semifinished materials that are imported.

The 145,000 workers employed in the 180 manufacturing firms that responded to the questionnaire represent about three-fourths of all manufacturing workers in Milwaukee. The manufacturing workers covered by this survey also account for one-third of all employees in the Milwaukee metropolitan area.

No attempt has been made to analyze the extent of the interests of the workers, as between exports and the displacement effects of imports, upon an individual company basis. To attempt to do this would lead to blind alleys and would involve a risk of logical error. The proportion of a company's output that is exported cannot be used to measure the export interest of that firm any more than can the displacement effects of highly competitive imports, in the final analysis, be measured by the number of workers affected in the first instance.

The logical presumption, throughout, is that segments of an economy that have no direct interest in foreign trade will be benefited by the achievement of the greatest good for the greatest number of those who are affected directly by changes in imports and exports. Thus, if the industries that are on an export basis were to suffer from a loss in exports, the effects would be felt in all parts of the economy of the area in question and in adjacent areas. Similarly, companies which are forced to contract their operations in whole or in part because of import competition would transmit that effect throughout the community and the adjacent economy.

If, then, the companies which are confronted with import competition employ more workers than those which would be benefited by increased exports, the presumption is that the economy of the entire area would suffer if competitive imports were to increase-at least insofar as immediate effects are concerned. Contrarily, if companies which export some of their products or which, in importing raw materials, employ more workers than do the companies protected by import barriers, the presumption is that the economy of the area would suffer if foreign trade were to contract.

To study the secondary, tertiary, and more indirect effects of increased foreign trade both with regard to exports and import competition would necessarily involve, ultimatea study of the economy of the entire Nation. The parts of the national economy are all tied together, and a stress or strain anywhere is felt everywhere in greater or less degree. What would be gained by more completeness of logic would be lost in terms of closeup facts at the community level. Just as a stone thrown into a lake makes an initial splash with ripples extending to all shores, so would the economic fact of a substantial change in imports or exports reveremphasize the displacing effects of increased imports, or those who, on the contrary, stress the indirect expansive effects of increased exports, are sometimes prone to concentrate entirely upon the one set of effects at the expense of the other. In the lake analogy, just alluded to, it would be incorrect to concentrate on the ripples extending to only one shore of the lake. A complete picture would require that the ripples extending in all directions be studied. That is to say, the indirect effects of increased imports should

not be studied unless, at the same time, similar attention is devoted to the positive and indirect effects of increased exports.

Yet, the fact that it is not feasible to analyze all of the indirect effects of changes in foreign trade is no reason why, at the community level, we should not know as much as possible, in concrete terms, about the immediate impacts of foreign trade. size of the initial splash, to revert to the analogy, has much to do with the size and the extent of the ripples in both directions. If the initial impact is not great the chances are that the indirect effects will not be great

On the basis of the replies to the questions contained in the questionnaire it appears that about 31/2 percent of the workers em-ployed by manufacturing establishments answering the questionnaire in the Milwaukee area work for companies that are conscious of direct competition between the products which they produce and imports. (See table I.) Another 33 percent of the workers are employed by companies that are conscious of such competition, but which also export some of their own products to foreign countries. Here the interest is mixed and it would be incorrect to count the entire number of workers as either protected or as on the export side of the question.

TABLE I .- Summary: Workers in manufacturing firms of Milwaukee classified according to reported interest in foreign trade, 1953

I For actual number of workers see table "Summary of number of workers of replying firms on basis of exports and competitive imports" in section on "Results of the survey."

Almost 53 percent of the workers, however, are employed by manufacturing establishments that export some of their products to foreign countries and which are not concerned about competition from imports. About 101/2 percent of the workers are employed by companies that express no interest in either exports or in import competition. This last-named group to which should be added mercantile workers, transportation workers, professional people, and others, would be affected to lesser or greater degree by increased exports or increased imports presumably only to the extent that such changes in foreign trade would make for greater, or less, prosperity in the economy of the city as a whole.

In table II these facts are broken down according to industry groups. The upper section of this chart shows the importance of these eight groups, in terms of number of workers. Largest of all is the machinery group, with over 89,000 workers employed. Next are the metal products and the food products groups, with about 16,000 workers in each.

The lower portion of the chart shows, in terms of percentage distribution, the proportion of workers in each industry group ac-cording to the interest of the firms in the group with regard to exports and with regard to import competition.

The greatest percentage of workers who are employed in firms likely to be affected by import competition are in the chemical, petroleum, clay, and glass products group. Next in importance are the wood and paper products, leather products and textile products groups. It should be noted, however, these are the four groups that have the that smallest number of workers, as is indicated in the upper portion of the chart.

The export interest is dominant, on the other hand, in the machinery group, which accounts for over 89,000 workers, the food products group and the metal products group, and the miscellaneous groups. Even in the wood and paper products, and the chemical products groups, however, the export interest is considerably greater than the import competitive interest. In the leather products group the export interest is only slightly greater than the competitive import interest.

From table II, it is clear that some industries have a high proportion of firms and workers which have a mixed interest as regards exports and competitive imports. As pointed out previously, there has been no attempt to measure the extent of interest in exports or imports on an individual firm basis. Companies and industries which encounter import competition are more inclined to raise questions of protection from unfair competition or cheap labor imports than are exporting firms inclined to stress the importance of markets abroad. On the other hand, the immense size and potentials of the American market are such that internal market considerations often outweigh the attention which might be given to the possibility of export markets in the future resulting from a reduction in trade barriers.

The availability of dollars abroad, the maze of currency restrictions and other import barriers which American exporters face, the resurgence of competition in export markets, both in terms of well-made highly competitive goods and in terms of extensive credit facilities used by other exporting countries, are all mentioned in the replies to the questionnaire as of significance to Milwaukee manufacturers.

Finally, many firms in every industry in Milwaukee need and use goods produced abroad. Imports of hops and malt breweries, newsprint for the paper industry, special hides and leather for the leather goods industry, nickel and many other metals and alloys for the metal products industry, special lenses and instruments for the in-

struments industry, all link Milwaukee with the rest of the world. The facilities of its excellent deepwater harbor, the opportuni-ties to be provided by the St. Lawrence seaway, and its advantageous position in regards to routes of the major railroads, give Milwaukee a deepening interest in foreign trade.

METHOD AND LIMITATION

Method

Since Milwaukee's economy is devoted largely to manufacturing, the main emphasis of this study is on manufacturing firms in its metropolitan area. By consulting census data as to sizes of firms, types of industries, and total manufacturing employment a fair idea of the industrial make-up of Milwaukee was developed. With this industrial picture in mind a list of 250 firms was selected to be surveyed by correspondence.

A letter was sent to these 250 firms, explaining the purpose of the survey and asking their cooperation by answering the following questions:

1. What are the principal products produced by your company?

2. What was your annual output of these principal products in 1953? (in value and in units of quantity, if possible).

3. With which of your products do you regard imports as competitive? Which imports?

4. Which of your products do you sell for export abroad? (In value and in units of quantity, if possible).

5. Are any of the materials used by you imported from abroad? If you do not have this information will you please furnish us with a list of materials that go into your products?

6. What is your total average employment? 7. We shall appreciate any comment you may care to make regarding the significance

of (a) exports and (b) imports to: (i) Your own company

(ii) The industry of which your company is a part.

(iii) The city of Milwaukee.

About three-fourths (180) of the firms replied. Responses to the letters differed as to the completeness of their answers. firms merely supplied short answers to the questions 1-6. Others commented at length on the importance of exports and imports to their own firms, to their industry and to the city of Milwaukee.

For the purpose of analyzing the impact of foreign trade on the present or potential markets of the products of Milwaukee's manufacturers the 180 replies were classed into the following broad categories:

1. Firms which stated that imports are competitive with their products and which

do not export.

2. Firms with a mixed interest which stated that imports are competitive with their products and which also export.

3. Firms which export and which are not concerned with import competition. 4. Firms which stated that they do not

export and do not consider imports to be competitive with their products.

By totaling the number of workers of the

firms in each of the four categories a quantitative measure of the importance of each category was established. Also analyzed were the commodities produced abroad on which Milwaukee manufacturers are dependent.

Other sources have also been utilized to throw light on the position of Milwaukee with respect to foreign trade, especially businesses and workers in transportation and in the trade and service industries. Census data, as previously mentioned, directories, State and private publications, magazine articles, and general reference works were all used.

Limitations

Economic forces in operation throughout the entire country have an impact on the economy of Milwaukee. This is especially true in the case of this city since it is a center of capital equipment industries, often designated as "feast or famine" lines of activity. It is probable that some producers in Milwaukee are affected by import competition indirectly through the customers which they supply in other parts of the country. Likewise, in some instances, Milwaukee manufacturers sell their products to other industries which have a substantial export interest not apparent to the supplying firms in Milwaukee. These relationships often are not apparent, although several such situations were indicated in the replies. such information is not available, it is impossible to note, much less to trace, these secondary and tertiary effects of foreign trade on the region.

The effects of competitive imports, exports, or dependence on imports is less clear on such industries as transportation, trade, and services than on manufacturing industries. To the extent that the reverberations from the initial impact of foreign trade are not traceable the scope of this survey and the conclusions which might otherwise be drawn are limited.

Another limitation inherent in this study and closely related to the one above is the lack of field work. There was no opportunity for first-hand interviews with the people in industry and labor in Milwaukee. Census tables are an inadequate substitute for personal inspection of the economic character of a city or community. Neither is correspondence altogether satisfactory as a means of collecting information. Fortunately, a substantial number of firms replied to the

questionnaire, and many of the replies were fully expository as to the importance of foreign trade to the area. The interest of a number of manufacturing firms and industries with respect to foreign trade is divided. On the one hand, they export a substantial proportion of their products; on the other hand, part of their production is apparently faced with keen import competition. This appears to be true of some firms manufacturing heavy electrical equipment which is said to be facing stiff competition from Britain, and to a lesser extent from Germany and Italy. Without more facts than are presently available it is not possible to measure the balance of interest in these cases. Indeed, for the country as a whole, it would appear that many of these industries and firms have themselves not arrived at a complete answer as to the effects of foreign trade on their operations.

Finally, it must be added that the extent and direction of adjustments in domestic industries and firms is not foreseeable if exports were to be sharply curtailed or imports were to be allowed to compete freely

with domestic production.

To conclude that a particular community has, in fact, an export interest on the basis of the number of workers in exporting firms, and, therefore, an interest in lower trade barriers and higher levels of trade does not take into account the adjustments that might be necessary if imports were to be allowed to compete more freely by reducing import barriers. Or to say that a region faced with import competition of a damaging magnitude has an interest in higher import barriers and a protected domestic market merely on the basis of the number of firms and employees clearly threatened by import competition, again, does not take into account the adjustments to the economy that would be necessitated by a curtailment of exports.

Too many other economic forces are at work in a dynamic economy to allow characterization of a community as proof positive of the benefits of freer trade or as an infallible example of the advantages of protec-The purpose of surveys such as this is tion. to place in more local and, it is hoped, more understandable, terms the problems that the

United States faces in finding and following foreign trade policy in the national interest.

THE ECONOMY OF MILWAUKEE

Milwaukee is the largest metropolitan area in Wisconsin. It is located 85 miles north of Chicago, Ill., on the southwestern shore of Lake Michigan and has a population of approximately 900,000. The metropolitan area embraces the whole of Milwaukee County.1 Besides the city of Milwaukee, which accounts for 73 percent of the area's population, such cities as Cudahy, South Milwaukee, West Allis, Wauwatosa, and others are also included in the metropolitan area.

In terms of population Milwaukee is the 16th ranking metropolitan area. In recent years it has ranked eighth or ninth among metropolitan areas in terms of "value added by manufacture."

The Milwaukee metropolitan area has a labor force of over 380,000 workers.2 cording to the 1950 Census of Population the labor force is engaged in the following types of employment.

TABLE III .- Labor force employed in the Milwaukee metropolitan area, 1950

Industry	Number employed	Percent of total	
Agriculture, mining, and forest and fisheries Construction Manufacturing Transportation, trade, and services	2, 604 18, 966 160, 545	(¹) 5 43	
Total	374, 755	100	

¹ Less than 1 percent.

Agriculture, forest and fisheries, and mining Employment and economic activity in agriculture, forest and fisheries, and mining are very limited in the Milwaukee metropolitan area. Of the 2,600 workers employed in these 3 industries in 1950, approximately 2,200 were engaged in agricultural pursuits. For Milwaukee County the value of all crops sold was \$6.5 million in 1949 (the latest agricultural census). Horticultural specialists, \$3.1 million, and dairy products, \$1.1 million, together, accounted for two-thirds of the total value of farm products sold in Milwaukee County.3 Within the metropolitan area itself farming is very limited, although Milwaukee, as a commercial center, services the products of the rich farmland to the west. The initial impact of foreign trade on Milwaukee is of little direct consequence to agri-culture in the region. The same can be said for the mining and for the forest and fisheries industries.

Transportation

Approximately 17,500 workers were engaged in the transportation industry of Milwaukee in 1950. The city's transportation facilities are good and include 3 major railroads, 11 airlines, numerous trucking firms, convenient warehousing terminals, and modern port facilities serving an excellent deepwater port.

The three major railroads that serve the Milwaukee metropolitan area are the Chicago & North Western Railway System, the Chicago, Milwaukee, St. Paul & Pacific Rail-Co., and the Minneapolis, St. Paul & Sault Sainte Marie Railroad Co. Milwaukee's proximity to Chicago, the Nation's railroad hub, puts the area within reach of most major rail lines, and Milwaukee's freight rates to the east are the same as

Chicago's. This freight rate advantage is due, at least in part, to the efficient car ferry services which cross Lake Michigan between Milwaukee and the Michigan cities of Muskegon and Ludington. The car ferry lines are operated by the Grand Trunk Western Railway and the Chesapeake & Ohio, which give Milwaukee direct rail connections to the east across Lake Michigan.

The trucking firms which serve the Milwaukee metropolitan area include: Advance Express, Cushman Motor Delivery, Hancock Trucklines, Interstate Dispatching, Interstate Motor Freight, Trans-American Freight, Ziffrin System, and Olsen Service. These companies and others in the area are used extensively to handle the freight which moves over the docks of the port, especially fuels and building materials. Trucking firms also provide a more than auxiliary transportation service connecting Milwaukee with other commercial and industrial centers in the Midwest.

With a new terminal to be completed in the fall of 1954, it is said that the modern facilities at General Mitchell Field in Milwaukee will match most of the airfields in The field is operated by the the country. county. Milwaukee is also fortunate in having an airport conveniently located near its business district. The terminal facilities at the Maitland airfield include accommodations for seaplanes, amphibian, and landtype aircraft. With a growing emphasis on air cargo and air travel, Milwaukee is at present well served by such airlines as: American, Capital, Flying Tiger Air Freight, Northwest, United, Emory Air Freight, Acme Air Cargo, Wisconsin Central, Anderson Air Activities, and Braniff.

The port of Milwaukee

Milwaukee's port, one of the leading Great Lakes ports, handles a large volume of bulk traffic, mainly coal. In recent years, petroleum products have been increasing in importance as a bulk commodity in the port's commerce. Included in an annual average of 8 million tons, in addition to bulk traffic, is the car-ferry traffic and foreign commerce. Package freight on the Great Lakes has been considerably reduced since the beginning of World War II.

The port itself consists of an outer basin or harbor of refuge, and the inner commercial harbor located in the three rivers, the Milwaukee, the Menominee, and Kinnickin-nic, and a system of artificial slips and canals which flow throught the city. It is said that the port of Milwaukee is commercial rather than industrial in character.4 It remains to be seen whether, in conjunction with the planned development of the port and the growing industrialization of the region, the port will acquire a more industrial flavor. The position of the port of Milwaukee in foreign trade is discussed below.5

Commercial and financial services

Milwaukee is also an important commercial and financial center. Although its nearness to Chicago probably has discouraged development to some extent, Milwaukee's commerce has grown with the increased tempo of its manufacturing industries. It is estimated that the Milwaukee metropolitan area has an effective annual buying income of \$1.9 billion. Retail sales are mated to have reached \$1.2 billion in 1953, while wholesale sales amounted to an estimated \$769 million.6 Milwaukee's 30 banks and 12 branch banks have resources of \$1.3 At least five of Milwaukee's banks have foreign-trade departments. With the advantages of its excellent transportation connections to the east and the vast marketing area to the west as far as the Rocky Mountains, Milwaukee probably will continue to grow in commercial importance.

Manufacturing

Milwaukee's manufacturing industry is highly diversified. Among its products are turbines, trucks, farm machinery, automobile bodies, bulldozers, and many other kinds of earth-moving machinery, motorcycles, gasoline and diesel engines, outboard motors, beer, leather and leather products, iron pipe and high-pressure steel pipe, and many types of special machines such as food-product machinery and baling presses. The following table shows employment and value added by manufacture for 1947 and 1953 (estimated):

Table IV. - Manufacturing establishments, manufacturing employment, and value added by manufacture for the Milwaukee metropolitan area, 1947 and 1953 (estimated)

Footnotes at end of speech.

and publishing, and paper and allied products industries.

According to the 1950 census, approximately 43 percent of the labor force in the Milwaukee metropolitan area is engaged in manufacturing and over two-thirds of the manufacturing employment is in the durable-goods field.

Milwaukee, as a manufacturing center, has a high degree of skilled labor. It has excelent supplier-consumer relationships in the primary to fabricated metal to finished machinery and equipment industries. Indicative of its skilled workmen are the successes of Milwaukee's inventors; Milwaukee can claim such early "firsts" in machines as the first practical typewriter, the outboard motor, a recording meter, and a pig-iron casting machine. These and many other inventions and innovations mark the substantial contributions that have been made to the advancement of business and industry by the industrial skills of Milwaukeeans.

RESULTS OF THE SURVEY

The letters that were sent to 250 firms elicited 180 responses. These 180 firms employ over 145,000 workers, or almost three-fourths of all manufacturing employment in the metropolitan area.

Every major type of manufacturing enterprise in Milwaukee is represented in the replies that have been received. Practically every shade of opinion has been expressed regarding the importance of foreign trade to the Milwaukee manufacturing community. Opinions are to be found among the replies ranging from extreme indifference to well thought-out statements of company or industry position on foreign trade and foreign trade policy.

Exports and competitive imports

The following analysis is concerned with the effects of foreign trade on manufacturers of the Milwaukee area with respect to markets and sales. The extent to which the manufacturers of Milwaukee are dependent upon imports of raw and semifinished materials will be discussed below.¹

It is clear that a number of the firms in the area are faced with import competition. In other cases a division of interests exists in that the firms which export also produce commodities with which imports are competitive. On the other hand, many firms which export do not find imports to be competitive at all. Finally, many firms do not export and do not produce commodities which compete with imports.

The replies are broken down into the following categories:

L Firms which are confronted with import competition and which do no exporting.

H. Firms with a mixed interest, in that they export and are also confronted with import competition.

III. Firms which export and which are not concerned with import competition.

IV. Firms which reply that they have no interest in exports and that they are not concerned with import competition.

The replies have been tabulated on the basis of the information contained in the replies. If a firm states in its reply that imports are competitive and that it has no exports it is placed, automatically, in category I. If the reply states that the company exports and produces commodities competitive with imports it is placed in category II, etc. No attempt has been made to go beyond the reply in order to force a company into any category.

In summarizing the replies under the categories above in quantitative terms, the number of employees is used since the number of employees is the only common denominator in the replies. The following table shows the results of the analysis of the replies on the basis of the above categories by number of workers.

Footnotes at end of speech.

Summary of the replies

Fifteen of the manufacturing establishments responding to the questionnaire state that imports are competitive with their products and that they have no export sales. These firms (designated category I) employ about 5,000 workers. There are 42 firms employing over 48,000 workers in category II, those which find imports competitive and which also export. In category III—companies with some interest in exports—there are 54 firms employing 76,600 persons. There are 69 firms which indicate in their replies that they neither export nor produce commodities which are competitive with imports. These firms (category IV) employ slightly more than 15,000 workers.

On an industry basis the replies give a closer picture of the impact of exports and competitive imports on Milwaukee manufacturers. The replies are classed in broad manufacturing industry groups since many Milwaukee manufacturers are fully integrated companies producing a variety of products.

Food and kindred products: Along with its beer, Milwaukee, once an important milling center, still has several millers and grain products manufacturers. Being in what the citizens of Wisconsin term, "the dairyland of America," dairy products are also an important item in the manufacture of food and kindred products in Milwaukee.

Replies were received from 17 firms (16,500 employees) in the food and kindred products industry in Milwaukee. Among the commodities produced by these companies are: beer, canned vegetables, meat products, malt, corn products, yeast and similar products, chocolate and cocoa products, candies, cookies, fountain topping, and chocolate dairy powders, dairy products, and nutritional supplements.

I. Import competitive interest: Only one firm in the food and kindred industry fell into the category of not exporting, but experiencing import competition. This firm producing chocolate and cocoa products states that cocoa powders in bulk are being imported from Holland, England, France, and Italy. The firm expresses its position in the following way:

"Cocoa powders from these various countries are not particularly troublesome in the city of Milwaukee, as much as they are in other parts of the country to which we ship. Even in Milwaukee, however, cocoa powder from Holland is being delivered at prices far below our cost. * * *

"These imports of foreign cocoa powders have cut deeply into the cocoa powder business of the entire American chocolate manufacturing group. Since the manufacture of cocoa powders also yields cocoa butter which is vital in the manufacture of chocolate prod-

ucts themselves disturbance to the United States chocolate manufacturers goes far deeper than any loss in cocoa powders business itself."

II. Mixed interest: Eight manufacturers of food and kindred products indicate in their replies that they find imports competitive and also export their products. Two malt manufacturers which consider imported malt to be competitive also export. One malt producer exports only 1 percent of total production, the other 8 percent.

A manufacturer of crackers, cookies, packaged candies, etc., evidently has very little export sales, with the exception of military sales abroad; the firm replies:

"Imports of European candles in boxes, bags, and also bars at lower prices than we can possibly manufacture for are now on the upgrade and commonly seen in the United States markets. This could seriously affect not only our sales picture but the sales of the entire candy industry in the near future."

A dairy which produces bottled milk, ice cream, evaporated milk, and powdered milk, considers powdered milk from Holland to be competitive. However, it also exports sweetened powdered milk in small quantities.

A producer of corn grits, corn meal, corn flakes (brewers and confectioners), core binder, processed flours, hominy feed, and corn oil considers various grains used for feeding to be competitive with hominy feed. Otherwise, this firm exports corn grits, meal, flakes, and core binder. The amount of exports is not known.

Two major meat and meat-products producers in Milwaukee consider canned hams as generally competitive. Both export lard, and one also exports dry salted pork, dry sausage, and smoked meats. One firm states that it "attaches no special significance to either imports or exports to (its) operations in Milwaukee."

A small firm producing food seed products for feeding cage and outdoor birds, and lawn-seed and grass-seed mixture, exports its bird products on a limited scale. This firm considers imports of both bird products and lawn seed to be competitive. It is, however, dependent on importations of niger, canary, poppy, sesame, poa trivilis, and fescues seed.

III. Export interest: Among the food and kindred product producers which export are three breweries. Although exports of beer do not appear to be very important to these firms, one beer company exported 5 percent of its production in 1953. It would appear on the basis of the replies that imports of beer are not considered to be of much concern, competitively speaking. A small firm manufacturing nutritional supplements exported 3 percent of its production to Can-

ada in 1953 and has no competition from exports.

The above firms employ 10,300 workers,

IV. No expressed interest: There are 4 firms manufacturing food and related products employing about 1,200 workers which state that they are not affected by import competition or availability of export markets. Among the products of these firms were canned vegetables, meat products, and yeast and similar products.

Textile mill and apparel and related products: Replies were received from 11 firms employing approximately 6.800 workers in the textile and apparel industries.

I. Import competitive interest: In the manufacture of apparel and related products two manufacturers having no export sales express concern about import competition. The first manufactures women's fabric gloves, made from nylon, cotton, and rayon materials, and men's and ladies' leather dress gloves. In answer to the question concerning import competition the company

replies that:

"All of our products are in direct competition with imports. Our industry does not require a large investment in buildings, land, and machinery, but a substantial investment in the training costs of help. Because it is in the needle trades and does not require a large initial capital investment, it encourages many people as individuals to enter into the industry. Labor is a high percentage of the total cost, and because of the fact that there are such wide differentials in labor costs in foreign countries, we find that they are able to manufacture at substantially lower costs, even in spite of the nominal duty rates that exist at the present time."

With regard to the significance of foreign trade the company comments as follows:

"Exports are of no significance to our company or our industry, as long as we have to compete in those foreign markets with sources of supply that are paying labor rates of from \$1 a week to 25 cents an hour. The city of Milwaukee obviously is interested in exports because many of the industries here are manufacturers of heavy goods and are interested in expanding their world markets. They are producing goods in an industry that requires a high capital outlay but one that does not have the competition on a worldwide basis that an industry such as ours has. Imports are highly significant to our company in our industry because they seriously compete with the products that we are making and jeopardize the possibility of our continuing to produce these items in this country. From that standpoint, it can well affect the economy of our city since the largest share of our employees are women, which helps to stabilize the labor force."

A very small amount of women's nylon dress gloves is exported by this firm, although the exports are insignificant in terms of total company operations.

The second firm, a manufacturer of millinery, although not affected directly, lists the following competitive imports: Wool felt (hat) bodies, fur felt and velour bodies (produced in Connecticut and Massachusetts), imported from Italy and France and at one time Czechoslovakia and Austria. The reply states further that, "Occasionally there are imported ready-to-wear felt and straw berets of various kinds, principally from Italy."

In commenting on the significance of foreign trade the company states:

"Being in a style business exportation of our product is not very practical. Because of the Canadian import duties it is not practical to ship millinery products into Canada as Canadian factories can undersell us. * *

"We are largely dependent for raw materials, principally straw braids and bodies, on imported goods because the domestic manufacturers of these items have not developed,

and even during the war, when domestic braid manufacturers tried to supplement the limited imports, they were not very successful. However, there are a few domestic manufacturers still producing yarn and belastraw braids for the industry. The millinery industry has declined in volume during the last 25 to 30 years because of increasing hat-less-ness, in spite of the increase in population, so that the industry is largely made up of many small factories. As for the city of Milwaukee there are at present only two factories doing a small percentage of the total volume."

This particular firm is dependent on imports of straw braids and bodies and other accessories. The competition from imports is only one of many factors affecting their total sales picture.

II. Mixed interest: Two hoslery companies manufacturing both men's and women's hoslery export both and consider imports of both men's and women's hoslery to be competitive. The replies indicate, however, that neither exports nor competitive imports are very significant in the Milwaukee metropolitan area.

III. Export interest: Only one small firm which has no import competition expressed any interest in exports. This firm manufactures cotton felt for automotive seat pads and women's sportswear. The reply states that seat pads are sent abroad directly by automotive companies, and the company has no idea how many are exported.

IV. No expressed interest: Among the manufacturers of apparel and related products there were six replies from firms indicating no interest in foreign trade. These firms employ about 1,400 workers and manufacture such things as cloth caps, infant underwear; junior dresses, suits, and sportswear; and hospital and institutional apparel. A manufacturer of truck and tractor seating is included in this group also.

Lumber and wood products and paper and allied products: These industry groups employ approximately 7,000 workers in the Milwaukee area with the paper and allied products industry apparently being the most important activity of the 3. Fifteen firms with about 4,700 workers replied to the questionnaire.

I. Import competitive interest: Two firms employing 1,100 workers find imports competitive and have no export markets. A producer of paperboard, corrugated, and solid fibre containers and folding cartons states that paperboard is the principal item produced by the firm which is competitive with imports.

"Exports are not important to our own company due to our location in the Middle West. We believe that this is generally true of most companies in our industry similarly located.

"Imports are an important factor as all grades of paperboard are manufactured in foreign countries with labor rates and similar costs substantially below those prevailing in the industry in this country. From this standpoint, the subject of imports is important to us."

No breakdown is available as to the importance of paperboard in the total production of the company, but the firm considers import competition to be an upsetting factor in the domestic marketing of their paperboard production.

A manufacturer of seasonal toys, sporting goods, advertising displays all manufactured from molded pulp considers the imports of papier mache toys from Europe, particularly Western Germany, and from Japan to be competitive.

II. Mixed interest: Two firms (280 employees) which have a small export interest consider imports to be competitive. A manufacturer of lace paper, paper cups, napkins, etc., considers imports to be competitive with

about 10 percent of its production. The company exports less than 1 percent and considers exports to be unimportant to its operations. A second firm indicates that some of the local industries for whom they are a source of supply for paper requirements have been affected by competitive imports and states that, "Sales have been depressed to these accounts * * * (notably Harley Davidson)." The firm is concerned with exports because it furnishes some packing materials for the firms which export.

III. Export interest: The export interest of firms in the wood and paper products industry is expressed in the replies of two firms employing 1,600 workers. One is a producer of packaging materials, including cellophane, pliofilm, polyethylene, glassine, wax laminated glassine, foil acetate paper, various foil laminations. folding cartons, letterpress printing and lithography. Also produced by the firm are silk screen process printing, and fabricating bags, pouches, and tubes. This firm states that all of its products are available for export, but cites no figure of the amount of its production exported. The reply stated that, "Beginning with the year 1954 our plans are to take a more active interest in export sales. * * *"

A firm producing export boxing and crating, also manufactures food freezers and air conditioners. It states that its exports consist of "packaging and boxing of goods for export—freezers and air conditioners just beginning to enter the foreign market." This firm also states that:

"The significance of export trade to our company is quite apparent in view of the fact that boxing and processing of shipments for export constitutes the major part of our industry and without this we would almost be out of existence. This applies to our boxing and packaging industry as a whole as manufacturers could very well handle their domestic boxing and crating without the service which we offer. The exports are of extreme significance to the city of Milwaukee as it employs quite a number of people and fills in the low spots in production. It is significant that export business is usually greater when we have a slowing up of our normal business."

IV. No expressed interest: Replies from nine firms employing about 1,750 workers producing wood products and allied paper products indicated they had no import competition and no export sales. The products of this group of firms include: lace paper products; business supplies; stationery; posters, labels, displays, etc.; corrugated shipping containers; and paper boxes and cartons. Also included in this group is a manufacturer of television, phonograph, loud speaker and similar types of cloth-covered and painted plywood cabinets.

Chemicals and related products, petroleum and coal products, and stone, clay, and glass products: These three industry groups are considered together because some of the firms produce several products that are classed in all three industry groups. Replies were received from 9 firms employing about 2,200 workers in these 3 industry groups.

I. Import competitive interest: Two firms employing 800 workers state in their replies that imports are competitive with their products. Neither firm exports. One company producing paint, mirrors, and church windows mentions that stained glass and plate glass are competitive. However, this firm imports mosaic, stained glass, and plate glass, and it is not possible to ascertain just how troublesome imports are.

A manufacturer of coke, gas, tar, ammoniacal licuor and light oil products states that the products that they produce and which are affected by imports are principally tar and light oil. The company exported a very small amount of coke and

A187

ammonia in 1953 and apparently considered these sales to be insignificant. The com-

pany feels that:

"Our own company is adversely affected by the low-price imports of creosote, naph-thalene, and benzol. The United States coal chemical industry is also affected adversely by low-priced imports. Since benzol, toluol. and xylol are strategic materials, the importation of these products affecting their production in any way can prove detrimental to our war efforts. Also, unemployment in the city of Milwaukee is increased when the plant is not operating at capacity."

II. Mixed interest: A firm manufacturing flat glass products, paint, varnish, and lacquer products, soda ash, caustic soda, and chlorine considers flat glass products from Europe to be highly competitive with flat glass products produced in this country. This company also exports flat glass specialties, paints, varnishes, and lacquer products, soda ash, and caustic soda. Figures are not available for the Milwaukee operations separately, but on a national basis the company exports 3 percent of its production. states that:

"We do little, if any, exporting of products made in the city of Milwaukee because of its distance from the coast. The market for our products in Milwaukee is little affected by imports for the same reason."

III. Export interest: Four firms employing about 800 workers, mostly in the chemical and allied products industry, export their products and do not find imports to be competitive. A small firm producing pharmaceutical specialties exports 24 percent of its production and seems concerned about its competitive position in export markets in regards to credit facilities available to exporters in other countries. A manufacturer of private label cosmetics states that some of its production of cosmetics for national distributors finds its way into export markets, but the firm has no way of knowing how much. Two small firms produce leather finishes and industrial finishes, including wax emulsions for the shoe industry, and leather dyes, oils, and soaps. One firm exports 1 percent of its production, the other 10 percent. On the significance of foreign trade, one of these firms states that:

"Improvement in both importing and exporting raw material could be obtained with a better port of Milwaukee facilitated by the St. Lawrence Waterway, which would enable larger ships and more frequent sailings."

IV. No expressed interest: Two firms, one a chemical company producing detergents, the other a manufacturer of storage batteries and paints and varnishes, state that they do not export and do not consider imports to be competitive with their products. These firms together employ 180 workers.

Leather and leather products: Milwaukee has long been an important producer of leather and leather products. This industry is still an important part of Milwaukee's manufacturing picture. Replies were received from 20 firms with 8,460 employees in the leather and leather products industry.

I. Import competitive interest: Three manufacturers of leather and leather products which do no exporting feel that imports are competitive with their products. A lambskin tanner and dyer states that, "Imports are a distinct threat despite present inadequate tariff; tariff reduction or elimination would invite disastrous consequences,

A manufacturer of men's dress shoes, growing girls' shoes, misses' and children's shoes feels that "Men's shoe imports are unfair competition at present." Men's shoe production accounts for well over half of this firm's production.

The firm comments that:

"Imports of men's shoes from England sometimes sold in two Milwauke department stores are priced below what they can be produced for here and are therefore unfair competition. Tannery and shoe factory labor in England is much below us."

Another firm producing men's shoes mentions that British men's shoes are competitive, but adds that "imports of footwear to this area are negligible."

II. Mixed interest: In the leather and leather goods industry in Milwaukee firms employing about 4,500 workers find some imports competitive and also export to some degree. A company which tans shearlings exports 6 percent of its production and considers imports of mouton competitive. A company manufacturing leather principally for use in shoes and gloves feels that imports are not very competitive, except on rare occasion in certain types of lining and strap leather. Exports of shoe splits amount to 1 to 2 percent of production annually. This company comments on the significance of foreign trade to the leather industry as fol-

"Exports are a very small end of our business, and imports as a general rule do not interfere directly with our business. As far as the leather industry [is concerned], the exporting of hides, during the last 2 or 3 years, because of the high world market, has had a tendency to firm our domestic hide market, which in reality has had an effect on leather prices. In this writer's knowledge, it is the first time that we have ever become an exporting nation, as far as hides [are concerned]. Normally we usually import more than we export."

Another leather manufacturer (calf and kip leather) exports less than 2 percent of its production and feels that "exports are not vital to either our company or our industry." As to import competition, the firm

states in the reply:

"Importation of finished leathers is a grave threat to the industry, as our rates of pay are four times or more what our foreign competitors pay. During the period 1920 to 1930 when calf leather was on the free list we lost progressively up to 40 percent of the domestic market to sweatshop foreign produced leathers. I might add that the calf industry is far more vulnerable to cheap labor foreign competition because of the light weight and high value of our product. Heavier leathers of course benefit by higher relative transportation and distribution costs."

About the same comments were given by a leather manufacturer of cattle hide shoe upper leather which exports about 1 percent of its production and considers imports of cattle hide shoe upper leather from Europe and South America to be a particular threat in view of the subsidies on the part of exporting nations and low labor costs abroad.

Two shoe manufacturers, one making men's dress and work shoes, one making men's work and dress shoes and children's shoes, consider men's dress shoes to be competitive. One firm states that imports of medium high priced men's shoes directly compete with its potential marketing field. Both firms export, but the amount of exports is not significant.

Another firm making children's and growing girls' shoes maintains imports of are competitive. Both types of shoes are exported. The amount exported or the degree of import competition is not known. A small firm making general footwear exports 2 percent of its production and considers all slipper items to be competitive with imports.

III. Export interest: One manufacturer of men's fine shoes exports 1 to 2 percent of total production and does not find imports to be competitive.

IV. No expressed interest: Nine firms manufacturing leather and leather goods which express no fear of import competition and no interest in exports employ about 850 workers. These firms manufacture tanned split leather; sideleather for the shoe and the leather goods industries; work gloves

and work shoes; children's shoes; racing harness and accessories; industrial leather goods; hand luggage and sample cases.

Primary and fabricated metals tries: As mentioned previously, Milwaukee has an excellent supplier-feeder system in its metal industries. Replies were received from 38 firms in the primary and fabricated metals industries. These firms employ almost 16,500 workers.

I. Import competitive interest: In the primary and fabricated metals industry, three manufacturers feel that imports are competitive. A foundry supplies firm feels that no imports are competitive, except those which may harm our customers. this connection the firm mentioned that imports are harmful to producers of motoreveles.

A firm producing hardware specialities, metal stamped specialities and carpet sweepers listed the following competitive imports: brass and alumium continuous hinges, hinge butts, ball bearings and wheel parts for velocipedes and baby carriages.

A manufacturer of brass plumbing goods states that imports are competitive to all brass plumbing goods. As to the significance of imports the firm comments as follows:

"As far as our own company is concerned, we experience some competition from Italy and Japan because of the importation of some items of brass plumbing goods. In general, the quality of the product imported was considerably under that of the American product, but on the other hand the price was very low.

"As far as the city of Milwaukee is concerned, being away from either coast there is less likelihood of some of the imported goods being shipped to the Midwest than there is on either seaboard. However, what affects the rest of the country, also affects Milwaukee."

II. Mixed interest: Seven firms in the general field of primary and fabricated metals employ approximately 3,150 workers and furnish their products to both exporting firms and import competitive firms. Four of these firms have no competitive imports nor do they export their products. All appear to be aware of the secondary effects of foreign trade.

A company producing malleable iron castings states:

"Our products are largely used on farm machinery, railroad, automotive, earth moving equipment, electrical equipment, etc. most of which are heavy capital goods. Anything that curtails the exportation and encourages the importation of such products concerns our business. At the present time one of our customers, a manufacturer of motorcycles, had their market for their product considerably curtailed by the importation of motorcycles to this country, and the loss of their export market. This has materially reduced the tonnage of castings that we used to make for them, and has decreased employment in the city of Milwaukee for this company.'

Another company, also manufacturing malleable and gray iron castings, as well as railroad car handbrakes and other railroad car specialties states:

"The question of foreign trade and imports are tremendously important to us for our products are components which are incorporated into end products such as farm equipment, railroad equipment, road-building machinery, hardware specialities, mis-cellaneous machinery, automobile, trucks, For that reason if our customers within this country are discriminated against whether in the possibility of their exporting their manufacture or protection against imports manufactured in countries where lower wages and lower standards of living prevail the level of our business and the possibility of our employing local labor will be affected.

A company making steel forgings reports

"About 60 percent of our output goes into equipment, principally 4-wheeled ors. Some of these tractors are extractors ported, but we do not have any information as to which of our products are included in these exports. • • • We also furnish forgings to the machine-tool industry. These people have direct competition from imports."

A manufacturer which does contract metal stampings and produces builders hardware, metal shower stalls, and metal toilet partitions regards imports as competitive with all of its products. This firm also exports metal toilet partitions, builders hardware, and metal shower stalls in small quantities. The actual dollar amounts are not available.

III. Export interest: Two firms which employ 5,100 workers export both primary and fabricated metal products. One large firm producing made-to-order forgings and highpressure steel pipe fittings apparently con-siders exports to be important to the opera-This firm mentions meeting increased tion. competition in the export markets of Cuba, Mexico, and Canada, which are importing these products from the United Kingdom, and more recently, from Germany.

A firm producing bronze castings, forgings, weldrods, wire pipe and condenser tubes, ingots, sheets and plates, fabrications and other bronze products now exports 2 percent of its total production. However, the firm comments on the significance of foreign trade

as follows:

We consider exports as well as imports to be of considerable significance to both our company and the city of Milwaukee. Our export business, while not large at the present time, is increasing yearly and we have coverage throughout Europe, Mexico, and South America. Imports of special metals, such as tin, are of course, quite vital to the foundry and metal industries and are naturally of very deep concern to us. As you know, the city of Milwaukee is one of the most important inland seaports and if the St. Lawrence Waterway project is ever completed, Milwaukee will be even more important and both imports and exports will be of vastly greater value to the city."

IV. No expressed interest: Twenty-six firms state that they do not export, nor do they consider imports to be competitive with their These 26 firms, employing 7,600 workers, produce: non-ferrous castings, steel malleable iron castings, grey iron and semi-steel castings, drop forgings, electric processed steel castings, sheet metal fabrication, structural steel, including fabricated structural steel, steel tanks, wire, metal cans and other metal containers, stamping hardware, tools, dies, jigs, and fixtures.

Machinery, including electrical, and transportation equipment: These three industry groups account for over 50 percent of the manufacturing employment in the Milwaukee metropolitan area. They are considered together since the larger firms in Milwaukee are fully integrated operations produc-ing several different products. Replies from 54 firms employing 89,000 workers were received.

I. Import competitive interest. A small firm manufacturing transformers, principally dry type, and substations, feels that its production is competitive with all imports coming principally from England, Sweden, Switzerland, and Germany. This firm states that, "Imports are a serious competitor to us and our industry and may result in reduced employment in Milwaukee." This This firm exports but in negligible amounts.

II. Mixed interest. Eleven firms in the machinery and equipment field indicate that, although they export, they also find imports competitive. In a few cases it is not difficult to ascertain in which direction the interests of the firm are considered to be. In other cases the balance of interest as between exports and competitive imports is less clear

Milwaukee is the center of production of motorcycles. The industry's position as regards foreign trade is well known since imports of motorcycles are considered to be a very serious threat to the domestic industry. In a very complete reply outlining the effects of imports, one company states:

"On September 18, 1949, European currencies were devaluated by 301/2 percent and immediately prices of European motorcycles comparable to ours in performance dropped 25 to 30 percent in the American market. We have never been able to meet this competition pricewise. * * *

"Immediately imports went up and each year our domestic production went down. This firm in years past exported as high as 40 percent of its production. The present export situation is described as follows:

'The situation so far as our exports are concerned is this. We are shut out of the British Empire except Canada. We find it almost impossible to do business in countries whose currencies are tied to sterling. Our exports to South America are sharply curtailed by the high prices of our motorcycles as compared to the lower priced comparable motorcycles from Europe. The motorcycles in Europe are lower priced because they pay anywhere from 35 cents to 58 cents an hour whereas in our factory with fringe benefits we pay \$2.18 an hour. Our exports now represent between 7 percent and 8 percent of our total production."

Allis-Chalmers' plant in Milwaukee manufactures wheel tractors; crushing and cement machinery; electrical machinery; steam and hydraulic turbines; centrifugal pumps condensers. This company is a multiplant organization as are several machinery manufacturers in Milwaukee. Total company export sales are approximately 9 percent of total billings in 1953 according to the annual report of Allis-Chalmers for 1953. Large hydraulic turbines, electrical generators and large power transformers are competitive with imports.

A company producing large herringbone and helical gears, flexible couplings, speed reducers, motoreducers, special drives includ-ing propulsion drives for different types of vessels, as well as steel castings and weldments states that imports are competitive with its standard product lines, such as flexible couplings, motoreducers, speed reducers and more recently propulsion drives in the tow and tug line. This company states that:

"We compete with foreign builders of ship propulsion drives in the same manner as American shipyards compete with foreign builders. Generally speaking, if a ship is built in this country it is equipped with a drive of domestic manufacture and, to the best of our knowledge, all ships built with American capital in foreign countries have been equipped with foreign drives."

As to exports the company replies that: "Since we are essentially machine component manufacturers, we sell principally to other machinery manufacturers who in turn sell abroad. It is our guess that less than 10 percent of our products end up in foreign countries, most of which would be in the motor reducer, speed reducer, and helical gear lines."

As to the significance of exports and imports this company gave, perhaps, the most complete comment:

"We are essentially a jobbing company. We are not mass producers of any particular product or size of product (except for small flexible couplings) as even the standard lines are produced in batch lots. Furthermore, all of our products, except castings, and weldments, fall into the precision machinery class; therefore labor and supervision is a much higher percentage of cost than is ma-

terial. Consequently, we are in an entirely different labor-wage market than are any foreign competitors and have little or no edge in technology, principally because of the lack of mass production. Obviously we have much more to lose than to gain if trade barriers were lowered; and were we to be washed out of the picture, the mass producers would suffer as we make much of the special equipment used by these people for high-volume production.

"The foregoing applies to all others in the gear and steel-casting industries. All of us are specialists in these fields and therefore serve the special requirements of other manufacturers not users or consumers and must be considered as a part of mass-production machinery manufacturers to the same degree as the tool and die makers, bearing manufacturers, etc.

"Any change in the balance of exportimport trade would directly affect the economy of Milwaukee as its metropolitan area includes a dozen or more large manufacturers in the same category that we are in. It is well known that Milwaukee has a big concentration of skilled labor and it is because of this fact that manufacturers like ourselves can operate successfully in the pre-cision machinery field. Were the economy to be upset downwardly it would cause a transfer and dilution of the skilled labor force which would be a detriment in normal times and a serious handicap in emergencies."

A manufacturer of air-cooled combustion engines exports 8 percent of its production. It finds imports competitive with its entire line. On the significance of foreign trade

it states:

"If, and when, the St. Lawrence seaway becomes a reality it should certainly help Milwaukee because of its diversified industry, both for exports and imports, as well as place this country in a better competitive position in world markets."

A manufacturer of medical industrial and dental X-ray apparatus; X-ray supplies and accessories; and electromedical apparatus states that imports are competitive with its medical X-ray line which accounts for about three-fourths of its total production. This firm exports its complete line; exports amounted to about 10 percent of production in 1952.

A large electrical-control apparatus and electronic-parts manufacturer considers imports to be competitive to both to a small extent. This firm exports 21/2 percent of its production. A small firm manufacturing industrial counting and measuring instruments also exports approximately 2 percent of its production. It stated that "about 20 percent of our product line has foreign competition." The same situation is applicable to a manufacturer of paper converting machinery and special machine tools.

A manufacturer of water meters stated its present competitive position in the fol-

lowing terms:

"Exports: As mentioned before, we used to export about \$1,500,000 to \$2,000,000 worth of meters a year. This has dried up to nothing only because we cannot compete with the European and Japanese watermeter manufacturers. During the time of an emergency, such as Korea and at the present, it seems to me it would be advantageous for the welfare of our Nation not to jeopardize the meter industry, considering the effective way its techniques were used in World War II for the manufacture of ammunition for the Armed Forces.

"Imports: It is obvious that any reduction in tariff barriers on our product could be catastrophic to our company. In fact, it could prove catastrophic to the industry as a whole. The only effect on the city of Milwaukee would be that our present employees would be idle."

A manufacturer of balling press equip-ment states that "We have lost sales re-

cently to * * * German competition involving some extremely large shipments." Exports of this firm "are very nominal."

III. Export interest: The major exporters in the Milwaukee area are the firms in the machinery and equipment field. Thirty-nine firms employing 56,000 workers indicate in their replies that they export some or all of their products and that they do not consider that imports are seriously competitive with their products.

A large manufacturer of overhead cranes, excavators, hoists, welders, electrodes, heavyduty cranes, diesel engines, and prefabricated houses states that it exports excavators, welders, electrodes, hoists, and heavy-duty cranes. Some of these items are export commodities of a substantial degree.

A manufacturer of portable and stationary concrete mixers, truck mixers, and agitators states that all of its products are exported; the same situation applies to a producer of sawmill machinery, steam engines, and waterworks equipment. In both cases export figures are not available.

A milk-bottling equipment firm replies that it exports limited quantities of its products while a bottling machinery manufacturer states that all of its products are exported to some degree. It appears from the comment in the reply of this firm that as regards the export market, "competition in all foreign countries is becoming terrific." The reply states that:

"While no appreciable foreign competition is encountered by producers in the domestic United States market in our industry, the competition in all foreign countries is becoming terrific. From a situation when more than 50 percent of our entire output was shipped overseas 2 years ago, today foreign business has trickled down to only a nominal fraction of what it was formerly. The potential foreign business that is available, due to a combination of prices, terms, controls, etc., that restrict purchases from the United States is consistently being lost to American industry."

As to the importance of exports to the firm and industry, the bottling-machinery manufacturer replied:

"Certainly we and our industry are both directly and indirectly dependent upon foreign business to maintain production up to available capacity. With present high costs and high break-even point, larger volume of production is a necessity in order to keep operating in the black."

A manufacturer of baling presses, malting equipment, valves, and cylinders states that "a relatively small amount of all our products" are exported. A producer of railroad supplies (mostly small parts for locomotives and special lifting jacks) exports some locomotive parts. The firm stated that the exports are rather minor in terms of value, except for Canada. In several other instances manufacturers tend to treat shipments to Canada as part of the American market. Of course, insofar as foreign trade is concerned, shipments to Canada are exports in the same way as are shipments to Brazil or Indonesia.

A portable electric tool manufacturer exports its entire line. A manufacturer of diesel industrial and marine engines and diesel electric generators exports all of its products and spare parts, but the amount exported is not known.

A manufacturer of temperature regulation and air conditioning control systems stated that very little sales are made abroad. Electric ranges and electric water heaters are both exported by one firm but in a nominal sum; a firm making gas, oil and coal ared furnaces, along with cast iron boilers, cooling equipment, incinerators and dehumidifiers also exports a small amount of its total production. A small firm making automatic switches, manual controls and metal stamping, exports replacement switches, evidently a small item of its total business.

A firm making a standardized line of padlocks and hasps states that:

"Although we are not free to divulge all of the information requested, we can tell you that our export business has for years constituted a substantial portion of our total sales. We continue to actively promote the sale of our products in overseas markets and would suffer a serious blow if we were forced to discontinue our overseas business. It should be remembered that our export business helps pay for the general overhead and other fixed charges. Without the returns earned by our overseas business, our domestic business would have to carry the entire load, which would probably be reflected in price increases."

A firm producing magnetic separation equipment, magnetic clutches, disk brakes, etc., indicated that it has been meeting increased competition abroad, although the reply did not state the amount of total production that is exported. As to the export market this manufacturer comments as follows:

"We have, however, had serious foreign competition with respect to the sale of our products abroad. There is virtually an embargo on the shipment of our products to the sterling area. This was especially noticeable after the devaluation of the pound sterling a few years ago. German competition has been growing and this has affected our markets in South America and other parts of the world. We have about reached the conclusion that the only basis on which we can compete in foreign markets is licensing foreign concerns to manufacture our products under a lease or royalty contract.

"Our export market has shrunk considerably and this has therefore affected our growth, employment, and progress as well as having corresponding effect on the city of Milwaukee and our community."

Another firm making industrial motor control systems and accessories as well as lowvoltage distribution apparatus, gas measuring and mixing equipment, and newspaper printing press drives and conveyor systems stated that:

"All of the products we manufacture here are sold for export in some degree. Here again it is impossible for us to establish any units of quantity due to the wide variety of these products so sold. Exports are a relatively minor activity with regard to our overall sales, but we consider it quite important. In this respect we do not feel it is possible to divulge the exact dollar volume of our exports."

On the significance of foreign trade to Milwaukee the comment was as follows:

"We estimate that to the city of Milwaukee exports are relatively important due to the broad diversification of capital equipment manufacturing organizations in this city. We are of the opinion, however, that imports are not particularly important to the city of Milwaukee except the basic raw materials unobtainable except by importation."

Another multiplant firm producing electrical distribution and transmission equipment stated that, the larger part of the export business is done from and through Milwaukee

A producer of oil burners, road machinery, steam generators, and distillating units exports approximately 4 percent of its total production. This firm comments as follows:

"Our export market is principally Central and South America. All of our boilers are powered by either fuel oil or gas, and due to the lack of these materials in Europe, our sales on the Continent have been very small."

A manufacturer of crawler and rubbertired shovels, cranes, draglines, clamshells, trenchoes and attachments and spare parts exports 3 percent of its production. The same ratio of exports to production was given by a producer of front end loaders and bullclams for track type tractors. A producer of foundry flasks and wheelbarrows exports 4 percent of its foundry flasks to Canada. A large manufacturer of 4-cycle, single cylinder, gasoline engines, as well as automotive locks and keys, switches and related equipment exports 3 percent of its production. This firm comments as follows:

tion. This firm comments as follows:

"We and our industry are continuously promoting export business—greater availability of United States dollars would, no doubt, increase our exports materially. * * * We believe export business is good for Milwaukee. Opening of the St. Lawrence River to larger boats will, undoubtedly, make Milwaukee, a much more important export, import, seaport."

Another manufacturer of gasoline engines and air compressors also exports 4 percent of its production.

A firm manufacturing industrial control equipment, including switchboard apparatus, states that only about 1 percent of its production is exported. The export business is handled through an agency in New York which has informed the Milwaukee firm that their prices are often too far out of line with those of European concerns to expect that exports might amount to any appreciable value.

A firm which manufactures electrical, industrial, and laboratory heat-treating furnaces, dry-type transformers, and constant-current regulators exports about 2 percent of its total production.

A firm making drying tumblers for commercial and self-service laundries and drycleaning plants and other similar products exports 5 percent of its production. This firm believes that it could export more, but the currency situation in various countries prevents this.

A firm manufacturing automatic wiremeasuring, cutting, and tipping machines, and other special products exports 5 percent of its production, mostly wire-stripping machines, although all the firm's products are exported.

A machine-tools manufacturer sums up its export situation as follows:

"The entire machine-tool industry, of course, has been historically dependent upon a large percentage of foreign trade. This trade has diminished greatly because of the economic situation in foreign countries and the problem involving currency exchange. Also great inroads upon the market have been made by machine-tool manufacturers on the Continent and in England, with the result that the percentage of exported machine tools from our company (and the effect has been industrywide, also) has been reduced to something approximating 5 percent in recent years. This compares with a normal export market of about 25 to 30 percent."

A manufacturer of outboard motors exports 9 percent of total production, while a very large firm manufacturing automobile frames and parts, vessels, electrodes, pipe, and oilwell casing, exports 6 percent of all of its products.

A large manufacturer of several products such as petroleum transport equipment, dump bodies and hoists, road machinery, dehydrators, oil burners, furnaces, boliers, stainless steel milk transport and storage tanks, and general steel fabricated products exports about 9 to 10 percent of its production. This firm states:

"With reference to question 7, the city of Milwaukee depends a great deal on the export of its manufactured products for its full employment. * * Figures as to the total dollar volume and number of people employed for export products is available. * * * As the figures on the form will indicate, export means a great deal to our company, for virtually 10 percent of our civilian output goes into that field."

A manufacturer of shovels and cranes, pavers, mixers, dumptors, finishers, and mud jacks exports all of its products, exports amounting to 12 percent of production. Another large company's numerous products

include power transmission and conveyor chains, conveying machinery roller bearings, and construction machinery; exports are 12 percent of total production. This company replies that:

'Our export business is of substantial interest and importance to our company and by reason of its volume and the employment which it provides should be of fair impor-

tance to the city of Milwaukee."

A large manufacturer of power shovels, cranes, and draglines, oil well, water well and blast hole drills, and tractor equipment exports 25 percent of its production. other large firm produces component parts for use in end products of other company operations. Diesel injection pumps, gears, forgings, and castings make up the bulk of the component parts produced. The end products of the receiving operations are motortrucks, farm implements, farm tractors, industrial tractors, and equipment refrigeration products, and related service parts. Approximately 27 percent of the Milwaukee plant's output is eventually exported.

A firm manufacturing magnetic separators, electromagnets of all types, permanent magnets and magnetic brakes exports about 20 percent of total sales. This firm comments

on its export market as follows:

Our export market amounts to approximately 20 percent of our total business, exports, including Canada, and needless to say 20 percent of any business is a rather healthy amount. From our observations of other companies in these specialty manufacturing industries, particularly those industries which have a large proportion of their products going to the mining industry, indicate a 20 percent export market is about normal, in fact, a little bit less than some companies that specialize entirely in mining machinery."

IV. No expressed interest: Three firms employing 2,400 workers replied that they do not export and do not consider that imports are competitive. One firm, a manufacturer of machine tools states that, "Our machinery is of the special high production type used primarily by the automotive industry.' firm manufacturing automatic dishwashers, food waste disposalls, dehumidifiers and air craft turbo-superchargers states that almost all of their production is for the domestic market and that, therefore, they are not af-fected by foreign trade. A third firm manufacturing a complete line of automatic temperature controls, does no exporting and does not consider imports to be competitive.

Miscellaneous manufactures: In this miscellaneous industry group there are eight

firms with 850 employees.

I. Import competitive interest: A manufacturer of toys states that imports of toys are extremely competitive in individual price categories. The company does not export

II. Mixed interest: Three firms in this group of manufacturers have an apparent export interest as well as import competition.

A manufacturer of vulcanizers, hot patches, and automotive accessories such as directional-signal lights and mirrors for passenger cars and trucks, aparently exported 80 percent of its production in 1953. How-ever, because of increased competitive imports of tube patches from Germany in re-cent years, this firm states that it has lost an amount in domestic sales greater than its exports in 1953.

A small firm producing photographic darkrom equipment, dental equipment, and motorcycle accessories exports 6 to 7 percent of its total production valuewise, all of which is in photographic equipment. As to competitive imports this firm considers motorcycle accessories competitive. It also states: "Imports from Britain hurt sales of the Harley-Davidson Motor Co. very badly and naturally reflects on our accessory business."

A firm manufacturing engineers' levels and transits, builders' and farm levels, theodolites, astrolabes, alidades, army transits, stereo cameras, viewers, and productors states that imports are competitive with these products, particularly from Germany and Japan. Exporting 1 percent of its production this firm comments as follows:

Exports of photographic equipment are depressed because of world money status and lack of processing facilities for color film in

foreign countries.

III. Export interest: Three firms indicate in their replies that they export and experience no competition from imports. A small manufacturer of industrial brushes for the beverage and food industry considers its export sales of 2 percent of production to be of minor importance. A producer of paint rollers and trays of all types and a manufacturer of inkstands and other desk equipment both export their products; the extent of exports the two firms is unknown. The inkstand and desk-equipment manufacturer states that, "Exports are a very desirable part of our business and an essential part of the industry and the city of Milwaukee."

IV. No expressed interest: A small firm making latex rubber adhesives does not feel that exports or competitive imports are of

any concern to its operations.

MILWAUKEE AS A CAPITAL GOODS CENTER

Milwaukee has been called the principal capital of the capital goods business in the world.* Almost two-thirds of the manufacturing employment in the Milwaukee metropolitan area is in the durable goods Of the replies received in this survey, about 90,000 workers are in firms in the industries producing machinery and equipment, including electrical machinery and transportation equipment. These 90,000 employees account for almost two-thirds of the workers in firms covered by this survey. If the workers of the replying firms in the primary and fabricated metals industries are included almost 75 percent of the workers covered by this survey are in these five industries: Primary and fabricated metals, machinery, including electrical machinery, and transportation equipment. This group of industries provides the products that go to make Milwaukee the capital goods center that it is.

A study was recently made of the export market for capital goods. The results of the study were published in a bulletin by the Council for Technological Advancement in July of 1953.* In summary, the bulletin gave the following general conclusions:

"1. Machinery and equipment comprises by far the largest group of commodities exported from the United States. The \$3 billion of machinery and equipment exported in 1952 accounted for 20 percent of total United States exports, or almost 25 percent of nonmilitary exports. Thus capital goods manufacturers and Government have a great mutual interest in the formation and impact of national policy affecting foreign trade.

2. The importance of export markets to capital goods producers is pointed up by the fact that during the past years about 11 or 12 percent of total machinery and equipment sales have been in these markets, ranging from 4 percent for railroad and transit equipment to almost 23 percent for tractors, parts, and accessories. A recent CTA survey of capital goods manufacturers revealed that exports of many individual firms were an even higher proportion of their total sales than the industry percentages presented here." 18

The following is a list of ratios of exports to total national production for some of the more important products that are made by Milwaukee manufactures:

In line with the replies received in this survey it appears that, as a capital goods equipment center, Milwaukee shares in the importance of exports to the total production of capital goods in the country as a

On the other hand, Milwaukee's capital goods manufacturers face import competition. Imports appear to be competitive with electrical equipment such as transformers. hydraulic turbines, large electrical generators, electric motors, and some electrical conapparatus and X-ray equipment. Imports are also competitive with motorcycles; internal combustion engines; large gears, propulsion drives and special heavy castings and forgings; water meters; and special machinery such as baling presses and paperconverting machinery.

Milwaukee, as a center of industrial skills, is a good example of the advancement and advantages of American industry that make its products so wanted and desired throughout the world. On the other hand, imports from countries where lower wages are paid can sometimes compete effectively with manufactures in Milwaukee that require highly skilled, highly paid labor, and where manufacturing process is not adaptable to mass-production techniques.

However, export sales and competitive imports are not the only way in which foreign

trade affects Milwaukee.

IMPORTS USED BY MILWAUKEE MANUFACTURERS

Manufacturers of Milwaukee use commodities originating in all parts of the world necessary to produce their finished goods. While some of these materials are obtainable within the United States, many of them are not produced in this country and must be obtained from abroad.

In the manufacture of food and related products Milwaukee manufacturers import cocoa beans for use in the manufacture of chocolate and cocoa products. Other manufacturers of cookies, cakes, and candies must import spices, nuts, dates, irish moss, coconuts, and coconut oil. Meat-product com-panies use spices, fuller's earth, and burlap, all import items. Malt manufacturers occasionally import barley, while the brewers of Milwaukee import hops. The beer, ale, and soft-drink producers also must have tin, for plating of cans, and cork for inserts in crowns and kegs. The United States is entirely dependent upon imports for its supply of tin; very little, if any, cork is produced in the United States.

Leather tanners in Milwaukee import such items as chromium, sodium bichromate, quebracho, wattle, eucalyptus extracts, and other tanning materials. Some leather producers import calfskin, while shoe manufacturers import special calf, buck, and kangaroo leather, as well as shoe machinery from Germany and Italy.

The paper and allied products industry and the printing and publishing industry are dependent on newsprint from Canada and, to a lesser extent, on woodpulp imports. Smaller manufacturers of such items as automotive seat pads and truck and tractor seating import burlap, sisal and some cotton. One millinery producer imports straw hat bodies and braids.

Manufacturers of wax emulsion and leather finishes for the shoe and leather goods industries must import shellac, carnauba wax, ouricury wax, manila, gums, casein, castor oil, and other waxes. A cosmetic firm in Milwaukee also imports castor oil and carnauba wax, as well as candelilla wax.

Producers of hardware specialties and a manufacturer of industrial brushes imports hog bristles, as well as goat and horsehair, bass, bassine, and plasava fiber. While the manufacture of rubber products is a relatively small operation in Milwaukee, many machinery and equipment firms use rubber in some form. Natural rubber and other gums must be imported.

The primary metals, fabricated metals, and machinery and equipment industries are most dependent on imports of raw materials. Firms manufacturing iron and steel and other metal castings and forgings import manganese, nickel, copper, tin, chromium, cadmium, beryllium, zinc, lead, cobalt, titanium, lithium, phosphorous, magnesium, antimony, silicon, calcium, zirconite sands, ferromanganese, and other metal alloys, micand various clays. These metals are used along with basic iron and steel in the manufacture of the machinery, electrical apparatus, and transportation equipment that are produced in the shops of Milwaukee.

In a study, Raw Materials: Area of Growing Dependency, it was pointed out that the United States is dependent on imports for 75 percent of its antimony and must import percent of its asbestos consumption. There is also a 90-percent import dependency on beryl, a 99-percent import dependency on chromite, which is used extensively by the tanning industry in Milwaukee, a 90-percent dependency on imported cobalt, a 90-percent dependency on imported manganese, and a 99-percent dependency on imported nickel. These and other raw materials used extensively in the metal and machinery industries are examples of the strong ties that Milwaukee industry has with the rest of the world in terms of foreign trade."

INCREASED COMPETITION IN WORLD MARKETS

Just as competition from imports has increased to some extent in the domestic market since the reconstruction and development of industry in Europe since 1948, it is evident that competition has increased in the world markets to which American manufacturers have been exporting many of their products in the postwar years.

From the replies received in this survey, it is apparent that Milwaukee manufacturers are experiencing increasing competition in world markets, especially from the United Kingdom, Germany, Italy, and Japan. Some of the exports from Milwaukee were financed by the foreign-aid program of the past 7 or 8 years; however, the amount of exports from Milwaukee under the foreign-aid program is not known. There is no doubt that with the decreasing amounts of foreign aid available exporters find it more difficult to make sales when payment must be made in dollars. The lack of dollars and the recovery of European industry weighs heavily upon

the competitive position of American exporters in world markets.

One manufacturing company comments on increased competition in export markets as follows:

"While no appreciable foreign competition is encountered by producers in the domestic United States market in our industry, the competition in all foreign countries is becoming terrific. From a situation when more than 50 percent of our entire output was shipped overseas 2 years ago, today foreign business has trickled down to only a nominal fraction of what it was formerly. The potential foreign business that is available due to a combination of prices, terms, controls, etc., that restrict purchases from the United States is being consistently lost to American industry."

A manufacturer of pharmaceutical special-

ties replies that:

We have noticed an increasing competitive trend in our export business mainly from former German, French, and Italian manufacturers who were once predominant in the export pharmaceutical markets. We are able, thus far, to compete with these European manufacturers on a price basis. However, we find it increasingly difficult to compete with them on the terms which they are extending to our foreign distributors. formerly we sold on letters of credit or sight draft basis, we have been gradually extending this to time draft, 30, then 60, then 90, then 120 days. We now find that the European manufacturers are allowing terms as long as 1 or 2 years. Obviously, to extend such terms, they must receive some major subsidy from their governments. We cannot allow terms extending over that long a period of time without some comparable assistance on the part of our own Government."

Another company is also concerned with the terms which exporters from other companies are able to give. It comments as fol-

"The big problem confronting Milwaukee exporters—in fact all exporters today—is the inability to meet long term financing offered by foreign competition.

"We, of course, recognize that funds are available through such organizations as the Export Import Bank, but this organization, as well as other existing governmental organizations, is not in a position to take care of the majority of extended term orders offered manufacturers in this country.

"Because of such extended terms of 3 to 5 years offered by foreign competition, many orders which should come to the United States are going elsewhere, and unless some legislation is passed to permit banks and insurance companies, such as the Canadian plan, to carry paper without recourse for foreign countries, we are going to lose considerable business in the years to come. This is a serious situation and should have the immediate attention of our legislative groups in Washington."

THE PORT OF MILWAUKEE AND FOREIGN TRADE

Milwaukee is one of the leading ports on the Great Lakes and it is one of the most diversified. It has excellent facilities for handling such bulk cargoes as coal and petroleum products which make up the greater share, volume-wise, of the port's commerce. Grains, building materials, and other bulk commodities are also large items in total port traffic. The car ferry service across Lake Michigan adds to the diversity of commodities handled by the port, and this service aids Milwaukee in taking advantage of its location on the trade routes between the productive interior and the eastern sections of the United States.

It is said that the port of Milwaukee's facilities for handling foreign exports are superior to any other port on the Great Lakes. Although foreign commerce is but a small part of the 8 million tons annually that move across the docks it is of much greater value than is indicated by its volume.

The following table gives the shipping weight and the total value of waterborne exports and imports for the port of Milwaukee for the years 1951-53:

TABLE VII.—Shipping weight and value of United States waterborne exports and imports of the port of Milwaukee, 1951-53

	(milli	Quantity (millions of pounds)		(millions of (millions of		Total	
	Im- ports	Ex- ports	Im- ports	Ex- ports	Quan- tity	Value

Source: U. S. Department of Commerce. Waterborne Trade by United States Port. January-December 1952. Summary Report FT 972, May 19, 1953. Waterborne Foreign Trade Statistics, January-December 1953. Summary Report FT 985. June 15, 1984.

The amount of waterborne foreign commerce of the port has been increasing in recent years, and, although the Canadian trade is by far the greater share of the total, the increase in overseas sailing is indicative of the growth in overseas trade through the port.

Pioneers of the Great Lakes ocean services were the Fjell and Oranje lines of Norway and the Netherlands, respectively. The ships of these two lines were calling at Milwaukee before World War II. There were 45 sailings from Milwaukee to ports of Europe by these lines in 1939.

During World War II there were no foreign sailings from Milwaukee. With the revival of foreign trade on the Great Lakes in 1946, the Fjell and the Oranje lines started their services again. They were followed by the Swedish-American and Swedish-Chicago lines; Hamburg-Chicago, the first German line to service Milwaukee, and the Fabre lines of Marseille, linking Milwaukee with Mediterranean and north African ports.

In 1953 four new lines were added: the Metron Shipping, Inc., linking the Great Lakes with Hamburg, Antwerp, and Bremen; the Ahlmann Trans-Caribbean Line, sailing between the Great Lakes and Colombia and Venezuela; the West Line to Cuba and Haiti; and the Cuban American Line with direct service to Habana. In 1953 there were 154 sailings to foreign ports from Milwaukee and it is estimated that in 1954, sailings to overseas ports will increase to 170.

The commodities that are important in the foreign commerce of the port of Milwaukee differ as between overseas and Canadian trade. Overseas imports consist of fish and fish products; fruits and preparations; building and monumental stone; and iron- and steel-mill products (principally Swedish steel). Exports to overseas ports include meat and meat products; animal fats and oils; wheat flour; and distilled spirits and malt liquors. Machinery and vehicles are by far the largest items in terms of tonage exports to overseas ports. In fact, Milwaukee is the leading overseas exporter of machinery on the Great Lakes.

Canadian waterborne trade appears to consist mostly of bulk items such as barley and rye, wheat and oats and newsprint that are imported, and corn and iron and steel scrap that are exported.

In a study of the port of Milwaukee, Mr. Edward Hamming summarized the foreign trade situation as follows:

"Although the Canadian trade is larger in volume than the overseas traffic, the more colorful aspects of the latter and the potentialities of that trade are highlights in the water-borne commerce of Milwaukee. It offers the Midwest manufacturer an opportunity to compete in foreign markets on an equal basis with eastern industry. The Great Lakes ports, however, do not have import-export rates similar to the ocean ports,

but application has been made to the western trunk line railways to allow more liberal demurrage regulations to permit more free time on railroad cars carrying export shipments. Whenever an improved St. Lawrence seaway becomes a reality Milwaukee, with its superior harbor facilities, is ready to serve the needs of any increase in overtraffic. Besides, it is in a favorable position to draw the trade from the upper Midwest because the pull of the compet-ing ocean ports is felt far more strongly in Chicago than in Milwaukee." 12

Many people in Milwaukee have been ardent supporters of the St. Lawrence seaway. When Public Law 358, for the creation of the St. Lawrence Seaway Corporation, was passed in the 2d session of the 83d Congress there were many predictions of the economic effects of the seaway. The port director of Milwaukee expects to see the total foreign commerce tonnage to rise to 1 million tons annually. It would appear that the port of Milwaukee with its excellent facilities will certainly handle more foreign commerce after completion of the seaway since without the seaway the foreign commerce of the port has been increasing.

² Reference to Milwaukee in this study is to the Milwaukee metropolitan area and not to the city of Milwaukee alone.

²U. S. Bureau of the Census. United States Census of Population: 1950. Vol. II, Characteristics of the Population, pt. 49. Wisconsin. According to the 1950 Census of Population, Milwaukee County in 1950 had a population of 871,047, a labor force of 374,755, and 160,545 workers engaged in manufacturing. The May 10 issue of the Sales Management, a survey of buying power, estimates that the 1953 population of Milwaukee County was 908,000 with 199,800 workers in manufacturing industries. The Bureau of Labor Statistics also estimates the manufacturing employment at about 200,000.

Defense Mobilization Order Establishing Advisory Committee on Watch Industry

EXTENSION OF REMARKS OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1955

Mr. STENNIS. Mr. President, I was happy to note the announcement, today, that the Office of Defense Mobilization has established an Advisory Committee on the Watch Industry, which will recommend any necessary steps to keep the domestic watch industry in a healthy condition, and to preserve its essential skills for our national security, particularly as it pertains to essential skills for our national security. This action will help put into effect the unanimous findings and recommendations on this subject, as made last July by the special subcommittee of the Senate Armed Services Committee, which was headed by the Senator from Pennsylvania [Mr. DUFFI. It was my privilege to serve on that subcommittee. From that experience. I know the fine interest of the senior Senator from North Carolina [Mr. ERVIN], who today is unavoidably absent from the Senate Chamber. On his behalf. I ask unanimous consent to have printed in the Appendix of the RECORD a press release by the Director of De-fense Mobilization, as well as an order of the Office of Defense Mobilization.

There being no objection, the release and order were ordered to be printed in the RECORD, as follows:

EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF DEFENSE MOBILIZATION, Washington, D. C.

Arthur S. Flemming, Director of Defense Mobilization, today issued Defense Mobilization Order IV-3 establishing an Advisory Committee on the Watch Industry. Its function will be to recommend to him any measures which should be taken to maintain the domestic watch industry in a healthy condition over a long period and to assure the preservation of essential skills of the industry at a level sufficient to provide for the Nation's mobilization base requirements.

The committee will consist of the Assistant Secretary of State for Economic Affairs, the Assistant Secretary of the Treasury in charge customs matters, the Assistant Secretary of Defense (supply and logistics), the Assist ant Secretary of Commerce for domestic affairs, the Assistant Secretary of Labor for employment and manpower, and the ODM Assistant Director for manpower (chairman).

Noting that the industry would be essential in the event of full mobilization, Mr. Flemming said national security requires that the facilities and skills of the industry be maintained at a level from which a quick and effective expansion of production can be made in the event of national emergency.

In announcing the establishment of the new committee, Mr. Flemming called attention to a study which had been made of the jeweled-watch segment of the industry by an Interdepartmental Committee. Principal findings of that committee, whose study was issued last year, were (a) that preservation of the skills of the American jeweled-watch industry is essential to the national security and (b) that the levels of production and employment in jeweled-watch manufac-turing were then below the levels necessary preserve those skills sufficiently for the industry to expand quickly and effectively to meet the requirements of full mobilization.

DEFENSE MOBILIZATION ORDER IV-3 EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF DEFENSE MOBILIZATION January 12, 1955.

Subject: Establishment of an Advisory Committee on the Watch Industry.

By vitrue of the authority vested in me by Executive Order 10480 of August 15, 1953, and Reorganization Plan No. 3 of June 12, 1953, and in order to obtain advice which will facilitate the development of long-range policies and programs to further the preservation of the skills of the domestic watchmanufacturing industry which are required in the interest of national security, it is hereby ordered:

1. There is established in the Office of Defense Mobilization an Advisory Committee on the Watch Industry. The committee shall consist of the Assistant Secretary of State for Economic Affairs, the Assistant Secretary of the Treasury in charge of customs matters, the Assistant Secretary of Defense (supply and logistics), the Assistant Secretary of Commerce for Domestic Affairs, the Assistant Secretary of Labor for Employment and Manpower, and the Assistant Director for Manpower, Office of Defense Mobilization, who shall serve as chairman.

2. The Advisory Committee on the Watch Industry shall make recommendations to the Director of the Office of Defense Mobilization with regard to any measures which should be taken to maintain the domestic watch industry in a healthy and vigorous condition on a long-term basis to the extent necessary to assure preservation of the essential skills of the industry at a level commensurate with mobilization requirements.

3. This order shall take effect on Janu-

ary 12, 1955.

OFFICE OF DEFENSE MOBILIZATION, ARTHUR S. FLEMMING, Director.

The Dixon-Yates Power Contract

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1955

Mr. SPARKMAN. Mr. President, a very interesting editorial appeared in the September 26, 1954, issue of the Huntsville Times, of Huntsville, Ala., a newspaper which gave all-out support to the Republican ticket in 1952. The editorial is entitled "The Dixon-Yates Power Deal Smells." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the

RECORD, as follows:

THE DIXON-YATES POWER DEAL SMELLS

The proposed Dixon-Yates contract with the Atomic Energy Commission to supply power to TVA consumers is receiving such a blasting from so many sources that it may

never be consummated.

Both a Senate and a House committee are preparing to air this deal, which smells so badly that some action should be taken by President Elsenhower to join in a thorough investigation.

In the very beginning, a majority of the AEC opposed being put in the position of being a power broker between the Dixon-Yates combine and the TVA. An order from the President, however, compelled the Board, which is an independent agency, to hold its nose and proceed with the negotiations.

A majority of the TVA Board is against the proposal as costly and counter to the best interests of this Federal agency and its cus-

The past week, J. D. Steitenroth, secretary treasurer of the Mississippi Power & Light Co., a subsidiary of Middle South Utilities, which Edward H. Dixon heads, revealed he had been fired because he stated publicly on September 19 that customers of the company were being charged excessive rates, because it is dominated by Middle South Utilities.

He also charged that 2 sets of books are kept by Mississippi Power & Light—1 at Jackson, Miss., for corporate purposes, the other in New York for tax purposes and for

manipulation.

The charges were so caustic that the Securities and Exchange Commission would not grant permission for a Middle South Utilities stock issue, if any of the money were to be used to build the Dixon-Yates \$100 million steam plant near Memphis, from which to supply power to the TVA, in return for electricity furnished to the AEC for its atomic-energy plants at Paducah, Ky.

In his 1952 campaign, President Eisenhower pledged himself to operate the TVA at maxi-

mum efficiency.

Unfortunately, he does not seem too familiar with the high finance that some of his friends seem to be trying to put over behind his back, and without his full understanding. They apparently have learned nothing from the fiasco of the Samuel Insuli operations more than 20 years ago.

tions more than 20 years ago.

To clear the air, the President should put into the public record the proposed contract between the Dixon-Yates combine—it has been kept a deep secret so far—and join with the two congressional committees in investi-

gating the entire deal.

If it will stand the spotlight of publicity, and is in the public interest, he will be vindicated; if it is shown to be a plain shenanigan, he should withdraw it and take some more direct route for supplying power at reasonable rates to the TVA and its customers.

Importance of the Air Force—The Motion Picture Strategic Air Command

EXTENSION OF REMARKS

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. KUCHEL. Mr. President, the cause of peace is served by the military power of the people of the United States. It serves free peoples everywhere. To the extent that all people are made aware of our great military strength, the likelihood of aggression by those who oppose freedom diminishes.

Through the genius of the great motion-picture industry of America, there has now been portrayed, for all to see, the power and might of the Strategic Air Force of the United States Air Force.

This week in Washington, the world premiere of the great new Paramont picture, Strategic Air Command, was shown to the Congress and to members of the Air Force. Two great actors, Mr. James Stewart and Miss June Allyson appear in the principal roles. It is a magnificent film story, but it is more than that. It will bring to those who view it a graphic and moving story of the power and might of our Strategic Air Command.

America today-

States the dedication for the picture—
is watching her skies with grave concern,
for in these skies of peace the Nation is
building its defense. To the officers and men
of the United States Air Force, to the Straof the United States Air Force, to the Strasion to start shooting at Carswell Air Force

tegic Air Command, whose cooperation is gratefully acknowledged, and to the young men of America who will one day take their places beside them, this motion picture is dedicated.

As a Californian, I salute what the motion-picture industry, located in our State, has done. Barney Balaban, Paramount president; Y. Frank Freeman, vice president; and Samuel J. Briskin, the producer, and the splendid actors have produced a film which portrays a vigorous and forceful lesson, namely, that America's strength in the air is a powerful deterrent to aggressive war.

Mr. President, Mr. James Stewart, of California, one of the actors having a principal role in the motion picture Strategic Air Command, spoke at the Air Force Association's symposium luncheon last summer, on August 20, 1954, at the Fontenelle Hotel, at Omaha, Nebr., where he was introduced by Gen. James H. Doolittle. I ask unanimous consent that a portion of the remarks made by Mr. Stewart on that occasion be printed in the Appendix of the Record.

There being no objection, the excerpts from the statement were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REMARKS BY JAMES STEWART AT THE AIR FORCE ASSOCIATION'S SYMPOSIUM LUNCHEON, FRIDAY, AUGUST 20, 1954, IN THE BALLROOM OF THE FONTENELLE HOTEL, OMAHA, NERR.—MR. STEWART WAS INTRO-DUCED BY JAMES H. DOOLITILE

Mr. Doolftele. Next I would like to introduce to you another very fine gentleman, comarade-in-arms of mine in England, a wonderful actor, a wonderful fightingman, a wonderful friend and wonderful fellow,

Jimmy Stewart. [Applause.]
Mr. James Stewart. Thank you, General Doolittle. General Kenney. Air Force Association members, you know movie actors are very often criticized for taking every personal appearance they make, every gathering they attend, every interview they give as sort of an occasion to put in a plug for their latest picture.

When I find myself in a sort of unique situation here, here I am in front of the members of the Air Force Association, I notice a lot of very distinguished Air Force personnel in the room, here I am in Omaha, the head-quarters of the Strategic Air Command, and I just completed a picture about the Strategic Air Command, so it is just too good an opportunity to pass up. [Laughter.]

I would like to talk a little bit about my

I would like to talk a little bit about my latest picture. The project started about a year ago. Bert Lowe and I came to General LeMay for an idea about a movie about the Strategic Air Command, and we were invited up here to Omaha. We had a 6-hour briefing by General Montgomery, and it is an experience I will never forget as long as I live, as far as enlightenment about airpower is concerned.

After hearing the briefing, and after getting General LeMay's ideas about what he wanted told and getting a story about the Strategic Air Command, well we suddenly felt we could do more than make just a movie with Air Force background. We could do something long overdue, something that should have been done a long time ago, and that is acquaint the American public with the accomplishments of SAC, with the problems she has solved, with the problems she has still, with the potential strength she has. We got General LeMay's information; we got the story started; I got Paramount interested in it, and after preparations we were ready to start. We were given permission to start shooting at Carswell Air Force

Base in Fort Worth, Tex., and MacDill Air Force Base in Tampa, Fla.

It was made very clear to us when we were given this permission that all the shooting that we did on these two bases was not to interfere with the training going on that time, and I am very proud to say that we have received notice that it did not interfere in any way with the training at Carswell where the filming of that part of the picture had to do with the B-36. And while we were there and watching this airplane taking off and landing. I was reminded that not too many years ago the B-36 and crews that fly her and the command that operated her were in quite a controversy. Evidently, the American people had chosen to accept just so much information about the B-36. and that was that each 1 of them cost \$5 million, and they were informed also that the United States Navy could shoot them

Well, at that time it was sort of very tough to present anything new without a precedent, the entire idea of a continental bomber was a very unfamiliar word and it is pretty hard to convince people about anything they don't understand or things they refuse to understand. But at that time, at the same time the Navy was presenting a problem of the big aircraft carrier.

I want you to know as I sat on the ramp at Carswell Field while these same B-36 sister ships were taking off with great crews to spots all over the world, with profile missions and were lifting almost incredible weights, climbing to almost incredible altitudes, it gave me a great deal of pride and satisfaction. It gave me a great deal of pride and satisfaction because these great B-36's and gallant crews are probably the reason Russia doesn't occupy the whole of Europe today.

Then we moved to MacDill Field for that part of the picture that had to do with the B-47, and see airpower at work as we did. The story of General LeMay's switchover to a complete jet long-range Air Force is a story that is one of the most inspiring of the air stories, almost as inspiring as the Air Force itself. And, of course, here again at MacDill it is very hard to sell people a new idea. When you start talking to people about knock numbers and tallpipe numbers in inflight refueling, oftentimes you don't get very far to them.

The Air Force Association in the past has been very quick to back legislation for appropriations for the finest of equipment and the finest of aircraft, of all types, but let's not lose sight of the fact that the real power behind airpower is still personnel.

Let's not lose sight of that fact, the flyboy is no longer a term that can be applied to the member of the Air Force, a crew member of the Air Force, any more than the floppy hat, the 300-hour-hat term can be applied to the Air Force. Now these men fly by slide rule, capable of very mature thinking, and very mature judgment, they are the result of back-breaking and meticulous training.

Now would not it be a great service for the Air Force Association to do everything in its power to encourage the young men in America to duty in SAC. Not just as a hitch in the Air Force, but as a career, but as his life's work. There has probably never been in any time a group of men who can compare with the combat crews of SAC, who must now be prepared in a single aircraft on a single sortle to perform a mission that in a few short years ago was assigned to a whole Air Force.

I personally believe that in every fown and city in America these men should walk the streets with their heads held high in the knowledge that they are honored and cherished by everyone of us for whatever they are and their willingness to hold our survival in their bare hands.

The President's Message to Congress

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent editorial from the Wall Street Journal of January 7, to be followed by an article written by Mr. Albert Clark, head of the Washington bureau of the Wall Street Journal.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of January 7, 1955]

REVIEW AND OUTLOOK

IN OTHER HANDS

Early in President Eisenhower's message to Congress there is a spiritually stirring passage:

"It is of the utmost importance that each of us understand the true nature of the struggle now taking place in the world.

"It is not a struggle merely of economic theories, or of forms of government, or of military power. At issue is the true nature of man. Either man is the creature whom the Psalmist described as 'a little lower than the angels,' crowned with glory and honor, holding 'dominion over the works' of his Creator; or man is a soulless, animated machine to be enslaved, used, and consumed by the state for its own glorification."

Later in the message:

"The aspirations of most of our people can best be fulfilled through their own enterprise and initiative, without governmental interference. This administration, therefore, follows two simple rules: First, the Federal Government should perform an essential task only when it cannot otherwise be adequately performed; and, second, in performing that task, our Government must not impair the self-respect, freedom, and incentive of the individual. So long as these two rules are observed, the Government can fully meet its obligations without creating a dependent population or a domineering bureaucracy."

Then the President lists a number of specific recommendations for new legislation.

In the field of general welfare he renews a proposal for a Federal scheme of health reinsurance, a program to aid low income farm families, a strengthened Federal disaster assistance program, special Government aid to small business, additional Government subsidized housing, measures to improve the medical care of those already receiving Federal assistance, Federal action to build more schools, Federal action to combat juvenile deliquency and new ways to help veterans readjust to civil life.

In the economic sector the President endorses flexible monetary and debt management to help business. He approves of an extensive program of highway construction, a strengthening of the economy in key sectors by continued Government stockpilling and aid to shipbuilding, and the authorization of 6 new reclamation projects and 30 projects planned by the Army Engineering

Corps.

It seems to us that these things constitute a considerable addition to the intervention of Government in the lives and in the business of citizens—an increase in an intervention which over a space of two decades has mushroomed.

Nor is it likely that the intervention of Government will stop with these things. If

President Eisenhower, who wishes some restrictions on the role of Government, can endure such a program, who is then to resist the advocates of a more powerful state

We certainly have no intention here of questioning Mr. Eisenhower's sincerity. We would be willing to believe that if the Government were to remain in his hands, or in the hands of those who see the danger that the citizen may be consumed by the state for its own glorification, there could be achieved a tolerable balance between freedom and security.

But we have among us those who do glorify the State; those who believe that in some fashion they have been cast in a superior mold capable of guiding the citizen better than the citizen can guide himself; those who have little patience with the individual or his initiative; those who would create a domineering bureaucracy and a dependent population.

And how else will they use these instruments of power should they fall into their

hands?

[From the Wall Street Journal of January 10, 1955]

IKE'S SHIPT—HE DRIPTS AWAY FROM CONSERV-ATIVE PROGRAM THAT MARKED ADMINISTRA-TION'S FIRST YEARS

(By Albert Clark)

Washington.—President Eisenhower now seems to have made a perceptible shift away from the conservative platform that swept him into office in 1952 and gave his party then a narrow control of Congress.

The shift is perhaps not abrupt, and the program he outlined for Congress last week is still more conservative than one that might have been offered by, say, former President Truman. Nevertheless a close reading of Mr. Eisenhower's state of the Union message shows some noticeable departures from his previously espoused political philosophy.

The President made it plain he is no longer so inseparably wedded to such conservative fiscal principles as the balanced budget. And he is now more attracted by schemes for liberal spending on public works, welfare, and aid to usiness.

WELFARE PLANS

Last week he put a great deal of emphasis on things the Government should do to promote business expansion. He proposed a multi-billion-dollar highway building program, more public housing, more public works, new help for low-income farm families. And he endorsed the idea that the Government monetary and debt-management policies should be kept flexible—i. e., manipulated to influence the economy.

The President also asked for a raft of measures designed to keep people healthy and care for the ill. Many of these were stated in general terms, but with a promise that he would spell them out in later special messages to Congress. For instance, "an affirmative program" for Federal aid in school building will be sent to Congress February 15.

Meanwhile, the President said nothing specific about what Uncle Sam should stop doing, or do on a smaller scale. The omission seems significant because this was one of the President's campaign themes in the 1952 campaign and he hit it hard in his first state of the Union message 2 years ago.

In sum, then, Mr. Elsenhower's message this year seemed to add up to a promise of more big government and even of a little bigger government—a very unlike-Ike promise.

ise.
What has brought on this change in emphasis?

STRUGGLE IN THE PARTY

Mr. Eisenhower has been under heavy pressure to line up with the liberal wing of his party ever since he returned from Paris to seek the 1952 GOP presidential nomination. Although the liberals backed him for the nomination, Ike looked like a conservative

all through the subsequent campaign that won him the White House. He harped on the lavish spending, high taxes, and Government interference in business that characterized the previous administration.

Once elected, he both preached and applied the same philosophy. At least most of his proposals during the first 2 years in office were in line with his campaign promises. But all during this time there continued a struggle within the administration between the conservative and liberal wings of the party for the position of influence with the President. And with the passing of Senator Taft the conservatives lost their most intellectual, respected, and articulate spokesman.

The first tipoff that the liberal wing might be gaining in influence came last fall. In the September budget review, official figures showed that Mr. Eisenhower then planned to spend more for civilian Government in the current fiscal year, ending next June, than Mr. Truman spent in each of his last 2 fiscal years in office. This review also suggested that the goal of a balanced budget was receding in the distance.

This swing toward a more liberal policy became more noticeable during and after the 1954 congressional campaign in which the Republicans lost control of Congress. Anyway, since that election the President has talked increasingly of building the GOP along moderate progressive lines.

Last week's message made it fairly plain that Mr. Eisenhower has now, by and large, chosen the so-called liberal course. He made a few gestures toward the conservatives and repeated his statement that Government ought to do for people only what they cannot do for themselves. But when it came down to specific proposals, the liberals' views won out in nearly every case.

PAYING THE COST

The economic expansion theme threaded through the 6,700-word annual message. "If we as a people act wisely," he said, "within 10 years our annual national output can rise from its present \$360 billion to \$500 billion, measured in dollars of stable buying power." Government spending, and other Government aid to business, was offered as a lever for raising that national output.

To help foot the bill, the President asked for at least another year of high taxes; he wants to postpone corporate and excise tax relief scheduled for April 1 under existing law. Then he expects increased revenue from economic expansion to permit later tax cuts, perhaps in 1956 (which happens to be an election year).

It is true, of course, that this message contains few new measures, or at least none that had not been anticipated in Washington. Yet there is a tone that reflects the shift to a liberal view. It is hard to escape the conclusion that what the President has done is to write his party's presidential platform for 1956, and few observers doubt any longer that Mr. Eisenhower will be the candidate who'll run on it.

It hardly looks like the platform of 1952. The emphasis now is on things the Federal Government ought to be doing—and no longer on the things it ought not to do.

Very Nice Kind of "Ruin"

EXTENSION OF REMARKS

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record,

I include herewith an editorial from the lic utility districts. Twenty-four years ago New Era, Reading, Pa.:

December 3, the then Secretary of State

VERY NICE KIND OF "RUIN"

The Commerce Department is headed by Sinclair Weeks. He's an ultraconservative big-business man of the kind who like to talk about how the New Deal and Fair Deal ruined the country. Yet, this week, his Department published a report which completely contradicts such talk.

The report describes the amazing economic growth of the United States between 1929 and 1953, the last year for which figures are available, and the first year after the Republicans took over the White House and Congress. The comparison would have been still more striking if it had begun with one of the Hoover depression years—1930, 1931, or 1932—instead of with the peak boom year 1929. Nevertheless, the figures speak for themselves. Among other things they show:

"Gross national product"—total production of goods and services measured in dollars—much more than tripled. It rose from \$104 billion in 1929 to \$365 billion in 1953.

Even allowing for rising prices, by using 1947 dollars as the yardstick for measuring both 1929 and 1953 production, it increased by 105 percent. In the meantime, population grew by 30 percent, but the production of goods and services for each man, woman, and child in the country rose 57 percent during the New Deal and Fair Deal years.

And now note this, which is particularly important in view of all the talk that the country is being rulined by high taxes: The report shows that disposable income, which the American people had left after paying all taxes, soared from \$83 billion in 1929 to \$250 billion in 1953.

All that is reported by a Government department headed by one of the big-business men who have been telling the people that the New Deal and Fair Deal ruined the country.

Silver Anniversary Year for Washington State Public Utility Districts

EXTENSION OF REMARKS

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. MAGNUSON. Mr. President, the public utility districts of Washington State are this year celebrating their silver anniversary and 25 years of progress made under the plan adopted by my State in 1930.

We in Washington take pride in the accomplishments of the public utility district plan of development of electric power and the supplying of water by them to municipalities.

The December issue of Public Power News, published by the Washington Public Utility Districts' Association, tells of the advances made, in an article I believe will interest all of us. I ask unanimous consent to have it printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWENTY-FIVE YEARS OF PROGRESS UNDER DEMOCRACY

This month marks the beginning of the silver anniversary year of Washington's pub-

lic utility districts. Twenty-four years ago December 3, the then Secretary of State certified the passage of initiative No. 1 to the legislature. Better known as the grange power bill, the initiative measure had been approved by a majority vote of the people of the State at the general elections held November 4, 1930. The measure, in accordance with provisions of the State constitution, became effective 30 days after passage, on December 4, 1930.

This law, now generally referred to as the PUD law, authorized the establishment of public utility districts, owned by the public and governed by their elected representatives, "to conserve the water and power resources of the State of Washington for the benefit of the people thereof, and to supply public utility service, including water and electricity for all uses."

While there have from time to time been amendments to the PUD law, in its essentials it remains pretty much as adopted 24 years

Today there are 30 public utility districts in 29 of Washington's 39 counties (not counting the small, less-than-countywide Spokane County district which has been inactive for many years). Since the Whatcom County district began operating a short transmission line in October, 23 PUD's have been engaged in the electric utility business. About 210,000, or approximately 25 percent, of the State's electric customers are served by PUD's. In addition over 11,000 customers are receiving water service from PUD mains.

Washington has the lowest electric rates in the Nation. Over 99 percent of the farms in the State have been electrified. Rural electrification is more complete in only one other State—Connecticut. Average consumption of electric energy by consumers in Washington is amongst the highest in the Nation, if not the highest. This is a record of which we can justly be proud. The public utility districts and the PUD movement have played an important part, a deciding part, in making this record possible. 1955 does indeed mark 25 years of progress under democracy.

One Hundredth Anniversary of Lawrence (Kans.) Post Office

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1955

Mr. CARLSON. Mr. President, yesterday, January 13, marked the 100th anniversary of the Lawrence (Kans.) Post Office established in the territory of Kansas on January 13, 1855.

Postmaster Carmi W. Babcock was named the first postmaster for Lawrence by President Grant. Since that time we have had a succession of fine postmasters in Lawrence culminating in the recent appointment of James H. Parsons, one of the outstanding citizens of the community.

The Lawrence Post Office was served on the first mail contract in Kansas with mail being distributed from Leavenworth.

The growth of the Lawrence Post Office and the service it has given that community typifies the pioneer spirit of all our great State by desire to pay homage to Lawrence's Postmaster Parsons and the postal employees for their untiring efforts and contribution to the continued growth of the community.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the story published in the Lawrence Daily Journal World.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FAR CRY FROM HUMBLE BEGINNING-POST OFFICE HERE IS NEARLY 100 YEARS OLD

(By Ruth E. Love)

The Lawrence Post Office will observe its 100th anniversary Thursday. According to records in the National Archives a Federal post office was established here January 13, 1855.

In its 100 years the office has grown from a mere receiving place for the mail in a home on the raw bank of the Kansas River with a 1-man crew, to an installation in the large brick Federal building at Seventh and New Hampshire Streets, with a staff of 80 officials and employees. The present staff includes 27 city carriers and 5 rural carriers, plus a crew of supervisors, office clerks, substitute workers, and custodial workers.

Before the opening of the United States post office, citizens of Lawrence, realizing the need of a central point for distribution of mail, set up their own post office and appointed E. D. Ladd to serve as an unofficial postmaster.

An early day newspaper, the Herald of Freedom, described the action under dateline of January 6, 1855, as follows:

"We have no mails yet in this territory save such as are gotten up at private expense. Here in Lawrence we have a post office, kept by Mr. Ladd, who was appointed by the citizens to discharge that duty. The mail matter directed to individuals residing here is stopped at Kansas City or Westport, Mo., from which point it is brought, almost daily, by private individuals who chance to be traveling between the several points.

be traveling between the several points.

"We saw the other morning a gentleman residing 75 miles west of this, on the Kansas River, who had just traveled the entire distance on foot, to get the mail matter for individuals in that vicinity. Such is pioneer life in Kansas; but we trust Government will soon remedy these inconveniences.

"A post route should be established along the south side of Kansas River from Westport, Mo., to Fort Riley, Kansas Territory, and in a very brief space of time be a source of revenue to the Government. A bill will no doubt be passed in the present session of Congress establishing such a route, with others to various parts of the Territory."

Just 1 week after the printing of this article, a regular United States post office was established at Lawrence.

Severe weather was one of the handicaps of mail delivery in those early days, as the following item in the February 17, 1855, issue of the Herald of Freedom indicates:

"It seems impossible to get any news from the East. Our exchanges are almost wholly cut off, and of letters we have none of any account for weeks. It is said the snow is so deep and has drifted so high that the cars (trains) have been compelled to cease running. No eastern mail has been received in Chicago, says a dispatch, in 11 days, and none from Chicago has been received in St. Louis in 9 days. If these reports are true, we can readily account for the delay of our own mail matter."

Four days later it was recorded that about 400 letters arrived at the Lawrence office for local citizens.

The location of the first Lawrence post office and the first mail service is described in another Herald of Freedom item on March 3, 1855, thus:

"The post office for the present will be at the house of Mr. (William H. R.) Lykens on the levee. The mail carrier will leave this city every Monday morning at 8 o'clock, returning on Friday."

James Parsons, present postmaster, said the weekly trip of the carrier mentioned probably referred to a mail route from Lawrence to Kansas City and return. In seeking to establish a history of the local office, Parsons was aided by Dr. Robert Taft, of the University of Kansas. The postmaster also requested such information as could be obtained from the National Archives and Records Division at Washington, D. C., and was aided by Paul Lewinson, Chief Archivist there.

An excerpt from Lewinson's letter to Parsons says, "It is interesting to note that mail route contract No. 15233, from Fort Leavenworth (via Lawrence) to Fort Scott was let on October 10, 1855, to Charles B. Norris, 125 miles and back, once a week, for \$1,100 per annum. The mode of transportation of mail service to Lawrence for the period prior to the use of the railroads is not shown. However, other Kansas mail route contracts for the same period show that mail had been delivered by 2-horse hack, 2-horse carriage, and 4-horse coach."

Carmi W. Babcock, a lawyer and real-estate dealer, was named the first postmaster for Lawrence and his office was placed in the store of Paul R. Brooks, on the west side of Massachusetts Street. Babcock also was the second major of Lawrence, and later was a ember of the Free State legislature. He served as Kansas surveyor under appointment from President Grant, and acted as contractor for the east wing of the State capitol. He served one term of 2 years as postmaster.

He was succeeded by James Garvin, who also served 2 years. The list of postmasters to the present time includes some of the town's most prominent citizens. Those who served, and their terms of office, are: Babcock, 1855-57; Garvin, 1857-59; Samuel K. Huson, 1859-61; Josiah Miller, 1861-63; John H. Shimmons, 1863-67; John R. Rankin, 1867-71; John H. Simmons, 1871-73; Lorenzo J. Worden, 1873-85; Osbun Shannon, 1885-89; Eugene F. Goodrich, 1889-94; George Innes, 1894-98; Eldie F. Caldwell, 1898-1903; George J. Barker, 1903-07; Irving Hill, 1907-11; Charles S. Finch, 1911-15; Charles C. Seewir, 1915-20; Charles E. Finch, 1920-24; Clitus B. Hosford, 1924-34; Roger M. Williams, 1934-52; Harry R. Barnard (acting post-master), 1952-53; James H. Parsons, appointed in 1953.

From the seventies until the time the present post office building was erected, the office was located in the building at the corner of Massachusetts and Seventh (then Winthrop) Streets. The building was first known as Liberty Hall and afterward as the Bowersock Opera House. The entrance to the post office was on the Winthrop or Seventh Street side.

In 1906 the present Federal building was completed and the post office moved in. The following year it became a first-class post office. To achieve this, income from all sources had to reach \$40,000 and the local office topped this by nearly \$1,000 that year. By 1914 local officials were complaining that the office was too small for the town's needs. More business was being transacted here than in any other office in the State with the exception of Kansas City, Topeka, and Wichita.

But it was not until some time later the funds were appropriated by Congress, and by that time receipts had reached an all-time high of \$692,000 in 1953. In December of 1954 another record was established—the exceeding of 1 million cancellations in a month.

States Rights

EXTENSION OF REMARKS

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. GOLDWATER. Mr. President, we have all witnessed how States rights have deteriorated since 1933, and very few people have risen to the defense of States rights. Because the question is going to become one of the great issues in the coming years, I ask unanimous consent that a discussion, entitled "States Rights and the Supreme Court," by Dean Clarence Manion, delivered on Sunday, January 2, 1955, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATES RIGHTS AND THE SUPREME COURT

Bright and early yesterday morning, my favorite radio announcer came through with a brand new traffic safety slogan: "Stay alive in '55." But in spite of all warnings and precautions, traffic will be a big killer this year. So will cancer. The new year finds us still handicapped in our fight against cancer, precisely because we do not yet know exactly what cancer is. We can now detect its presence in its very early stages, but since we are uncertain about its cause, we are helpiess to avoid its malignant impact. As long as we are confused about the nature and cause of cancer, we are doomed to live in dread of it.

Communism is the cancer of modern civilization. It destroys the normal pattern of rational growth and development in human society and dooms the body politic to a life worse than death. For those who are chronically complacent about the revolting menace of the Communist disease, I have a short, sure cure. Read the novel "1984," by the late George Orwell. One hour in this fictional yet obviously scientific chamber of horrors will make your blood run cold.

But unlike cancer, we know what the disease of communism is. We know what causes it, and we have the one effective means of immunizing the United States against it for all time to come.

One of the great assistants to the development of the communistic disease is the wise prevalence of faulty diagnosis. Communism is not a hunger in human nature for equality and justice. It is not a demand for the redistribution of wealth, land, and property. Communists represent communism as a crusade for social justice, precisely to distract its victims into administering the wrong medicine, while the ravages of their deliberately propagated disease take a firm hold. Communism is a malignant conspiracy for power. Its target is the tight concentra-tion of complete control of all persons and all things into the hands of godless gangsters. The deadly germs of this disease are cultured and developed only in a climate of power concentration. Where governmental control over human beings is minimized, dispersed, disintegrated, and effectively kept that way, the germs of communism can never take hold.

In the world at this moment there is one effective shield against communism. It is found in the vigilant enforcement of the American constitutional system. The wide and ramified distribution of governmental power provided for in our State and Federal Constitutions is a scientific pattern for per-

manent immunity against communism. But this pattern is not self-executing. It depends for its effectiveness upon the conscientious restraint of every State and Federal officeholder. These officeholders will be so restrained only as long as we, the people, are as vigilantly and continuously devoted to our constitutional safeguards as we are to the elemental protections of our personal health and safety.

When our legislatures and administrators ignore constitutional restraints and raid our reserves of liberty, privacy, and immunity with arbitrary rules and regimentation, we have our constitutional resort to the courts for ultimate and final protection. Ours is the only country on earth where the individual citizen can thus make all the power and force of government stand back before the assertion of his personal, God-given, constitutionally protected right. In the last analysis, therefore, your constitutional right is only as good as the judge or judges before whom it is asserted. A great Justice of the United States Supreme Court once declared that while we are protected by the Constitution, we should always remember that Constitution is what the judges say it is." For all practical purposes, that statement is correct. Thus, when the Supreme Court decides what a selected provision of the Constitution means in a particular case, that decision, until it is overruled, becomes in effect a part of the Constitution itself. Lawyers then advise their clients to respect the decision. Legislatures and governmental administrators attempt to proceed within the limits of such constitutional construction. Lower courts decide and dispose of thousands of analogous cases upon the authority of the original Supreme Court decision. It is obvious that because of its important repercussions such a construction of the Constitution, once it is made by the Supreme Court, should certainly be respected and upheld by that tribunal down through the succeeding years.

For a century and a half the Supreme Court did just that. Since 1936 however, the judicial attitude of the Supreme Court in this, and in many other respects, has changed radically. Like the Constitution, which they are appointed to protect, the Supreme Court Justices are deliberately and securely walled away from the fickle pressures of popular opinion and political turnovers. It is becoming increasingly obvious, however, that the Justices are not only reading the election returns, but in many instances, are interpreting and projecting them like the astute politicians that many of them were, and to all appearances, still are.

In the last 15 years the Supreme Court has overturned and reversed more of its own judicially established constitutional con-structions than were changed by that court in all the preceeding years of our national history. These reversals do not show the Supreme Court merely to be what Justice Roberts called the breeder of fresh doubt and confusion in the public mind. showing is much more significant than that. The recent revolutionary reversals of judicial precedent fall ominously into a precise pattern for political centralization. By its decisions, during the last 15 years, the Supreme Court has removed practically every constitional restraint upon congres sional and Federal executive power. At the same time, the Court has rebuffed and frustrated every important attempt by the individual States of the Union to assert the regulatory powers over subjects reserved to them under the 10th article of the bill

Constitutionally reserved State powers, crystalized by specific judicial constructions for more than 50 years, have been summarily swept away by the New Deal—Fair Deal—Middle-of-the-road—Progressive—moderate,

New Look that the Supreme Court now gives to everything. The Justices are not content to validate new extensions of congressional regulation into purely local business activities. In some instances the Court goes further by first disregarding the restraints that Congress itself has written into its own laws, and then extending the scope of that legislation by judicial decree.

For instance, in 1938 Congress passed what is known as the Natural Gas Act. Its obvious purpose was to regulate the State-to-State, cross-country, transportation of natural gas in the pipelines of transporting companies. The congressional act further provides this: "It shall not apply to any other transportation or sale of natural gas, or to the local distribution of natural gas, or to the facilities used for such distribution, or to the production or gathering of natural gas." The administration of the act was given, by Congress, to the Federal Power Commission. That agency consistently took the congressional act at its word, and refused to fix local gas prices of independent local gas produc-Nevertheless, some people kept insisting that the Commission fix this local producer's price. To settle the question, Congress in 1950 passed the Kerr bill, expressly reaffirming the original congressional intent to leave local, intrastate prices alone.

Although the Kerr bill was vetoed by President Truman, this congressional action, plus the expressed congressional withdrawal from the area of local gas prices, in the 1938 act, was a clear indication of the limit which Congress intended to place upon its own Federal regulation. Nevertheless, in June of 1954, the Supreme Court in the now famous Phillips case (Phillips Petroleum Co. v. Wisconsin et al. (347 U.S. 672)) decided otherwise. In exempting local gas prices from the regulatory powers of the Federal Commission, it could be assumed that Congress recognized at least some constitutional limitations upon the distance it could go into the regulation of purely State and local busi-However, in its decision, the Supreme Court ignored the possibility of any such constitutional limitation. The only dissent and disagreement in the Court was on the question of congressional intention. The majority of the Justices held that, although the act said no, the legislative history of the measure showed congressional intent to go the full distance. Incidentally, in deciding the Phillips case as it did, the Supreme Court reversed 2 of its own previous decisions, 1 made in 1944, another in 1949. (Federal Power Commission v. Hope Natural Gas Co. (320 U. S. 591 (1944))); (Fed. Pow. Comm. v. Panhandle Eastern Pipe Line (337 U. S. 506) (1949))). Both of these cases had decided the identical question under the same congressional act in a manner exactly contrary to the decision in the Phillips case.

Thus what Justice Roberts called the breeder of confusion becomes more and more prolific. It is not, however, as the breeder of confusion but as the architect of centralized power that the Supreme Court now needs to be watched and feared. Not only does it now destroy the integrity of the States by widening the already broad exercise of congressional power, but, even more dangerously, it corroborates the power of the President—all by himself—to wipe out every vestige of reserved State power through the agency of secret international agreements.

In the most appropriately named Pink case, United States v. Pink ((1942) 315 U.S. 203), the Supreme Court held that President Rooseveit's agreement with Litvinov, which recognized Communist Russia in 1933, overrode the constitution and laws of New York as well as the 10th and 5th article of the Federal Bill of Rights. In the Pink case, the Supreme Court held that, notwithstanding the fact that the Litvinov agreement was not ratified by or even submitted to the United States Senate, the rule of legal su-

premacy for treaties still applies. The Court said: "From the very fact that complete power over international affairs is in the National Government, it is not and cannot be subject to any curtailment or interference on the part of the several States." The Pink decision then concluded, "in respect of all international negotiations and compacts, and in respect of our foreign relations generally, State lines disappear." Nevertheless erally, State lines disappear." Nevertheless the last clause of the Bill of Rights still says that "the powers not delegated to the United States by the Constitution * * * are reserved to the States respectively or to the people." Is the Supreme Court interpreting the Constitution or is it making it over? If the centralizing forces of Communist concentration are now too strong to be resisted by the Justices in Washington, then what chances do our American soldier boys have on their lonely vigils in Korea, Samoa, Spain, Ethiopia, and elsewhere?

Officially we are all out against communism. But regardless of the money we spend—the armies we raise or the American boys we bury all over the world—the fact nevertheless remains, in the words of Woodrow Wilson, "A concentration of governmental power is what always precedes the death of human freedom." By encouraging power concentration in Washington, we are nourishing the very disease we are trying to destroy. If constitutional freedom is to stay alive in 1955 and beyond, we had better take a good look at our Supreme Court.

Crusade for Freedom and Radio Free Europe

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1955

Mr. WILEY. Mr. President, I was pleased to see in the January 1955 issue of the Eagle magazine, published in Milwaukee, Wis., a fine writeup of the Eagle's new drive in support of the crusade for freedom.

The writeup refers specifically to the launching of another great balloon campaign carrying freedom messages behind the Iron Curtain. It rightly urges prompt communication with the president of the American Heritage Foundation, which sponsors the crusade-for-freedom drive. I am glad to point out that the president of this foundation is our noted friend, great soldier-stateman and leader, the able former Under Secretary of State, Gen. Walter Bedell Smith.

I believe that this latest fine Eagle campaign—symbolic of other efforts by other splendid American organizations—will be of interest to my colleagues. I send to the desk now the text of the Eagle article.

I append to it an article which is carried in the current issue of the magazine Retirement Life, published by the National Association of Retired Civil Employees. This article by Frank J. Wilson is entitled "Radio Free Europe Crashes the Iron Curtain." It tells graphically why it is so important that this particular phase of the crusade for freedom be given every possible support.

I ask unanimous consent that both items, preceded by a list of the distinguished officers and trustees of the foundation, be printed in the Appendix of the Record.

There being no objection, the list and articles were ordered to be printed in the RECORD, as follows:

OFFICERS OF AMERICAN HERITAGE FOUNDATION

Walter Bedell Smith, president; Henry Ford II, chairman of the board; Louis A. Novins, executive vice president; Barney Balaban, vice chairman; John L. McCaffrey, vice chairman; George Meany, vice chairman; Walter P. Reuther, vice chairman; Robert G. Sproul, vice chairman; Charles E. Wilson, vice chairman; Edwin L. Weisl, Jr., secretary; James G. Bialne, treasurer; George J. Waas, controller and business manager; and William A. Greene, national crusade chairman.

Trustees: Mrs. Oscar A. Ahlgren, William D. Askren, Barney Balaban, Don Belding, James G. Blaine, Harold W. Brightman, Thomas D'A. Brophy, Leo Burnett, Henry L. Corbett, John Cowles, John W. Davis, Fred F. Florence, Henry Ford H. Ford C. Frick, Bruce Gould, Philip L. Graham, Eric Johnston, Robert Lehman, Henry R. Luce, Charles Luckman, J. A. Martino, John L. McCaffrey, Timothy A. McInerny, George Meany, Harvey S. Mudd, Earl Newsom, Louis A. Novins, Irving S. Olds, Arthur W. Page, Mrs. Robert P. Patterson, T. S. Petersen, Samuel F. Pryor, Walter P. Reuther, Edward L. Ryerson, David Sarnoff, Paul R. Scott, McGregor Smith, Paul C. Smith, Walter Bedell Smith, Robert G. Sproul, Niles Trammell, Frank C. Walker, DeWitt Wallace, Thos. J. Watson, Edwin E. Wiesl, Charles M. White, Charles E. Wilson, and Robert E. Wilson.

[From the Eagle of January 1955]

EAGLES WILL AGAIN LAUNCH SYMBOLIC BAL-LOONS IN BIG CRUSADE FOR FREEDOM DEM-ONSTRATION—EACH AERIE URGED TO JOIN IN SPECTACULAR PROGRAM

Last year the Eagles staged a sensational and dramatic demonstration of the order's dedication to the cause of world freedom when many hundreds of aeries launched thousands of freedom ballons to bring home to all Americans the message of the crusade for freedom.

This year will see an even more spectacular project designed to gain support for bringing the message of freedom to those imprisoned behind the Iron Curtain.

Eagle Freedom Chairman Martin J. Mol. Detroit, recently returned from a trip to Europe, has announced that once again all aeries will be urged to participate in the program which gained front-page publicity in papers all over the continent last year.

On February 12, Lincoln's birthday, there will be a mass launching at Freyhun, Germany, of ballons which will be sent over the Iron Curtain to the people of Czechoslovakia. As a part of a great civic celebration, there will be launched a balloon for every aerie in the jurisdiction, each bearing a message from the crusade for freedom and greetings from the sponsoring aerie.

In addition to the mass launching in Milwaukee, freedom balloons will soar from the steps of every State capitol in the Nation, under State aerie auspices.

And every Eagle aerie is being asked to make plans for a balloon launching from the city hall of every Eagle city. To facilitate this, Mol recently announced, the grand aerie freedom committee will send a balloon to every aerie. Additional balloons may be ordered by the aeries by writing to Gen. Walter Bedell Smith, president, American Heritage Foundation, 345 East 46th Street, New York 17, N. Y.

Mol states that this year the balloons will be exact facsimiles of those used in Europe to carry the message of freedom over the Iron Curtain. They will be approximately four times the size of the Eagle balloons sent aloft lest year.

To eliminate the problem which arose last year when some of the helium supplies proved inadequate, the committee is suggesting this year that each Aerie contact a local source of gas.

Mol announces that January 15 is the deadline for securing additional balloons.

In addition to the chairman, other members of the freedom committee are William Hazelwood, Detroit, secretary; Joseph Starowski, Bremerton, Wash.; Chas. J. Fracisco, Livermore, Calif.; Elwood Devine, Terre Haute, Ind.; Ed Spangler, Freeport, Ill.; Steve Thomas, Pennsylvania; Carmen Corbisero, Ashtabula, Ohio; Tony Phelps, Denver, Colo.; Ew Kamas, Elmira, N. Y.; and Guy Porter, Davenport, Iowa.

[From Retirement Life] Radio Free Europe Crashes the Iron Curtain

(By Frank J. Wilson)

(EDITOR'S NOTE.—The American Heritage Foundation made it possible for Mr. Wilson and 71 other national leaders in the 1954 crusade for freedom to observe Radio Free Europe in action and to observe its intensive overseas facilities. Thousands of retirees have contributed to the crusade for freedom and are interested in it. President Wilson's account of the flight to Munich and his impressions there appeared in our December issue. This report on the RFE operation and its significance as he sees it completes his self-imposed assignment as a Retirement Life reporter at the front.)

Live as long as I may, I doubt if there will be another moment that can fully match the solid satisfaction that came to me in Munich. This was the moment when, before a microphone of Radio Free Europe, there came a sudden realization that I was about to have an actual part, however small, in a magnificent, extensive enterprise carrying to millions of freedom-loving people like myself, unwilling captives behind an Iron Curtain of a giant, inhuman Communist conspiracy, a message of hope and courage from the people of my own country.

I would not try to describe the emotion of that moment. I would not know where to find words. It was a mixture. Exactly what I would say into the microphone there before me had little to do with what I felt. The big thing was that when I would say it the chances were better than good that in spite of all the Red tyrants could do, the words would crash through their Iron Curtain. A realization of what that bare fact meant to those enslaved people—what it might signify perhaps for the whole world for centuries to come—was, literally, breathtaking. And uppermost, as I recall, was a sense of profound gratitude; gratitude that the RFE microphone should be there; for the vision and spirit of my countrymen who put it there; for the will and the power that lay steadily behind it.

BEGINNINGS

Perhaps if I go back a bit I can indicate in another way what I want, if I can, to share with every reader of this report. In 1950, the year following his return home after his service as United States High Commissioner to West Germany, Gen. Lucius Clay said this:

"When I left Germany in 1949, I came home with a very firm conviction that we needed in addition to the Voice of America a different, broader voice, a voice of the free people, a radio which would not speak the words of government but would speak to each country behind the Iron Curtain in its own language, and from the throats of its own leaders who had fled for their lives

because of their beliefs in freedom. I found that one was already getting under way known as Radio Free Europe. It seemed to me that what it needed was a broad base of support from the American people. Then it would truly be a voice of freedom, representing the American people. Then it would truly be a voice of freedom, representing the American people. Then it would truly be a voice of freedom, representing the free peoples behind the Iron Gurtain, but sponsored by the people of America. That was the origin of the Crusade for Freedom."

DEVELOPMENT

Radio Free Europe went on the air in July 1950 with a mobile 7½-kilowatt shortwave transmitter and broadcast for a total of 10 hours a week. One by one, added stations were developed into a network: The Voice of Free Czechoslovakia, of Free Hungary, Free Poland, Free Rumania, and Free Bulgaria. When I was in Munich 22 shortand medium-wave transmitters were broadcasting 2,400 hours every week to the target countries. Very powerful transmitters broadcast each program simultaneously on different wavelengths, thus enabling enslaved patriots in satellite nations to tune in on many locations on their radio dials, So rapid has been the development.

TECHNIQUES

Radio Free Europe programs to the captive peoples behind the Iron Curtain aim to sustain their hope of restoring their national freedom and individual liberties, and eventual return to the free world.

Radio Free Europe exposes the daily lies and distortions of the Communist regimes by simple truth and unvarnished fact. Listeners are continuously reminded of the power of their inherent strength, in contrast to the weakness of regimes which must rely on terror to maintain the power they have usurped. They are acquainted with the spiritual, political and economic values of America and other free nations where God is regarded as the Supreme Master. broadcasts explain the benefits that would come from the reestablishment of governments of their own choice within a free, united Europe. The programs impress the need for all who desire to worship God and wish peace with freedom to unite against the tyranny of communism.

On each of the Radio Free Europe stations, exiles from the captive countries speak to their peoples in their own languages. Inspired by their devotion to the cause of freedom and democracy, they write persuasive scripts, and broadcast in their own styles. Letters to Radio Free Europe from listeners behind the Iron Curtain, which usually open with such phrases as, "My Fellow Countryman," "Dear Beloved Compatriots," or "My Dear Free Comrades," establish that the principle of operating "exile stations" is sound. Americans work closely with the exiles as partners allied in the common struggle. This partnership has resulted in vital, hard-hitting scripts-the sincere efforts of front-line fighters in the struggle against communism-heart-touching messages that show a profound understanding of life behind the Iron Curtain and that carry rays of cheer to the downcast.

I briefly described the balloon technique for overpassing the Iron Curtain in December Retirement Life. Confidential reports from a reliable source advise us that the balloons were being fired upon by Soviet occupation troops. The balloon activities are so effective that the enraged Communists commissioned a sly saboteur to sneak up on the station and set it on fire. The saboteur was apprehended outside the balloon field and this sinister Red plot to burn the plant was nipped in the bud. Alert and fierce police dogs continuously guard the plant.

PROGRAMS

Programs cover a wide range of subjects. World news is included in programs of many types, for the true nature of communism obviously cannot be made clear without relating it to life in the free world. News is broadcast around the clock, every hour, as the truth is a precious commodity in the war of words. Special programs are designed for youth, factory workers, farmers, women, war veterans, and even Communists.

Religious news and services go to listeners of all faiths. Culture and comedy, drama and music, forums and interviews are all included in programs aimed to attract more and more listeners. Strategically located all along the borders of the Iron Curtain, from Stockholm to Istanbul, a chain of 16 Radio Free Europe news bureaus provides a constant flow of information to prove that the cruel Communists are continuously conspiring to crush under the iron heel the freedom to worship God, and freedom of speech. Refugees produce plenty of current evidence for Radio Free Europe broadcasts regarding tyrannical conditions behind the curtain.

RESULTS

Is Radio Free Europe reaching the people behind the Iron Curtain with its message of home liberation freedom?

hope, liberation, freedom?

Is the operation undermining the Communist totalitarian regimes and winning friends for the cause of a free world?

Are listeners actually influenced by the

broadcasts?

These are questions which Americans have a right to ask for Radio Free Europe is made

a right to ask, for Radio Free Europe is made possible by their contributions.

From what I have seen at close range and from careful study during the course of my tour, I am convinced that the evidence is all one way; that the answer to each of the questions is definitely "Yes." Two basic criteria allow us to appraise the effectiveness of Radio Free Europe operations. The first is the positive reaction to its programs by the listening audience. The second is the reaction by the God-hating, materialistic Communist regimes and their propaganda organs.

Reaction of listeners comes daily to Radio Free Europe in letters from persons of all ages and description. Most have praise for Radio Free Europe's fight for the cause of liberation and the freedom of all peoples to select governments of their choice, to worship God, to enjoy free speech, and to live in peace with their fellow men in other nations. Many contain reports of radio reception conditions. Others tell about the terrors of the police state. Some even chide Radio Free Europe for not advocating immediate war against Russia in order to set free the captive peoples.

The violence of the reactions of the Communist regimes is evidence fully as convincing. When the powerful Radio Free Europe transmitter went on the air to Czechoslovakia, Communist stations broadcast death threats to Radio Free Europe personnel, and the Prague regime dispatched official diplomatic communications to the United States Government vigorously protesting against the broadcasts.

In addition to positive reactions of this kind—proving Radio Free Europe's ability to influence its audiences—the satellite regimes were forced to disregard a primary rule of psychological warfare—namely, that hostile propaganda should not be dignified by reply. Communist spokesmen have constantly answered Radio Free Europe accusations and attacked its operation so as to counteract the impact of its broadcasts. A few of their favorite epithets are; "criminal rabble," "barking dogs," "hired slanderers," "pirates of the ether," "saboteurs," and "yakkity-yakkers."

Shortly after the death of Stalin, Rude Pravo, the official Communist paper in Czechoslovakia, angrily attacked Radio Free Europe's "inhuman monsters who raised their nauseating voices to try to exploit the

anguish of the people." The attack continued, "Our people will not forget that the most monstrous of these monsters were emigres whom our nation long ago cast from its The "monsters" referred to were the exiles at Radio Free Europe who fled from Communist terror to become the frontline fighters in the struggle for a free world.

So it goes. So it was going when I was at Munich; and the efficient staff of Radio Free Europe remarked happily that so long as Moscow and her secret police regimes continue to bellow we can be certain that the attack goes well. Let me assure you that Radio Free Europe intends to continue to obstruct the march of Soviet imperialism. It is playing an important part to help the free world win the cold war. By winning a war, we can prevent a hot war.

With this necessarily brief and far from adequate report of Radio Free Europe in action, perhaps you will better understand and to some extent share my emotions on that moment before a microphone in Munich. As for the significance of the Radio Free Europe michophone itself, certainly it can be no better stated than it has been by our farsighted President:

"Through Radio Free Europe * * * men and women, who might otherwise have succummed to the philosophy that it is good to be slaves, still keep alive the spark of freedom in their hearts. This work serves not only the nations we seek to help-it serves the best interests of the United States."

President Eisenhower, our inspired leader, appeals to us "to rededicate ourselves to unselfish striving for the common better-ment of mankind." You will agree that Radio Free Europe exemplifies that Christian doctrine to a high degree. It is a high privilege to be associated in such a humane cause. Let us as loyal citizens aid in the fight against our arch foe, communism, and demonstrate our Americanism by strong support of such worthy activities as the American Heritage Foundation, Radio Free Europe, and the crusade for freedom.

Gridiron Club Comment on Dixon-Yates Contract

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1955

Mr. SPARKMAN. Mr. President, on December 11, 1954, the famous Gridiron Club held its annual meeting in Washington, and at that time various matters were commented on and various persons were "placed on the griddle."

One of the most interesting skits presented on that occasion related to the Dixon-Yates contract. I ask unanimous consent that that portion of the Gridiron Club's program be printed in the Appendix of the RECORD.

There being no objection, the excerpt from the program was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of December 12, 19541

GRIDIRON SIZZLES AGAIN

Still another skit introduced Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission, and Maj. Gen. Kenneth D. Nichols, its General Manager. Joining in on this one were Edgar H. Dixon and Eugene A.

combine.

The announcer said:

"One hundred years ago the team of Mason-Dixon—and their line—rated national interest. Tonight the line leads to the new team of Dixon-Yates, and their interest rate. We take you to the Tennessee mountains where chained lightning has given way to chained power for the A-bomb, and the H-bomb."

The set opened with "Strauss and Nichols" tending a moonshine still. "Dixon and Yates" entered and this dialogue followed:

Dixon: "I'm Dixon and this is my partner, Yates. We're powerfully interested in some-

thing with power. Can we make a deal?"
Nichols: "Yes, siree. We like deals, but not with this stuff. We're cooking this for a couple of other friends."

Yates: "What we want is some of this

guaranteed free enterprise."
Strauss: "What's that?"
Yates: "Why, something you get free from the Government."

Strauss: "We got lots of that, but you gotta make a bid first."

Dixon: "What's a bid?"

Strauss: "That's simple. Just tell us what you want and we'll let the boss persuade us to give it to you."

Yates: "O. K., then listen."

To the score of Make Believe, "Dixon and Yates" sang:

We could make believe they fooled us Please don't make believe that you fooled me. Others find profits high in pretending Couldn't you? Couldn't I?

Couldn't we? When our kilowatts are blending Dixon-Yates comes first-then two, or three. Creepin' capitalists, here's a real hint Get a high line to the mint. We could make believe it's risky,

Nine percent's the least we'll take Electricity's so stimulating-Four for you

Five for I

Nine for we. Guaranteed returns awaiting In a year or two or three. Never bid, but just try cultivating Budget Bureau friends for we.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized book dealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by book dealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printers to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Yates, of the controversial Dixon-Yates power LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approxi-mate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives. each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 8 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Let's Save America

EXTENSION OF REMARKS

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. GROSS. Mr. Speaker, in answer to a substantial number of requests, I submit for printing in the RECORD a copy of the remarks which I made to the 29th Women's Patriotic Conference at its sessions in Washington, D. C., last week.

These remarks follow:

LET'S SAVE AMERICA

Mrs. Good, delegates to this 29th Women's Patriotic Conference on National Defense, and distinguished guests, I appreciate the invitation to participate in your discussions here today.

You, and the organizations you represent, deserve the praise of all America for your efforts to defend our Constitution and the

American way of life.

The task to which you have set yourselves is a difficult one, as all of you are well aware. But let me assure you that those of us in Congress who still believe the sovereignty of the Nation deserves first consideration are grateful for your work. I pray that more Americans will become alert to the dangers which threaten to take from us the libertles which our forefathers fought to secure and

will join in your crusade.
Our first President, George Washington,
warned that we must remain independent and steer a clear and sure course away from Europe's intrigues and quarrels. The great vision of Washington, as well as Jefferson, led to the American policy of noninterven-tion and the greatest free government on earth. On no other basis than the avoidance of foreign entanglements could Republic have endured and on no other basis

will it be sustained.

What everyone must understand, then, is that the end product of our foreign policy must be the protection and advancement of our national interests, not the least of which is the perpetuation of our individual rights and freedoms. In judging the results of the interventionist policy which we now pursue, those who advocate this course must therefore rest their case on what it has accomplished.

In less than 40 years, and the fighting of three gory wars, we look across the Pacific to a hostile Far East where once we had earned the respect of hundreds of millions of people. We look across the Atlantic—to the continent of Europe—and are hard-pressed to find a single country of any substantial area or population which is willing to make the sacrifices necessary to defend itself much less join in an international movement to suppress aggression.

Meantime, our young men grow up in the shadow of the draft, serving longer periods in active service and reserves than almost anywhere else in the world; our Federal debt alone far exceeds the combined debts of all the governments of the world, while our total debt, public and pri-vate, has rocketed to more than \$600 billion. In this climate, savings and investments are constantly threatened by inflation, and we are burdened by a tremendous load of taxation, unprecedented in time of peace and legally unlimited.

By what stretch of the imagination can

one-worlders, Atlantic unioneers and international do-gooders claim that our national security and well-being has been enhanced by the foreign policy we continue to

POREIGN GIVEAWAYS

Let us review briefly a few of the many foreign giveaway schemes which have drained from the pockets of American tax-payers some \$150 billion in the last 15 years. Incidentally, it may be argued that some of that huge amount of money represents loans to foreign governments. May I remind you that our so-called foreign friends still owe us more than \$17 billion as a result of loans during World War I. If our so-called allies haven't seen fit to repay this money in 38 years, is anyone naive enough to believe that any of them will make more than gestures toward paying their debts arising out of World War II and the postwar period?

In the last 15 years we have seen the fantastic spectacle of Americans providing scores of countries with funds for one pur-pose or another. No corner of the earth has been neglected in our mad scramble

to finance the world.

We have made possible the building of air-conditioned, luxury apartments in the jungles of the Belgian Congo.

We financed the building of a railroad station in Rome that for sheer splendor makes Grand Central of Pennsylvania stations in New York look like tank-town facilities on a branch line rallroad.

We sent an expert to Italy to show the Italians how to husk corn; we sent a Pennsylvania track coach to India to teach the Indians how to run although their chief mode of transportation is their legs, and we recently sent a delegation of eight, handpicked American women to an assortment of foreign countries to pick a bevy of foreign women to visit this country. can taxpayers, of course, pick up the checks both ways for these international tourists. It's all part of the tub-thumping propa-ganda by the State Department, Foreign Operations Administration and United Nations to keep the multibillion dollar giveaway show on the road.

COFFEE "EXPERTS"

We send experts to Brazil to tell the Brazilians how to raise coffee but we do nothing about the speculation in coffee that has gouged millions of dollars out of the budgets of American housewives.

We underwrite a super highway in Thailand and commercial aviation in Pakistan and Turkey. We build air bases in Great Britain under terms whereby the British can cancel American rights to the bases at any time, and with no provision whereby we can recover any part of our investment.

We build hydroelectric power dams in France and Italy, and we build power projects in Iran which authorities say are economically unjustifiable and when Iranian money is available for the work.

Besides the money that has been handed over to individual countries, we have given to such organizations as the European Payments Union, the Intergovernmental Committee for European Migration, Intergovern-mental Committee on Refugees, International Refugee Organization, Organization of American States, United Nations Rehabilitation Relief, and a score of others. And more frosting goes on the cake in the form of miscellaneous, overlapping programs.

Henry Wallace, in a flight of fancy during World War II, said the United States must make sure everybody in the world has the opportunity of drinking a quart of milk a His successors, if they have their way, will throw in a deep freeze for every Eskimo

and a power mower with leaf-chopping at-tachment for every Hottentot. Few Government agencies have been omitted in this dishing out of the taxpayers money to foreigners. The Defense, Commerce, Agriculture, State, and Treasury Departments have all been involved. Of course, Harold Stassen's Foreign Operations Administration, and its predecessor agencies, all bearing perfumed titles, have played the leading role.

And not only have the American people been called upon to financially support a good share of the world, but they are called upon to defend it as well.

UTTERLY PANTASTIC

Altogether, some 50 nations with a combined population of more than a billion people look to the United States to come to their defense militarily and fight their bat-

The spectacle of a nation with only a fraction of the land area and population of the world attempting to finance and defend peoples in every corner of the earth is utterly fantastic.

This policy is the handiwork of a small group in this country who either have spent a considerable part of their lives in England and France or who have business interests abroad. This group apparently finds it fruitful to support the decadent and tottering Empires of Great Britain and France, countries which are unwilling to join wholeheartedly with us in meeting the Communist world conspiracy. These internationalists, wealthy and influential politically, their influence stemming from interlocking directorates and vast control over business and industry, do not represent the American people. They have shown little concern over high costs of living or taxes as long as this country spends billions to subsidize their favorite foreign nations and stands ready to defend those nations when they won't fend themselves. It is these people or their hired hands who keep alive scores of organizations, each with a propaganda mill, to perpetuate the cruel fantasy that the Ameri-can people have it within their capacity to solve all the ills and evils that exist in the world.

UNITED NATIONS

Let me now, and briefly, discuss the United Nations. I would remind you first of all that Alger Hiss, who recently completed a peni-tentiary sentence for lying about his Communist activities, was one of the chief architects of the United Nations Charter. I would also remind you that Harry Dexter White, who died suddenly and mysteriously while under investigation for his alleged Communist connections, was another of those who had a hand in drafting the United Nations Charter and in piloting it through the San Francisco Conference. Is there, then, anything strange or coincidental about the fact that Soviet Russia has three votes to our one in the United Nations General Assembly; that every possibility and every move to make this organization an effective instrumentality for security and peace is subject to a Communist veto?

If there was any virtue in the Korean war—and God knows the killing of more than 35,000 American boys plus the wounding of 100,000 more can be nothing but stark tragedy—it was the complete proof of dismal failure on the part of the United Nations. Not only did it fail to punish aggression for the aggressors still stand and thumb their noses from the ame vantage points they did in June 1950, but it demonstrated that collective action under the United Nations is a sham and a farce.

The proof of this is that Americans, despite all the eloquent phraseology of the U. N. Charter, did 95 percent of the fighting and dying and 100 percent of the financing of the war in Korea. I am speaking of U. N. participation. Please remember that South Korea was not and is not a member of the United Nations. The cold, bloody record of that war is that 45 member nations of the United Nations with combined populations of more than a billion persons, contributed not a single combat soldier. When the showdown came in the United Nations, there was then as now no real sense of moral obligation or responsibility.

PROFITS AS USUAL

On the contrary and at the height of the Korean war—while Americans were being slaughtered on the battlefields and suffering the agonies of Red Chinese prison camps—it was profits as usual for most of our alleged free-world friends. The British Supreme Court at Hong Kong, for instance, fined the President Steamship Lines more than \$60,000 for refusing to deliver a consignment of medical supplies, including wonder drugs to the Red Chinese. American officials of the President Lines rightly held that these medical supplies were contraband and would be used to patch up Chinese Communist soldiers so they could be returned to the front and kill more Americans.

Does anyone in this room recall a single word of protest even from the United Nations or our State Department concerning this outrageous fine levied by the British upon an American firm which, unlike the British, refused to stab American soldiers in the brok?

Only recently we witnessed another shocking defeat in the United Nations when \$180,-000 in back salaries and damages were approved for 11 American employees of the U. N. who were fired for refusing to answer either to a grand jury or the Senate Internal Security Committee as to whether they were Communists or engaged in Communist activities. The case of these 11 fifth amendment Americans was carried to the administrative tribunal of the United Nations and to the so-called International Court of Justice, both of which upheld the payments.

Henry Cabot Lodge, chief United States representative to the United Nations, described the huge awards as unjust and outrageous but he capitulated to the decision that the payment be made.

TOO MUCH RESPECT

Another representative to the United Nations was the first to capitulate and with the public assertion that he had too much respect for the International Court to op-

pose its decision. This statement despite the sordid fact that three Communist judges sit on the bench of the International Court and thus were in a position to pass judgment on 11 persons suspected of being part and parcel of the Communist subversive movement.

I wonder if this individual would have the same respect for an appeals court in this country on which sit felons, charged with passing judgment on American citizens?

In the closing days of the last session of Congress, the House and Senate passed a resolution stating in clear language that no funds appropriated then or thereafter from the United States Treasury could be used to pay the award of \$180,000 to these 11 characters who sought refuge behind the 5th amendment. Then, you ask, how will payment be made?

We now discover payments will be made by the simple and shabby device, approved by the weak-spined United States representatives to the U. N., of levying an assessment upon the salaries of United Nations employees. This simply means that honest, loyal American employees of the U. N. are now to be taxed on their salaries to compensate 11 persons who were fired from their midst for alleged disloyalty to the United States. This is unbelievable.

Incidentally, Mr. Lodge will pay no part of the assessment. He informs me that his salary is paid by the State Department. I might add that it is considerably more substantial than the salary paid to a stenographer or some other underling at United Nations headquarters. Of course, there will be no deduction from the salaries of congressional representatives to the U. N.

SOVEREIGNTY UNDERMINED

There are many more examples of how our sovereignty is being undermined in the United Nations. I shall mention only 1 or 2.

In 1952, the Government refused to issue visas permitting two foreigners to enter this country to attend a United Nations conference. In refusing, our Government presented to the U. N. a congressional reservation, which reserved the power of the United States to issue visas to allens seeking to enter this country to attend meetings. What happened? The U. N. decreed that the congressional reservation had never been approved by the U. N. General Assembly. Then, dictating to the State Department of the United States, the U. N. demanded and obtained, entry permits for the two unwanted foreigners.

Another example is to be found in the recently published United Nations handbook on standards of conduct in the International Civil Service. This handbook states that the conduct of the international civil servant must clearly reflect his obligation to the international organization, and any appearance of disloyalty to that organization must be considered incompatible with his status. Under the circumstances, is it any wonder that disloyal Americans have been uncovered in the employment of the United Nations and its subsidiary organizations? Still another example is the World Health Organization decision last year which assessed the United States for \$350,000 more than Congress had appropriated for this agency. United States representatives protested but were of course outvoted. Here is an example of the ability of foreigners to levy taxes upon Americans.

In this brief discussion of the United Nations and its specialized agencies, the U.N. Educational, Scientific and Cultural Organization also deserves mention for it is through this agency that the internationalists and one-worlders attempt to influence the people of America, especially our youth.

UNESCO PROPAGANDA

Typical UNESCO propaganda goes something like this, and I quote from a UNESCO

publication; "Our children should be educated to prepare themselves for citizenship in a world society. As long as the child breathes the poisoned air of nationalism, education in world mindedness can produce only precarious results. It is frequently the family that infects the child with extreme nationalism. The school should therefore combat family attitudes that favor jingoism." Such propaganda has but one aim: To poison the youth of this nation against America and to prepare them for a role in the internationalists, one world.

What these propagandists find most difficult to overcome is the fact that in terms of culture, civilization, and consciousness this is not one world in which we live. And to try to make it one, against all the realities of life and nature, is far more likely to awaken the spirit of rebellion than the spirit of harmony. And when those in the United States work for world government on the premise that it will solve all the problems of the people of other lands, they refuse to recognize history which teaches that nations are rarely if ever benefited by what they do not do for themselves.

Probably no more flagrant instrumentality for the destruction of the constitutional rights of Americans is to be found than that which is embodied in the so-called Status of Forces Treaty

of Forces Treaty.

Under this treaty, American servicemen stationed in certain foreign countries, who have taken an oath to support and defend the Constitution of the United States, are subject to trial in foreign civil courts by foreign judges and incarceration in foreign prisons.

JAPANESE SENTENCE AMERICANS

Since this treaty became effective, it is reported that many American boys were brought to trial in foreign courts and some are now serving in filthy foreign prisons for various offenses, some of them minor and effectively stripped of their constitutional rights as American citizens.

Let us take the case of France where there are thousands of American troops and where communism is rampant. There is nothing to prevent a Communist cell from framing or bringing trumped-up charges against one or more American boys. In that case they would likely be arrested by American military police who would be compelled under the Status of Forces Treaty to turn the alleged offender or offenders over to a civil court for trial.

In Turkey, France, and other European countries American servicemen have been tried by the courts of those countries under procedures that are totally foreign to them. It may well be pointed out here that in certain countries of the Middle East the penalty for petty larceny may be the lopping off of a hand.

It should also be pointed out that as the result of another agreement entered into with Japan in 1953, at least 26 American servicemen are now serving terms ranging up to 15 years in Japanese prisons after being convicted in the civil courts of a country whose nationals only a little more than 10 years ago were practicing barbarity in almost every form upon American soldiers.

Perhaps these individuals were guilty. If so, there are American military and civil courts before which trial could be had. The point is that the Constitution of the United States either has meaning or those who are responsible for setting it aside, without benefit of amendment, ought to be decent enough to make sure that every American conscripted for military service and sent to duty in a NATO treaty country, is properly advised that he no longer has the protection of the Constitution which he has sworn to uphold and defend with his life, if necessary.

DECEPTION

Yes, the American people in the last two decades have been the vicitims of much de-

ception and have lost more in the way of sovereignty than many of us can comprehend.

The hour is late, but there is still time to save America if we will but return to policies that are first of all in the best interests of this country and its people.

In advocating such a return to reason and sanity, one is quickly branded by the internationalists as an isolationist. I asked these internationalists: Were Washington and Jefferson isolationists?

Our Founding Fathers were not isolationists, but rather vigorous advocates of international intercourse based upon reason and understanding, and I am sure all of us here today advocate the same course in our dealings throughout the world.

In this connection, permit me to quote a passage from a speech made in 1852 by Henry Clay. He said:

"By following the policy we have adhered to since the days of Washington, we have prospered beyond precedent; we have done more for the cause of liberty in the world than arms could effect; we have shown to other nations the way to greatness and happiness.

"But if we should involve ourselves in the web of European politics, in a war which could effect nothing, where, then, would be the last hope for the friends of freedom throughout the world? Far better it is that, adhering to our wise Pacific system, and avoiding the distant wars of Europe, we should keep our own lamp burning brightly on this western shore as a light to all nations, than to hazard its utter extinction amidst the ruins of fallen or falling republics in Europe."

These words as spoken by Henry Clay more than 100 years ago are as full of meaning and wisdom today as they were then.

CENTRALIZATION OF POWER

We have many important issues and problems in this country that desperately need consideration and solution but transcending all of them is what position we take and what we do as a matter of foreign policy. No other single issue has the impact of foreign policy upon every home and the lives of every man, woman, and child. Our forefathers understood this and wisely guided the young nation from the pitfalls that today confront us.

We must immediately adopt a foreign policy that is within the ability of the American people to honor and support. We cannot go on indefinitely financing and policing the world, piling up burdens which the children of tomorrow cannot possibly carry or endure.

No less important is the fact that the course upon which we are presently embarked means steadily increasing centralization of power in Washington. The great and free institutions under this form of government—economic, political, educational, religious, and cultural—all depend for their perpetuation upon a diffusion of power.

Another step that must be taken immediately is to revise the charter of the United Nations and make it an effective instrumentality for collective security or abandon it to those who are now using it as a lethal boobytrap.

It is distressing to note that even some who have seen the error of our ways in the last two decades now sadly say it is too late for us to turn back; that we have become so enmeshed in the affairs of nations all over the world that our course can't be altered.

The hour is late, but there is still time to trim the wick of our lamp and make it burn more brightly on our own shores and the shores of the Western Hemisphere. We not only can but we must turn back if we are to save this great constitutional Republic as we know it and as we cherish it.

Should Legislative Hearings Be Televised?

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over WMEX, Boston, Mass., on Saturday, November 20, 1954:

Should Legislative Hearings Be Televised?

Congressional investigating committees are an essential part of the United States

are an essential part of the United States Government to serve as a check on the growing power of the executive department.

Even as I speak, this subject of investigating committees—their activities and conduct—is the real background for an unusual session of the United States Senate.

The development of television makes it possible for most American homes to watch the proceedings firsthand.

It also creates problems in turn.

The issue at present is concentrated on personalities and is highly charged with emotion.

In the larger sense we shall have to decide whether or not legislative hearings should be televised and, if so, under what conditions.

Perhaps most people want televised hearings.

On the other hand, the American Bar Association, the Federal Bar Association, and the New York State Bar Association are in opposition to them. An article by Church and Wasilewski throws much light upon the subject. It quotes John W. Davis, of the American Bar Association, as saying in the report of his committee: "The television camera is a force the power of which is only beginning to be appreciated. Granted that it greatly enhances the public interest in current events, it can also circulate with great speed baseless accusations which may be to the irreparable injury of the person accused. It may often, perhaps usually, be the case that this public view of any proceedings is only intermittent. The result may well be a distorted impression of the facts and a consequent prejudgment of the witness by the viewers, without regard to the legal presumption of innocence to which the witness is entitled."

"Your committee is well aware that newspaper reports may also by their necessary brevity give a distorted impression of the facts, but this regrettable circumstance affords no justification for further distortion incident to the use of television and broadcasting.

"Your committee is not prepared to say televising or broadcasting of an unwilling witness is such an infraction of his right of privacy as to be unlawful; yet even where the consent of the witness is invoked there would seem to be an element of unfairness in putting upon him the burden of consent or protest. His very unwillingness to consent might be treated in certain quarters as an unfavorable symptom. These unfavorable aspects become all the more true where the television or broadcasting is concentrated only on selected witnesses or incidents not calculated or intended to represent the proceedings as a whole."

That is the very careful and conscientious opinion of the legal fraternity.

However, public opinion has a different

There is no concern that people are misled by political campaign speeches with their exaggerations and their attacks upon the character of rival candidates. People seem to do pretty well in arriving at the truth regarding candidates and issues.

It does not seem logical that they should now be considered immature to witness the investigative functions of Government on the

TV screen.

Such hearings are fact-finding proceedings. Their purpose is to show whether or not legislation is needed in a certain field or to expose such dangers to the security of the Nation as subversion or corruption.

The full publicity given to televised statements before congressional committees makes it impossible for a witness to lie, or blunder. \Someone in the huge audience is sure to spot the contradiction and come forward with the true facts.

Representative government is not merely a schedule of free elections with no thought as to what happens in between. The people have a right and a duty to participate in government, and there is no better way than through the media of mass communications, which gives them a front seat to observe how public business is conducted.

We must never forget our constitutional guaranties of a public trial and a free press.

As the Messrs. Church and Wasilewski well state: "Members of congressional committees are elected. In televised hearings they appear before their constituents and make their records. It can be a record of fairness or of partiality, of courtesy or of abuse, but it is a personal record for which they must one day stand up and be counted."

It is too early to determine the effect of television appearances upon the political careers of investigatory committee members. Television, however, has led to a move for reform of legislative hearing procedures. Congressional committees, historically, have made their own rules. Witnesses have been treated with dignity, with frivolity, or with abuse, as the committee saw fit. Prior to the advent of television, the public and the bar showed little concern over such procedure. The presentation to the public, by television, of a relatively few hearings, seems to be the principal spur for demands that reform of congressional hearing procedures be under-This has served to reawaken interest in government. It is an accepted fact that an informed and alert electorate is essential to the survival of a republic; yet, as government becomes centralized, vast, and complicated, personal participation dwindles. Television, by recreating in citizens a town-meeting sense of immediacy, can help reverse this trend. Communications media capable of stimulating such interest should not be curtailed.

It will come as a surprise to many people who regard the televising of hearings as something bizarre to learn that religious services have been televised from St. Patrick's Cathedral in New York, and from the Cathederal of St. Peter and St. Paul in Washington, without any loss of dignity or reverence. Furthermore, the proceedings of the United Nations are telecast regularly, through camera equipment set up in an entirely separate room.

The argument is put forth that television cameras invade the witness' right of privacy.

This is nothing new.

Whenever a person becomes a part of a newsworthy event he is no longer anonymous. Newspapers have been reporting such matters and the persons involved in them for many generations.

Another criticism is that participants are

Another criticism is that participants are encouraged to put on an act. Committee members are accused of badgering witnesses for the sake of impressing the folks back home. But it seems to me that this wide audience is the best protection for the wit-

ness. If unjustly treated that fact is given the widest publicity exactly as it happens. The American people have a genuine sense of fair play, and they can be counted on to react strongly against fakery or injustice.

Out in Oklahoma, they have had success ful results in the telecasting of State legislative sessions and even of a murder trial.

In commenting on the latter, Trial Judge Van Meter stated, "The coverage was handled in such a manner as not to hamper or influence the trial in any manner. tention of the attorneys, the jurors, the witnesses, and the court, was not distracted in any appreciable manner. So long as the court is informed of what is to be done and has control of the situation there should be no objection to this new means of informing the people. In my opinion, if television is used in an educational and factual manner as it was in this case, without any of the spectacular portrayal, it should be very helpful. There is no question in my mind but what there is a need for people generally to know more of their courts in action. Many people rarely have any contact with the courts. Too often what is said or shown about courts is not a true portrayal. If television can present courts as they actually function, this should be a real public

As to the legislature, one of the members noted a sudden improvement in behavior. "Not that the Oklahoma Legislature had any lack of it," he said, with tongue-in-cheek loyalty to his colleagues, "but the customary reading of newspapers while in session, feet on desks, small caucuses held in the aisles, etc., were nonexistent while the camera's red light was on."

Even today in committee hearing rooms of the Congress, apart from the few executive sessions, there are seats for the public and complete recognition of the right of as many people as possible to attend an open hearing as physical limitations of the room will allow.

It is hard to understand why there is so much to-do about extending the audi-ence via television. The machine itself is not prejudiced, even though the human beings whose actions it transmits are not always so objective.

The fact that television's first reports have revealed some problems in legislative proce dure should inspire us to correct them. So TV shall become, as it will soon, the most effective instrument in conjunction with press and radio for taking people into full partnership with their representative government.

Words Versus Actions

-EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following newspaper article which appeared in the Times Leader-Evening News, Wilkes-Barre, Pa., on January 13, 1955:

WORDS VERSUS ACTIONS

The charge of the Anthracite Institute that the Federal Government is unsympathetic to the hard-coal industry is supported by the record of the past four decades.

It is hard to understand, for anthracite has suffered under Democratic and Republican administrations. This is more than ordinary indifference; there have been occasions when it has been pretty close to being punitive.

It was bad enough when the authorities in Washington falled to do something for anthracite. These moves are infinitely worse since they actually injure the industry by furnishing unfair competition and de priving the product of local mines of markets.

And the region as a whole has fared no better than the industry. During the Sec-ond World War, the powers in Washington refused to utilize local manpower and facilities although they were pleading for production elsewhere and spending vast sums on housing and plants that were unused here. That mystery has not been explained and probably will not be.

When local delegations go to the Nation's Capital, they are invariably received with courtesy and given a hearing, but subsequent actions do not match words. Just when we think an understanding has been reached, the knife is plunged in the back

The area is more bewildered than the industry must be.

If Mr. IMARD is telling the truth, and there is no reason to suspect he is not telling the truth or what he believes to be the truth, Government has again invaded a field of private industry that should be left to State control, and the consequence of such action may be disastrous to all concerned.

Who benefits if the expansion of the natural-gas industry is stopped? Certinly not would-be consumers of natural gas, industries and individuals. Certainly not the gas

industry itself.

The ostensible purpose of all regulation by Federal and State agencies of industrial operations, transportation, and so on, is to protect both the public interest and that of the industries regulated. No industry can stand still. It either expands or it declines, and the latter course leads to extinction.

A situation has been created in the natural-gas industry with which Congress should have the power to deal. There is the possibility, however, that legislation enacted by Congress to exempt natural-gas producers and gatherers from jurisdiction of the Power Commission will be pronounced unconstitutional by a liberal Supreme Court.

man Ikard

EXTENSION OF REMARKS OF

HON. JACK B. BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. BROOKS of Texas. Mr. Speaker, under leave of the House to extend my remarks in the RECORD, I wish to insert in the RECORD an editorial from one of Texas' leading daily newspapers, the Beaumont Enterprise. The Enterprise complimented most highly our distinguised colleague, Mr. FRANK IKARD, of the 13th Congressional District of Texas. The Enterprise recognized the importance of the splendid analysis our distinguished colleague made on January 10, 1955, concerning the regulation of natural gas by the Federal Government, and which appeared in the RECORD of that date. I feel privileged to insert in the RECORD this tribute to my fellow Texan.

The editorial follows:

NATURAL-GAS REGULATION

Representative IKARD, of Texas, voices the considered opinion of State producers and gatherers of natural gas in saying they should be exempt from regulation by the Federal Power Commission.

What will be the outcome of the battle between the natural-gas industry on State levels and Federal bureaucracy in Washington cannot be predicted now but the industry has presented some convincing arguments to prove that the Federal Government should keep its hands off the producers and gatherers of natural gas inside the States. Speaking in the House, Mr. IKARD said:

The effect of the Commission's order freezing gas prices at the wellhead has been practically to stop cold the industry's national expansion. • • • Consequently, some communities which would soon have been supplied with natural gas will go without it.

"If this and other heating fuels are sub-jected to the kind of regulation enforced by this order, competition will stagnate, and lack of competition is the best way to exploit consumers.

Beaumont Enterprise Praises Congress- The Coming of the Poles to Texas and in Particular to Karnes County

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. DINGELL. Mr. Speaker, the following remarks were made by Dr. A. P. Coleman, president of Alliance College, Cambridge Springs, Pa., on May 7, 1954, in Karnes City, Tex., commemorating the centennial of Karnes County:

Judge Pickett, distinguished guests, citizens of Karnes County, Texans, the opportunity you have given me to address you on this great centennial occasion is one that will have a profound effect on my thinking, and perhaps on my actions, all the rest of my life. Coming here, I have been forced think back to the origins of the Polish people, to reflect on what they have stood for in world history, and, above all, to weigh and appraise their peculiar contribution to the opening up of this great American land of

Like most Americans, I suppose, I had taken the Founding Fathers and the pioneers for granted. But in order to achieve perspective in the various words I was expected to say to you in the course of this celebra-tion, I had to go further and dig deeper than this. I had to think myself into the days of the pioneers' coming, and into the conditions on this continent and in Europe which, on this side invited, and on the other, made inevitable their great decision.

The sufferings of the Polish pioneers in untamed Texas have often been rehearsed, as have the sufferings of the Pilgrims in that first grim winter of 1621. The hill of death overlooking Plymouth colony is immortal in American symbolism. In Panna Maria there was no hill, but there was death, and the giant live oak tree there is our symbol, symbol of the spirit which over-

As an historian, though of only amateur pretensions, what I find inspiring in the coming of the Pollsh pioneers to Karnes County, and to Texas generally, is not the sufferings they endured. After all, in the act of uprooting themselves from their Silesian homes they probably suffered more

acutely before ever setting foot beyond the home border than they did in all the hard, lonely years of struggle in Texas. That act of uprooting was the really great suffering. What I am interested in is the forces which impelled the pioneers to uproot themselves in the first place.

Behind the Poles' decision to migrate, and impelling them inexorably toward the decision, was the interplay of gigantic historical forces. Silesia, whence they came, had been occupied, and was being absorbed by the Prussians. Within Silesia, Germans and at least three different branches of the great Slavic family lived and labored together, and to all four elements, the local Germans and Czechs and Lusatians as well as the Poles of the area, Prussianism was something abhorrent, to be escaped from.

To the folk of Silesia the year 1848 gave momentary promise that Prussianism might be banished, in a great revolutionary upsurge of a more liberal spirit. But the hope was born only to be blighted. Tyranny and oppression reigned the more openly after 1848 than before, and it was this change for the worse that brought the ploneers of Panua Maria and Czestochowa to Karnes County.

In the struggle of the Silesian people during the last century the great motivating force was a deepseated yearning after freedom. Prussianism was a chain, and the chain must be broken: the folk must break free

Slogans have come down to us from this period. Here is one of them:

"From the struggle we'll ne'er resign; We've the strength of justice within, By the might of that strength divine, We'll fight to the end and win."

It was in this spirit that the pioneers of Karnes County, among them the fellow countrymen of my own ancestors, tore themselves from their ancient foundations and crossed the ocean seeking homes. These pioneers have been classed as belonging to the so-called economic immigration into the United States, and thus have been given a slightly lower rank in the hierarchy of our citizenry than such figures, for example, as Carl Schurz, or Generals Kosciusko and Pulaski, who were of the elite, political, or idealistic immigration.

As I study the case today, this seems a wrong view. Knowing what it was the pioneers of Karnes County were ficeing from in their desperate journey to our shores, knowing it was far from mere scarcity of bread that impelled them. I find these folk of the second or third wave of immigration hardly less idealistic than their predecessors. All, allke, sought liberty. All yearned to be free, to be caught no longer in the web of Europe's ancient caste system, its intrigue and stagnation of opportunity, its denial of full franchise to all.

On a later occasion I shall speak more specifically of the coming of the Polish pioneers to Karnes County, and in particular, of their part in founding Panna Maria. This time I shall rest content if I have implanted one thought in your minds, a thought possibly revolutionary to your previous thinking. A better life, a freer life: This was the objective of the Polish pioneers and their neighbors from Silesia. Is there, can there be, greater idealism than this? Do not these too deserve to be classed among the idealistic immigrations?

In a poem written between the two great world wars by a Silesian, about his own people, we find these lines:

"And so, behold, there comes toward me, out

of the ages' abyss,
A man—one of those who sow with the spirit, appointed—

A man—worker, gigantic and nameless.
Who by lifting his hand can alter the pattern of history."

These men of Silesia, these pioneers who founded the earliest settlements in Karnes County, were men of that mold. By lifting their hands they did alter the pattern of history. They helped give us the great State of Texas, and bound it by ties of blood and sweat and their own tears into our glorious Union forever.

Peace Through Strength — McCormack Hits Peaceful Coexistence

EXTENSION OF REMARKS

HON, EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1955

Mr. BOLAND. Mr. Speaker, under permission to extend my remarks, I include a news item appearing in the December 16, 1954, issue of the Dorchester Argus-News, of Dorchester, Mass., entitled "Peace Through Strength—Mc-CORMACK Hits Peaceful Coexistence," carrying portions of a speech made by our colleague from Massachusetts, Mr. McCORMACK, before the Kiwanis Club of Dorchester, Mass.:

PEACE THROUGH STRENGTH—McCormack Hits PEACEFUL COEXISTENCE

In what may well be termed a major foreign policy address, Congressman John W. McCormack, speaking before Tuesday's meeting of the Dorchester Kiwanis Club, said:

"As long as the Communists hold to their intent of world aggression and domination the only thing they will respect is power. We are dealing with cold, ruthless, world killers."

The Congressman's words will have a strong bearing upon future United States foreign policy. The local Representative will surely hold one of the key posts in the next Congress, as majority leader of the House. In any case he will be one of the inner circle of congressional leaders to meet with the executive branch of the Government in planning our path through world affairs.

Congressman McCormack went on to say: "Of course, we must try negotiation. If we don't make progress this way and get affirmative information we will at least get negative information, by which we can better appraise our problems.

"In any case, the term 'peaceful coexistence' breeds complacency which is a very dangerous thing."

Describing the proposed policy of peaceful coexistence, the Congressman went on to say that we know what it means to us. We look forward to a world living in peace and harmony. "But what does it mean coming from the Kremlin? It means that they want a breathing spell. We are justified in examining this policy closely, but we must not forget that the Communists are out for world domination.

"Ideological communism is directly opposed to the natural law of God and the birthrights of freedom of man.

"To the Kremlin this policy means admitting Red China to the United Nations and freezing the status of Western Europe so that they can chain the Red-dominated countries in their present condition."

CITES PRESIDENT AND DULLES

Quoting from statements of President Elsenhower and Secretary of State Dulles, Congressman McCormack said that the President himself has said that he believes the Reds are intent on world revolution, while Dulles recently remarked that despite the

protestations of the Reds' coexistence policy their deeds speak otherwise.

STRONG PUBLIC OPINION

"We are indeed fortunate that we are living in a democracy. Public opinion is one of our greatest weapons. Its power is greater than that of the President, Congress, and all elected officials. Public opinion can be sound and rational or it can be emotional. We must strive for the former.

"The importance of a sound public opinion cannot be overemphasized. In a dictatorship there is no such thing. In order to mold a sound public opinion the people must be given information so that they can properly appraise and evaluate the facts. With the facts we can outmatch, outthink, outproduce the Soviets even if we don't have their manpower. The will of our people to be free is our greatest asset," he continued.

HERE ARE THE KNOWN FACTS

"There is no secret about the fact that the Reds have 175 army divisions in Western Europe plus 80 satellite divisions. We don't know how many divisions the Chinese Reds have. Russia also has 300 reserve divisions that can be activated in 90 days. They have 300 submarines, and their overall naval tonnage is greater than that of Great Britain. Their air force is well on the way to be all jet equipped.

"When the American people are given the facts they are capable of making up their own minds. But these facts speak for themselves."

WHY HELP EUROPE?
